1. Document Identification

Objective

This plan defines and describes the Information Technology (IT) strategy for the Florida Department of Transportation (FDOT) District Four's Transportation Systems Management and Operations (TSM&O) program for the next five years (2021 – 2026). The plan includes a review of existing IT infrastructure, current and planned activities, the state of practice, and fiscal budget estimates.

Background

FDOT District Four operates and maintains extensive IT infrastructure in support of its TSM&O program. This IT infrastructure is currently supported and maintained through District Four's Transportation Systems Management and Operations (TSM&O) Contract. The operations contract is currently managed by AECOM as the prime contractor, and Eland Engineering as a sub-contractor for IT support.

List of Acronyms

ACL	Access Control List
AOR	Area of Responsibility
ATIS	Advanced Traveler Information System
ATMS	Advanced Traffic Management System
AVI	Automatic Vehicle Identification
CALS	Client Access Licenses
CCTV	Closed Circuit Television
CFX	Central Florida Expressway Authority
CPU	Central Processing Unit
DDoS	Distributed Denial of Service
DMS	Dynamic Message Sign
DMZ	Demilitarized Zone
DNS	Domain Name Server
FDOT	Florida Department of Transportation
FHP	Florida Highway Patrol
FL511	Florida 511
FLL	Fort Lauderdale–Hollywood International Airport
FTE	Florida's Turnpike Enterprise
HD	High Definition
HOT	High-Occupancy Toll
IaaS	Infrastructure as a Service
ICMP	Internet Control Message Protocol
IP	Internet Protocol
IPS	Intrusion Prevention System

iSCSI	Internet Small Computer Systems Interface
IT	Information Technology
ITS	Intelligent Transportation System
iVDS	Internet Video Distribution System
KVM	Keyboard, Video and Mouse
MDX	Miami-Dade Expressway Authority
MIMS	Maintenance and Inventory Management System
MT	Maintenance
MTTR	Mean Time to Respond
MVDS	Microwave Vehicle Detection Systems
NH/HW	National Highway/Highway
NIC	Network Interface Card
OIT	Office of Information Technology
OS	Operating System
P3	Public-Private Partnership
PMR	Property Management Report
PTR	Property Transfer Receipt
PTZ	Pan-Tilt-Zoom
RAID	Redundant Array of Independent Disks
RTMC	Regional Traffic Management Center
SaaS	Software as a Service
SAN	Storage Area Network
SCSI	Small Computer System Interface
SKU	Stock Keeping Unit
SNMP	Simple Network Management Protocol
SOG	Standard Operating Guidelines
TAC	Technical Assistance Center
TIMSO	Traffic Incident Management Support Office
TMC	Traffic Management Center
TSM&O	Transportation Systems Management and Operations
UC	Unified Communications
VDS	Video Distribution System
VM	Virtual Machine
VMS	Video Management System
WAN	Wide Area Network
WSUS	Windows Server Update Services

2. Existing TSM&O IT Infrastructure

ITS Systems and Infrastructure

The FDOT District Four Regional Traffic Management Center (RTMC) manages steadily increasing vehicular traffic on freeways and arterials within the region, with an expanding base of deployed ITS devices integrated with central systems. The amount of data generated by past and recent deployments of ITS equipment is substantial and will only increase further with the ongoing expansion of express lanes, and the continued development of the arterial roadways.

Most of the data flows into the SunGuide RTMC in Broward County, where two instances of the statewide Advanced Traffic Management System (ATMS) software, called SunGuide, processes the data. The SunGuide software allows operators at the RTMC to perform incident management tasks, obtain data from vehicle detection systems, display video from roadside cameras, and alert motorists with messages on dynamic message signs, highway advisory radio, or by using the Florida 511 (FL511) Advanced Traveler Information System (ATIS). Video streams from hundreds of CCTV cameras are also channeled into the RTMC, where they are displayed on the video wall and operator workstations, and made available to other agencies, including emergency responders, via both direct fiber connections and an Internet Video Distribution System (iVDS).

The SunGuide software and other ITS applications are also made available at the Palm Beach SMART SunGuide RTMC located in the Vista Center, the Emergency Operation Center at the District 4 Headquarters, and the Traffic Incident Management Support Office (TIMSO), located in Fort Pierce, which acts as a disaster recovery site in case the Broward RTMC becomes unusable.

The IT Infrastructure at each of the four locations, and the field network that connects them to deployed ITS devices on the freeway and arterials provide a foundational layer – a platform upon which the ITS applications operate. The availability of the ITS applications, and by extension, the ability of RTMC operations personnel to perform their core functions, depends directly on the integrity of the IT infrastructure, for example, servers, storage, and network equipment. Failure of a non-redundant IT infrastructure component can cause a system outage, which in turn impacts operations, with varying degrees of severity, depending on the specific nature and location of the failure.

This plan focuses on the TSM&O IT infrastructure, which is the primary ATMS programs managed by FDOT District Four. Other significant ATMS programs within the region include those belonging to Florida's Turnpike Enterprise (FTE) and the I-595 Express Concessionaire. FDOT District Four also maintains system interfaces to FTE, I-595 Express, and all other District's, however ITS operations for those roadways are not within the scope of the FDOT District Four ITS program.

2.1 RTMC Facilities

The Broward SMART SunGuide RTMC is at the heart of FDOT District Four ITS operations. The RTMC's state-of-the-art control room is shared by I-595 Express traffic operations personnel, and the Broward County Traffic Engineering Division. The RTMC operators also work together with their counterparts in Florida's Turnpike Enterprise, Miami-Dade

Expressway Authority, and FDOT District Six to effectively manage road traffic at a regional level (Southeast Florida).

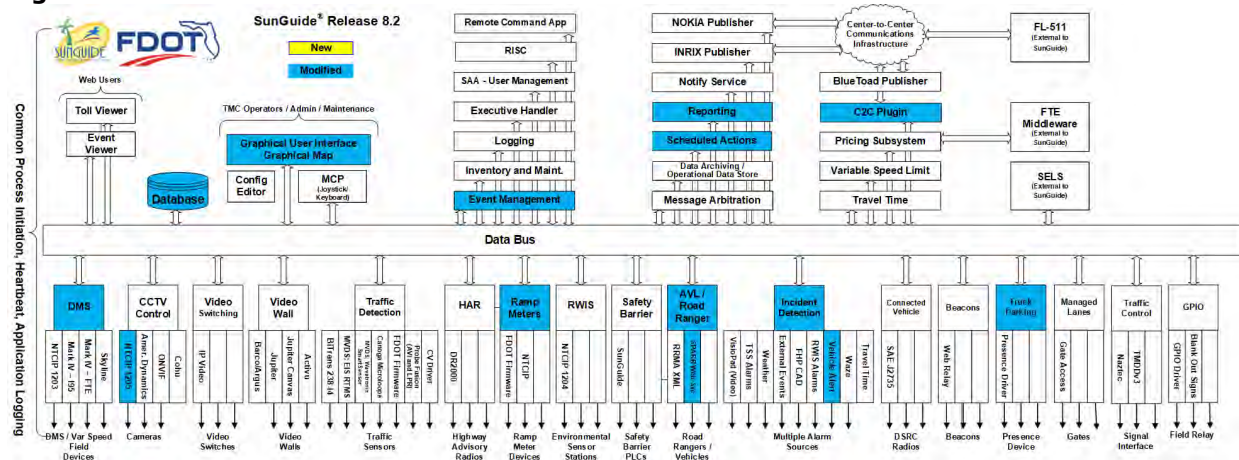

There are two other facilities within FDOT District Four which are equipped with IT infrastructure to enable them to operate as a backup to the Broward RTMC. A summary of the three control centers is provided in Table 1 below.

