NOTES

DESIGN SPECIFICATIONS:

TRAFFIC RAILINGS OR PARAPETS:
If there is a Traffic Railing or Parapet on the wall, align Wall Joints with V-Grooves, and Wall Expansion Joints with Barrier Open Joints.

FOUNDATION: Prepare the soil below the footing in accordance with the requirements for spread footings in Specification Section 495.

* Shear Key is required only when specified in the Plans.

REINFORCING STEEL BENDING DIAGRAMS

NOTE:
All bar dimensions are out-to-out.

See Plans for Retaining Wall Data
**Wall joint spacing 25 ft. maximum and 5' minimum. At minimum, every fourth wall joint to be an expansion joint. See Plans for actual wall joint spacing and expansion joint location.

3" Ø PVC Drain Pipe at 10 ft. max. spacing (Typ.) See Typical Backfill Detail.

**Wall Joint Spacing

½ V-Groove across top and down front face of wall at joint (Typ.). Extend V-Groove down back of wall to 6" min. below ground. (see V-Groove Detail).

** Wall Joint

Front Face of Wall

Stem Offset

Stem as constructed

Stem Offset (in) = \( \frac{H(Ft)}{16} \)

Stem Offset Values

(for H < 20 Ft.)

Traffic Railing (Index No. 420, 32" F-Shape shown, see Plans for Traffic Railing type)

TRAFFIC RAILING/JUNCTION SLAB DETAIL

(32" F-Shape Shown, other Traffic Railings similar) (for 32" F-Shape Traffic Railing as shown, see Index No. 420; for 32" Vertical Shape Traffic Railing, see Index No. 422; for 42" Vertical Shape Traffic Railing, see Index No. 422)

Junction Slab (See Index Series 6100)

For C-I-P Wall

3" Ø PVC Drain Pipe at 10 ft. max. spacing (Typ.) See Typical Backfill Detail.

Drain shall be continuous 1.5' x 1.5' clean, broken stone or gravel, graded and placed to allow free drainage. Place Type D-3 (see Specification Section 985) geotextile fabric, 1'-0" wide and full height of fill, to the back of wall with an adhesive approved by the Engineer.

* Key to stop at top of footing and 6" from top of wall. Joint across footing and top of wall to be a straight line.

** Stay-In-Place Plastic Preformed Bond Beakers are permitted to form joints.
KEYWAY & WALL JOINT DETAIL  
(TOP VIEW)

TYPICAL SECTION  
C-I-P CONCRETE GRAVITY WALL

BAR BENDING DIAGRAM

BILL OF REINFORCING STEEL

GENERAL NOTES
1. C-I-P Gravity Walls constructed as extensions of reinforced concrete retaining walls, except walls of proprietary designs, shall have the same face texture and finish as the reinforced concrete retaining wall.
2. Concrete for Gravity Wall shall be Class NS per Section 347. Concrete for Scheme 3 Junction Slab and Traffic Railing shall be Class II per Section 346, unless otherwise specified in the plans.
3. Reinforcing steel shall meet the requirements of Specification Section 932 (Grade 40 or 60). Smooth or Deformed Welded Wire Reinforcement (WWR) may be substituted on an equal area basis. Do not increase bar/wire spacing for Grade 60 reinforcing steel or WWR.
4. When required, for adjacent guardrail, see Index No. 870 or 880 as appropriate. For adjacent Type B fence see Index No. 802.
5. Joint seal to be two layers of 30# smooth roofing paper or Type D-5 geotextile fabric in accordance with Specification Section 985. Map all contact surfaces of concrete and roofing paper or geotextile fabric with cut-back asphalt. Stop roofing paper or geotextile fabric 6" below top of wall.
6. Provide a continuous 1"x1" clean gravel or crushed rock drain for wall heights > 2'-0", and higher. Wrap drainage layer as shown, with Type D-5 geotextile fabric in accordance with Specification Section 985. Provide 2"x8" galvanized mesh with 1/2" openings, at the inside end of the PVC Drain Pipe. Provide 2"x8" PVC Drain Pipe (Sch. 40) at 10 ft. max. spacing (when Drainage Layer is required). Locaky exterior side of Drain Pipe a minimum of 2'-0" from wall joints.
7. C-I-P reinforcing steel, face texture, finish, joint seal, drain pipes, drainage layer, galvanized mesh and geotextile fabric to be included in the Contract Unit Price for Concrete Class NS, Gravity Wall. Cost of concrete for Junction Slab in Scheme 3, to be included in Contract Unit Price for Concrete Traffic Railing Barrier with Junction Slab. Adjunct railings or fences to be paid for separately.

