## 1.0 EXECUTIVE SUMMARY

The Florida Department of Transportation (FDOT) District Four is conducting a Project Development and Environment (PD&E) Study to evaluate alternatives for the ultimate improvements of the State Road 9 (SR 9)/Interstate 95 (I-95) interchanges at Hallandale Beach Boulevard, Pembroke Road, and Hollywood Boulevard. The project is located in Broward County, Florida and is contained within the municipalities of Hallandale Beach, Pembroke Park, and Hollywood. The project is approximately three miles long and extends from south of Hallandale Beach Boulevard to north of Hollywood Boulevard (Mileposts 0.0 – 3.1).

This Level I Contamination Screening Evaluation Report (CSER) was prepared using the FDOT *PD&E Manual, Part 2, Chapter 20* and standard contamination screening evaluation practices such as: reviewing regulatory agency records, site reconnaissance, literature review and when necessary, personal interviews of knowledgeable parties within the limits of the project.

A total of 52 potentially contaminated sites were identified and reviewed for potential impacts to the project. Of these, 11 were ranked “High”, 16 were ranked “Medium”, 20 were ranked “Low”, and five (5) were ranked “No” for potential contamination concerns.

For the sites assigned a risk rating “No”, no further action is recommended. These sites have been evaluated and determined not to pose a potential environmental contamination risk to the proposed project, at this time.

For sites ranked “Low”, no further action is required at this time. While these sites/facilities have the potential to impact the proposed project at this time, they were determined to have a low risk, based on several factors. Factors that may change the risk rating include a facility’s non-compliance to environmental regulations, discharges to the soil or groundwater, and modifications to current permits. If any of these factors change, additional assessment of the facilities may be warranted.

For sites assigned a risk rating of “Medium” or “High”, Level II Assessment is recommended if construction activities are proposed in the site vicinity. These sites have been determined to have known contaminants, which may impact the

proposed project. A soil and groundwater sampling plan should be developed for each site, as applicable. Based on the findings of a future review and Level II Assessment, the design engineers may be required to avoid areas of concern or include special provisions with the plans to require that construction activities performed in areas of concern be conducted or supervised by a contamination assessment and remediation contractor specified by FDOT.

Additional information may become available or site-specific conditions may change from the time this report was prepared and should be considered prior to acquiring right of way (ROW) and/or proceeding with roadway construction.

## 2.0 PROJECT DESCRIPTION

### 2.1 PROJECT DESCRIPTION AND LOCATION

The FDOT District Four is conducting a PD&E Study for I-95 from south of Hallandale Beach Boulevard (SR 858) to north of Hollywood Boulevard (SR 820), a distance of approximately three miles (see **Figure 2.1**). The PD&E Study is proposing improvements to the Hallandale Beach Boulevard, Pembroke Road, and Hollywood Boulevard interchanges. The project is located in Broward County, Florida and is contained within the municipalities of Hallandale Beach, Pembroke Park, and Hollywood. The project is approximately three miles long and extends from the Broward/Miami-Dade County Line to Johnson Street (Mileposts 0.0 – 3.1).

I-95 is the primary north-south interstate facility that links all major cities along the Atlantic Seaboard and is one of the most important transportation systems in southeast Florida. I-95 is one of the two major expressways, Florida's Turnpike being the other that connects major employment centers and residential areas within the South Florida tri-county area. I-95 is part of the state's Strategic Intermodal System (SIS) and the National Highway System. In addition, I-95 is designated as an evacuation route along the east coast of Florida.

I-95, within the project limits, currently consists of eight general use lanes (four in each direction) and four dynamically tolled express lanes (two in each direction). This segment of I-95 is functionally classified as a Divided Urban Principal Arterial Interstate and has a posted speed limit of 65 miles per hour.

Figure 2.1 – Project Location Map

The access management classification for this corridor is Class 1.2, Freeway in an existing urbanized area with limited access.

There are three existing full interchanges within the project limits located at Hallandale Beach Boulevard, Pembroke Road, and Hollywood Boulevard. All three roadways are classified as Divided Urban Principal Arterials. Hallandale Beach Boulevard consists of four lanes west of I-95 and six lanes east of I-95. Pembroke Road and Hollywood Boulevard each have six lanes west of I-95 and four lanes east of I-95.

This PD&E Study is evaluating the potential modification of existing entrance and exit ramps serving the three interchanges within the project limits. Widening and turn lane modifications at the ramp terminals were evaluated to facilitate the ramp modifications and improve the access and operation of the interchanges.

## 2.2 PURPOSE AND NEED OF THE PROJECT

The overall goals and objectives of this PD&E Study are described below:

- Evaluate the implementation of potential interchange and intersection improvements that will improve capacity, operations, safety, mobility, and emergency evacuation.
- Identify the appropriate interstate/interchange access improvements that, combined with Transportation Systems Management and Operations (TSM&O) improvements, will service the users of the area, and achieve the Purpose and Need.
- Provide relief from existing and projected traffic congestion.
- Improve the safety of the I-95 mainline corridor by addressing speed differentials and lane weaving deficiencies between interchanges.
- Support the optimal operations of the existing roadway network.
- Maintain consistency with the current I-95 Express Lanes and local projects.
- Prioritize the proposed improvements based on the area needs (short-term vs. long-term), logical segmentation and funding.

The need for this project is to increase interchange and ramp terminals intersection capacity at Hallandale Beach Boulevard, Pembroke Road and

Hollywood Boulevard. Other considerations for the purpose and need of this project include safety, system linkage, modal interrelationships, transportation demand, social demands, economic development, and emergency evacuation. The primary and secondary needs for the project are discussed in further detail below:

**Capacity** – The I-95 ramps at Hallandale Beach Boulevard, Pembroke Road, and Hollywood Boulevard are currently congested and affecting traffic operations along I-95 between the interchange ramps and at the arterial intersections near I-95.

Without future improvements, the driving conditions will continue to deteriorate well below acceptable Level of Service (LOS) standards. The following I-95 freeway segments will operate below LOS D within at least one peak-hour period before the year 2045:

- Ives Dairy Road northbound on-ramp to Hallandale Beach Boulevard northbound off-ramp
- Hallandale Beach Boulevard northbound on-ramp to Pembroke Road northbound off-ramp
- Pembroke Road northbound on-ramp to Hollywood Boulevard northbound off-ramp
- Hollywood Boulevard northbound on-ramp to Sheridan Street northbound off-ramp
- Sheridan Street southbound on-ramp to Hollywood Boulevard southbound off-ramp
- Pembroke Road southbound on-ramp to Hallandale Beach Boulevard southbound off-ramp
- Hallandale Beach Boulevard southbound on-ramp to Ives Dairy Road southbound off-ramp

Additionally, the following intersections will fall below LOS D during at least one peak-hour period before the year 2045:

- Hallandale Beach Boulevard northbound ramp terminal
- Hallandale Beach Boulevard southbound ramp terminal
- Hollywood Boulevard southbound ramp terminal
- Hollywood Boulevard/28<sup>th</sup> Avenue

The improvements proposed as part of this project will increase the capacity of the interchanges and the ramp terminal intersections.

**Safety** – The crash safety analysis indicates that the I-95 study area segments have experienced greater overall number of crashes for the years 2012 through 2014 than what would typically be anticipated on similar facilities. A review of the crash data indicates that traffic operational improvements could address some of the safety issues.

Additional I-95 entry and exit ramp capacity at these interchanges will improve the safety and overall flow of traffic within the project corridor and adjacent intersections.

**System Linkage** – I-95 is part of the State's SIS and the National Highway System. I-95 provides limited access connectivity to other major arterials such as I-595 and Florida's Turnpike. The project is not proposing to change system linkage. However, potential interchange modifications would improve movements within the existing network systems.

**Modal Interrelationships** – There are sidewalks in both directions and public transit routes along Hallandale Beach Boulevard, Pembroke Road, and Hollywood Boulevard. Additionally, there is a Tri-Rail Station in the northwest quadrant of the I-95/Hollywood Boulevard Interchange.

Capacity improvements within the study area will enhance the mobility of people and goods by alleviating current and future congestion at the interchanges and on the surrounding freight and transit networks. Reduced congestion will serve to maintain and improve viable access to the major transportation facilities and businesses in the area.

**Transportation Demand** – The I-95 PD&E Study phase from south of Hallandale Beach Boulevard to north of Hollywood Boulevard is included in the Broward Metropolitan Planning Organization (MPO) 2045 Long Range Transportation Plan (LRTP), Transportation Improvement Program (TIP), FDOT Work Program, FDOT State TIP, and FDOT SIS Five Year Plan.

**Social Demands and Economic Development** – Social and economic demands on the I-95 corridor will continue to increase as population and employment

increase. The Broward County MPO LRTP predicted that the population would grow from 1.9 million in 2018 to 2.2 million by 2045, an increase of 16 percent. Jobs were predicted to increase from 0.9 to 1.2 million during the same period, an increase of 25 percent.

The project intersects the cities of Hallandale Beach, Pembroke Park, and Hollywood, the third largest city in Broward County.

**Emergency Evacuation** – The project is anticipated to improve emergency evacuation capabilities by enhancing connectivity and accessibility to major arterials designated on the state evacuation route. I-95, Hallandale Beach Boulevard, Pembroke Road, and Hollywood Boulevard serve as part of the emergency evacuation route network designated by the Florida Division of Emergency Management and by Broward County. Hallandale Beach Boulevard, Pembroke Road, and Hollywood Boulevard move traffic from the east to I-95. I-95 is critical in facilitating traffic during emergency evacuation periods as it connects to other major arterials and highways in the state evacuation route network (i.e., I-595 and the Florida's Turnpike).

### 2.3 EXISTING CONDITIONS

I-95, within the study limits, consists of eight 11 to 12-foot wide general use lanes (four lanes in each direction), four 11-foot wide dynamically tolled express lanes (two in each direction), 12-foot wide auxiliary lanes at selected locations, 12-foot wide paved outside shoulders, 6 to 11-foot wide paved inside shoulders, a 2-foot wide median barrier wall, and outside roadway guardrails. The express lanes are buffer-separated from the general use lanes with express lane markers and a 3-foot wide buffer. **Figure 2.2** shows the roadway section north of Hallandale Beach Boulevard and **Figure 2.3** shows the roadway section north of Pembroke Road. **Figure 2.4** depicts the existing conditions schematic line diagram.

The existing limited access right of way varies slightly within the study limits. The right of way is generally consistent throughout the corridor except at the interchanges, where it varies to accommodate entrance and exit ramps. **Table 2.1** summarizes the available right of way along the corridor.

Figure 2.2 – I-95 Existing Roadway Section North of Hallandale Beach Boulevard

Figure 2.3 – I-95 Existing Roadway Section North of Pembroke Road

### 3.0 PROJECT ALTERNATIVES

Alternatives evaluated during the PD&E Study include the No-Build Alternative and two Build Alternatives. Alternatives were developed and evaluated based on the ability to meet the project purpose and need.

#### 3.1 NO-BUILD ALTERNATIVE/NO ACTION ALTERNATIVE

The No-Build Alternative (also referred to as “No Action”) includes the existing transportation network and any funded, planned or programmed improvements open to traffic by the design year. The No-Build Alternative includes only those improvements that are elements of the MPO’s Transportation Improvement Program, the 2045 Cost Feasible LRTP, the FDOT’s Adopted Five Year Work Program, any local government comprehensive plans and/or any development mitigation improvement projects that are elements of approved development orders.

The No-Build Alternative includes currently planned and programmed improvements. One of the programmed improvements are the safety short-term interim improvements at the Hallandale Beach Boulevard, Pembroke Road and Hollywood Boulevard interchanges. The No-Build Alternative includes the ongoing District Four I-95 Express Phase 3C Construction Project between south of Hollywood Boulevard and north of I-595. This construction project will add additional express lane access points (northbound egress and southbound ingress) within the Hollywood Boulevard Interchange. The No-Build Alternative also includes the District Six I-95 Planning Study between US 1 (Downtown Miami) and the Miami-Dade/Broward County Line. This planning study is proposing to add

mainline capacity and interchange improvements by the design year of this project.

This alternative is considered to be a viable alternative to serve as a comparison to the study's proposed build alternatives.