2.2 SunGuide Software

The SunGuide software is the ATMS software used by all FDOT Districts and other transportation agencies in the state of Florida, such as the Miami-Dade Expressway Authority (MDX) and the Central Florida Expressway Authority (CFX). The RTMC Operations programs use two different instances of the SunGuide software, deployed on different IT infrastructure, and with different system architectures, within the Broward RTMC.

SunGuide software details are available on its web page <http://www.sunguidesoftware.com>. A schematic of the overall SunGuide software architecture is provided below.

Figure 1: SunGuide Software Architecture

3. TSM&O Applications and IT Infrastructure

The IT infrastructure for the TSM&O program supports the SunGuide software and a wide variety of other ITS applications integral to the TSM&O program. The SunGuide application and database servers are physically dedicated, but the balance of the IT infrastructure consists of a virtualized environment. It should be noted that at the alternative sites to the RTMC limited physical servers are utilized and instead an all-virtualized environment is deployed.

The architecture of a physical server is simple, with each server has its own hardware: memory, network interface cards (NIC), Central Processing Unit (CPU) and storage resources (e.g. disk drives). On this hardware, the server's operating system (OS) is loaded, and through this OS you can run and manage installed applications. With virtual infrastructure, there are physical servers and associated hardware resources, but instead of a traditional server OS, hypervisor software is loaded. The hypervisor software is what enables the creation of virtual machines. Each virtual machine has its own virtual devices – virtual CPU, virtual memory, virtual NIC and

virtual disk storage. Upon this virtual hardware, a traditional guest operating system is loaded, and server applications installed.

4. TSM&O Infrastructure Priorities

4.1 Infrastructure Security

Security within the TSM&O IT Infrastructure is the top priority. Items used within this category follow a simple three-step process throughout the environment. Each system must adhere to these three processes to exist.

1. Authentication – Identify the user by providing a set of credentials to confirm the user is who they are logging in as.
2. Authorization – Determines whether the user has the authority to perform functions they are attempting.
3. Accounting – Keeps a record of the above two processes, and in some cases, provides a log of commands that were issued during their session.

In some cases, applications (both turnkey and internal) may not adhere to the above policies which is why additional “supporting” applications must exist. These additional service applications provide a uniform and consolidated vehicle to perform the three A’s (AAA).

The TSM&O Infrastructure must ensure that cyber security threats are defended against on a second-by-second basis. To facilitate this type of security posture, security applications must be used to collect, parse, and analyze information from both internal and external sources. Because cyber security changes frequently, sometimes throughout each day, the external sources utilized are chosen due to their expertise in cyber security monitoring and alerting.

Examples of cyber security scenarios that are not manageable from within the TSM&O are as follows:

1. Users accessing malicious or inappropriate websites – There are millions, if not billions, of different websites that exist on the internet. The state of these websites changes frequently. It would be inefficient and impossible for the TSM&O IT Team to monitor the status of these websites and change the authorized lists. Instead, an external vendor, who specializes in real-time updates to malicious or inappropriate websites, is used to change policies on the fly, without the participation or interaction of the TSM&O IT Team.
2. Identifying malicious or damaging software, or data traversing the environment that is meant to cause harm – This scenario can be summed up simply with the word “virus”. Every IT environment in the world is threatened by outside viruses. It would not be possible for the TSM&O IT Team to manually scan each computer, server, or system to check for possible viruses. Therefore, service applications are used to scan, identify, and alert on any viruses it finds. In addition, these applications update the “library” of viruses daily, automatically updating their systems to identify new threats.
3. When an environment uses many applications to function, users are required to have many logins to be used on each application – This problem becomes more and

more dangerous as the AAA process, from above, is harder to manage and enforce when application numbers continue to grow. Security services are used to enforce the AAA process using a more universal vehicle to accomplish this.

Lastly, most systems are digital in nature. The above information pertains to digital data. Unfortunately, all digital data lives on a physical, tangible device. This requires that the AAA process be followed even for physical security. The TSM&O IT Team ensures that physical security is as important as digital.

4.2 Business Continuity Operations

Business Continuity, also known as Business Coop, is a high priority to the TSM&O overall operation. Systems that are vital to the goals and responsibilities of the overall TSM&O mission need to continue to run and function even when conditions are not conducive. This requires that certain safeguards be taken to prepare for these types of scenarios.

There are two major segments of Business Coop.

1. Backup Data – The process of ensuring that previous versions of critical data exist outside of the production data.
2. Disaster Recovery – The preparedness of the environment to recover and continue operations after a disaster.

It is the responsibility of the TSM&O IT Team to ensure that operations can continue in many different scenarios. There are some core services that are used to assist the team with performing, tracking, and testing the various backups. These systems are vital for the continuation of operations.

Some of examples of Business Coop scenarios are as follows:

1. When a user makes changes to a document or application that was a mistake or malicious – This can happen quite often when users edit or delete documents that were important to the department. When changes like this cannot be undone, the only option is to “restore” from a backup of that data taken from a previous day, prior to the change that was made.
2. When a system failure of a critical system happens, and the system requirement is 24 hours per day – This is when there is normally a hardware or environmental failure (i.e. power outage). When this occurs, other IT systems will be employed to compensate for the failure. In some cases, this can be done without the interaction of the TSM&O IT Team.
3. An environmental disaster occurs such as a facility fire, hurricane, or flooding – This scenario is planned for and requires both systems mentioned in the above scenarios. Operations would need to continue regardless of the impact of these disasters.

4.3 Infrastructure Operations

Infrastructure Operations is the most basic form of what makes the IT environment run. This can include many of the following:

- Operating Systems
- Server Management

- Environment Monitoring

Without these most basic tools, the entire environment would be unable to run. The core purpose of Infrastructure Operations is to adhere to both Infrastructure Security and Business Coop, while also adding efficiency. These services give IT administrators the tools they need to manage the entire infrastructure in key central points.

There are three key points that Infrastructure Operations should follow:

1. Secure and Standard Operating Systems
 - a. When choosing operating systems, the most secure and efficient operating systems should be used. In addition, industry standards should be referenced and followed where possible.
2. Efficient Use of Resources
 - a. When creating/altering/deleting many of the management systems, various applications have excelled at reducing the time it takes to do this. The purpose of this section is to ensure that resources can be easily directed to organizational priorities at a reduced time.
3. Environment Monitoring
 - a. Because there are so many moving parts within IT, it is impossible to manually monitor the entire environment. Services and applications should be used to streamline this process. Many problems can be resolved before they affect the business operations. This is called predictive failures. It is the purpose of these monitoring tools to establish a baseline, and alert administrators when that baseline is exceeded. The value of this functionality cannot be overstated as minor failures within an IT system can become catastrophic very quickly and frequently when a problem has not been addressed in an acceptable amount of time.

4.4 Camera Operations

Cameras are one of the most primary elements in the TSM&O operation. They give the visual confirmation and awareness of what is happening in the Area of Responsibility (AOR). Camera management is a function that is spread between multiple departments within the TSM&O (Operations, IT, and Maintenance).

Information Technology responsibilities are tied to presenting the video data stream to the users/operators. In addition, IT is responsible for ensuring that various applications are available for cameras to be viewed from the outside.

Services within this category should be tailored to the requirements of the main applications being used:

- SunGuide
- iVDS
- DIVAS
- Barco Sidebar

These four services make up most of all camera operations. SunGuide is used by operators to view and document incidents on the roadway. iVDS and DIVAS is used for external users to view cameras and Barco Sidebar is for internal users to view cameras with increased clarity and video wall operations.

Due to the number of cameras that exist with the TSM&O area, as well as the number of cameras being added, it is important to ensure that camera configurations are kept as uniform as possible. This allows administrators to be able to identify problems quick and work to resolve them before an interruption in service.

4.5 Information Technology Infrastructure Library (ITIL)

ITIL is an industry standard term to refer to the documenting the wealth of knowledge that exists within an IT environment and how that focuses on aligning IT services with the needs of the business.