C-I-P CONCRETE GRAVITY WALL

CONSULTANCY

FOOTLY DESIGN STANDARDS

GRAVITY WALL

INDEX NO.

6011

SHEET NO.

1 of 1
CONSTRUCTION:
1. Walls will be constructed in accordance with Specification Section 548 and the Wall Company's instructions.
2. For location and alignment of retaining walls, see Wall Control Drawings.
3. If required, locate manholes and drop inlets as shown on wall elevations.
4. Refer to Wall Control Drawings of individual walls for minimum reinforcement strip/mesh length, factored bearing resistance, minimum wall embedment and anticipated long term and differential settlements.
5. The Contractor is responsible for controlling water during storm events as needed during construction.
6. It is the Contractor's responsibility to determine the location of any guardrail post's behind retaining wall panels. Prior to placement of the top layer of soil reinforcement, individual reinforcing strips/mesh may be skewed (15° maximum) to avoid the post locations if authorized by the Engineer. No cutting of soil reinforcement is allowed unless shown on Shop Drawings and approved by the Engineer. Any damage done to the soil reinforcement due to installation of the guardrail will be repaired by the Contractor at the Contractor's expense. Repair method will be approved by the Engineer.
7. If existing or future structures, piles, foundations or guardrail posts within the reinforced soil volume interfere with the normal placement of soil reinforcement and specific directions have not been provided on the plans, the Contractor will notify the Engineer to determine what course of action shall be taken.
8. The Contractor is responsible for gradually displacing upper layers of soil reinforcement downward (15' maximum from horizontal) to avoid cutting soil reinforcement and conflicts with paving and subgrade preparation. The Contractor's attention is directed especially to situations where roadway super-elevation and/or soil mixing is anticipated.
9. For concrete facing panel surface treatment, see Wall Control Drawings. Extend surface treatment a minimum of 6" below final ground line.
10. Drive piles located within the soil volume prior to construction of the retaining wall, unless a method to protect the structure, acceptable to both the Engineer and Wall Company, is proposed and approved in writing. The portion of piles or drilled shafts extensions within the soil volume will be wrapped with polyethylene sheeting in accordance with Specification Section 459.
11. A structural extension of the connection of the retaining wall to soil reinforcement will be used whenever necessary to avoid cutting or excessive skewing (greater than 15°) of the soil reinforcement around obstructions (i.e., piles, pipes, manholes, drop inlets, etc.).
12. Steps in leveling pads will occur at MSE Wall panel interfaces. Panels will not cantilever more than 2" past the end of the upper tier leveling pad.
13. The top of the leveling pad or footing will be 2'-0" minimum below final ground line.
14. Top of leveling pad elevations shown in the Wall Control Drawings are maximum elevations. The constructed leveling pad elevations may be deeper based on the panel layout shown in the shop drawings.
15. The height of panels in the bottom course of MSE Walls must not be less than half the height of a standard panel.
16. Work this Index with Index 6100 & 6200 Series.

SHOP DRAWING REQUIREMENTS:
See Specification Section 548 for shop drawing requirements.

GENERAL NOTES AND DETAILS
NOTES

DESIGN CRITERIA:
1. Design is based on the assumption that the material contained within the reinforced soil volume, methods of construction and quality of prefabricated materials are in accordance with Specification Section 548 and FDOT Structures Design Guidelines Section 3.13.2.
2. It is the responsibility of the Engineer to determine that the factored bearing pressure shown for the wall does not exceed the factored bearing resistance of the foundation for that specific wall location.
3. The Wall Company is responsible for internal stability of the wall. External stability design, including foundation and slope stability, is the responsibility of the Engineer.
4. If present, consider in design and analysis and locate manholes and drop inlets as shown on wall elevations.