The No-Build Alternative roadway sections are the same as the existing sections plus any future planned improvements. I-95, within the study limits, consists of eight 11 to 12-foot wide general use lanes (four lanes in each direction), four 11-foot wide dynamically tolled express lanes (two in each direction), 12-foot wide auxiliary lanes at selected locations, 12-foot wide paved outside shoulders, 6 to 11-foot wide paved inside shoulders, a 2-foot wide median barrier wall, and outside roadway guardrails. The express lanes are buffer-separated from the general use lanes with express lane markers and a 3-foot wide buffer. **Figure 3.1** shows the roadway section north of Hallandale Beach Boulevard and **Figure 3.2** shows the roadway section north of Pembroke Road. **Figure 3.3** depicts the No-Build Alternative schematic line diagram.

### 3.2 BUILD ALTERNATIVE

Two build alternatives were evaluated to improve traffic operations within the study area for the I-95 mainline and interchanges. Build alternatives were developed with the goal of reducing congestion and delay while also maximizing the efficiency of the transportation system.

**Alternative 1** – This alternative proposes braided ramps between interchanges to improve substandard weaving movements along I-95. In this alternative, the on-ramps from each interchange will remain unchanged. However, the off-ramps to Pembroke Road and Hollywood Boulevard in the northbound direction and to Pembroke Road and Hallandale Beach Boulevard in the southbound direction will be located one interchange prior to the destination interchange. For example, travelers destined northbound to Pembroke Road would use an exit ramp located just south of the Hallandale Beach Boulevard corridor right after the Hallandale Beach Boulevard off-ramp. The new exit ramp will continue separated from the I-95 mainline braiding over the Hallandale Beach Boulevard on-ramp and continuing along the right of way line until reaching the cross-street ramp terminal. This new exit ramp bypasses and avoids conflicts with the Hallandale

Figure 3.1 – I-95 No-Build Alternative Roadway Section North of Hallandale Beach Boulevard

 INTERSECTION

Beach Boulevard on-ramp. The same design continues northbound to Hollywood Boulevard and southbound to Pembroke Road and Hallandale Beach Boulevard. **Figure 3.4** shows the roadway section north of Hallandale Beach Boulevard and **Figure 3.5** shows the roadway section north of Pembroke Road. **Figure 3.6** shows the schematic geometric layout of Alternative 1

**Alternative 2** – This alternative proposes a collector distributor roadway system within the I-95 mainline project area. The collector distributor roadway system will remove the Pembroke Road Interchange from directly interacting with the I-95 mainline. In the northbound direction, all exiting traffic to Pembroke Road and Hollywood Boulevard will utilize a new collector distributor off-ramp just south of Hallandale Beach Boulevard. The collector distributor roadway system will extend to just north of Hollywood Boulevard serving the exit traffic to Pembroke Road, entry traffic from Pembroke Road and entry traffic from Hollywood Boulevard. In the southbound direction, the new collector distributor roadway system will not be continuous, it will end and begin at Pembroke Road. The first section combines the off-ramps to Hollywood Boulevard and Pembroke Road and the second section moves the Pembroke Road on-ramp to enter I-95 south of the Hallandale Beach Boulevard on-ramp. **Figure 3.7** shows the roadway section north of Hallandale Beach Boulevard and **Figure 3.8** shows the roadway section north of Pembroke Road. **Figure 3.9** shows the schematic geometric layout of Alternative 2.

Widening and turn lane modifications at the ramp terminals were evaluated to facilitate the ramp modifications and improve the access and operation of the interchanges. These improvements are the same in both alternatives.

### 3.3 PREFERRED ALTERNATIVE

The preferred alternative for the I-95 corridor is Alternative 2. Alternative 2 was selected based on the alternative alignment analysis and the evaluation results summarized as part of the PD&E Study. Alternative 2 will add the capacity improvements necessary to improve traffic operations, safety, transit, system linkage, modal interrelationships, transportation demand, social demand, economic development, interchange access and emergency evacuation. Alternative 2 is the most prudent when compared with Alternative 1 for the following reasons:

- Removing the Pembroke Road interchange from directly interacting with I-95 improves the mobility and access in and out of Pembroke Road and adjacent roadways.
- Reduces the number of entrances and exits to and from I-95, which improves the overall operations of the I-95 mainline, ramps, and interchanges.
- Reduces long-term crashes related to heavy congestion, mainline weaving maneuvers, mainline and ramp speed differentials, and interstate access.
- The collector distributor roadway system removes I-95 mainline traffic, which provides more capacity to several mainline segments of I-95.
- Provides the ability to enhance/improve bus service, which offers an alternative to auto travel and addresses needs of low-income users and disadvantaged groups.
- Provides more off-ramp storage and requires less signage on the mainline due to less access points.
- Lower construction cost.

## 4.0 METHODOLOGY

A Level I Contamination Screening Evaluation was conducted for the project in accordance with *Part 2, Chapter 20* (revised July 1, 2020) of the PD&E Manual. A preliminary evaluation of the project area was conducted to determine potential contamination from properties or operations located within the vicinity of the project corridor. Potentially contaminated sites within a 500-foot buffer from the ROW line were identified and evaluated. Contaminants include petroleum products, dry-cleaning solvents and other hazardous materials. Non-landfill solid waste facilities were evaluated within 1000 feet and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), National Priorities List (NPL) Superfund sites and landfills were evaluated within 1/2-mile. This evaluation consisted of the following tasks:

- Review of historic aerial photographs

- Review of available government regulatory agency database information for sites of potential environmental concerns listed within FDOT PD&E Manual recommended search distances
- Pedestrian/windshield survey of the project corridor and adjacent properties for the previous alternatives as well as the preferred alternative
- Review of the Broward County Property Appraiser's online database
- Telephone interviews with tenants, local and State government officials (See **Section 7.2**).

The evaluation included an assessment to identify and evaluate sites in the vicinity of the project corridor that contain petroleum products, hazardous materials or other potential sources of contamination that may present a risk to the project.

Hazardous materials surveys for asbestos containing materials and metal-based coatings were not included in this evaluation, but are recommended during final design as existing bridge widenings are proposed.

#### 4.1 HISTORICAL AERIAL PHOTOGRAPH REVIEW

Historical aerial photographs were reviewed to identify historical land use/activities along the project corridor that may pose potential contamination concerns. Aerial photographs were obtained from the University of Florida Digital Collection (UFDC), FDOT and Google Earth (1952 – 2019). A summary of historical aerial review is provided in **Section 7.1**. Sites identified as a concern are included in the discussion in **Section 7.2**.

#### 4.2 REGULATORY FILE REVIEW

A database review/search report was obtained from Environmental Record Search (ERS) for the I-95 corridor on March 20, 2017. The ERS Summary Report is included in **Appendix A**. This report provides locations of sites with known or potential contamination based on a number of federal and state databases, including:

- Federal NPL Site List
- Federal Delisted NPL Site List

- Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List
- Federal CERCLIS No further Remedial Action Planned (NFRAP) Site List
- Federal Resource Conservation and Recovery Act (RCRA) Corrective Action (CORRACTS) Facilities List
- Federal RCRA non-CORRACTS TSD Facilities List
- Federal RCRA Generators List
- Federal Emergency Response Notification System (ERNS) List
- State- and Tribal-equivalent CERCLIS
- State and Tribal Landfill and/or Solid Waste Disposal Site Lists
- State and Tribal Leaking Storage Tanks Lists
- State and Tribal Registered Storage Tank Lists
- State and tribal Voluntary Cleanup Sites
- Local lists of Hazardous Waste / Contaminated Sites
- Other Ascertainable Records

Individual contaminated sites were reviewed, and desktop information updated in July 2021, as applicable. The updated desktop review was conducted online using the Broward County Environmental Inquiry and Resource System (ENVIROS) database, Broward County GeoHub, Miami Division of Environmental Resource Management (DERM) Department of Regulatory and Economic Resources (RER) database, Florida Department of Environmental Protection (FDEP) OCULUS and Information Portal, FDEP Contamination Locator Map, FDOT Efficient Transportation Decision Making (ETDM) Environmental Screening Tool (EST), Florida Department of Health (FDOH) Well Surveillance Mapping Site, and United States (US) Environmental Protection Agency (EPA) Facility Index System (FINDS). File reviews were supplemented with telephone conversations with Agency representatives.

A detailed discussion of the potential contamination sites identified during this contamination screening evaluation is provided in **Section 7.2**.

### 4.3 FIELD REVIEW

Initial pedestrian/windshield surveys of the project study area were conducted on March 13, 2017, to identify potential sites or areas with indications of past or present contaminant storage, use, generation, or disposal. Follow up field reviews were conducted on November 29, 2018, August 14, 2020, and November 18, 2020, to update and/or verify previous data collected. The potential

contamination sites were visually examined to the extent of available access for evidence of contamination. Known and potentially contaminated sites within the project study area were visually inspected for stressed vegetation, vent and fill pipes, accumulated areas of debris, evidence of buried materials, areas of soil staining, etc. (see **Section 7.2**). Current occupancy and operations at each site were verified during the field reviews. Photographs of typical existing sites are included in **Appendix B**.

#### 4.4 AGENCY COORDINATION

As part of the ETDM process, comments were solicited from the South Florida Water Management District (SFWMD), Federal Highway Administration FHWA, EPA, and other federal, state and local agencies requesting a review of each agency's database for information relating to the identification of properties or businesses that use, store, or distribute petroleum products, hazardous wastes, or other regulated materials, or potentially contain environmental contamination, that may be located within or adjacent to the existing or proposed FDOT ROW associated with the project corridor. To date, responses have been received from the SFWMD, FHA, and EPA. All the agency comments received to date are discussed in **Section 7.5** and in the ETDM Progress Summary Report. Copies of agency correspondence and relative sections of the ETDM Progress Summary Report are provided in **Appendix C**.

A community meeting was held by the EPA on January 19, 2021, to discuss their proposed preferred cleanup alternative for Petroleum Products Corporation (Superfund) site cleanup located at 3130 SW 19<sup>th</sup> Street, Pembroke Park, Florida. Agencies present during the meeting included the EPA Region 4, FDEP and FDOT District IV. A detailed discussion of this community meeting is included in **Section 7.2**.

#### 4.5 POTENTIAL CONTAMINATION RISK RATING

Based on the compilation of data collection activities described above, and the distance and direction of a site from the project corridor, each site was assigned a risk rating based on the rating system specified in the FDOT *PD&E Manual, Part 2, Chapter 20*. This rating system expresses the degree of concern for potential contamination impacts to the project's cost and schedule. Each site was

assigned a contamination rating of No, Low, Medium or High based on the following criteria:

- **No:** A review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants had been handled on the property. However, findings from the contamination screening evaluation or sampling and testing results indicate that contamination impacts are not expected.
- **Low:** A review of available information indicates that former or current activities on the property have an ongoing contamination issue, has a hazardous waste generator identification (ID) number, or handles hazardous materials in some capacity. However, based on the review of conceptual or design plans and/or findings from the contamination screening evaluation or sampling and testing results, it is not likely that there would be any contamination impacts to the project.
- **Medium:** After a review of conceptual or design plans and findings from a contamination screening evaluation or sampling and testing results, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to make a determination as to the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a “Medium”. Properties used historically as gasoline stations and which have not been evaluated or assessed by regulatory agencies, sites with abandoned in place underground petroleum storage tanks or currently operating gasoline stations should receive this rating.
- **High:** After a review of all available information and conceptual or design plans, there is appropriate analytical data that shows contamination will substantially impact construction activities, have implications to ROW acquisition or have other potential transfer of contamination related liability to the FDOT.

## 5.0 LAND USE

Existing land use within, and adjacent to, the project corridor was mapped using the Land Use layer from the SFWMD Geographic Information System (GIS) Data Catalog. Land use within the ROW is transportation (road and highway) with supporting features such as drainage swales and ponds. The primary land uses adjacent to the project corridor comprise developed properties, such as commercial, light industrial, residential, institutional facilities, and recreation/open space (e.g., golf courses). **Figure 5.1** illustrates the existing land use and cover within a quarter-mile of the project corridor.

## 6.0 HYDROLOGIC FEATURES

### 6.1 SOILS

Based on the *Soil Survey of Broward County, Florida* (NRCS 1984), mapped soil types within close proximity to proposed improvements are classified in **Table 6.1**, and shown in **Figure 6.1**.

According to the *Hydric Soils of Florida Handbook* (Hurt, 2007), five (5) of the eleven (11) soil types identified listed above in **Table 6.1** are classified as hydric; the remaining six (6) types are classified as non-hydric. Hydric soils are typically characterized as poorly to very poorly drained muck or sandy soils. The majority of areas within and adjacent to the project corridor have been disturbed by residential and infrastructure development, and these areas may not currently exhibit historic soil conditions.