ITIL describes processes, procedures, tasks, and checklists which are neither organization-specific nor technology-specific, but can be applied by any organization towards strategy, delivering value, and maintaining a minimum level of competency.

Services within this category should be used to support this purpose.

Examples of services for this area are:

CRM – Customer Relations Manager

Although the TSM&O does not have revenue-based customers, each user and system within the environment are considered customers that require support.

Standards and Practices – Knowledgebase

This is a set of commonly used solutions. These solutions should be indexed and catalogued, searchable by both customer service representatives and users alike. This allows for a better, more streamlined, way to support and assist users.

Change Management and Inventory

To better assist users, there needs to be awareness of changes happening within the environment. By tracking this, it allows customer service representatives to correlate changes with active issues.

4.6 Warranty/Support

Warranties and Support are essential to quick resolutions to catastrophic failures. Warranties should exist on every Priority 1 (Critical) system within the environment. Part of the requirements, for warranties, are that they support the 24/7/365 nature of the TSM&O operations. This means that SLA's (Service Level Agreements) are less than 4 hours to a resolution.

Support agreements exist to gain access to expertise that does not exist within the IT department. The support agreements should be tailored to devices that are not listed under the job responsibilities of any IT department personnel.

4.7 End User Support/Equipment

The TSM&O department has approximately 120+ users that the IT department is responsible to support at any given time. Aside from managing the network infrastructure, users are the primary customer. Users perform any number of different functions in support of the TSM&O mission. Equipment, software, and services should be tailored to specific functions that users perform in their daily business.

Examples of items and services required by users are as follows:

- Keyboards
- Mice
- Headsets
- Specialized software to perform a function.
- Monitors
- Laptops
- Desktops

4.8 Hardware Lifecycle Replacement

PRODUCT LIFE CYCLE CATEGORIES	YEARS
Information Wall Equipment (Control Room Primary Display Wall)	8
Information Wall Equipment (Accessory Displays Projectors)	7
Information Wall Equipment (Servers, Video Processors, Transcoders etc...)	6
Information Wall Equipment (Software)	6
Servers (All)	5
Laptops (All)	3
Desktops Core Endpoint Hardware (All)	4
Tablets (All)	3
Core and Hub Switches Routers	8
Distribution and Access Switches Routers	7
Firewalls and Unified Threat Appliances	5
Phone Communication Equipment (Phones, Central Hardware)	7
Wireless Network Devices (WAP's, WLC's, etc...)	7
SQL and Database Application Software	6
Microsoft Client Operating Systems and Applications	6
Microsoft Server Operating Systems	6
Microsoft Other Software	6
MISC Other Software	6
IP Security Cameras	7
Storage Area Network iSCSI Switches Fiber Channel Switches HBA's	5
Storage Area Network Servers	5
CyberLock Hardware (Keys)	4
CyberLock Hardware (Locks)	7
CyberLock Hardware (All Other Hardware)	5
USB External Storage hardware	5
Network Audio Communication Hardware	6
Environmental Monitoring Hardware	7
Power Equipment (UPS, Power Distribution Units)	7
Network Device Appliances (Misc)	7
Rack Network KVM's	7
Network Devices (Misc)	7
IT Equipment (Misc - Security)	5
IT Equipment (Misc - Non category)	7
Multimedia Equipment (Misc)	7

5. Staffing Plan

5.1 IT Support Roles

The roles and responsibilities of the personnel who support the TSM&O IT infrastructure at the RTMC are described in the contract “Districtwide Transportation Systems Management Operations” (436198-1-82-01). The contract was awarded in March 2018 to AECOM.

The contract includes a services fund, operational roles at the RTMC, plus the IT personnel who administer the systems and network.

The contract specifies explicitly list the critical job roles for five IT Support positions. A summary of the IT positions is provided in the table below.

Table 3: TSM&O IT Support Roles

POSITION	DEFINITION OF ROLE
RTMC IT Manager	System architect for the District Four RTMC IT systems. Responsible for administration, and operation of all IT servers, desktops, networks and subsystems. Responsible for managing a staff of 5 full-time employees, and possibly seasonal part-time employees through internships with FIU. Collaborates with relevant FDOT staff for input into IT governance policies, procedures, and training materials. Responsible for attending daily, weekly, and monthly meetings with FDOT. Responsible for technical coordination with other government agencies and contractors.
RTMC IT Special Projects Manager	Infrastructure IT architect for the District Four RTMC IT department who plans, designs, and oversees the systems that run the departments technological infrastructure. This position assesses the existing and future needs of the operation, evaluates the strengths and weaknesses of the current systems, and makes recommendations for improvements. This position also implements and integrates new technologies and solutions while following the departments policies and vision. This position is responsible for ensuring the efficiency, scalability, and high availability of the infrastructure systems.
RTMC IT Network Manager	Responsible for the transport of all data at a layer 3 level for the entire District, including the management of all Cisco Layer 3 Routers at the RTMC and the field. Responsible for the management of all Layer 2 Switches within the RTMC, TIMSO, and Vista center. Responsible for all traffic shaping within and outside of the network. Responsible for maintaining an enterprise wireless system across the entire district. Responsible for management of unified communications across voice and video systems throughout the district.

<p>RTMC IT Security Manager</p>	<p>Responsible for day to day desktop and server administration within the district. Responsible for weekly patch management, of all desktops, laptops, and key servers. Responsible for monthly updates to master system images, responsible for the daily monitoring of antivirus, web, and network traffic, including responding to automated alerts for incident problems that occur throughout the district. Responsible for maintaining a quarterly inventory, as well as assistant in management the TMC control room including the FDOT Information wall subsystems. Responsible for management of IT systems used to track and administer the TMC.</p>
<p>RTMC IT Systems Manager</p>	<p>Responsible for day to day desktop and server administration within the district. Responsible for weekly patch management, of all desktops, laptops, and key servers. Responsible for monthly updates to master system images, responsible for the daily monitoring of antivirus, web, and network traffic, including responding to automated alerts for incident problems that occur throughout the district. Responsible for maintaining a quarterly inventory, as well as assistant in management the TMC control room including the FDOT Information wall subsystems. Responsible for management of IT systems used to track and administer the TMC.</p>
<p>RTMC IT Desktop Manager</p>	<p>Responsible for day to day desktop and server administration within the district. Responsible for weekly patch management, of all desktops, laptops, and key servers. Responsible for monthly updates to master system images, responsible for the daily monitoring of antivirus, web, and network traffic, including responding to automated alerts for incident problems that occur throughout the district. Responsible for maintaining a quarterly inventory, as well as assistant in management the TMC control room including the FDOT Information wall subsystems. Responsible for management of IT systems used to track and administer the TMC.</p>

All operations shall be 24 hours, 7 days a week unless otherwise directed. The IT support personnel are not normally present after-hours (6pm – 6am) but do have rotational on-call duty to ensure 24 x 7 x 365 support for RTMC Operations.

5.2 FDOT District Four Documents – TSM&O

The FDOT Standard Operating Guidelines (SOG) are an essential part of the RTMC operations and provide a contractual framework by which FDOT manages its program. The TSM&O SOG includes a chapter (Chapter 17) that is dedicated to IT Infrastructure, which specifies design standards and operational processes, to be implemented within the FDOT District Four IT environment, to maintain the integrity of the IT infrastructure.

6. Governance

The governance structure for the ITS program is meant to ensure FDOT District Four review and approval for ITS IT infrastructure design, procurement and implementation. The governance process for procurement is partially covered in the Purchasing Guidelines document referenced in the SOG. The guidelines identify the steps to be undertaken once a purchase direction has already been made.

The current governance procedures consist of the following steps to ensure the IT ITS contractor is fully aligned with FDOT District Four on any major purchase or any important technology direction.

