SECRETARY

POLICY

Effective: April 27, 2020
Office: Policy Planning
Topic No.: 000-525-053

**RESILIENCY OF STATE TRANSPORTATION
INFRASTRUCTURE**

It is the policy of the Florida Department of Transportation to consider resiliency of the State's transportation system to support the safety, mobility, quality of life, and economic prosperity of Florida and preserve the quality of our environment and communities. Resiliency includes the ability of the transportation system to adapt to changing conditions and prepare for, withstand, and recover from disruption.

The Department will continue to identify risks, particularly related to sea level rise, flooding, and storms; assess potential impacts; and employ strategies to avoid, mitigate,

“Resiliency includes the ability of the transportation system to adapt to changing conditions and prepare for, withstand, and recover from disruption.”

This policy will be implemented through the Department's long-range and modal plans, work program; asset management plans; research efforts; and internal manuals, tools, guidelines, procedures, and related documents, guiding planning, programming, project development, design, construction, operations, and maintenance.

Kevin J. Thibault, P.E.
Secretary

**RESILIENCE
ACTION PLAN**

STATE HIGHWAY SYSTEM

State Legislation

- CS/HB 7503 (Section 339.157, F.S.)
 - FDOT Resilience Action Plan (RAP)
 - Enhance infrastructure and operational resilience
 - Design changes to retrofit and construct highway facilities
 - Enhance partnerships to address multijurisdictional needs

Resiliency Approach

- Leverage existing resources
 - Capability Maturity Framework
 - Existing Resilience Strategies
 - Internal & Community Collaboration
 - Technical Advisory Team
 - MPOs and Regional Collaboratives
 - FL Chief Resilience Officer
 - GIS Data