### 6.2 HYDROLOGY

The Biscayne Aquifer underlies the project area as well as the entire Broward County. The Biscayne Aquifer is a sole source aquifer for drinking water in Broward County. The Biscayne aquifer is a surficial, unconfined aquifer, which extends from the ground surface to a depth of 240 feet along the eastern coastline (U.S. Geological Survey (USGS) Atlas 2000). The water table fluctuates from two (2) to four (4) feet above mean sea level. This aquifer is recharged through infiltration of precipitation and surface water. A sequence of low-permeability, largely clay

Urban land	No	24.72
Water	Yes	5.20

deposits about 1000 feet thick separates the Biscayne aquifer from the underlying Floridian aquifer system. The groundwater and surface water form an integrated hydrologic system, the SFWMD utilizes a system of canals, levees, control structures, pumping stations and water conservation areas to manage freshwater resources. Regional groundwater generally flow in the southeast direction however, influences from local geology and topography can change the direction of groundwater flow. The specific groundwater flow beneath the subject property can only be determined by field methods such as the installation of monitoring wells and the measuring of hydrostatic pressure. USGS (1994) North Miami, Florida, 7.5 Quadrangle Topographic Maps are shown in **Figures 6.2a** and **6.2b**. Based on the 1994 topographic map, the surface elevation is approximately 5 – 10 feet above sea level.

Twelve man-made surface waters, including drainage ponds are within 500 feet of the project. These include drainage ponds along the I-95 corridor and within

the three project interchanges. These other surface waters (OSW's) are primarily associated with commercial, residential, and golf course developments. A brief summary of the OSW's and associated maps, excerpted from the Natural Resources Evaluation (NRE) is contained in **Appendix D**.

### 6.2.1 Broward County Wellfield Protection Zones

The Broward County Wellfield Protection Program protects the aquifer by restricting land uses within the vicinity of the public wellfield. A section of the project corridor east of I-95's intersection with Pembroke Road, is located within the Broward County Wellfield Protection Zones in the City of Hallandale Beach. No other part of the study area is located within the wellfield protection zone (see **Figure 6.3**). All phases of work will comply with the requirements of *Chapter 27 Article XIII, Broward County Wellfield Ordinance*. Best Management Practices pertaining to construction will be followed to prevent adverse impacts to water quality.

### 6.2.2 USGS Wells

USGS groundwater wells located throughout Broward County. The four (4) wells in closest proximity to the project are illustrated in the USGS Groundwater Wells map in **Appendix E**. USGS wells G -2956 and G-4002 are located adjacent to the project corridor.

## 7.0 PROJECT IMPACTS

### 7.1 AERIAL PHOTOGRAPH REVIEW

A detailed review of the historical aerials obtained from 1952 to 2019 is provided below. Historical aerials were reviewed each year for significant changes and a summary provided at a frequency of once per five years, when available.

#### 1952

A four (4) lane roadway appears in the approximate location of present day I-95. An existing railway, located within the project corridor and oriented north to south is also visible. Orangebrook Golf Course is visible adjacent to and west of the four-lane roadway and north of Pembroke Road. Sunset Golf Course is observed North of Johnson Street and east of the four-lane roadway.

SR-91/I-95 from S of SR-858/Hallandale Beach Blvd. to N of SR-820/Hollywood Blvd. PD&E Study  
 Broward County

Broward County  
 Wellfield Map

Figure 6.3

Date Prepared: 05/20/2021

1957

A four-lane road appears in the approximate location of present day I-95. Ojus Landfill, located 200 feet west of the four-lane road is visible. Dredging activities are shown at the present-day Desoto Lakes, approximately 350 feet west of the four lane road. Land use is primarily undeveloped at the southern portion of the project corridor. Residential/commercial development is visible along the northern half of the project corridor.

1961

Commercial development is visible along the corridor, on the west and east sides of the aforementioned four lane (in the approximate location of present day I-95). There is significant residential development along Hollywood Boulevard and Hallandale Beach Boulevard. The Desoto Lakes (see **Figure 6.2b**) are developed and surrounded by a mobile home park. Borrow pits are visible west of the project corridor and south of Pembroke Road. Commercial/industrial warehouses are developed, and Sunset Golf Course appears fully developed.

1969

I-95 is fully developed with multiple lanes and overpasses (first shown on USGS topographic maps as early as 1962). Excavation of a borrow pit lake is visible east of I-95, between Hallandale Beach Boulevard and Pembroke Road. Dredging activities are observed at the present day, Harbour Cove Brownfield Site. Bulk storage tanks and several pits are visible west of I-95 and south of Pembroke Road at the current Petroleum Products Corporation Superfund site.

1972

Significant commercial development is visible adjacent west and east of I-95. Ojus landfill is observed with vegetative overgrowth.

1979

A school is observed on the southeast corner of I-95 intersect with Pembroke Road. The current Superfund site (Petroleum Products Corporation) appears developed with warehouses.

1980

Two gasoline stations appear along Hallandale Beach Boulevard.

1986

Land use appears generally unchanged. The present-day Harbour Cove Brownfield site, located 100 feet north of Hallandale Beach Boulevard, appears backfilled.

1991

Additional earthwork around the borrow pits/lakes west of I-95 and south of Pembroke Road.

1992

Commercial development is observed at the northwest intersection of I-95 and Hallandale Beach Boulevard.

1995

The project corridor continues to be occupied by residential properties, golf courses, commercial properties, and a limited number of undeveloped parcels.

1999

Land use along the project corridor is generally unchanged. There appears to be backfilling activities at a borrow lake, north of Hallandale Beach Boulevard.

2003

The backfilled area north of Hallandale Beach Boulevard. Ives Estates Park is developed at the former Ojus Landfill.

2006

The project corridor and surrounding area appears similar to current conditions. The project corridor is fully developed with residential properties, golf courses, commercial properties, gasoline stations and auto repair shops. Construction of Harbour Cove Apartments located at the Harbour Cove Brownfield site is visible.

2011

Land use appears generally unchanged.

2016

Land use appears generally unchanged.

2020

The project corridor and surrounding properties appear similar to current conditions.

## 7.2 PROJECT IMPACT RESULTS

This section describes the potential contamination associated with each of the identified sites in the vicinity of the proposed project. Fifty-two (52) known or potentially contaminated sites were identified along the corridor and evaluated for potential impacts to the project. Known contaminated sites were confirmed by record search. Potentially contaminated sites were identified by field review and then researched to determine if file information was available. These sites were numbered in geographical order from south to north and west to east. **Figure 7.1 (Overall Map), and Figures 7.1a, 7.1b and 7.1c** illustrate the general locations and parcel boundaries of the known and potentially contaminated sites. **Table 7.1** presents a brief summary of the details recovered from the record search and field review. Relevant documentation of contaminated sites assigned a risk rating of Medium or High are included in **Appendix F**.

At this time, dewatering is anticipated for bridge/structure construction and possibly for drainage and utility installation. The preferred alternative will require a dewatering permit from the FDEP/SFWMD, as most of the project corridor has contaminated sites within 500 feet of potential dewatering areas.

A brief description of the identified sites is provided below.

### Site 1

City of North Miami Beach OJUS Landfill (currently Ives Estates Park)

20735 NE 16<sup>th</sup> Avenue

Miami, Florida

DERM Facility ID: 57134 / SW-1179 / File-12839

This site is located southwest of I-95 and County Line Road intersect, within 200 feet west of the project corridor. Based on the regulatory file review, the City of Miami Beach operated the Ojus Landfill from the late 1930s until 1978, receiving solid waste such as vegetative debris, bulk goods and household garbage. Several citations were issued for this facility for operating without a permit on July 30, 1975, trash disposal, trench excavation below the water table, trash dumping

The site has a DRC restricting groundwater use onsite.	Facility Closed with engineering controls	H

into water-filled trenches and failure to address violations until officially closed in accordance with State and County regulations in February 1978. A follow up inspection conducted by DERM on June 17, 1986, reported uncovered trash and miscellaneous trash disposed in an open ditch. Onsite groundwater contamination was documented as early as 1984 by DERM and USGS. An ammonia groundwater plume is present beneath the northern portion of the site and methane gas is monitored along the perimeter. The April 2016 5<sup>th</sup> Semi-Annual Groundwater Monitoring Report confirmed ammonia at several locations throughout the site above FDEP Groundwater Cleanup Target Level (GCTL) of 2.8 micrograms per liter (mg/L) for the following samples: OW-1 at 6.6 mg/L, OW-2 at 5.9 mg/L, OW-3 at 5.7 mg/L, OJ (60') at 8.3 mg/L, OJ-20(40') at 7.2 mg/L, OJ-21(35') at 3.4 mg/L, OJ-21(55') at 3.8 mg/L, OJ-22 (35') at 4.7 mg/L and OJ-22(55') at 9.1mg/L. No additional information was available for review (for example, groundwater flow direction). The site is currently occupied by Ives Estates Park.

Proposed construction activities includes excavation of a proposed dry retention area approximately 75 feet east of this site. Based on the documented presence of ammonia in groundwater, distance to project corridor, proposed excavation activities and potential for dewatering activities, this site has been assigned a **Medium** risk rating for the preferred alternative.

## Site 2

Penn Tanks Lines Inc. - Roadside Spill  
Southbound I-95, 0.75 Miles south of Exit 18  
Hallandale Beach, Florida  
FDEP Facility ID: 06/9816414

This discharge site is located southbound on I-95, 0.75 miles south of Exit 18 (Hallandale Beach Boulevard), within the project corridor. A Discharge Reporting Form (DRF) was submitted March 2018 in response to a petroleum product release due to a multi-vehicle accident. A Penn Tank Lines, Inc. fuel tanker rolled over, damaging one compartment, and releasing approximately 2,000-gallons of gasoline along the paved shoulder and soil in the retention area between I-95 and the South Florida Regional Transit Authority (SFRTA) railroad tracks. Approximately, 400 gallons of free product, fire-fighting foam, and water were collected for disposal during emergency response cleanup. An August 2018 Interim Source Removal (ISR) Report documented subsequent source removal activities, to include the excavation of 465.87 tons of soil and 12,190 gallons of

free product and surface water collected for recovery. The March 2019 Site Assessment Report (SAR) and subsequent October 2019 and April 2020 SAR addendums reported soil concentrations below FDEP Soil Cleanup Target Levels (SCTLs) at the former discharge site. However, groundwater samples collected during the April 2020 sampling event reported (Benzene, Toluene, Ethylbenzene and Xylenes) BTEX concentrations above FDEP GCTLs. Benzene was reported in MW-E at 1.20 mg/L above the GCTL of 1.0 mg/L. Ethylbenzene was reported in MW-E2 at 106 mg/L above the GCTL of 30 mg/L. Toluene was reported in MW-E1 at 85.9 mg/L and MW-E2 at 40.2 mg/L, above the GCTLs of 40 mg/L. Total xylenes was reported in MW-E at 30 mg/L and MW-E2 at 739 mg/L, above the GCTL of 20 mg/L. The groundwater plume has been delineated during the “dry season”, but further sampling was recommended during the “wet season” to verify prior to remediation. The October 2020 “wet season” sampling event confirmed BTEX exceedances and lack of plume delineation on the east of monitoring well MW-E2 (towards I-95). The October 2020 SAR addendum (SARA) reported groundwater flow towards the south-southeast direction. Agency review included recommendations for semi-annual groundwater sampling to determine contaminant plume stability. An April 2021 SARA was submitted to address recommendations made on the October 2020. The report concluded there is a reduction in plume size during the dry Season 2021, however, total xylenes are not completely delineated to the east. Agency review concurred with the findings of this report. No additional information was readily available for review.

Proposed construction activities includes excavation of a proposed dry retention area within the discharge location. Based on reported exceedances of BTEX above the FDEP GCTLs in groundwater, groundwater flow in the south-southeast direction towards the project corridor, work proposed within the discharge location, proposed excavation and potential for dewatering, this site has been assigned a **High** risk rating for the preferred alternative.

### Site 3

City of Hallandale Beach Disaster Debris Management Site (DDMS) #1 (currently Gulfstream Academy at Hallandale Beach)

Field behind 1000 SW 3rd Street

Hallandale Beach, Florida

FDEP Facility ID: 99011

This facility is located approximately 800 feet east of the I-95 project corridor. No evidence of dumping was observed during review of historical aeriels. The FDEP Waste Assurance and Compliance System (WACS) assigned the facility a No Further Action (NFA) status. The site was identified during site reconnaissance as a field for Gulfstream Academy of Hallandale Beach. No additional information was readily available for review.

Construction activities are proposed approximately 700 feet west of this facility. Based on the current regulatory status, distance to the project corridor and limited documentation, this facility is assigned a **Low** risk rating.

