**Description:**

Improvements under this Site-Specific Lump Sum contract consist of upgrading the drainage system in the northeast quadrant of the intersection of SR 10 (US 90) and Glover Lane in Santa Rosa County (MP 10.352). Remove the existing mitered end section and install a junction box with a Type J-8 traffic-bearing manhole on a 12 inch thick bedding stone base. Use flowable fill in lieu of embankment around the junction box to an elevation above the pipe connections. Extend the existing 36 inch reinforced concrete pipe (RCP) side drain at Glover Lane to connect to the junction box. From the junction box, install approximately 20 LF of 24-inch RCP and mitered end section to tie into the existing ditch Northeast of SR 10 and install 30 LF of 36 inch RCP and mitered end section to tie into the existing ditch East of Glover Lane. Increase the existing radius at Glover Lane to encompass the new junction box and manhole using concrete pavement with a minimum thickness of 6-inches. Newly installed pipe locations shall be backfilled, and sod installed to match existing shoulder elevations to prevent erosion. Install riprap rubble ditch lining for approximately 300 LF eastward from Glover Lane along the ditch bottom (approximately 6), front slope (approximately 4), and back slope (approximately 4). All existing flowlines shall be maintained. Restore any damaged asphalt pavement and shoulders to pre-existing conditions. All work shall be completed within the existing FDOT right of way. All work requiring a lane closure will be performed at night. Mobilization and Maintenance of Traffic shall be incidental to the pay items listed.

The Improvements under this Site-Specific Contract consist of reshaping ditches and reworking shoulders along State Road 83 from Thad Bell Road (Mile Post 10.648) to Alabama State Line (Mile Post 19.116) and State Road 187 (US 331) from State Road 10 (US 90) (Mile Post 0.000) to Alabama State Line (Mile Post 21.565) in Walton County at designated locations. These ditches are non-typical and should be re-graded to +/- 3 inches of the original flow line to create a free and unobstructed flow of drainage water. For the purposes of this contract, the original flow line is considered to be the linear projection along the ditch bottom between the invert elevations of immediately adjacent drainage structures. Spoil material removed from ditches and shoulders shall be relocated to FDOT storage pits in Argyle or Liberty. Mobilization and Maintenance of Traffic shall be incidental to the bid items.