HAZARDS AFFECTING A GEOGRAPHIC AREA

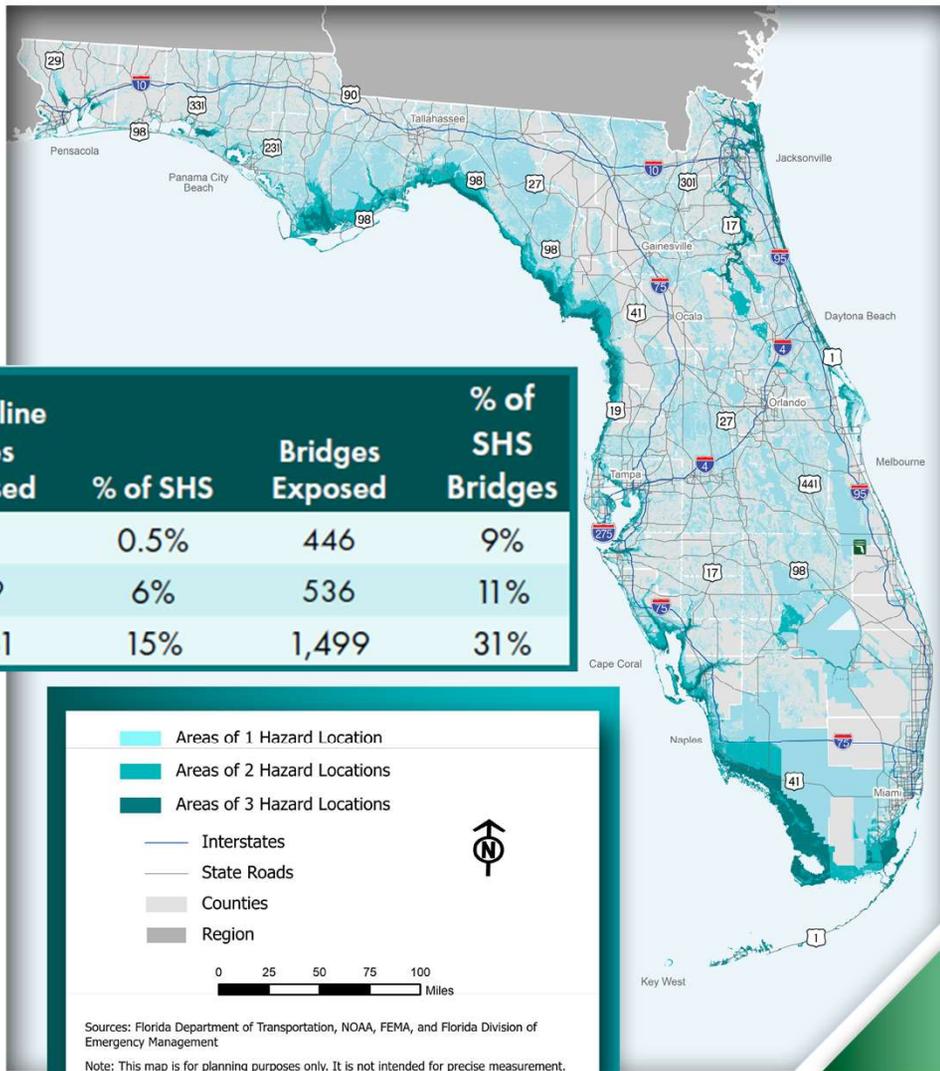

1% CHANCE OF FLOODING
(100-YEAR FLOOD ZONE)

2 FEET OF
SEA LEVEL RISE

CATEGORY 3
STORM SURGE

VULNERABILITY

High	Geographic areas affected by all three hazards
Medium	Geographic areas affected by any two of the three hazards
Low	Geographic areas affected by any one of the three hazards

* Prioritization Tier	Centerline Miles Exposed	% of SHS	Bridges Exposed	% of SHS Bridges
High	57	0.5%	446	9%
Medium	709	6%	536	11%
Low	1,781	15%	1,499	31%

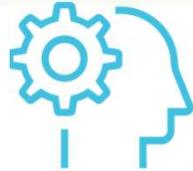

Vulnerable Areas

- Areas of 1 Hazard Location
- Areas of 2 Hazard Locations
- Areas of 3 Hazard Locations
- Interstates
- State Roads
- Counties
- Region

0 25 50 75 100 Miles

Resilience Strategies

PLANNING

**PROJECT DEVELOPMENT
& ENVIRONMENT**

**DESIGN, MATERIALS,
& CONSTRUCTION**

**TRAFFIC OPERATIONS
& EMERGENCY MANAGEMENT**

**ASSET MANAGEMENT
& MAINTENANCE**

Focusing on Bridges and Structures

Hurricane Ivan 2004

Hurricane Charley 2004

Hurricane Michael 2018

Focusing on Structures: LRFD Design Practice

Load (Stressors & Shocks)

- Structural Loading
Traffic, Vessel Impact, Waves, Wind
- Environmental
Cl-, pH, UV, Sea Level Rise, Fire
- Future Use
Capacity Increase, Functional Change

Justification

Life Cycle Cost, Cost/Benefit, Risk

Resistance (Resilience)

- Structural Capacity
Codes, Ultimate vs Service Limit State
- Material Endurance
Strength, Fatigue, Creep
- Material Durability
Aging Effects, Environmental
- Redundancy
Load Paths, Multi-Girder, Continuous

