

F9101 Security Fencing and Gate Installation – Bid Questions and Answers #3

Question: A fence subcontractor said on Friday you found existing electrical panels near the exterior of the building to run power out of two new gate operators which would save running electrical above the acoustical ceiling down corridor and shorten the electrical run considerably. Please confirm the location of the panel we are supposed to use.

Answer: There is an electrical panel near the exterior of the building. It is within 20 feet of the exterior wall where it will need to leave the building.