Firstly, major purchases and projects are discussed over multiple review sessions between FDOT District Four management and relevant IT ITS staff, to validate alignment with short and long term goals, and confirm FDOT's expected outcomes for the project tasks.

Secondly, multiple options for design and implementation are presented and discussed with FDOT District Four to ensure there is proper due diligence concerning final outcomes.

Thirdly, numerous factors are assessed such as long term costs, life cycle dates, vendor track record, technical needs, strength of vendor support, and price are all taken into consideration prior to recommending a solution for purchase. The results of these evaluations are presented to FDOT District Four as part of the value proposition of a given option versus another.

7. Performance Indicators

The TSM&O IT program provides a weekly activities report to FDOT District Four for review and comments, the report details the incidents, problems and routine maintenance tasks of the previous week. In addition, weekly in-person management meetings are held with FDOT management, during which the status of short term tasks and long term projects are reported, giving FDOT management an opportunity to provide feedback and direction in terms of their needs or concerns. There are additional monthly, quarterly, and annual reports showing specific performance and operational tasks are completed with financial penalties occurring due to inefficiencies.

8. ITS Inventory Audit

The TSM&O program, because of its extensive asset inventory, has a very structured inventory management and auditing process. The District's SOG details the auditing process for all ITS inventory, including:

- Receiving Equipment from OIT

The DOT Property Management Report (PMR) is completed, signed and reviewed by the Property Auditor (currently Nicole Forest), and filed. All equipment includes a NH/HW tag.

- Receiving Equipment with a unit cost of \$5,000 or more

The Property Auditor physically verifies all required information is accurate, completes a PMR, and submits the request to Financial Services to receive an NH/HW tag

- Property Items With a Value Less Than \$5,000

All relevant IT equipment under \$5,000 is tracked by FDOT District Four ITS - IT and Maintenance staff. The equipment is assigned a unique ITS tracking tag that starts with IT (Information Technology) or MT (Maintenance), and is entered in the MIMS inventory tracking system.

- ITS Property Transfer Receipt Forms

Property Transfer Receipt (PTR) forms are used to accurately track the location and party responsible for every piece of FDOT owned equipment. The FDOT ITS Program Manager is responsible for requesting a PTR Form be completed for all FDOT equipment with an NH/HW tag and ITS equipment with an IT/MT tag

- Inventory process for items within the FDOT District Four RTMC and Maintenance Yard, TIMSO, FHP, and the Vista Center

Inventory is conducted four times a year starting on the first Friday of March, June, September, and December and should be completed by the second Friday of the same month. The Property Auditor is responsible for overseeing the inventory process through coordination with the IT Manager.

- Process for FDOT District Four Inventory Scanning annually in December
A MIMS report is generated to show the last location of all equipment to be scanned, and an FDOT scanner is used to scan all NH/HW tagged items. If an item cannot be located, it must be documented on the report and followed up with the last responsible party on the PTR, and referred to the FDOT ITS Program Manager.

9. Future Initiatives Supporting Strategic Objectives

9.1 Mobile Broadband Connectivity

Background and Description: The need for camera locations and viewing areas increase daily. The cost to install fiber infrastructure becomes increasingly expensive and is only viable when paired with a major project. With both of those challenges, and with the creation of 5G technologies, the natural answer is to use mobile broadband technologies to resolve these problems.

By deploying cameras, connected to mobile broadband technologies, it reduces the 20-year cost by 95% per mile used. This is a very large cost savings to the Department.

Mobile broadband technologies are being improved at a faster rate than the requirements needed for a roadside camera; therefore, it is beneficial for the Department to invest in these technologies early, as improvements can be leveraged in future years.

Strategy: The first goal, in this objective, is to identify areas within the environment that are lacking visibility. For example, US27 was installed with a point-to-point network system that proved ineffective for the area. The system has not worked successfully in a large amount of time. To bring this stretch of road back online, mobile broadband technologies can be used.

When paired with sufficient antennas, these mobile devices can provide sufficient connectivity to areas that are difficult or expensive to install new fiber.

Various manufacturers will be assessed for their capabilities, security, and analytics to be decided upon. Once a manufacture is chosen, a dedicated Access Point Network (APN) will be established with the cellular vendor of choice. This will provide a single secure link with all communications between these devices and the TSM&O network.

9.2 Connected and Automated Vehicles (CAV)

Background and Description: The State of Florida has been investing in CAV technology for the past 8 years. They have built a \$35 million facility dedicated to the testing of CAV technology (Suntrax). As some technologies are already being tested, it is prudent for the D4 TSM&O IT Strategic Plan to keep a close watch on how this technology progresses.

From early reports and assessments, requirements of local traffic Intelligent Traffic System (ITS) will be, what is referred to as, “edge” computing, meaning that data processing will be done on the roadside. This will require that networking systems be as robust as possible. As of 2021, the D4 TSM&O environment is upgrading their entire network infrastructure with Cisco networking systems which are the most robust systems to meet the CAV requirements. Other items may be required to fill out these requirements, but the Cisco upgrades sets up a good foundation for future expansions.

As of May 2023, the District 4 TSM&O environment has started a risk assessment project that will identify the needs of the network to interface with FDOT’s V2X DEP (Data Exchange Program). This will send data from the V2X systems on the roadside, through Sunguide, and into a data retention system. Possible security changes will need to be made to the environment to support this connection with the DEP.

Strategy: It is important for management and IT staff to stay updated on CAV technologies as they become available. Building relationships with Suntrax personnel and management to create partnerships is the best way to gain information on what technology will become the standard across the state. Early adoption and test beds should be identified with local municipalities so that testing can be conducted throughout the area of responsibility (AOR).

9.3 Cloud Computing Systems

Background and Description: The IT industry has adopted cloud computing as a standard for applications and services that need a higher level of availability. In addition, cloud computing can offer another option for redundancy within an environment. Historically, cloud computing has been difficult to both get approved and procure within the state purchasing system, but new cloud contracts, built specifically for state purchasing requirements, have been created to resolve this issue.

There are a number of applications in the D4 TSM&O environment that would be eligible to be in the cloud. Any application located in the DMZ could be put into the cloud. A secure connection can be established between the cloud provider and the D4 network. The applications would then be accessed by field personnel through the cloud, offering a higher level of availability and computing power.

Strategy: Identify new contracting solutions for cloud computing through state procurement requirements. Also need to identify a list of applications and services that would be eligible to be in the cloud. Research will need to be done to identify the right secure connection that would be established with a cloud provider. Information from other districts may be a good place to start .

10. Five Year Budget Plan

The approach to the budget planning forecast is based on the priorities listed above but considers the frequently changing priorities of the IT industry. It is the responsibility of the IT Manager to ensure that priorities are altered based on industry best-practices.

The current services and products that been recently been procured for the TSM&O IT systems have considered current and future priorities and should be sufficient for the foreseeable future; however, priorities change daily.

The Five-Year IT Budget is included in Appendix A, and includes a fiscal year breakdown for replacement hardware, software licenses, required warranties, and service agreements. All items include the prescribed quantity, estimated and extended cost, and a brief description. The potential funding sources for the categorized items are included, as well.