SOIL PARAMETERS:
1. See wall control drawings for soil characteristics of foundation material to be used in the design of the wall system. The Contractor must provide soil design parameters for backfill material based on the actual soil characteristics utilized at the site. Provide the values of unit weight, cohesion and internal friction angle in the Shop Drawings.

MATERIALS:
1. Provide soil reinforcement in accordance with Specification Section 548.
2. For additional material notes, see Wall Company General Notes.

CONSTRUCTION:
1. Walls must be constructed in accordance with Specification Section 548 and the Wall Company's instructions.
2. For location and alignment of retaining walls, see Wall Control Drawings.
3. Refer to Plan and Elevation sheets of individual walls for minimum reinforcement strip/mesh length, factored bearing resistance, minimum wall embedment and anticipated long term and differential settlements.
4. If existing or future structures, pipes, foundations or guardrail posts within the reinforced soil volume interfere with the normal placement of soil reinforcement and specific directions have not been provided on the plans, the Contractor must notify the Engineer to determine what course of action should be taken.
5. The Contractor is responsible for gradually deflecting upper layer(s) of soil reinforcement downward (15° maximum from horizontal) to avoid cutting soil reinforcement and conflicts with paving and subgrade preparation. The Contractor's attention is directed especially to situations where roadway superelevation and/or soil mixing are anticipated.

GENERAL NOTES AND DETAILS

TEMPORARY TRAFFIC RAILING

TEMPORARY MSE RETAINING WALL SYSTEMS

DESIGN STANDARDS

2016
This Design Standard includes details for five types of piles with two thicknesses. Types "B1", "B2", "C1" and "C2" piles (corner piles) are of reinforced concrete construction, and Type "A" is of prestressed concrete construction. The piles shall be manufactured, cured and installed in accordance with the requirements of the contract documents.

MATERIALS: (for materials not listed refer to the Specifications)

CONCRETE
- Class: V (Special) for slightly and moderately aggressive environments
- Unit weight: 150 psi
- Based on the use of Florida limestone concrete

REINFORCING STEEL
- ASTM A615 Grade 60

PRESTRESSING STEEL
- ASTM A416 Grade 270 (Low-Relaxation Strand)

DESIGN PARAMETERS:
- Types "A" and "B1" to "C2":
  - Concrete Compressive Strength at release of prestressing: 4000 psi minimum
  - Uniform compression after prestressing losses: 1060 psi minimum
  - Minimum compressive strength f'c ≥ 4000 psi required.
  - Pick-up, Storage and Transportation: 0.0 psi tension with 1.5 times pile self weight
  - Pick-up, Storage and Transportation: Minimum compressive strength f'c ≥ 4000 psi required.

ENVIRONMENT:
- The pile designs are applicable to all Environments.

PLASTIC FILTER FABRIC:
- The plastic filter fabric shall extend to the bottom of the "X" dimension.

PILE PICK-UP AND HANDLING:
- Types "A" and "B1" to "C2":
  - Pick-up of pile may be either a single point pick-up or a two point pick-up as shown below.
  - Two point pick-up for lifting out of forms & two point support for storage & transportation.
  - Single point pick-up for installation only.

PILE FIT-UP:
- 2'-6" Sheet Pile dimension is nominal. This dimension may be shortened by the Manufacturer up to 1/4" to allow for Sheet Pile fit-up in its final position. Minimum Sheet Pile width is 2'-5 1/4". No changes shall be made to the tongues or grooves.
**TYPICAL PILE**

- Spaced at 1'-0" Maximum

REINFORCING STEEL NOTES:
1. All bar dimensions in the bending diagrams are out to out.
2. All reinforcing steel at the open joints will have a 2" minimum cover.
3. Bars 4A may be continuous or spliced at the construction joints. Lap splices for Bars 4A will be a minimum of 1'-8".
4. The Contractor may use Welded Wire Reinforcement (WWR) when approved by the Engineer. WWR must consist of deformed wire meeting the requirements of Specification Section 931.

