

## **FDOT and ProjectWise**

The **FDOT Production Support CADD office** develops, maintains and advances FDOT CADD Standard resources and tools through quarterly software updates. The CADD office currently supports both **AutoDesk** and **Bentley** product platforms. [Current Supported Versions \(fdot.gov\)](#)

Traditionally, our workspaces on the Bentley Microstation platform are delivered and installed for Client/Server or Local Workstation installations. These types of configurations have continued with our latest workspace for the Bentley Connect Edition platform.

The CADD Office does not deliver or currently support a managed workspace via Bentley ProjectWise. Currently, Bentley Product Support is investigating related issues to provide improved support for the FDOT Workspace in ProjectWise for the FDOT CADD Consultant Community. We hope to provide more information on this in the future.