#### Site 4

Dubs and Tires  
2952 SW 30<sup>th</sup> Avenue  
Pembroke Park, Florida  
Facility ID: N/A

This site is located along SW 30th Avenue and is approximately 50 feet west of the I-95 project corridor. This facility currently operates as an auto tire and service station, providing air conditioning (AC), alignments, brakes, oil change, new tire and tire repair services. No additional information was readily available for review. Hazardous wastes commonly generated by auto repair shops include degreasers, mineral spirits, lubricants and antifreeze/coolant.

Based on absence of documented contamination, the site has been assigned a **Low** risk rating.

#### Site 5

Coin Laundry Dry Cleaners (formerly Landry VIP)  
1059 W Hallandale Boulevard  
Hallandale Beach, Florida  
Facility ID: N/A

This facility is located approximately 230 feet east of the I-95 project corridor and approximately 500 feet south of W Hallandale Beach Boulevard. According to a tenant representative, the facility provides laundry and offsite dry-cleaning services. No additional information was readily available for review.

Based on current operations, distance and the absence of reported contamination, the site has been assigned a **Low** risk rating.

### Site 6

Advance Auto Parts  
3000 W Hallandale Beach Boulevard  
Pembroke Park, Florida  
County Facility ID: 00485

This facility is located adjacent to W Hallandale Beach Boulevard and approximately 85 feet west of I-95. This facility maintains a Hazardous Material License as a retail trade with battery exchange or hazardous waste. Hazardous waste maintained at this site includes petroleum products, batteries and fluorescent bulbs. No additional information was readily available for review.

This facility is proposed for ROW acquisition. Based on the current regulatory status and absence of reported contamination, this facility has been assigned a **Low** risk rating for the preferred alternative.

### Site 7

Gas Station Services Corporation (currently Moil)  
(formerly Mobil Hallandale, Amoco-Subco and Superstop Hallandale)  
3151 W Hallandale Beach Boulevard  
Pembroke Park, Florida  
FDEP Facility ID: 9800048; County Facility ID: 02181

The site is within 50 feet of the western terminus along W Hallandale Beach Boulevard, north side, and approximately 0.3 mile west of I-95. This facility has historically operated and currently operates as a retail gasoline station and maintains two (2) unleaded gasoline UST and one vehicular diesel UST. This facility has no documented historical discharges however, the facility has a history of noncompliance issuances. An FDEP Annual Compliance Inspection Form dated September 2019 reported several noncompliance issues at the facility. The facility responded in May 2020 to provide evidence of a contractor hired to bring the facility in compliance. A June 23, 2021 Field Inspected Summary Form reported a gas release near dispenser #1 and in a storm drain. Based on this form, the Broward County EPGMD EEPD issued a notice requiring a site assessment be performed onsite. No additional information was identified regarding compliance

activity or contamination issues at the facility. No visible staining was observed during the site reconnaissance performed in November 2020.

Based on current service station operations, non-compliance status, reported release and the potential for dewatering, this site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 8

Energy Dispatch LLC Tanker Truck Spill

East & West Sides of SW 31<sup>st</sup> Avenue & W Hallandale Boulevard

Pembroke Park, Florida

FDEP Facility ID: 9803721; County Facility ID: 09884

This discharge site is located on the east and west sides of SW 31st Avenue, adjacent to the north side of W Hallandale Beach Boulevard. An Energy Dispatch LLC fuel tanker was involved in a vehicular accident, releasing approximately 675 gallons of unleaded gasoline. Subsequent source removal activities were performed through excavation of 549.39 tons of impacted soil. A July 2003 SAR/ No Further Action Proposal (NFAP) reported the petroleum derived compounds, sampled during source removal activities, below the FDEP SCTL/GCTLs, was submitted, and a Site Rehabilitation Completion Order (SRCO) issued by the FDEP in November 2003.

Based on the current regulatory status and closure of the historical discharge this facility has been assigned a **Low** risk rating for the preferred alternative.

### Site 9

Racetrac #491 (formerly Chevron)

3031 W Hallandale Beach Boulevard

Pembroke Park, Florida

FDEP Facility ID: 9602003; County Facility ID: 02341

This facility is located west of I-95 on the north side of W Hallandale Beach Boulevard, adjacent to the project corridor with the tank area approximately 150 feet north of it. This facility has a history of discharges. It operated as a Chevron service station from the 1969 to circa 1971. Historic soil and groundwater impacts were discovered during an environmental audit conducted in 1989. Source removal activities included excavation of soil on the south side of the site. A SRCO

was issued for the 1989 discharge discovery in June of 1994. The site is currently occupied by a Racetrac service station. A DRF was submitted in May 2008 after petroleum was observed in a spill bucket. The spill buckets were removed and replaced in December 2008 and contaminated soil was excavated. The 2009 SAR indicated that GCTLs were exceeded and a Remedial Action Plan (RAP) was recommended. Following submission of the RAP in 2010, additional data was collected and the Broward County Environmental Protection and Growth Management Division (BCEPGMD) agreed to implement Natural Attenuation Monitoring (NAM) in place of the RAP. After four quarters of NAM, a NAM Report/NFAP was submitted for review. The NFAP was approved, and an SRCO was issued for the May 2008 discharge by FDEP in January 2014. Two (2) 12,000-gallon unleaded gasoline underground storage tanks (USTs) and one 12,000-gallon vehicular diesel UST are maintained onsite. A FDEP Storage Tank Facility Annual Compliance Site Inspection Report dated July 2021 reported the facility as in-compliance. No additional information was available on file to the date of this report.

Based on the current operations as a gasoline station, distance to the project corridor, historical documentation of contamination and potential for dewatering activities, this facility has been assigned a **Medium** risk rating for the preferred alternative.

### Site 10

Mobil #03 (formerly Texaco #021-313-FISK's)

1090 W Hallandale Beach Blvd

Hallandale Beach, Florida

FDEP Facility ID: 8502027; County Facility ID: 09693

This facility is located adjacent to and east of I-95 and adjacent to the north side of W Hallandale Beach Boulevard. The site was acquired by FDOT circa 1994 for a prior I-95 expansion project, with plans to demolish the gasoline station and construct a stormwater detention pond. The site formerly operated one 8,000-gallon, three (3) 4,000-gallon and one 3,000-gallon gasoline USTs removed circa 1987. A DRF was filed November 1988 in response to evidence of petroleum contamination discovered during manual testing of the monitoring wells. Subsequently, an EDI application was submitted and the site was approved for state-funded cleanup. Remediation efforts included the submission of a CAR, soil excavation, limited groundwater pumping and implementation of a MOP. The

CAR was completed in efforts to identify the horizontal and vertical extent of petroleum hydrocarbons in soil and groundwater. The CAR concluded the petroleum plume had migrated offsite to the east and south but, had not impacted those properties based on groundwater monitoring results. Additionally, the vertical extent of the petroleum plume was determine to be less than 28 feet with groundwater flow to the northeast. Approximately 2,370 tons of soil was subsequently removed from the site and a groundwater treatment pump was installed with additional monitoring wells to monitor the effluent. An NFA status was granted to the facility in June 1996. No additional information was available for review. A swale was constructed at this site circa 1997. The site has remained a swale.

Based on the NFA status issued for the November 1988 discharge, current regulatory status and current use of the property as a swale, this site has been assigned a **No** risk rating for the preferred alternative.

### Site 11

FL Department of Transportation  
Highway 858 & I-95  
Hallandale Beach, Florida  
FDEP Facility ID: 9102665

This site is located in the median of W Hallandale Beach Boulevard. Based on the Memorandum dated July 1991, the facility ID was created in anticipation of reimbursement of project costs for Federal Aid Project No. IR-958-1(372)18. No additional documentation was available for review.

Based on the current regulatory status and absence of documentation of contamination, this site has been assigned a **No** risk rating for the preferred alternative.

### Site 12

Exxon (formerly Shell, Hallandale Beach Club, Five Brothers)  
1080 W Hallandale Beach Boulevard  
Hallandale Beach, Florida  
FDEP Facility ID: 8502695; County Facility ID: 04662

This site is located east of I-95 and north of W Hallandale Beach Boulevard, adjacent to the project corridor with the tank area less than 50 feet north of the existing ROW. Two historical DRFs have been filed for this facility in May 1986 and December 2004. The 1986 DRF was filed in response to a fuel dispenser leak. The facility was approved for state-funded cleanup under the EDI Program in April 1988. A RAP proposing installation of a pump and treat system and soil vapor extraction system with an air stripper was approved by FDEP in 1991. A SRCR was proposed June 1997 and approved by FDEP in November 1997.

The second DRF was filed December 2004 in response to a release of 610-gallons of diesel fuel during a product delivery. A PCAR and NFA was submitted in December 2005. A SRCO was issued by the FDEP in August 2006. A FDEP Storage Tank Facility Annual Compliance Site Inspection Report dated May 2020 lists this facility in compliance. One 3,000-gallon vehicular diesel, one 12,000-gallon gasoline, a 9,000-gallon gasoline USTs are present at the site. No additional information was readily available for review

The property is proposed for ROW acquisition. Based on the current operations as a gasoline station, the proposed ROW acquisition, distance to the project corridor, documentation of historical contamination and the potential for dewatering activities, this site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 13

HB 1000-18 LLC (formerly Shell, Fina, Citgo, 7-11)  
1021 W Hallandale Beach Boulevard  
Hallandale Beach, Florida  
FDEP Facility ID: 8501728; County Facility ID: 04094

This site is located adjacent to the south side of W Hallandale Beach Boulevard and 830 feet east of I-95, and is presently a strip mall. The site was a former gasoline station from 1979 through circa 2011. Two DRFs were submitted in February 1987 and February 2000. The February 1987 Discharge Notification Form (DNF) was filed in response to evidence of petroleum impacts detected during groundwater analysis. An Early Detection Incentive (EDI) application was submitted and approved July 1987. A RAP proposing a pump and treat system was approved April 1990. Remediation discontinued due to the site's low score.

During the February 2000 removal and replacement of three USTs, the contents of one UST was released into the excavated area. A Supplemental Site Assessment and Limited Tank Closure Assessment Report (TCAR) was submitted in December 2010, identifying contamination in soil and groundwater. A February 2011 Limited Groundwater Assessment Report noted temporary petroleum impacts to groundwater above the FDEP GCTLs, and recommended NAM. The March 2018 NAM Report identified groundwater flow direction to the northeast (toward the project corridor) and identified cumene (isopropylbenzene) in groundwater above FDEP GCTLs. The March 2018 NAM Report recommended further NAM monitoring, however, upon further review, the FDEP issued a purchase order to transition the site to remedial action. A Level I RAP was submitted in October 2018 recommending biosparging with bioaugmentation system technology to address the groundwater impacts at the site. The RAP was approved in June 2019 and a purchase order for the construction and operation of the RAP was issued. A Field Inspection Summary Form dated December 2020 documents the beginning stages of the remedial system installation. A Task 2-Remedial Action Startup Report dated July 30, 2021, documented baseline groundwater sampling results from September 2020. Cumene was reported above the GCTLs in monitoring wells MW-20, MW-24 and MW-27. No additional information was readily available for review.

Based on the lack of closure for the February 1987 and 2000 discharges, documented groundwater flow in the northeast direction towards the Hallandale Beach Boulevard ROW potential for dewatering activities and proximity to the project corridor, this site has been assigned a **High** risk rating for the preferred alternative.

#### Site 14

Hallandale Beach U-Gas (formerly known as BP Amoco)

999 W Hallandale Beach Boulevard

Hallandale Beach, FL

FDEP Facility ID: 8502072; County Facility ID: 04111

This site is located on the south side of W Hallandale Beach Boulevard and east of I-95, with the tank area approximately 115 feet south of the existing Hallandale Beach Boulevard ROW. The site currently has three (3) active 10,000-gallon unleaded gasoline USTs that were installed in 1984. One 10,000-gallon UST has been closed in place. A DRF was submitted in October 1987 and November 1990.

A June 2018 SAR identified soil contamination above FDEP SCTLs and groundwater contamination above FDEP GCTLs, recommending remedial action followed by NAM. The March 2020 NAM Report identified groundwater flow direction to the southeast along the northern portion of the site, away from the project corridor. The soil contamination consists of elevated OVA readings within 20 feet of project corridor and petroleum contamination within 100 feet of the project corridor. The groundwater impacts appear to be delineated within the property limits according to the March 2020 NAM report. A June 2021 NAM Report identified exceedances in monitoring wells MW-8, MW-15, MW-16, MW-C, and MW-E. Quarterly groundwater monitoring is ongoing. No additional information was readily available for review.