**S** = Slightly Aggressive
**M** = Moderately Aggressive
**E** = Extremely Aggressive

C-I-P COPING USED WITH PRECAST COPING

Note: When precast coping units do not fit the entire length of the retaining wall, use this similar C-I-P coping for short portions between precast coping units. This C-I-P coping may also be used for vertical copings.

C-I-P COPING ENCLOSURE DETAIL

Field bend Bars 4A to maintain minimum cover for Extremely Aggressive Environments.

Begin or End Retaining Wall

Bars 4B (Horizontal) (Field cut as required to maintain minimum cover)

Bars 4A (follows Slope of C-I-P Coping Enclosure)

Bars 4U3 @ 1'-6" Max. sp. (Typ.)

Dimensions:
- **S** = Slightly Aggressive
- **M** = Moderately Aggressive
- **E** = Extremely Aggressive

Note: When precast coping units do not fit the entire length of the retaining wall, use this similar C-I-P coping for short portions between precast coping units. This C-I-P coping may also be used for vertical copings.

MSE WALL COPING (PRECAST OR C-I-P)
JUNCTION SLAB NOTES:

1. When a 42” F-Shape Traffic Railing is used with precast copings, provide Bars 3D @ 8” spacing between Bars 5D within 6'-0" of Expansion Joints.
2. Construct the expansion joints, V-Grooves and face of coping plumb.
3. Provide Class III concrete for slightly aggressive environments or Class IV for moderate or extremely aggressive environments.
4. Dowel Load Transfer Devices will be hot-dip galvanized ASTM A 36 smooth round bar, or GFRP smooth round bars with a minimum shear strength of 22 ksi in accordance with ASTM D7617. Install Dowel Load Transfer Devices in accordance with Specification Section 330.
5. Construct 1/2" Expansion Joints in junction slabs and C-I-P copings plumb and perpendicular or radial to the Gutter Line. Provide at 90'-0" maximum intervals as shown. Provide 3”x3” Mortar plugs in open joints at the base of traffic railings to control run-off.
6. Shear Keys in junction Slab are required when GFRP bars are used for Dowel Transfer Devices and are optional with steel dowel bars. Tongue Slope on Shear Key must be constant and between 3" to 45° from horizontal.
7. Provide and install Preformed Expansion Joint Filler in accordance with Specification Section 932.
8. Construct 1/2" V-Grooves in junction slabs and C-I-P copings at 30'-0" maximum intervals as shown. Space V-Grooves equally between 1/2" Expansion Joints and/or Begin or End Junction Slab. V-Groove locations are to coincide with V-Groove locations in the Traffic Railing.
9. Shoulder or roadway Pavement is required on top of the junction slab for its entire length on the traffic side of the Traffic Railing. See Typical Sections on Sheet Nos. 2 and 3 for details.
10. Spacing shown is along the Gutter Line.
11. For Precast Coping only, provide Dowel Bars 4D embedded 1'-0" and extend 9" above the top of MSE wall panels. Field cut as necessary to maintain 2" minimum cover to the top of the build up concrete. See Wall Company Drawings for number and spacing of Dowel Bars 4D.
12. Work this Index with the following:
   Index No. 420 - Traffic Railing - (42" F-Shape)
   Index No. 425 - Traffic Railing - (42" F-Shape)
13. The following Indexes contain details of the intersection of the retaining wall at approach slabs:
   Index No. 20900 - Approach Slabs (Flexible Pavement Approaches)
   Index No. 20910 - Approach Slabs (Rigid Pavement Approaches)

(The above concrete quantities are based on a max. superelevation of 6.25% and a 32" F-Shape Traffic Railing.)

**TYPICAL SECTION THRU PRECAST* 32" F-SHAPE TRAFFIC RAILING AND COPING WITH C-I-P JUNCTION SLAB**

* C-I-P Traffic Railing and Coping Sections using precast dimensions and reinforcement are permitted at End Sections. Drainage Inlets and Light Pole Pedestals if slip forming is not used.

