> We completed the PKBM habitat assessment for the SR 292 Path. The attached report follows the approved methodology. Along the path you can see where the functional loss was taken for direct path impacts and the functional gain was achieved for restoring habitat along the path. Also, one additional area on the south side of SR 292 will be restored to give the project an overall functional gain. Let us know if you have any comments on the assessment and what the next step will be to obtain authorization for the PKBM habitat impacts.