Based on the current gasoline station operations, documented petroleum contamination in soil and groundwater and distance from the project corridor, this site has been assigned a **High** risk rating for the preferred alternative.

### Site 15

Hallandale Auto Care  
99 SW 10<sup>th</sup> Avenue  
Hallandale Beach, Florida  
County Facility ID: 02498

This site is located approximately 200 feet south of Hallandale Beach Boulevard, within Zone 3 of the City of Hallandale Beach Wellfield Zone. This facility currently provides automotive repair services and maintains a current Broward County Hazardous Material License. Hazardous wastes generated onsite include petroleum products, solvents, coolant, batteries, rags and fluorescent bulbs. A June 2018 Hazardous Material Inspection lists the facility as in compliance with Broward County *Chapter 27 Articles X (Storage Tanks), XII (Hazardous Material) and XIII (Wellfield Protection Zones)*. No additional information was readily available for review.

Based on the absence of reported contamination, compliance status and estimated groundwater flow towards the southeast, within the wellfield cone of influence, the site has been assigned a **Low** risk rating for the preferred alternative.

### Site 16

Harbour Cove Associates (Brownfield Site)  
100 Northwest 9<sup>th</sup> Terrace  
Hallandale Beach, FL  
FDEP Facility IDs: BF060401001 / ERIC\_6725

This site is 150 feet north of Hallandale Beach Boulevard and approximately 1,000 feet east of I-95. The location is an EPA Brownfield site with completed rehabilitation and redevelopment as a multi-family residential apartment complex. Historically, the property was once used as a 4-acre, 400-foot deep borrow pit at a lake fill site. From 1967 through 1985, the site was occupied by an auto parts manufacturer. In February 2004, free petroleum product was identified in excavation test pits. Site assessment and monitoring activities were completed, soil and groundwater contamination was delineated and Alternative CTLs were established for the site. Fifty one (51) tons of soil was excavated from the site. The property implemented institutional and engineering controls to restrict groundwater use at the property and address the remaining soil contamination. A SRCO with the above-mentioned conditions was issued in May 2009. No additional information was readily available for review.

Based on the distance from the corridor's terminus on Hallandale Beach Boulevard (beyond 500 feet), the site has been assigned a **Low** risk rating for the preferred alternative.

### Site 17

Ansin Boulevard Dump (formerly known as Recycling Center of Florida)  
310 Ansin Boulevard  
Hallandale Beach, Florida  
FDEP Facility ID: 53352

This site is located north of Hallandale Beach Boulevard, approximately 400 feet east of I-95. A 1988 groundwater sample result did not detect contaminants above FDEP GCTLs. However, in 2006, the FDEP issued an offsite notice for soil or groundwater contamination found on the property, due to migration from the former Hallandale Switch Facility (Site 23). No additional information was readily available for review. The site is currently closed and appears as a truck yard. A pedestrian/windshield survey was conducted and did not observe any visual

environmental concerns or recycling activities outside the facility during August and November 2020 field reviews.

A dry retention pond is proposed for construction approximately 200 feet west of this facility. Based on the offsite notice issued by the FDEP, proposed excavation activities and potential dewatering in the vicinity, this site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 18

Wedgewood Holdings, Inc.  
400 Ansin Boulevard,  
Hallandale Beach, FL  
FDEP Facility ID: 9802375

This site is located approximately 250 feet east of I-95, along Ansin Boulevard. A TCAR dated January 2000 documents the removal of a 4,000-gallon gasoline UST. No evidence of soil or groundwater contamination was noted during tank removal activities. No additional information was available during the desktop review. This facility is currently closed.

Based on the absence of documented contamination, distance and current regulatory status, this site has been assigned a **No** risk rating for the preferred alternative.

### Site 19

Messingschlager Properties (formerly Richard Danvers Auto Shop)  
2514 SW 30<sup>th</sup> Avenue  
Hallandale Beach, Florida  
FDEP Facility ID: 9401806

This site is located approximately 160 feet west of I-95. The site was formerly occupied by Richard Danvers Auto Shop, and maintained a 500-gallon UST. A DRF was submitted September 1994 in response to gasoline impacted groundwater during monitoring well installation, sampling and analysis following the removal of 500-gallon gasoline UST. In February 1996, the site became eligible for state-funded cleanup under the Abandoned Tank Restoration Program (ATRP). Subsequently, a SAR and NAM Plan was submitted and approved in 2002. After three quarters of NAM, a SRCO was granted for the 1994 discharge.

Based on the June 2005 SRCO confirming the addressed discharge, distance and current regulatory status, this site has been assigned a **Low** risk rating for the preferred alternative.

### Site 20

95 Warehouse LTD  
2401 SW 31<sup>st</sup> Avenue  
Hallandale Beach, Florida  
FDEP Facility ID: 894265; County Facility ID: 06862

This site is located approximately 350 feet west of I-95. A DRF was submitted in December 1988 with eligibility for state-funded cleanup under the EDI Program. A CAR dated March 2001, was submitted with recommendations for development of a RAP. The RAP proposed implementation of an air sparging and soil vapor extraction system. The system was operated for three years followed by post Remedial Action Quarterly Monitoring. The facility was granted an SRCO November 2010.

Based on the closure of the historical discharge and current regulatory status, this site has been assigned a **Low** risk rating for the preferred alternative.

### Site 21

Gallo Marble Enterprises (currently Countertops of Broward)  
500 Ansin Boulevard  
Hallandale Beach, Florida  
FDEP Facility ID: 8627989

This site is located approximately 120 feet east of I-95. A DRF was submitted December 1991 due to soil contamination discovered during the removal of a 2,000-gallon gasoline UST. A SRCO was issued for the 1991 petroleum discharge. In 2004, Phase I and Phase II Environmental Site Assessments (ESAs) conducted for this facility detected ammonia in groundwater, above the FDEP GCTLs. The ESA Reports were submitted to the Broward County Environmental Protection Department (BCEPD). The BCEPD requested additional assessment in June 2005. A September 2005 Groundwater Sampling Report was submitted to the BCEPD, documenting ammonia concentrations in groundwater above FDEP GCTLs. Previous assessments did not detect a point source for ammonia. The site is

suspected of being impacted by ammonia plume migrating from the former Hallandale Switch Facility (Site 23). A Declaration of Restrictive Covenant ((DRC)) restricting groundwater use at the site was recorded in February 2012. A DRC Inspection conducted in September 2020 lists the facility as in compliance with the DRC, and documented no groundwater use at this site. This site is currently occupied by Countertops of Broward.

Based on the concentrations of ammonia detected above the FDEP GCTLs, distance from the project corridor, and potential dewatering activities, this site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 22

Hallandale Beach Dump  
700 NW 7<sup>th</sup> Street  
Hallandale Beach, Florida  
FDEP Facility ID: 99353

This site is located approximately 890-feet east of the project corridor and is presently occupied by a field within Hallandale High School. The facility is listed in the Broward County Abandoned Dump Inventory. No readily available records were available for review. A Freedom of Information Act (FOIA) request was submitted to the BCEGPMD Environmental Engineering and Permitting Division to obtain additional information in December 2020 (see **Appendix C**). Available reports were given for CECOS' review.

According to a report dated June 1992 by the Broward County Office of Natural Resource Protection (DNRP), this facility was approximately five (5) acres in size with trash burning activities. Complaints were reported by neighboring properties due to fumes caused by burning and occasional fires that would start at the dump. Recommendations were made in the report to cover the trash with six inches of material and to continue using it as a trash dump. The FDEP Solid Waste Inventory lists the facility's status as NFA. In 2006, the FDEP issued an offsite notice for soil or groundwater ammonia contamination found on the property, due to migration from the former Hallandale Switch Facility (Site 23).

Based on the distance of potential ammonia contamination in groundwater from an offsite source to the project corridor and potential for dewatering activities this site has been assigned a **Low** risk rating for the preferred alternative.

### Site 23

Imperial Marine Equipment (formerly known as Hallandale Switch Facility)  
600 Ansin Boulevard  
Hallandale Beach, Florida  
FDEP Facility ID: 9700906; County Facility ID: 09924

The site is located approximately 60 feet east of I-95. A TCAR dated June 1997 was submitted to document the removal of a 1,000-gallon UST of unknown prior usage, discovered during a Phase I ESA. No contamination was documented during the removal of the UST and the site was issued a NFA for the UST closure.

The site historically operated as Hallandale Switch Facility, a transfer station. A desktop review conducted on Broward County Contaminated Locations Database, revealed ammonia contamination onsite. A DRC was recorded with the BCEPGMD in July 2010 restricting groundwater use onsite. A DRC Inspection conducted in July 2019 lists the facility as in compliance with the DRC and documented no groundwater use at this site. This site is currently occupied by Park Shore Pharmacy, according to the Inspection Report. However, the facility was not found during the pedestrian/windshield survey. Additionally, the FDOH was contacted on December 16<sup>th</sup> and December 29<sup>th</sup>, 2020 and again on January 5, 2021 to obtain additional information regarding results of potable well surveys performed at the former Hallandale Switch Facility and nearby properties with ammonia contamination. No response has been received.

Based on regulatory review, the FDEP issued offsite notices to surrounding properties (Sites 17, 21 and 22) after potable well surveys were conducted in the vicinity, informing of ammonia contamination in groundwater migrating from the site. However, no additional files were readily available for review online.

Based on the issued offsite notices to nearby facilities, reporting ammonia impacts to groundwater above the FDEP GCTLs, the migration of the contaminating plume offsite and distance to the project corridor, the site has been assigned a **High** risk rating for the preferred alternative.

**Site 24**

Hallandale Beach I-95 Pump Station  
2001 SW 30<sup>th</sup> Avenue  
Pembroke Park, Florida  
FDEP Facility ID: 9809512

This site is located adjacent to the west side of I-95 between Hallandale Beach Boulevard and Pembroke Road. The facility has a registered 5,000-gallon diesel UST to fuel a generator. No notices of noncompliance or violations have been issued for this site. No additional information was readily available for review.

Due to the current regulatory status and absence of documented contamination, this site has been assigned a **Low** risk rating for the preferred alternative.

**Site 25**

BW Recycling  
2035 SW 31<sup>st</sup> Avenue,  
Pembroke Park, Florida  
Facility ID: N/A

This site is located approximately 1000 feet south of Pembroke Road, approximately 400 feet west of I-95 and just west of the CSX railroad tracks. The site is a recycling center and not in a FDEP Cleanup Program. No permits or registered storage tank information were recorded for this facility. A pedestrian/windshield survey was conducted and did not observe any visual environmental concerns or recycling activities outside the facility during August and November 2020 field reviews.

Based on the absence of reported contamination and field survey noting no visual concern, the site has been assigned a **Low** risk rating for the preferred alternative.

**Site 26**

James Lanier Education Center  
1050 NW 7<sup>th</sup> Court  
Hallandale Beach, Florida  
FDEP Facility ID: 9100221; County Facility ID: 07879

This site is located adjacent east of I-95. A DRF was submitted in May 2007 due to the discovery petroleum impacts to soil and groundwater during the removal of a 2,500-gallon heating oil tank. Remediation efforts were completed through the excavation of 14.77 tons of contaminated soil. Subsequently, a SAR/NFAP was submitted and approved in 2008. A SRCO was issued for the discharge July 2008.

Based on the SRCO issued for the 2007 discharge, distance from the project and current regulatory status, the site has been assigned a **Low** risk rating for the preferred alternative.

### Site 27

Orkin Extermination Company  
1820 SW 30<sup>th</sup> Avenue  
Hallandale Beach, Florida  
FDEP Facility ID: 8502427; County Facility ID: 01149

This site is located 70 feet west of I-95 and is occupied by pest control services. Two 4,000-gallon gasoline USTs were removed from the site in May 1987. The facility maintains a Broward County Hazardous Material License for pesticides and fluorescent light bulbs. According to the Broward County ENVIROS database, the facility is on septic. No notices of noncompliance or violations have been issued for this site. No additional information was readily available for review.

Due to the current regulatory status and absence of a reported discharge, this site has been assigned a **Low** risk rating for the preferred alternative.