**NOTES:**
1. Match Cross Slope of Travel Lane or Shoulder.
2. Vary Junction Slab slope based on roadway cross slope to maintain a minimum 6" asphalt depth at the edge of the slab as shown.
3. For Rigid Pavement (Concrete), Junction Slab may be thinned to match finished grade.
4. Minimum length of Junction Slab between expansion joints is 30'-0".
5. At the Contractor's option, mechanical couplers may be used to splice reinforcing. Complete details, including reinforcement lengths are required in the Shop Drawings. Provide mechanical couplers in accordance with Specification Section 415. Mechanical couplers shall develop 125% of the bar yield strength.
6. Contractor to maintain stability of precast coping/traffic railing prior to junction slab completion. In the Shop Drawings, show reinforcement for optional extension required for stability, shipping and handling. Maintain 2" minimum concrete cover.
7. When the air gap between the precast coping extension and retaining wall exceeds 2½", fill gap with full depth Expanded Polystyrene to provide a maximum 2½" air gap.
8. Angle varies - 0° min., 20° max.

2. Slip Forming of C-I-P Traffic Railing is not permitted.
3. Actual width varies depending on type of Retaining Wall used.
4. See Index No. 423 for Traffic Railing details and Bars 7P1, 4P5, 4R3, 4S3 & 4V1. Bars 5R2 and 5U are not required in Retaining Wall Coping.
EXPANSION JOINT DETAIL

(Raised Sidewalk expansion joints are to coincide with 2" open joints in Traffic Railing).

** Stay-In-Place Plastic Preformed Bond Breakers are permitted to form joints.

RAISED SIDEWALK NOTES:

1. When a 42" Vertical Shape Traffic Railing is used with a precast coping, increase Bars 4C to Bars 5C or provide Bars 4C @ 4" spacing within 6'-0" of Expansion Joints.
2. Construct the expansion joints, V-Grooves and face of coping plumb.
3. Provide Class II concrete for slightly aggressive environments or Class IV for moderately or extremely aggressive environments.
4. Dowel Load Transfer Devices will be hot-dip galvanized ASTM A 36 smooth round bar, or GFRP smooth round bars with a minimum shear strength of 22 ksi in accordance with ASTM D7617. Install Dowel Load Transfer Devices in accordance with Specification Section 350.
5. Construct 2" Expansion Joints in raised sidewalk and C-I-P copings perpendicular or radial to the Gutter Line. Provide at 30'-0" maximum intervals as shown.
6. Shear Keys in Junction Slab are required when GFRP bars are used for Dowel Transfer Devices and are optional with steel dowel bars. Tongue Slope on Shear Key must be constant and between 5" to 45" from horizontal.
7. Provide and install Preformed Expansion Joint Filler in accordance with Specification Section 922.
8. Construct 1/2" V-Grooves in raised sidewalk and C-I-P coping at 30'-0" maximum intervals as shown. Space V-Grooves equally between 1/2" Expansion Joints and/or Begin or End Raised Sidewalk. V-Groove locations are to coincide with V-Groove locations in the Traffic Railing.
9. Spacing shown is along the Gutter Line.
10. For Precast Coping only, provide Dowel Bars 4D embedded 1'-0" and extend 9" above the top of MSE wall panels. Field cut as necessary to maintain minimum cover to the top of the build up concrete.
11. Finish Sidewalks in accordance with Specification Section 522.
12. Work this Index with the following:
   Index No. 20910 - Approach Slabs (Rigid Pavement Approaches)
   Index No. 20900 - Approach Slabs (Flexible Pavement Approaches)
   Index No. 423 - Traffic Railing - (32" Vertical Shape)
   Index No. 422 - Traffic Railing - (42" Vertical Shape)
13. The following indices contain details of the intersection of the retaining wall at approach slabs:
   Index No. 20900 - Approach Slabs (Flexible Pavement Approaches)
   Index No. 20910 - Approach Slabs (Rigid Pavement Approaches)

(Precast Coping Shown, C-I-P Coping Similar) (Traffic Railing not Shown for Clarity)

PARTIAL ELEVATION VIEW

(Precast Coping & Raised Sidewalk Reinforcing not Shown for Clarity)

(Precast Coping Shown, C-I-P Coping Similar)
The above concrete quantities are based on a Type D Concrete Curb (See Note 2).