FDOT DISTRICT 4 TSM&O

IT STRATEGIC PLAN FOR THE TSM&O PROGRAM: IT STRATEGIC PLAN BUDGET

**TSM&O ITS STRATEGIC PLAN CHECK LIST
FY 22-23**

SECTION	PURCHASE NAME	DESCRIPTION	JUSTIFICATION	ESTIMATED COST				PROJECTED PURCHASE		COMMENTS	Priority Rank 1-5	Object Code
				Work Program	Services	TME	Expense	Quarter	Renewal Dates			
				\$ 2,245,737.00	\$ 176,000.00	\$ -	\$ 5,000.00					
5.1 Infrastructure Security	Okta	Okta Multi-Factor Authentication - Used to ensure that user requesting to log into the network is, physically, the user. Okta Single Sign-On - Used to authenticate login requests from non-active directory applications.	The District 4 TSM&O program requires the renewal of the Okta Multifactor Authentication and Single SignOn service. These services manage the "Access Control Lists" for all applications with the SunGuide domain. In addition, Multifactor authentication assists administrators with ensuring that those trying to access critical or sensitive systems are authenticated as the person they're attempting to login as.	\$ 27,595.39	-	\$ -	\$ -	3	02/05/2023-02/04/2024		1	132700
	Cyberlock	Used to authenticate and authorize users to access physical areas of the TSM&O area (i.e. offices, HUB Buildings, server racks, roadside cabinets, etc.)	The District 4 TSM&O program requires the purchase of these Cyberlock cylinders due to previous roadside ITS projects that were designed prior to the standardization of Cyberlocks in the TSM&O environment. These devices secure the roadside cabinets that house CCTV devices and network and camera equipment for use in the TSM&O daily operations.	\$ 1,249.13	-	\$ -	\$ -	3	03/01/2023-03/01/2024		1	132700
	Cisco Umbrella	Used to restrict access to websites and data outside the network and to provide security updates to Cisco devices.	The District 4 TSM&O program requires the purchase of Cisco Umbrella in order to restrict users from accessing malicious or inappropriate data/websites outside the network. This system also keeps a log of all internet access activity ensuring that security and auditing is maintained. In addition, this system will provide security updates to Cisco equipment across the network.	\$ 8,199.90	-	\$ -	\$ -	3	02/08/2023-02/07/2024	Moved to WP.	1	132700
	Tenable	Tenable is a vulnerability scanner that accurately identifies, investigates, and prioritizes vulnerabilities.	There is a growing list of vulnerabilities in the world that are manifesting into serious security risks for organizations everywhere. Tenable will assist the IT department in identifying and resolving key vulnerabilities, in the environment, before they become a target for attack. Because of the changing cyber security space, this software will enact new vulnerability scans as they are identified.		\$ 37,631.65			3	04/17/2023-04/16/2024		1	132700
	TrendMicro	TrendMicro is software that protects endpoints, such as servers, workstations, and laptops.	The District 4 TSM&O program requires the purchase of the TrendMicro endpoint protection system. The current software being used at TSM&O is not sufficient enough for today's cyber security threats. TrendMicro is a leader in the virus protection and malware removal industry. This will ensure a more complete and comprehensive protection policy is enforced in the TSM&O environment. It will also reduce the amount of agents being run on each of our endpoints. Trend Micro does virus protection and malware removal in one agent, instead of the multiple systems being used now.	\$ 39,176.67	-			3	05/01/2023-05/01/2024		1	132700
	Cisco ISE	Cisco ISE Premier is used to control access to the network from unauthorized ports in the environment.	The District 4 TSM&O Program needs to upgrade the licenses on the Cisco ISE device to Premier. Cisco ISE is an Identity Services Engine that controls access to network equipment as well as the network itself. It allows administrators to restrict unauthorized access to the network from devices that haven't been approved. It also allows the system to audit access to the network to be reviewed in cases where access needs to be reviewed.	\$ 1,326.31				3	03/01/2023-02/28/2024		1	132700

**TSM&O ITS STRATEGIC PLAN CHECK LIST
FY 22-23**

SECTION	PURCHASE NAME	DESCRIPTION	JUSTIFICATION	ESTIMATED COST				PROJECTED PURCHASE		COMMENTS	Priority Rank 1-5	Object Code
				Work Program	Services	TME	Expense	Quarter	Renewal Dates			
				\$ 2,245,737.00	\$ 176,000.00	\$ -	\$ 5,000.00					
	ManageEngine	<p>ManageEngine ADSelfService - Allows users to reset their own network password, even after they've forgotten it, without the need to interface with IT.</p> <p>ManageEngine PasswordManager - There are many passwords within the environment used by administrators. This is a vault to keep those passwords safe while tracking who accesses them.</p> <p>ManageEngine Mobile Device Manager - Used to manage the various mobile devices (cell phones) throughout the environment for security and ease of use.</p>	The District 4 TSM&O program requires the purchase of these mobile device manager licenses for management of the mobile devices in the environment. All personnel on the roadside utilize a mobile device (cell phone) to communicate with each other, as well as with the Broward TMC. These devices are vital to the operation of the TSM&O mission. The health of these devices is also very important. The Mobile Device Manager allows the IT department to update, control, and otherwise locate all devices. As devices get more complicated (i.e. smartphones), they will need to be controlled to disallow various behaviors. This software license is vital to the communication operation of the TMC and the entire TSM&O.	\$ 9,724.46				3	03/14/2023-03/13/2024	Moved to WP.	1	132700
5.2 Business Continuity	Exagrid Backup Storage	This is external storage that stores backup jobs from all TSM&O systems.	The District 4 TSM&O Program needs to replace the storage devices that are currently being used to store backup data from all the systems within the TSM&O environment. This system ensures that backups are available and in good condition for use in cases where restoration is the only option and is needed to continue operations.	\$ 28,208.00				1	09/01/2023 - 08/31/2024			341023
	Veeam	Used to backup and restore lost/correct data within the environment. Will replace Unitrends.	The District 4 TSM&O Program needs to renew the license for "Veeam". This backup and restore software is the center of all business continuity and disaster recovery plans for the TSM&O environment. This is used to restore data that may have been lost due to a disaster, critical error, or corruption of data. As required by law, the TSM&O office retains data for various periods of time. This software is used to also catalogue that information for later reference.	\$ -	\$ 30,000.00			1	08/01/2023-07/31/2024		1	132700
	Arxys / Milestone	Used for security surveillance of key TSM&O facilities and equipment.	The District 4 TSM&O program needs to renew a comprehensive loss prevention camera system that allows the environment to be tracked and recorded. Currently, security cameras are having their streams being recorded, making it possible to go back and look at what may have happened in regards to security. With various security incidents having already happened at our roadside hubs and cabinets, such as devices being removed from hubs and unauthorized contractors entering secured structures, this system is imperative to be able to identify who, what, when, and where...when looking at malicious activity.		\$ 9,534.87			3	02/21/2023-02/20/2024		1	132700
	UPS Maintenance Agreement	Used to do preventative and emergency maintenance to the Treasure Coast TMC building's Uninterruptable Power Supply (UPS) unit.	The District 4 TSM&O Program needs to purchase a Maintenance Agreement for the UPS unit at the Treasure Coast TMC. This location also serves as the IT disaster recovery spot for all operations to be moved in cases of disaster at the RTMC. The UPS unit serves as the 1 st and 3 rd level of failover in cases of power failures. It holds the power load of all equipment from when the power fails until the generator kicks in. It's 3 rd level purpose is to hold the power load in cases where the generator fails. This would allow IT staff to systematically shutdown IT equipment in cases of imminent power failure. A maintenance agreement will ensure the unit remains in 100% readiness status.	\$ 4,243.05	-	\$ -	\$ -	1	09/01/2023-08/31/2024		1	132700

**TSM&O ITS STRATEGIC PLAN CHECK LIST
FY 22-23**

SECTION	PURCHASE NAME	DESCRIPTION	JUSTIFICATION	ESTIMATED COST				PROJECTED PURCHASE		COMMENTS	Priority Rank 1-5	Object Code