### Site 28

Flowers Baking Company  
3262 Pembroke Road  
Pembroke Park, Florida  
FDEP Facility ID: 8622371

This site is located adjacent south of Pembroke Road and is a known petroleum contaminated site. A July 2015 Template SAR reported a DRF was filed for this site in February 1988, due to a release from a 2,000-gallon UST; which has since been removed. The TSAR also reported 2014 groundwater samples detected benzene above FDEP GCTLs and soil sample results above FDEP SCTLs. The groundwater flow was reported to be to the north, east and south (toward the Pembroke Road

project corridor). An air sparging and soil vapor extraction remediation system was installed at the site in 2018 and operated from July 2018 until May 2019. Post Active Remediation Monitoring (PARM) was conducted with quarterly groundwater sampling following the remediation. After four quarterly events, groundwater concentrations were still reported above GCTLs at the site. March 2020 PARM Year 1, Quarter 4 results detected naphthalene in MW-03 at 229 micrograms per Liter ( $\mu\text{g/L}$ , above the GTCL of 14  $\mu\text{g/L}$  and above the Natural Attenuation Default Source Concentrations (NADC) of 140  $\mu\text{g/L}$ , as specified in Table V of Chapter 62-777, FAC. The March 2020 PARM Year 1, Quarter 4 review letter indicates that additional evaluation of the site is necessary to determine the source of post-remediation rebound of concentrations. A RAP medication was approved on November 18, 2020. Based on the November 2020 pedestrian survey, the site currently operates as a community center, but the building is not publicly owned.

Based on the March 2020 laboratory analytical data reporting the exceedance of naphthalene in groundwater, in exceedance of the FDEP GCTL and NADC, pending remediation status and distance to ROW and potential for dewatering activities, this site has been assigned a **High** risk rating for the preferred alternative.

### Site 29

Giant #177 (currently Mobil)

3250 Pembroke Road

Pembroke Park, FL

FDEP Facility ID: 9803165; County Facility ID: 03546

The site is located 1500 feet west of I-95 on the south side of Pembroke Road, with the tank area approximately 115 feet south of the project corridor. This facility is currently occupied by a Mobil gasoline station. The site maintains two (2) 10,000-gallon gasoline and one vehicular diesel USTs. A FDEP Storage Tank Facility Annual Compliance Site Inspection Report dated September 2019 and subsequent Return to Compliance Letter dated November 2019 indicated system was in-compliance. No additional information was readily available for review.

Based on the current gasoline station operations, regulatory status, distance to ROW and potential for dewatering activities, this site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 30

Broward Roofing Supply  
1751 South Park Road  
Hallandale Beach, FL  
FDEP Facility ID: 8627995

This site is located 1,260 feet west of I-95, approximately 300 feet south of Pembroke Road. One 2,000-gallon gasoline UST was removed from the site. An April 1988 Pollutant Storage Tank System Inspection Report Form listed the UST as removed with no trace odors noted at the site. According to the Inspection form, no follow up was required. No additional information was available during the file review.

Based on the current regulatory status and absence of a reported discharge, this site has been assigned a **No** risk rating for the preferred alternative.

### Site 31

Petroleum Products Corporation (Superfund Site)  
3130 SW 19<sup>th</sup> Street,  
Pembroke Park, FL  
FDEP Facility ID: 8732818

This Superfund site is located adjacent to the south side of Pembroke Road and approximately 850 feet west of I-95. This facility operated from approximately 1958 to 1971 as a processor and broker of waste oil and other petroleum derived products. Twenty-two (22) bulk storage ASTs were maintained at the site. A sulfuric acid-clay refining process was used to reprocess waste oil. This process generated sludge waste and spent clay, contaminated with petroleum products and metals, which were disposed in unlined pits. Additionally, waste containing PCBs and chlorinated solvents were received by the facility. Between 1970 and 1971, Petroleum Products Corporation (PPC) backfilled the pits and sold most of the site, and reportedly spread the contamination to adjacent areas.

PPC operations were restricted to the southeast corner of the site in 1971, and reportedly functioned as a storage/distribution facility until complete deactivation in 1985. In 1985, approximately 262 drums of sludge and 7,000-gallons of oil were removed from the site. The site was investigated in 1989 and subsequently, a bioslurping unit was installed and operated from 1990 until 2012.

The bioslurping unit recovered approximately 43,000 gallons of petroleum product. Recovery efforts continued through sludge removal. A 2019 Feasibility Study (FS) identified soil and groundwater analytical data comprised of VOCs, Semi-VOCs, PCBs and metals above FDEP SCTLs and GCTLs. On July 15, 2019, the site was added to the EPA Emphasis List of Superfund Sites Targeted for Immediate, Intense Action.

On May 8, 2018, a teleconference was conducted with EPA, FDEP, FDOT representatives and contractors to provide an overview of the PD&E process, proposed roadway improvements and the potential effects on the PPC site. EPA identified approximate soil contamination boundaries and discussed proposed cleanup methods (see **Appendix C** for the meeting summary).

On January 19, 2021, a community meeting was held by the EPA, to address the proposed plan for the site. The plan proposes relocation of tenants prior to building demolition, excavation of offsite contaminated soil at the Bamboo Trailer Park (located adjacent and south of PPC), shallow excavation under buildings, installation of a groundwater recovery and treatment system and the implementation of institutional controls to restrict groundwater usage until restoration of the Biscayne aquifer is achieved. The proposed plan was available for public comment until February 12, 2021. The EPA will issue a Record of Decision (ROD) for the proposed alternative during the fiscal year of 2021. Remediation activities are expected to begin 18 – 24 months after the ROD is signed.

The community meeting noted the facility location within 100 feet from the cone of influence for the City of Hallandale Wellfield. Sludge has been detected as deep as 24 feet below ground surface. The petroleum, PCB and chlorinated solvents impacts have extended offsite in groundwater as north as Pembroke Road and south/southeast towards the Bamboo Trailer Park. Sludge and free product binds to soils and as a result, leaches to the groundwater, causing the quality of the Biscayne aquifer to be affected. Currently, no nearby wellfields have been affected by the site.

Proposed construction on Pembroke Road may include dewatering activities. Based on the documented ongoing presence of soil and groundwater contamination above FDEP GCTLs, distance to the project corridor and potential for dewatering activities the site has been assigned a **High** risk rating for the preferred alternative.

### Site 32

A&B Recycling  
1708 SW 31<sup>st</sup> Avenue  
Pembroke Park, Florida  
County Facility ID: 03206

This site is located adjacent to Pembroke Road and approximately 750 feet west of I-95. This facility maintains a Hazardous Materials License for operations as a scrap metal yard with battery recycling. Mismanaged and cluttered materials were observed during site reconnaissance.

Based on the visual concerns identified, limited records available for review and potential for excavation or dewatering activities in the vicinity the site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 33

Waste Connections – Pembroke Park Transfer Station (formerly known as Choice Recycling Services of Broward; Pembroke Park Recycling and Transfer)  
1899 SW 31<sup>st</sup> Avenue  
Pembroke Park, Florida  
FDEP Facility ID: 55464 / 105719; County Facility ID: 00014

This site is located approximately 700 feet south of Pembroke Road and approximately 700 feet west of I-95. The site is an operational waste transfer station. A 2009 FDEP Annual Report for a Construction and Demolition Debris Facility identified materials processed to include concrete, wood, land clearing debris, paper, metals and textiles. The 2019 Annual Report submitted for the facility indicates that no waste materials were recycled or processed at the facility in 2019. A May 2020 FDEP inspection commented the facility was in-compliance.

Due to the absence of a documented contamination, distance of 700 feet from the project corridor and a FDEP inspection listing the facility as in-compliance, the site has been assigned a **Low** risk rating for the preferred alternative.

### Site 34

All Weather Control, Inc.  
2001 SW 30<sup>th</sup> Avenue  
Pembroke Park, Florida  
Facility ID: N/A

This site is located adjacent to the west side of I-95. The facility had a registered 2,200-gallon UST, removed in 1974. No additional information such as a TCAR or formal UST closure document was available for review.

Based on the current regulatory status and absence of documented contamination, this site has been assigned a **Low** risk rating for the preferred alternative.

### Site 35

Kosher Motors (Formerly Stevens Auto Service Center)  
2829 Pembroke Road  
Hollywood, Florida  
FDEP Facility ID: 9500022; County Facility ID: 01535

This site is located on the north side of Pembroke Road and approximately 450 feet east of I-95. The location was formerly called Stevens Auto Service Center with documented discharges reported. Historically, the site operated as a gasoline service station with underground gasoline and waste oil tanks, which were removed in 1984. Contamination was documented at the site in 1984 during UST removal activities and a discharge was also reported at the site for the waste oil tank in 1994. The site was assessed in 2008 and contaminated soil was removed under state-funded programs in 2011. Following the source removal, the site was transitioned to NAM for three years and two quarters and received a SRCO in January 2015. The facility currently maintains a Hazardous Material License for auto repair services, handling petroleum products, batteries and fluorescent light bulbs.

The property is proposed for ROW acquisition. Construction related activities in the vicinity of the site may include excavation and dewatering. Based on the distance to Pembroke Road ROW, the potential for ROW acquisition of the property and potential for excavation and dewatering activities the site has been assigned a **Medium** risk rating for preferred alternative.

### Site 36

Family Tire Distributors  
2817 Pembroke Road  
Hollywood, Florida  
County Facility ID: 15361

The site is located adjacent on the north side of Pembroke Road and is approximately 600 feet east of I-95. The facility currently maintains a Hazardous Material License for auto repair services, handling petroleum products, batteries and fluorescent light bulbs. No additional documentation was available regarding the history of the site. During the pedestrian/windshield survey, the site appeared to be cluttered with visual evidence of staining on the pavement.

The property is proposed for ROW acquisition. Construction related activities in the vicinity of the site may include excavation and dewatering. Based on the potential for ROW acquisition for this property, distance to Pembroke Road ROW, potential construction related activities and absence of historical documentation the site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 37

Italian Hoagie (formerly known as Texaco station)  
1051 W Pembroke Road  
Pembroke Park, Florida  
FDEP Facility ID: 8732177; County Facility ID: 04369

The site is located adjacent to the south side of Pembroke Road, approximately 250 feet east of the project limit on Pembroke Road. This facility was formerly leased by Texaco as a gasoline station. The site had two (2) 7,500-gal gasoline USTs. A letter from Texaco dated May 1986 noted that it is unknown whether the tanks were removed after operations ceased in January 1974.

Construction related activities in the vicinity of the site may include excavation and dewatering. Based on the potential of USTs having been abandoned in place and potential construction related activities, this site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 38

Shell (formerly known as First Coast Energy #3828)  
2801 Pembroke Road  
Pembroke Park, Florida  
FDEP Facility ID: 8502153

This site is located on the north side of Pembroke Road, with the tank area approximately 35 feet north of Pembroke Road and approximately 900 feet east of I-95. A DRF was submitted in July 1998 after petroleum was observed in an excavation during UST replacements. The 1999 SAR indicated that GCTLs were exceeded, and a NAM was recommended. The fourth quarter of NAM (November 2016) recommended NFA and requested a SRCO be issued. A SRCO was issued by FDEP in March 2017. A FDEP Storage Tank Facility Annual Compliance Site Inspection Report dated January 2020 indicated system was in-compliance.

Construction related activities in the vicinity of the site may include excavation and dewatering. Based on the current gas station operations and potential construction related activities, this site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 39

Orion Gas  
1011 NW 8<sup>th</sup> Avenue,  
Hallandale Beach, Florida  
FDEP Facility ID: 9807438

This site is located approximately 300 feet east of the project limit on Pembroke Road. The tank area is approximately 75 feet south of Pembroke Road. No contamination documents were available during the regulatory database review. No oil/petroleum or HAZMAT storage concerns was observed during a site visit. A FDEP Storage Tank Facility Annual Compliance Site Inspection Report dated January 2020 indicated system was in-compliance.

Based on the current gas station operations, absence of documentation and distance to the project corridor, this site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 40

Orangebrook Country Club  
4000 Entrada Street  
Hollywood, Florida  
FDEP Facility ID: 8944879; County Facility ID: 01360

This site is located adjacent to the west side of I-95 between Pembroke Road and Hollywood Boulevard and is presently a public golf course. Based on the historical aerial review, the site has operated as a golf course as early as the 1950s. The facility had two (2) registered 1,000-gallon USTs, removed in September 1989 and currently uses one 500-gallon vehicular diesel UST. The facility maintains a Hazardous Material License for the handling of petroleum products, solvents, batteries, rags, antifreeze and fluorescent bulbs. Arsenical herbicides and pesticides were commonly used in the 1950s for agricultural use. This potential application to turf grass may present a potential risk to soils and groundwater. However, no documented arsenic contamination was observed during the file review.

Based on the distance to the project corridor, no ROW acquisition, potential historical application of arsenical pesticides and herbicides, and proposed construction activities, this site has been assigned a **Low** risk rating for the preferred alternative.

