FDOT C3D 2025 Plan Production Workflow Tools
Q&A – 01/09/25

Q: What happens if information in the Create Project window like begin/end milepost changes?

A: You can obtain an updated .xml or update the information in the .DST file that will carry over.

Q: Changing Individual sheet properties when something like the fiscal year changes is very time consuming for plans with a large number of sheets. Is there any other method to change them all at once? A workaround I have found is to delete and re-add the sheets to the PSET after updating the PSET properties, but that can sometimes break other things and I have to rename and renumber all of the sheets again, which is also time consuming for files with 100s of sheets.

A: When you use the FDOT Civil 3D State kit, it comes with an additional tool called the Sheet Set Organizer that is now located on the FDOT Tab. You can load the .DST file into it and make those edits to multiple sheets all at once instead of one at a time and not having to reload them.