NOTES:
1. Actual width varies depending on type of Retaining Wall used.
2. Match roadway curb shape (Type) and height. See Roadway Plans and Index No. 300. 5'-11" dimension is based on a 32" Vertical Shape Traffic Railing with a Type D curb adjacent to a 10'-0" wide sidewalk. Adjust this dimension as required for other curb types or transitions at Begin or End Retaining Wall.
3. See Index No. 423 and Index No. 423 for Bars 5S, 5T & 5X and Bullet Railing details. Adjust vertical dimension of Bars 5T and 5X, see Reinforcing Steel Note 5.
4. Trim end of Bars 5T and 5X to clear construction joint for 42" Vertical Shape Traffic Railing.
5. At the Contractor's option, mechanical couplers may be used to splice reinforcing. Complete details, including reinforcement lengths are required in the Shop Drawings. Mechanical couplers shall develop 125% of the bar yield strength.
6. Contractor to maintain stability of precast coping prior to junction slab completion.
7. When the air gap between the precast coping extension and retaining wall exceeds 2 1/2", fill gap with full depth Expanded Polystyrene to provide a maximum 2 1/2" air gap.

The above concrete quantities are based on a Type D Concrete Curb on a level retaining Wall (See Note 1).

TYPICAL SECTION THRU C-I-P COPING AND RAISED SIDEWALK AND RETAINING WALL AT EXPANSION JOINTS

NOTES:
1. Match roadway curb shape (Type) and height. See Roadway Plans and Index No. 300. 6'-8" dimension is based on a 32" Vertical Shape Traffic Railing with a Type D curb adjacent to a 6'-0" wide sidewalk. Adjust this dimension as required for other curb types or transitions at Begin or End Retaining Wall.
2. See Index No. 422 and Index No. 423 for Bars 5S, 5T & 5X and Bullet Railing details. Adjust vertical dimension of Bars 5T and 5X, see Reinforcing Steel Note 5.
3. If slip forming is used, submit shop drawings for approval showing 3" side cover with the Typical Section dimensions adjusted.

VERTICAL SHAPE TRAFFIC RAILINGS

WALL COPING WITH TRAFFIC RAILING/RAISED SIDEWALK

INDEX NO. 6120
PRECAST COPING/parapet and sidewalk notes:

1. Provide class II concrete for slightly aggressive environments or class IV for moderately or extremely aggressive environments.
2. Construct 3/4" expansion joints in sidewalk and C-I-P coping plumb and either perpendicular or radial to the gutter line. Provide expansion joints at 90'-0" maximum intervals as shown.
3. Provide and install preformed expansion joint filler in accordance with specification section 932.
4. Construct 1/2" V-Grooves in sidewalk and C-I-P coping. Space V-Grooves at 30'-0" maximum intervals equally spaced between 3/4" expansion joints and/or begin or end sidewalk. For C-I-P coping only, V-Groove locations are to coincide with V-Groove locations in the Concrete Parapet.
5. Spacing shown is along the gutter line.
6. For Precast Coping only, provide Dowel Bars 4D embedded 1'-0" and extend 11" above the top of MSE wall panels. Field cut as necessary to maintain 2" minimum cover to the top of the buildup concrete. See Wall Company Drawings for number and spacing of Dowel Bars 4D.
7. Work this Index with Index No. 420 - Pedestrian/Bicycle Railing.
8. For C-I-P Coping only, work this index with Index No. 820 - Pedestrian/Bicycle Railing.
9. Finish sidewalks in accordance with specifications section 522.
10. The following Indexes contain details of the intersection of the retaining wall at approach slabs:
   - Index No. 20900 - Approach Slabs (Flexible Pavement Approaches)
   - Index No. 20910 - Approach Slabs (Rigid Pavement Approaches)
LIGHT POLE PEDESTAL NOTES:

1. The pedestal and junction slab are designed to resist the following working loads from the light pole applied at the top of the Pedestal:
   - Axial Deadload
   - Wind load Moment about Longitudinal Axis (*)
   - Dead load Moment about Longitudinal Axis (*)
   - Maximum Shear
   - Torsion about Pole Axis

(*) - Axis refers to Bridge Axis.

2. See Index No. 21200 for anchor bolt design and notes.

3. The Contractor is responsible for ensuring the anchor bolt design is compatible with the light pole base plate. Modifications to the anchor bolt design shown must be signed and sealed by the Contractor's Specialty Engineer and submitted to the Engineer for approval prior to construction.