Sunshine Skyway Bridge
Tampa Bay

R&A Structure Design Goals

Resilience

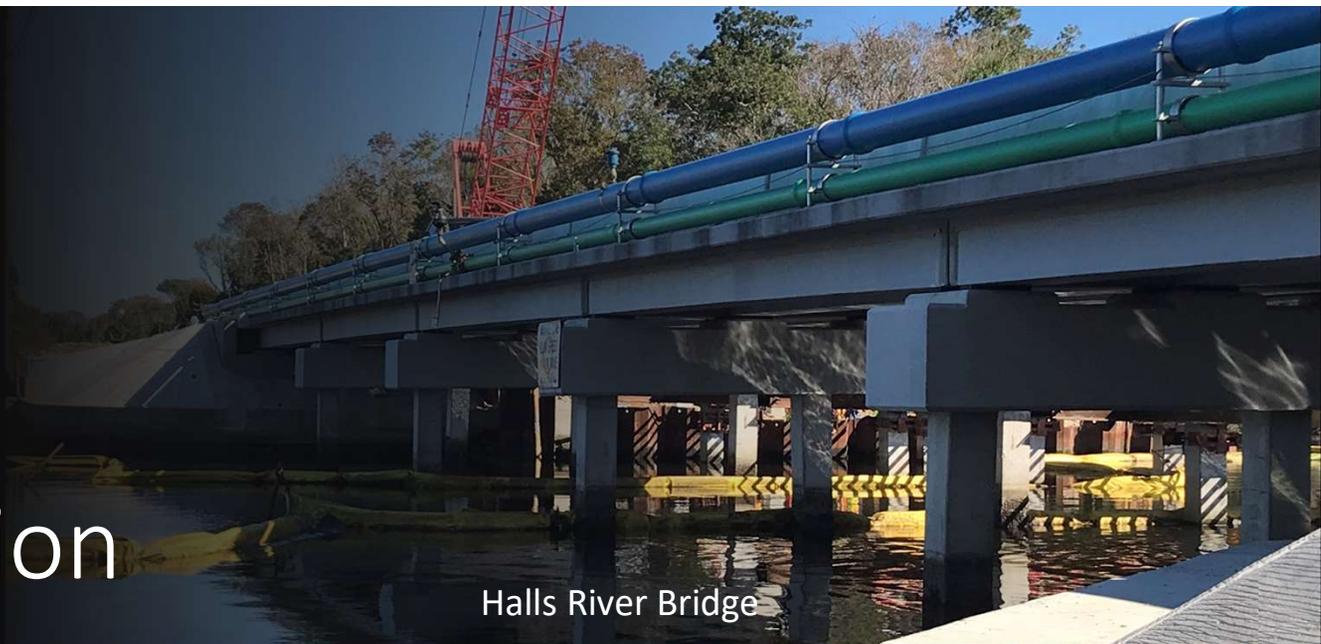

- Robustness
Redundancy, Bend Don't Break
- Durability
Inert, Regenerative
- Maintenance
*Prioritize, Repair,
Element/Component Replacement*
- Inspection
Easy Access, Visual, Monitoring

Adaptability

- Repurposing
Roadway, Shared Use, Transit, Rail
- Tunable
Widen, Strengthen, Raise, Lengthen
- Future Proofing
*Hydraulic, Vertical Clearance,
Seawater Encroachment, Emerging
Technology*

Resiliency in Action

Don't Drive Into the Unknown.....

.....Stay Away from Flooded Streets!

Do You Really Know How Deep the Water is?

12 inches of fast-moving water can carry away a small car.

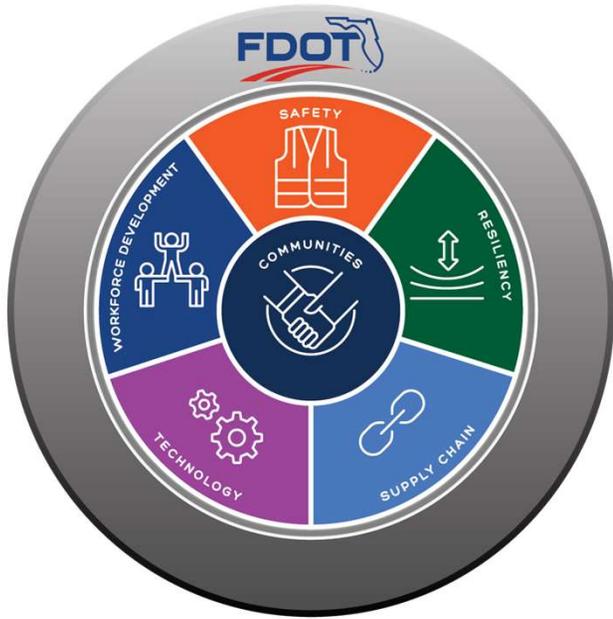

6 inches of fast-moving water can knock over and carry away an adult.

18-24 inches of fast-moving water can carry away most large SUVs, vans and trucks.

WHEN FLOODED TURN AROUND DON'T DROWN

An infographic showing a man in a red plaid shirt looking at a flooded street. A blue car is partially submerged in the water. A yellow diamond-shaped sign on a post reads 'WHEN FLOODED TURN AROUND DON'T DROWN'. A dark SUV is also shown partially submerged in the water. The background features mountains and a cloudy sky. The text provides statistics on the danger of floodwaters: 12 inches can carry away a small car, 6 inches can knock over and carry away an adult, and 18-24 inches can carry away most large SUVs, vans, and trucks.

Thank you for your time!
