Tallahassee, FL 32399-0450

JARED W. PERDUE, P.E.  
SECRETARY

### **FDOT District 1 Erosion and Sedimentation Control Plan (ESCP) Guidelines**

An Erosion Control Plan is required for all FDOT projects regardless of size or scope. **Do not** begin any soil disturbing activities without Department Approval of the Contractor's Erosion and Sedimentation Control Plan (ESCP). Based on the FDOT Specifications, Design Standards and the NPDES Permit Requirements, this editable ESCP document will fulfill the "Narrative" portion of the required submittal. This narrative, in addition to an illustrated set of plans, indicating type and location of erosion and sediment control devices and any other required documents will complete your ESCP and should be submitted for approval. If you have questions or need assistance, please contact a District Environmental Administrator.

Construction activities that will result in the disturbance of 1 or more acres will require an NPDES permit issued by the FDEP and obtained by the contractor. On the cover of your planset, you will find a SWPPP (Storm Water Pollution Prevention Plan) to assist you in making the site specific Erosion and Sediment Control Plan (ESCP).

In addition to the information from the SWPPP, the contractor will provide the following:

- a site specific ESCP including a narrative and illustrated plan set showing the locations of Best Management Practices (BMPs),
- the FDEP Notice of Intent (NOI) and
- Delegation Letter for the Responsible Authority on file at the FDEP if required
- FDOT Form 650-040-07 – "Contractor/Subcontractor Certification NPDES Generic Permit for Stormwater Discharges from Large and Small Construction Activities", signed by all contractors performing soil disturbing activities,
- Stormwater Inspector's Certification.

Per FDOT Standard Specifications, the Erosion and Sedimentation Control Plan shall describe, but not be limited to the following:

- I. For construction operations supply the following information:
  - a. Locations and types of all erosion control devices
  - b. Estimated time erosion control devices will be in operation
  - c. Monitoring schedules for maintenance of erosion control devices
  - d. Methods of maintaining erosion control devices
  - e. Permanent and temporary stabilization plan
  - f. Dewatering plan
  - g. Threatened or Endangered Species action plan
  - h. Location of all stored fuel or other contaminants, pollutants or hazardous waste
  - i. Spill prevention and response measures, disposal and removal methods
  - j. Off-site Staging Area Approval letter
  - k. Submit any changes to ESCP with seven calendar days
- II. The name and telephone number of the person responsible for monitoring and maintaining erosion control devices.