4. Install Anchor Bolts plumb.

5. For conduit, EJB and expansion/deflection fitting details, see Utility Conduit Detail Drawings.

6. The cost of anchor bolts, nuts, washers and anchor plates will be included in the Bid Price for Light Poles. Include the cost of all labor, concrete and reinforcing steel required for construction of the pedestals, EJB and miscellaneous hardware required for the completion of the electrical system in the Bid Price for either the Traffic Railing or Concrete Parapet that the pedestal is behind.

7. Field Cut Bars 4M2 as required to maintain clearance.

8. Slip Forming Method of construction requires the Engineer's approval within the limits shown.

9. Reinforcing shown for light pole pedestals is in addition to typical reinforcing for Junction Slabs and Raised Sidewalks.

10. Work this Index with the following as appropriate:
    - Index No. 5212
    - Index No. 6110
    - Index No. 6120
    - Index No. 6130

11. Pedestal may be precast in one section with Coping. Minimum Precast Coping section length is 10 ft. or 12 ft for combination Precast Traffic Railing and Coping section.

12. For Estimated Quantities, see Sheet No. 6.

13. Unless otherwise noted, Traffic Railing (32" F-Shape) is shown in all Views and Sections. The Pedestal details for other traffic railings or pedestrian/bicycle railings are similar.

PLAN VIEW
(Junction Slab reinforcing not shown for clarity)
(Junction Slab Shown, Raised Sidewalk or Sidewalk Similar)
**NOTES:**

1. Provide Concrete Class to match adjacent coping.

2. For junction slabs, increase the 3'-0" depth dimension to 3'-6".

3. For sidewalks, see Index No. 6130 for C-I-P Coping, but increase 6" depth dimension to 1'-6".

4. The minimum length of the Junction Slabs, raised sidewalks and sidewalks is 30'-0", measured along the Gutter Line.

5. Bars 4J are only required when pedestals are behind a Traffic Railing or Traffic Railing/Noise Wall.

6. Top of junction slab may be thickened to match finished grade of concrete pavement or shoulder, or top of sidewalk or raised sidewalk (See Notes 3 & 4).

7. Actual width varies depending on type of retaining wall used.

8. See Index No. 6110 for Bars 5V2 and 5S, or Index 5212 for Bars 5V and 5S1.

REINFORCING STEEL NOTES:
1. All bar dimensions in the bending diagrams are out to out.
2. All reinforcing steel at open joints will have a 2" minimum cover.
3. Dimensions shown are for junction slab. Increase width as required for C-I-P Raised Sidewalk and Sidewalks.
4. See Index No. 6110 for Bars 4A (or 5A), 5B, 5C and 4L (or 5L).
5. Two Layers 30Lb. Roofing Felt (Top) & Expanded Polystyrene shown hatched (1/8" Each Side).
6. Locate Barrier Wall Inlet a minimum of 10'-0" away from Expansion Joints in Junction Slab, Raised Sidewalk, C-I-P Coping and Traffic Railing or Concrete Parapet.
7. Work this Index with the following as appropriate:
   - Index No. 6110
   - Index No. 6120
   - Index No. 6130

NOTES:
1. Spacing shown is along the Gutter Line. Spacing shown is for C-I-P Junction Slab. For C-I-P Raised Sidewalks or Sidewalks, match bar spacing and size shown in Typical Sections (i.e., 11 ~ Bars 5U2 and 15 ~ Bars 452 @ 6" spacing for Raised Sidewalks).
2. Dimensions shown are for junction slab. Increase width as required for C-I-P Raised Sidewalk and Sidewalks.
3. Actual location & width vary depending on type of Retaining Wall used.
4. See Index No. 6110 for Bars 5V2 and 5S.
6. Locate Barrier Wall Inlet a minimum of 10'-0" away from Expansion Joints in Junctions Slab, Raised Sidewalk or Sidewalk, C-I-P Coping and Traffic Railing or Concrete Parapet.
7. Work this Index with the following as appropriate:
   - Index No. 6110
   - Index No. 6120
   - Index No. 6130