				\$ 2,245,737.00	\$ 176,000.00	\$ -	\$ 5,000.00					
	Ecava	Used to monitor the health and availability of generators located at the various HUB buildings.	The District 4 TSM&O Program needs to renew the license for "Ecava". This SCADA (Supervisory control and data acquisition) software is used to monitor, control, and create alerts for power generators throughout the TSM&O environment. These generators are attached the network HUB buildings, which are the backbone for the RTMC network and devices. This is used by maintenance to monitor the health of the generators and dispatch personnel when generators fail.	\$ 392.44	-			3	04/29/2023-04/28/2024		1	132700
5.3 Infrastructure Operations	Smart Deploy	Used to push updates and new images to computers/laptops.	The District 4 TSM&O Program needs to renew the license for "SmartDeploy". SmartDeploy executes, monitors, and tracks updates for all machines within the TSM&O environment. This includes workstations, laptops, and servers. If there are Windows updates that need to be deployed to the environment for security purposes, SmartDeploy will prepare and push those updates out to all machines. When a new computer needs to be imaged, SmartDeploy will push the approved image to the machine, ensuring that all machines are using the same image for consistent, predictable, and repeatable operations.		\$ 2,415.00	\$ -	\$ -	1	08/26/2023-08/25/2024		1	132700
	Axis Cameras	Used to monitor the physical security of sensitive areas of the IT infrastructure.	The District 4 TSM&O Program needs to purchase additional and replacement Axis Security cameras for the IT Infrastructure environment. There are a number of aging devices that are failing and are no longer supported by the manufacturer. There are other devices that will need to be installed in new areas being taken over by TSM&O, such as the Henry McKinney Tunnel SCADA system.	\$ 6,800.00				1			2	
	Tableau	Tableau is a "big data" database parsing system.	The District 4 TSM&O program requires the purchase of a software called Tableau. This software is considered a "big data" program that will allow the TSM&O program to deploy a SunGuide dashboard to the environment. Development of these dashboards has already been completed and this software will be used to permanently place this data into the environment. These dashboards will take numerous datapoints from within Sunguide and display them into useful and informative dashboards for management and operators to use.		\$ 1,505.56			3	01/19/2024 - 01/17/2025		3	132700
	Vmware	Used as the central management system for all 200+ virtual servers in the environment.	The District 4 TSM&O program requires the renewal of the VMWare Datacenter licensing. VMWare is the central hub of all server, storage, and application management for the RTMC. It allows the environment to run hundreds of servers on very few physical servers. This software also assists with disaster recovery, business continuity, failover operations, and other critical systems. The criticality of this system cannot be overstated, and is a central requirement to the continuance of RTMC operations.	\$ -	\$ 40,373.55	\$ -	\$ -	1	11/01/2023-10/31/2024		1	132700
	RedHat	Used as an alternate Operating System (OS) running on servers. (Alternative, more secure, version of Windows.)	The District 4 TSM&O program would like to renew the RedHat Enterprise Linux support subscription. This is software that runs the SENSYS Network systems for the Truck Parking/Rest Area project. It monitors that amount of available spaces within truck and rest areas.	\$ 728.24	-			2	01/27/2023-01/26/2024		1	132700
	GoDaddy	GoDaddy is the broker for internet domain names and Security Certificates vital to maintaining access to smartsunguide.com, I595Express.info	The District 4 TSM&O program needs to renew its ownership of smartsunguide.com and i595express.info in order to continue operations on those websites. In addition, Security Certificates (SSL Certificates) are required to maintain security on those sites for both the benefit of TSM&O and visitors to those sites.	\$ 1,950.00	-			2	02/20/2023-02/19/2024	Moved to WP.	1	132700

				\$	\$	\$	\$					
				2,245,737.00	176,000.00	-	5,000.00					
	Solarwinds Monitoring	Solarwinds monitors manages the health of the entire environment and all the nodes within it by alerting administrators of downed devices or predicitive failures.	The District 4 TSM&O Program needs to purchase the renewal of Solarwinds in order to be assisted with alerts and critical information about the health of the IT environment. This reports on the availability, disk space, and other items that allow the IT department to proactively correct issues before they become a problem. In addition, Solarwinds provides a Security and Event Manager, allowing the environment to audit itself in regards to changes/access having occurred.		\$ 47,288.46			3	03/26/2023-03/25/2024		1	132700
	VMWare Site Recovery Manager	Site Recovery Manager allows for full datacenter failover from the RTMC to TIMSO.	The District 4 TSM&O Program needs to purchase licenses for VMWare SRM to start the process of a full datacenter failover infrastructure that will allow, at the flip of a switch, to move all resources from one datacenter to the other. This process will begin in a phased approach, targeting only Tier 1 applications and will eventually move to where all applications will be added.	\$ 14,500.00				1	08/01/2023-07/31/2024		3	132700
	Network Switches	Network switches are used to connect data entities throughout the environment.	The District 4 TSM&O Program needs to purchase replacement network switches for aging switches currently in the environment. These switches are used to carry data throughout the environment and are essential to the operations of the IT infrastructure.	\$ 80,000.00				3	N/A			341023 516000 341025 210001
	CPU's and RAM for DMZ	Computing hardware to increase the resources on the server hosts in the DMZ	The District 4 TSM&O Program needs to purchase additional computing components for the server hosts in the DMZ. To reduce the amount of servers actually needed to maintain operations, these components will be used to increase the operational capabilities of the server hosts already in production.	\$ 3,684.00				1	N/A		2	341023 516000 341024
	Unforeseen Items	There are frequently needs that cannot be predicted.		\$ 32,000.00								341023 516000 341025 210002
5.4 Camera Operations	Mobile Broadband Connectivity	Used to connect cameras to the TSM&O network without the need for fiber.	The District 4 TSM&O program requires the purchase of mobile broadband devices to be deployed, throughout the environment, to provide connectivity to cameras that cannot be connected via fiber. This purchase will be used to purchase and install cameras along the intercoastal.	\$ 120,000.00	\$ -	\$ -	\$ -		N/A		4	341023 516000 341025 210003
	Wowza	Wowza is a software that allows for live video to be broadcast through a website media player.	The District 4 TSM&O Program needs to purchase the renewal of the Wowza media licenses to continue to show live D4 TSM&O roadside camera feeds on the iVDS website. This website services the public, as well as TV and news stations. Wowza is an essential part of this public service and is required to allow video to continue playing.	\$ 4,746.26	-			1	07/23/2023-07/22/2024		1	132700
	BoringLab	Works in conjunction with video management software for management of cameras.	The District 4 TSM&O program requires the purchase of a software called Boring Lab Toolbox. It works in conjunction with video management software that assists admins in ensuring compliance of firmware and managing bulk functionality. Given the amount of cameras D4 currently manages, this software will decrease the amount of time spent on each individual camera, and instead, would allow the software to make bulk changes at one time.		\$ 373.54			1	10/12/2023-10/11/2024		1	132700
	IP Video Transcoding	Used to convert camera streams from raw data into multicast streams to be distributed to various viewing systems.	The District 4 TSM&O Program needs to renew the license for IP Video Transcoding Live because roadside cameras are transcoded to be used within the iVDS application.	\$ 3,820.16	-			3	05/23/2023-05/22/2024	Moved to WP.	1	132700

