SIGN LIGHTING INSTALLATION

Roadway Lighting Included in Contract:
The power for the sign lighting shall be provided from the roadway lighting circuit. The lighting plans shall indicate the sign location and a pull box location for connection to the sign lights. The lighting contractor shall install pullbox and loop 2 of lighting circuit conductors in the pull box for connection by the signing contractor.

The signing contractor shall furnish and install luminaires, Nema 3R enclosure, 30 amp breaker, conduit, conductors and all other electrical equipment necessary for connection to the lighting circuit.

Roadway Lighting not Included in Contract:
The signing plans shall include pay item numbers to furnish and install conduit, conductors, ground rods, pullboxes and service point equipment.

The signing plans shall indicate the location of the service point equipment and circuit runs. The signing contractor shall provide all electrical equipment necessary for connection of the sign lights.

PLACEMENT OF SIGN LIGHTS
1. Luminaires shall be mounted so the lamp center is 4' in front of the sign face.
2. Luminaires shall be mounted so the back of the fixture is placed 1' below the bottom edge of the sign face.
3. Luminaires from manufacturers who recommended their fixture be field mounted shall be mounted on a bracket which provides this recommendation.
4. Photometric data for the production luminaire proposed for sign lighting shall be submitted for approval to the District Lighting Engineer, Florida Department of Transportation.

Use 3/4" Liquid Tight Flexible Conduit From Junction Box To Ballast And From Junction Box To Tee In Luminaires Bracket. Conduit Shall Be Of Sufficient Length To Allow Rotation Of Luminaires Bracket 90° In Either Direction.

Ballast Shall Be Mounted To Sign Chord With Stainless Steel Bracket. Bracket For Ballast To Be Fabricated From Galvanized Steel Plate For Steel Sign Structures And Aluminum Plate For Aluminum Sign Structures. (Submit Drawings Required)

4" x 4" x 3" (Min.) Weatherproof Cast Aluminum Junction Box Mounted On Sign Chord.

4" x 4" x 3" (Min.) Weatherproof Cast Aluminum Box Mounted On Sign Chord.

1" Conduit To Weatherhead Height As Required By Power Company

Ground Lug Attached To Metal Sign Structure

Ground Lug Attached To Metal Sign Structure

U.L. Approved Ground Rod 3/8" x 20" Copper Clad With Approved Ground Connection To Be Placed In Pullbox For Inspection Purposes. Splices To Be Made With Compression Sleeves Then Properly Insulated & Waterproofed.

For Details Of Luminaires Mounting Bracket See Index 1?505 2 U 2

Conduit To Extend Up Column And Along Lower Sign Cord To Junction Boxes (See Other Details This Sheet)

Luminarie Housing & Ballast Compartment Will Be Provided With Drain Plugs. Drain Plugs Will Be Removed And Screened Against Insects Upon Installation.
NOTES

1. Dimension "A" to be established by type and make of luminaire to be purchased and used on the project.

2. The center lines of both flange plates and the luminaire support arm are to be set parallel to the roadway before the set screw is seated.

3. Minor adjustments in the horizontal location of the luminaire support arm along the bottom chord of the truss will be allowed so that the flange plates will clear the truss web members.

4. All steel pipe shall meet the strength requirements of ASTM Specification A53 Grade "A" or Grade "B". Steel pipe shall meet the requirements of A36 and bolts, nuts and washers shall meet the requirements of ASTM A197.

5. All steel shall be hot dip galvanized after fabrication in accordance with the requirements of ASTM A53 and /or A55.

6. Luminaire support arm shall be free to rotate in a clockwise or counter clockwise direction. When service or maintenance is required for sign face or vertical face of truss support arm shall be capable of being locked in a position 90° from parallel to the roadway for unobstructed working clearance.