### Site 41

I-95 Express Lanes – Toll Equipment Building #2  
500 BLK I-95, #MM2.23  
Pembroke Park, FL  
FDEP Facility ID: 9813994

This site is located adjacent to the east side of I-95. The facility maintains a Broward County Hazardous Material License for a 500-gallon diesel day tank for an emergency generator. No additional information was readily available for review.

Based on the current regulatory status and absence of documented contamination, this site has been assigned a **No** risk rating for the preferred alternative.

### Site 42

Mobil (currently a vacant lot) (formerly known as Chevron)  
2911 Hollywood Boulevard  
Hollywood, Florida  
FDEP Facility ID: 8502126; County Facility ID: 09656

This site is located approximately 150 feet east of I-95 on the north side of Hollywood Boulevard, and is presently a vacant lot owned by FDOT. A DRF was submitted in July 1988 and an SRCO issued in September 1992. During tank removal, a DRF was submitted February 1995. The 1995 CAR indicated that a groundwater sample results exceeded GCTLs for benzene and soil samples exceeded FDEP SCTLs for lead. The site was assigned a score of 30 during a scoring review on November 2012 under the EDI program. Based on a review of historic aerials, the gasoline station was demolished between 1995 and 1999. During the pedestrian/windshield survey, the site appeared to be vacant with fencing around the site boundary. No further information was available for review.

A dry detention pond is proposed for construction on site. Pond construction may include excavation and dewatering activities. Based on the open 1995 discharge, the absence of recent documentation and proposed pond construction, this site has been assigned a **High** risk rating for the preferred alternative.

### Site 43

Davo Auto Center (currently U-Haul)  
2828 Hollywood Blvd  
Hollywood, Florida  
FDEP Facility ID: 8502583

This site is located adjacent to the south side of Hollywood Boulevard and approximately 700 feet east of I-95. The facility was constructed circa 1956 and maintained one 4,000-gallon, one 6,000-gallon and one 10,000 gasoline UST from 1975 to 1990; and two 10,000-gallon and one 10,000-gallon diesel UST from 1981 to 1990. Petroleum hydrocarbons were detected during monitoring in close proximity to the USTs. The facility was admitted for state-funded cleanup under the Abandoned Tank Restoration Program (ATRP). Assessment activities has been ongoing, with delays due to available funding. A Template SAR dated January 2018 documented the groundwater contaminant plume extending to the

northern boundary of the site, with recommendations for remediation. A RAP was submitted for the site in May 2019 and approved in August 2019. A subsequent Pilot Study was performed to test the efficiency of an air sparging and soil vapor extractions system. An FDEP Field Inspection Report dated April 2020 indicated the site has U-Haul and vehicle storage with no fuel dispensing operation. The reports noted vehicles in the back of the lot that would need to be removed prior to installation of the remedial system. In September 2020, an Agency Term Contractor (ATC) was selected to conduct remediation activities. Remedial activities are pending for the facility. During the pedestrian/windshield survey, U-Haul trucks were observed in the front of the property. Additional vehicles were observed in a fenced lot behind the trucks. No maintenance activities were observed at the time of the field review.

Construction activities proposed in the vicinity of the site may include excavation and dewatering. Based on documented groundwater impacts, pending remediation activities, distance to project and proposed construction activities, the site has been assigned a **High** risk rating for the preferred alternative.

#### Site 44

Goodyear Auto Service  
2825 Hollywood Blvd,  
Hollywood, Florida  
FDEP Facility ID: FLD981758634

This site is located approximately 625 feet east of I-95 and adjacent to the north side of Hollywood Boulevard and operates as an auto repair shop. No documentation is available regarding the history of the site. The facility appeared to be well maintained during the field survey, with FDEP permitted oil/HAZMAT storage and use, but no significant environmental concerns were noted. No documentation was recovered to indicate contamination history.

Based on the distance to the project corridor and absence of historical documentation, this site has been assigned a **Low** risk rating for the preferred alternative.

### Site 45

Mike's Great Bear Auto  
2804 Hollywood Blvd  
Hollywood, Florida  
Facility ID: N/A

This site is located approximately 875 feet east of I-95 and adjacent to the south side of Hollywood Boulevard. The facility currently maintains a Hazardous Material License for auto repair services, handling petroleum products, batteries and fluorescent light bulbs. No notices of noncompliance or violations have been issued for this site.

Based on the current regulatory status and distance to the project, the site has been assigned a **Low** risk rating for the preferred alternative.

### Site 46

Shell-First Coast Energy #3829 (formerly known as Equiva)  
2800 Hollywood Boulevard  
Hollywood, Florida  
FDEP Facility ID: 8502526

This site is located adjacent to the south side of Hollywood Boulevard, with tanks approximately 125 feet south of Hollywood Boulevard, 600 feet outside the project limits. The facility currently operates as a gasoline station. A DRF was submitted in April 1986 in response to a release of approximately 8,000 gallons and was accepted into the EDI program. A groundwater remedial system was installed and operated in 1986 and a soil remedial system was installed in 1992. A DRF was submitted in September 1993 in response to unleaded gas in a monitoring well (MW-6) and accepted into the PLRIP, a remedial system was operated from 1999 to 2000. A DRF was filed in July 2008 in response to groundwater contamination in wells which was not eligible for FDEP funding. An October 2008 LCAR detailed groundwater sample results above FDEP GCTLs and soil sample results above FDEP SCTLs. Confirmatory soil sampling was completed in 2016 and soil samples were reported below SCTLs. A NAM was initiated in 2016 and was completed in February 2020, following two consecutive quarters of groundwater samples reported below GCTLs. The 2019 NAM results confirmed groundwater contamination below FDEP GCTLs and the NFA proposal was approved in February 2020. All monitoring wells and remediation system components were

properly abandoned in May 2020 and the report was approved in July 2020. A SRCO was issued for the since in August 2020. A FDEP Compliance Inspection Form dated January 2020 indicates that the facility is in-compliance.

Construction activities are not proposed in proximity to this site. Based on the distance from the project corridor and no proposed subsurface activities in proximity to the facility, a SRCO indicating historic contamination has been addressed and current gasoline station operations, the site has been assigned a **Medium** risk rating for the preferred alternative.

#### Site 47

World's Best Cleaners  
2654 Hollywood Boulevard  
Hollywood, Florida  
FDEP Facility ID: 9500235

This site is located adjacent to the south side of Hollywood Boulevard and 1,610 feet east of I-95, outside the project limits. FDEP issued a Consent Order to the Tailor Dry Cleaners at the 2654 address number. No record of contamination within FDEP and Broward County on-line data bases was found. An on-site field investigation observed a maintained building with no significant environmental concerns noted, although a utility room in the rear had protruding vents and pipes. No other updated supporting documentation is available at this time.

Construction activities are not proposed in proximity to this site. Based on the distance from the project corridor and no proposed subsurface activities in proximity to the facility, this site has been assigned a **Low** risk rating for the preferred alternative.

#### Site 48

Sunshine #165 (formerly known as Amoco and Marathon Johnson Street)  
3034 Johnson Street  
Hallandale Beach, Florida  
FDEP Facility ID: 8502207

The site is adjacent to the south side of Johnson Street and approximately 400 feet west of I-95. The location is an active retail gasoline station with two (2) 10,000-gallon ethanol USTs, one 10,000-gallon gasoline UST and a 550-gallon waste oil

UST. In 1989, contaminated soils were encountered during tank replacement activities. Subsequently, 1,191 tons of excessively contaminated soils were removed and disposed offsite. In 1990, the site received eligibility for state-funded cleanup under the EDI program, with an assigned score of 75. In 1991, a RAP proposing groundwater pump and treat was prepared and approved by Broward County. However, due to the changes in the petroleum cleanup program, the RAP was not implemented. In 2001, the site was proposed for NAM for one year. In subsequent years, a SAR was completed to delineate the horizontal and vertical extent of petroleum contamination at the site. A RAP addendum was proposed in 2009 and 2010, to perform in-situ air sparging with soil vapor extraction. Remediation activities were completed in 2015. Post remediation monitoring activities were performed through 2019. This facility is currently undergoing NAM. The May 2020 NAM Report confirmed groundwater petroleum concentrations above GCTLs at the site. A June 2021 NAM Report stated BTEX / MTBE constituents were below GCTLs in monitoring wells MW-3 and MW-4. Additional monitoring was recommended for monitoring wells MW-10 and MW-16 to confirm plume stability. No additional information was readily available for review.

Based on to distance from ROW, proposed pond construction approximately 320 feet east of this site, documented impacts, and current operations as a gasoline station, this site has been assigned a **High** risk rating for the preferred alternative.

#### Site 49

Marvin's Cleaners (currently Clean Paws, Inc.)  
3030 Johnson Street,  
Hallandale Beach, FL  
FDEP Facility ID: 9501066; ERIC\_4112

This site is adjacent to the south side of Johnson Street and approximately 450 feet west of I-95. The location operated as a dry cleaning facility from 1967 until 2003. Site assessment activities were completed in 1998 which reported soil and groundwater contamination of solvents/PCE at the site. Remedial activities were performed at the site to reduce contaminant concentrations from 2001 through 2009 when groundwater samples were reported below GCTLs. Remediation efforts were made through actions including septic tank cleaning, drain field excavation and the installation of an air sparging and soil vapor extraction (SVE) system. The SVE system consists of six horizontal vapor extraction wells, a moisture

separator with automatic pump-out, liquid carbon treatment, a 500-gallon holding tank, a regenerative vacuum blower, and a vapor-phase carbon vessel. The SVE system has been in operation for eight years and is ongoing. Concentrations increased at the site following remediation. A 2018 Biennial Groundwater Sampling Report confirmed groundwater concentrations above FDEP GCTLs. According to the report, the results indicate a small source area remaining on site. Groundwater flow was reported to the east toward the I-95 project corridor.

Based on existing petroleum impacts to groundwater, distance to the project corridor, documented groundwater flow toward the project corridor and proposed pond construction in proximity to the facility, the site has been assigned a **High** risk rating for the preferred alternative.

#### Site 50

Sunshine #30  
3000 Johnson Street  
Hallandale Beach, Florida  
FDEP Facility ID: 8502723

The site is adjacent to the south side of Johnson Street and approximately 160 feet west of I-95. The location is an active retail gasoline station and currently operates two (2) 10,000-gallon ethanol USTs. The site has three (3) documented discharges that have completed cleanup activities and the most recent discharge was issued an SRCO in 2010. A Compliance Inspection Report from March 2020 indicates that the facility is in compliance.

A dry retention pond is proposed for construction 90 feet east of the site. Based on the current regulatory status, gasoline station operations and potential for excavation and dewatering activities in proximity to the facility the site has been assigned a **Medium** risk rating for the preferred alternative.

#### Site 51

Michel Auto Repairs (currently Hollywood Tires)  
2922 Johnson Street  
Hollywood, Florida  
County Facility ID: 02882

This site is located adjacent to the south side of Johnson Street and approximately 135 feet east of I-95. This facility currently provides automotive repair services and maintains a current Broward County Hazardous Material License. No history of non-compliance activities or violations were documented for this site. Hazardous wastes generated onsite include petroleum products, solvents, coolant, batteries, rags and fluorescent bulbs. The facility is reported to be on septic by the BCEPGMD.

A dry retention pond is proposed for construction in proximity of the site. Based on the site being on septic and the potential for excavation and dewatering activities in close proximity to the facility, this site has been assigned a **Medium** risk rating for the preferred alternative.

### Site 52

Former Sunset Golf Club (currently vacant land)  
2727 Johnson Street  
Hollywood, Florida  
FDEP Facility ID: FLR10TJ71; County Facility ID19554

This site is located adjacent to the ROW on the north side of Johnson Street and adjacent on the eastside of I-95. A review of historical aerials determined this site was developed circa 1952. Golf course operations were terminated in 2014. Arsenic impacts to soil and groundwater, above the FDEP CTLs, were discovered in a Phase I and subsequent Phase II ESA, conducted in 2006. SARs completed in July 2018 and revised in July of 2019, documented groundwater flow at the site in the northwest direction (toward the I-95 project corridor) and summarized the excavation and disposal of approximately 149.48 tons of soil. A RAP submitted in June 2019, proposed the dredging and disposal of an additional 489 tons of soil and soil blending to lower concentrations of arsenic in the soil. A revised RAP dated May 2020 proposed the construction of a stormwater detention area at the center of the site, excavation of contaminated soils from the proposed detention area and placement of two feet of clean fill throughout the property. Additionally, three quarters of NAM was conducted onsite to evaluate plume stability. In October 2020, the site was issued a No Further Action with Controls (NFAC) status after the BCEPGMD received a copy of the DRC restricting groundwater use at the site. In October 2020, the City of Hollywood purchased the land. Currently, the land is vacant. During the pedestrian/windshield survey, the site appeared vacant and fenced, with vegetative overgrowth.