**TSM&O ITS STRATEGIC PLAN CHECK LIST
FY 22-23**

				\$ 2,245,737.00	\$ 176,000.00	\$ -	\$ 5,000.00						
	Milestone Camera Control System	Used to control the PTZ functionality on all cameras.	The District 4 TSM&O program requires the purchase of Milestone licenses in order to replace the aging joysticks in the environment. The Milestone system requires no additional hardware in the environment and will utilize existing virtual computing resources to make this happen. Operators will be able to use their mouse and keyboards to control all cameras in the D4 environment.	\$ 65,000.00				2	10/1/2023-09/30/2024		1		
	TMC Side Wall Video Wall Repair	Video Wall Panels on the left/right side of the RTMC Control Room	The District 4 TSM&O program requires the purchase of a repair service for the side video walls in the RTMC control room. These panels were installed over 18 months ago, but were installed with the wrong components. The current components do not last more than a month and have to be replaced. The company who installed the components have shut down their video wall division and no longer support video walls such as these and cannot repair them for us. The attached quote will install the correct components and allow the video walls to function again.	\$ 28,000.00				1			1		
	Mobile Broadband Connectivity	Used to connect cameras to the TSM&O network without the need for fiber.	The District 4 TSM&O program requires the purchase of mobile broadband devices to be deployed, throughout the environment, to provide connectivity to cameras that cannot be connected via fiber. This purchase will be used to purchase and install cameras along the intercoastal.	\$ 3,925.32									
5.5 IT Infrastructure Library (ITIL)	Solarwinds ServiceDesk	Used to track, manage, and follow through all user requests. In addition, it tracks changes to the environment and the approvals for those changes.	The District 4 TSM&O Program needs to purchase additional tools for use in the IT Department for tracking, approvals, and audit. Solarwinds ServiceDesk includes asset manager, change management, service contract databases, warranty databases, user ticketing system, and risk detection.	\$ 23,407.93			\$ -	\$ -	2	02/21/2023-02/20/2024	Moved to WP.	1	132700
5.6 Warranty/Support	SmartNet	SmartNet is the name used by Cisco to refer to a warranty on a device.	The District 4 TSM&O program needs to renew the SmartNet coverage on all Cisco devices. This is the warranty that covers all Cisco devices within the environment and is required to maintain a functional environment.	\$ 266,000.00	\$ -	\$ -	\$ -	2	10/01/2023-09/30/2024		1	132700	
	HP Warranty	These warranties cover the various physical servers in the environment.	The District 4 TSM&O Program needs to renew the warranties for the HP servers located throughout the environment. These warranties offer quick 4 hour resolution service for administrators to gain support from HP in the event of a physical or software related failure on the servers. Because these devices are the core nodes that run all applications, files, and other data, it is imperative that the run time is as close to 100% as possible. These warranties will allow for a quick resolution time and retain the 100% uptime goal.	\$ 39,870.35				3			1	132700	
	Video Wall	The Video Wall is the central point of operations for the RTMC control room.	The District 4 TSM&O program needs to renew the warranty and service coverage on the main video wall located at the RTMC. This coverage will handle display failures, assistance with programming, and general cleaning/upkeep of the entire video wall.	\$ 135,000.00				3	3/28/2023 - 3/27/2024		1	341024	
5.7 End User Support/Equipment	Adobe Cloud	Used by the Public Outreach Coordinator to create logos, designs, photos, and videos.	The District 4 TSM&O Program needs to renew Adobe Creative Cloud Subscription. This software is used for public relations presentations and the TSM&O Annual Report. In addition, the RTMC exclusively uses Adobe Creative Cloud to create and design all marketing materials including brochures, newsletters, presentations, flyers, web graphics, logos, business reports and industry photography. Uses also extended into transportation, with the creation of Dynamic Message Sign vector graphics and high-quality construction maps.	\$ 2,083.28				2	02/03/2023-02/02/2024	Moved to WP.	1	132700	

**TSM&O ITS STRATEGIC PLAN CHECK LIST

				Work Program	Services	TME	Expense	Quarter	Renewal Dates				
				\$ 2,245,737.00	\$ 176,000.00	\$ -	\$ 5,000.00						
	TimeZone Clocks	Clocks for throughout the office area for users to use.	The District TSM&O program needs to replace the clocks around the office. The current ones use an old outdated system that is no longer supported. In addition, the clocks are mechanical in nature and are broken. The internal components cannot be repaired. These new clocks are digital and will seamlessly integrate with TSM&O's independent Network Time Protocol.	\$ 5,800.00				1			3		
	Workstation Monitors	Monitors to be connected to workstation/laptops throughout the RTMC.	The District 4 TSM&O Program needs to purchase replacement monitors for the environment. The replacement monitors are to be used for failing monitors in the control room. The control room monitors run 24 hours per day, 7 days per week, and sometimes 365 per year. This causes a reduced lifespan and requires units to be replaced much quicker than a normal office environment.	\$ 5,000.00				2	N/A		3	341023	
	Microsoft Licensing	Licensing to be used for Microsoft products/OS's, etc.	The District 4 TSM&O Program needs to purchase an "Optimized License Position Evaluation" from SHI. This service will scan our entire environment and document and inventory all Microsoft related licenses and installs we have. Once completed, the SHI team will assess the results and output a very detailed and accurate quote related to all Microsoft products and licenses we will need to be current on our Microsoft licenses. After the evaluation, licensing will need to be purchased for the correct amount of items that were found in the evaluation.	\$ 160,000.00				1	N/A		1		
	Replacement Laptops	Laptops to be used as the primary computer for RTMC personnel.	The District 4 TSM&O Program needs to purchase replacement laptops for the environment. In accordance with the Office of Information Technology (OIT), the TSM&O program is phasing out the use of desktops where applicable. These laptops will replace desktops as they are decommissioned.	\$ 17,880.00				2	N/A		2	341023	
	Keyboard and Mice	Keyboards and Mice are used to interact with workstations and laptops throughout the environment.	The District 4 TSM&O Program requires that replacement keyboards and mice are obtained to replace the existing ones in the environment. In many cases, the current keyboards and mice are used on a daily basis, some for 24 hours per day. This causes wear and tear on a much faster rate than normal office settings.				\$ 1,500.00	2	N/A		4	341021	
	Ethernet Patch Cables	Ethernet cables are used to connect various user systems to the backend infrastructure systems.	The District 4 TSM&O Program requires that ethernet cables be obtained for the purpose of connecting user systems, infrastructure systems, and video systems in the various sections of the environment. These cables vary in length and speed and are frequently used.	\$ 8,000.00									341023
	Unforeseen Items	There are frequently needs that cannot be predicted.		\$ 8,500.00				4	N/A		5	341023

	Miscellaneous Upkeep		The District 4 RTMC is a 24/7 Operations center. With that comes numerous items that are the responsibility of the IT department to manage, maintain, and organize for FDOT. There are multiple initiatives that can be planned and defined with specific line items and cost due to their size and scope within the District. However, there are always minor changes, additions, and modifications that occur at the request of FDOT personnel to better achieve a more harmonious environment to meet the basic and long term needs of FDOT. With that comes modifications to business practices and the use of technology to achieve those goals. Additionally, there is the daily, week, and monthly repair of items that either break or get damaged in a 24/7 environment that needs repair. This category includes all of those in a single line item and is needed for the proper operation of the RTMC. There isn't an effective way to determine when things break, or when a specific part or upgrade can enhance productivity within the RTMC by listing and including every possible scenario for such an option to occur. This line item meets these miscellaneous needs.				\$ 1,500.00					341018 341021 341023

Top 5 Intrusion Prevention Events (Prevent Mode)

# of Payloads	Rule
5,953 (62.8%)	 Invalid Traversal
3,421 (36.1%)	 1011242 - Apache Log4j Remote Code Execution Vulnerability (CVE-2021-44228) This DPI rule detects an attempt to inject JNDI requests in HTTP request. While not inherently malicious, the presence of JNDI code in the HTTP URI or Headers can be indicative of an attempt to exploit a known code execution vulnerability in Log4j. Configuration Note: Administrators are advised to configure this rule with IP(s) of trusted host(s) to allow JNDI request traffic.
18 (0.2%)	 1005604 - Apache Struts Multiple Remote Command Execution Vulnerability Apache Struts is prone to multiple remote command-execution vulnerabilities. Successful exploits will allow remote attackers to execute arbitrary commands within the context of the affected application.
18 (0.2%)	 1008207 - Apache Struts2 Remote Code Execution Vulnerability (CVE-2017-5638) A command execution vulnerability exists in the web application framework, Apache Struts2. The vulnerability is due to insufficient input validation when parsing incoming HTTP requests. A remote attacker can leverage this vulnerability by sending a crafted HTTP request to a target system and execute arbitrary code remotely.
18 (0.2%)	 1008491 - Apache Struts Security Bypass Vulnerability (CVE-2016-4436) Apache Struts 2 allows attackers to have unspecified impact via vectors related to improper action name clean up.