A stormwater pond is proposed on this site. Based on the proposed excavation and dewatering activities, and documented arsenic exceedances in soil and groundwater above SCTLs / GCTLs proximity to the ROW, and DRC restricting groundwater use, this site has been assigned a **High** risk rating for the preferred alternative.

### 7.3 ASBESTOS

No asbestos surveys were conducted for the preferred alternative. Bridge structures or facilities proposed for widening may have presumed ACM as defined by the Occupational Health and Safety Administration (OSHA) which includes thermal system insulation and surfacing materials. Bridge components such as Class V Finish, joints, black mastic, bearing pads, breaks for bascule bridges may contain ACM. Additionally, structures built prior to 1981, may contain presumed ACM. Asbestos surveys are recommended during final design.

### 7.4 HEAVY METALS

No heavy metal surveys were conducted for the preferred alternative. Due to the common use of lead-based paint coating for corrosion in the 1960s and 1970s, a heavy metal survey for bridges requiring widening or demolition is recommended during final design.

### 7.5 ETDM ETAT REVIEW

The project was reviewed through the FDOT's ETDM process where members of the ETDM ETAT provide input and comments; the ETDM Screening Summary Report (No. 14254) is contained in **Appendix C**. The following is a summary of the ETAT reviews.

The SFWMD, EPA and FHWA commented the project will have a "Moderate" effect on contamination. The agency comments, and the corresponding response/action taken by FDOT is included below each comment:

- a) Comment: The project is expected to have direct effects on surface and ground water. Construction methodologies must be designed to minimize movement of contaminant plumes. If dewatering is necessary, a water use permit may be required. Projects that do not qualify for the general permit provided under rule 40E-2.061 (2), FACC will require a water use permit from

SFWMD. The SFWMD assigned an effect of “Moderate” to contamination during their ETAT reviews.

Response: Dewatering may be necessary during the construction of the proposed bridges. FDOT will utilize best management practices during construction activities to minimize migration of contaminant plumes.

- b) Comment: The EPA recommended conducting a contamination assessment according to the PD&E Manual, Part 2, Chapter 20.

Response: A Contamination Screening Evaluation was conducted as part of this PD&E Study.

- c) Comment: The FHWA stated contaminated sites were located near the project and some impacts may not be avoided. The FHWA assigned an effect of “Moderate” to contamination during their ETAT reviews.

Response: No response required.

- d) A Contamination Level II Assessment will be performed for Medium and High risk sites during final design.

## 7.6 PERMITS AND SPECIFICATIONS

Dewatering is anticipated to occur, as such a dewatering permit will be required from FDEP/SFWMD. The contractor will be held responsible for ensuring compliance with any necessary dewatering permit(s). The dewatering plan will need to consider the radius of influence of any dewatering activity on nearby contamination plumes to avoid potential contamination plume exacerbation. The status of the sites will be updated accordingly at each future design phase. All permits will be obtained in accordance with Federal, State, and local laws and regulations and in coordination with the District Contamination Impact Coordinator (DCIC).

If dewatering activities are proposed within 500 feet of a contaminated site, a FDOT CAR Contractor will provide assistance during the preparation of the dewatering permit application and assist in the permit process. Roadway plans will have a general note listing any area of dewatering concerns with applicable

stationing. See Part 2, Chapter 20 Contamination, paragraph 22.2.5.2 Dewatering During Construction for further details. Additionally, see Part 1, Chapter 12, Environmental Permits and Part 2, Chapter 11, Water Quality Impact Evaluation for guidance on NPDES permitting.

## 8.0 CONCLUSIONS AND RECOMMENDATIONS

This CSER was prepared pursuant to the FDOT's PD&E Manual, Part 2, Chapter 20 (Contamination), July 1, 2020. This CSER identified 52 sites for evaluation associated with the preferred alternative. These sites consisted mainly of former/current gas stations, dry cleaners, landfills and one CERCLA site within one-half mile. Risk rankings were assigned to each potentially contaminated site after reviewing data obtained from regulatory databases, historical land uses, on-site field visits, proposed construction activity and proposed ROW acquisition.

In general, the project area consists of residential, retail, commercial, light industrial, utility/transportation support facilities, parks, community facilities and some undeveloped lands. The Medium and High risk sites (see **Table 7.1**) may require a Contamination Level II Assessment consisting of soil and groundwater testing should excavation/earthwork, drainage installation, structure installation or ROW acquisition be proposed adjacent to them.

See **Table 7.1** for a list of all 52 sites with their name, contamination disposition/status, and risk ranking. To evaluate potential impacts to planned construction activities, Medium and High risk sites are recommended for soil and groundwater sampling should ROW acquisition or construction activities be proposed that impacts those sites.

**Table 8.1** provides a summary of risk ratings for the preferred alternative.

**Table 8.1 – Summary of Risk Ratings for the Preferred Alternative**

Alternative	Contamination Risk			
	No	Low	Medium	High
Preferred Alternative	5	20	16	11

All risk ratings have been assigned based on the guidelines stated in the FDOT PD&E Manual, Part 2, Chapter 20.

As previously stated, hazardous materials surveys for asbestos containing materials and metal-based coatings were not included in this evaluation but, are recommended during final design as existing bridge widenings are proposed.

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Occurrences are shown in three colors to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in **RED** are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in **YELLOW** have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in **GREEN** are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. **Occurrences are shown in three colors** to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in **RED** are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in **YELLOW** have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in **GREEN** are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

Facility ID: 9700525

County: BROWARD

Facility Type: Fuel user/Non-retail ( C )

DEP Contractor Owned: PND

Facility Status: OPEN

Facility Determination: Double Wall ( DW )

Total Number of Tanks: 1

Total Number of Single Walled Tanks: 0

Total Number of Double Walled Tanks: 1

Total Number of Aboveground Storage Tanks: 1

Number of AST Single Walled Tanks: 0

Number of AST Double Walled Tanks: 1

Total Number of Underground Storage Tanks: 0

Number of UST Single Walled Tanks: 0

Number of UST Double Walled Tanks: 0

**Additional Tank Information**

Tank location: Aboveground

Alias: 2

Gallons: 1000

Content: Emerg Generator Diesel ( G )

Install Date: 06/01/1999

Tank Status: In Service ( U )

**CERCLIS-Archived-US**

**CERCLIS sites that have been archived**

**Category:** Federal CERCLIS NFRAP

**Description:** The Superfund Enterprise Management System (SEMS). The reports produced by SEMS contain information on the assessment and remediation of current and archived hazardous waste sites. The archived designation means that to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates that this decision was not appropriate or other considerations require a recommendation for listing at a later time. Information provided to the previous CERCLIS Legacy System has been added to the details of the sites.

### **FTTS-ENF-US**

**FIFRA/TSCA Tracking System (FTTS) Enforcement Actions**

**Category:** Federal ASTM Other

**Description:** The FIFRA/TSCA Tracking System (FTTS) is a regional system used to track compliance activities such as inspections, case review, enforcement actions taken, samples collected, and pesticide grants and cooperative agreement information. The compliance monitoring and enforcement activities are tracked from the time an inspector conducts (or schedules) an inspection until the time the case is closed or the enforcement action is settled. Specific legal citations include, but are not limited to: Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), Toxic Substances Control Act (TSCA), and Emergency Planning and Community Right-to-Know Act (EPCRA).

**Agency:** United States Environmental Protection Agency

**Phone Number:** 2025642501

### **Groundwater Contamination Areas**

**Category:** State/Tribal ASTM Other

**Description:** The Ground Water Contamination Areas GIS layer is a statewide map showing the boundaries of delineated areas of known groundwater contamination pursuant to Chapter 62-524, F.A.C., New Potable Water Well Permitting In Delineated Areas. 38 Florida counties have been delineated primarily for the agricultural pesticide ethylene dibromide (EDB), and to a much lesser extent, volatile organic and petroleum contaminants. However, it does not represent all known sources of groundwater contamination for the state of Florida.

## **Hist-FL**

### **Previously Listed Florida Sites**

**Category:** ERS Supplemental Govt Sources

**Description:** ERS has compiled records that have been previously listed in other agency databases. When ERS updates an agency database, if there is a record that was in the older version but the record is not found in the newer version, it is put into this database. The site may have been completely removed, or there was a significant change in the record such as Name, ID, or Address. The information from the old listing is preserved in this database along with which database it was originally in. It is also possible that it was moved from one database to another such as a LUST Open site receiving closure and now being listed in the LUST Closed database.

**Agency:** Environmental Record Search (ERS)

**RCRA-COR-US**

**Resource Conservation and Recovery Act - Corrective Actions**

**Category:** Federal RCRA CORRACTS

**Description:** The primary goals of RCRA are to: Protect human health and the environment from the potential hazards of waste disposal. Conserve energy and natural resources. Reduce the amount of waste generated. Ensure that wastes are managed in an environmentally sound manner.

EPA estimates that between 50 and 70 percent of all TSDFs have some degree of environmental contamination requiring detailed investigation and perhaps cleanup. Under a program entitled Corrective Action, EPA has the statutory authority to require permitted and interim status TSDFs to clean up hazardous waste contamination. This database contains a listing of sites that have had corrective action.

## UN-MAPPABLE OCCURRENCES

The following occurrences were not mapped primarily due to incomplete or inaccurate address information. All of the following occurrences were determined to share the same zip code as the area searched. General status information is given with each occurrence along with any address information entered by the agency responsible for the list.

ID	Facility Name	Address	Database	Status
No "un-mapped" sites requested.				

---

## **DISCLAIMER, LIMITS AND LIABILITIES**

All of the data presented in this report was garnered from public information maintained by governmental agencies. **Environmental Record Search (ERS)** cannot ensure that the data, which has been entered and maintained by others, is complete and/or accurate. Any, and all omissions, errors, negligence, accidentally or otherwise within the data received by **ERS** is assumed to be caused by others and **ERS** cannot and does not assume, take, or acknowledge any liability whatsoever for their respective data. The extrapolation of the mapped locations is based solely on the accuracy of the data provided by others. Prior to relying completely on any mapped location within this report, its accuracy should be verified using other means such as further documentation or a field visit. **ERS** makes no representation, warranty or guaranty, express or implied regarding the accuracy of the data entered and maintained by others or the suitability of the data received from others in this report for a certain task or interpretation.

The data presented in this report should only be interpreted by an experienced environmental professional, as per EPA definition, that completely understands the potential inaccuracy of the data derived from others, the possible existence of contaminated occurrences that have not been listed, and the possibility that the governmental database misrepresents the actual status of an occurrence or listing. Prior to relying completely on any of the data within this report, an environmental professional should verify the accuracy of the information presented unless one of ERS's Environmental Professionals has interpreted the data and/or report.

It is important that the reader and/or end user of this information realize that the data gathered has not been verified for its accuracy or completeness in any way by **ERS**. With billions of records, this is an impossible task for any Company. As much as possible, the data is presented unchanged and unaltered to represent the actual data produced by these agencies. This insures the integrity of the data for the end user.

**ERS** does however stand behind its representation of the data, any manually plotted occurrences, any risk determinations and all other items directly under its control. This report does comply (as far as the data is reasonably ascertainable as outlined in both the following standards) with section 8.2.1 of ASTM 1527-13 – Standard Environmental Record Sources and EPA's 40 CFR Part 312, All Appropriate Inquiries. **ERS** does ensure that the data is accurately reproduced from the original source. **ERS** backs the reporting of the data with \$3,000,000 of General and Environmental Professional Liability (errors and omissions) Insurance!

The **ERS** logo, name, report design, presentation, maps, tables, etc., are the exclusive property of **ERS** and its parent company and affiliates. Except as provided below, information or images contained in this report may not be reproduced or distributed in whole or in part by any means without the prior written permission from **ERS**. United States and international copyright laws protect any and all reports produced by **ERS**.

The person or entity that purchased this report may make up to five (5) copies of the entire report or any part of it for archival purposes or to include as part of another report. All copyright information must remain intact and not be modified in any way.

**Environmental Record Search (ERS)** and their respective products/reports (i.e. RecCheck, LenderCheck, Environmental Screen, etc.) as well as their respective business operations, are **NOT** associated in any way with nor related to, First American Commercial Real Estate, Inc. (FACRES) and/or the First American Family of Companies.