Top 5 Intrusion Prevention Events (Detect Mode)

# of Payloads	Rule
65,749 (82.5%)	 Invalid Traversal
7,722 (9.7%)	 Unsupported Cipher
5,512 (6.9%)	 1011242 - Apache Log4j Remote Code Execution Vulnerability (CVE-2021-44228) This DPI rule detects an attempt to inject JNDI requests in HTTP request. While not inherently malicious, the presence of JNDI code in the HTTP URI or Headers can be indicative of an attempt to exploit a known code execution vulnerability in Log4j. Configuration Note: Administrators are advised to configure this rule with IP(s) of trusted host(s) to allow JNDI request traffic.
281 (0.4%)	 URI Path Depth Exceeded
148 (0.2%)	 1005604 - Apache Struts Multiple Remote Command Execution Vulnerability Apache Struts is prone to multiple remote command-execution vulnerabilities. Successful exploits will allow remote attackers to execute arbitrary commands within the context of the affected application.

Top 5 Integrity Monitoring Events

# of Events	Rule
7,036 (31.5%)	 1003019 - Application - Trend Micro Deep Security Agent / Relay
4,767 (21.4%)	 1002778 - Microsoft Windows - System .dll or .exe files modified (ATT&CK T1036.003, T1222.001)
2,229 (10%)	 1006076 - Microsoft Windows - Task scheduler entries modified (ATT&CK T1053.005)

2,029 (9.1%)  1002999 - Application - Microsoft SQL Server

1,206 (5.4%)  1002780 - Microsoft Windows - Installed software attributes modified (ATT&CK T1195.002, T1554)

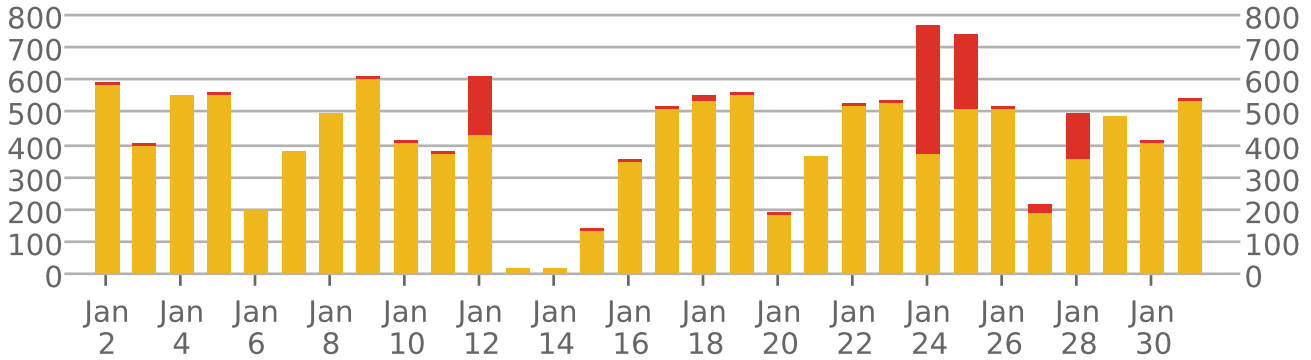

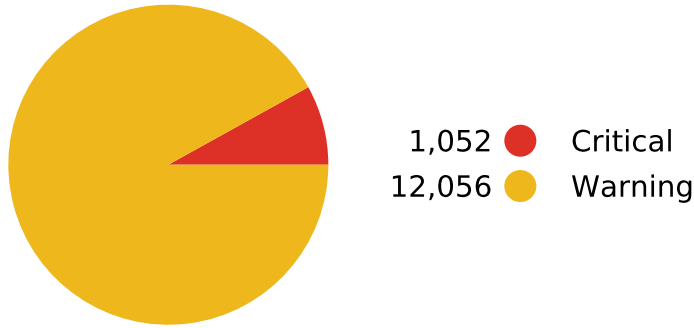

Top 5 Log Inspection Events

# of Events	Rule
432,592 (44.7%)	 1003613 - DHCP Server - Microsoft Windows
378,881 (39.1%)	 1004057 - Microsoft Windows Security Events - 1
74,820 (7.7%)	 1008670 - Microsoft Windows Security Events - 3
48,759 (5%)	 1003987 - Microsoft Windows Security Events - 2
28,568 (3%)	 1002795 - Microsoft Windows Events

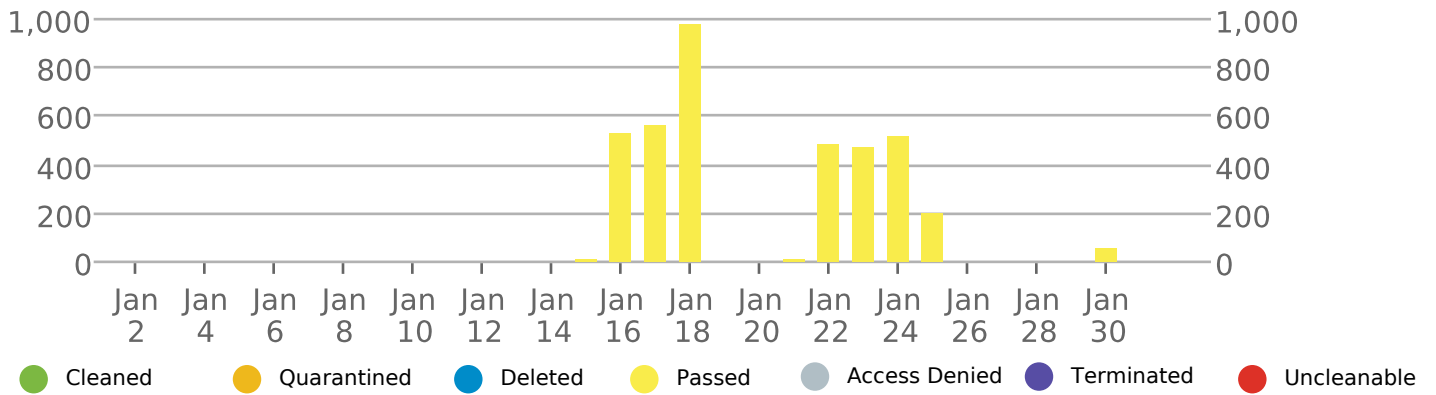

Top 5 System Events

# of Events	Event
107,511 (21.5%)	 Events Retrieved
77,260 (15.5%)	 Application Control Software Changes Detected
57,134 (11.4%)	 Computer Updated

Daily status report for ExaGrid Site: **D4TIMSO**

For: **15 Jan 2024**

From: **15 Jan 2024 23:59:59 UTC**

To: **16 Jan 2024 23:59:59 UTC**

Spoke Site: D4TIMSO timso-exagrid.smartsunguide.com

Status: OK

Time-Lock: Enabled (10 days)

Deduplication Ratio: 7.49 : 1

Summary

Name	Status	Deduplication Status	Replication Status	Capacity	Available for Next Backup		Available for Retention	
					Size	Percent	Size	Percent
D4TIMSO	OK	✓ Complete	✓ Complete	167.56 TB	89.89 TB	(53.64%)	5.89 TB	(3.51%)
timso-exagrid.smartsunguide.com	OK	✓ Complete	✓ Complete	167.56 TB	89.89 TB	(53.64%)	5.89 TB	(3.51%)

Landing Zone and Retention

Name	Landing Zone		Reclaimable Cache		Retention		System Reserved		Utility Sha	
	Size	Percent	Size	Percent	Size	Percent	Size	Percent	Size	Perc
