GENERAL NOTES:

1. All details shown on this Index for removal of organic and plastic materials apply unless otherwise shown on the plans.

2. Utilize excavated materials in accordance with Index 120-001.

3. Where organic or plastic material is undercut, backfill with suitable material in accordance with Index 120-001, as classified for Plastic (P) and High Plastic (H) on Index 120-001.

4. The term "Plastic Material" used in this Index in conjunction with removal of plastic soil is as defined under soil classifications for Plastic (P) and High Plastic (H) on Index 120-001.

5. See Index 000-506 for miscellaneous earthwork details.

6. The term "Organic Material" as used on this Index is defined as any soil which has an average organic content greater than five (5.0) percent, or an individual organic content test result which exceeds seven (7.0) percent. Remove organic material as shown on this Index.

7. In areas of curbed roadway, where underdrain is to be constructed beneath the proposed pavement, the grade of the underdrain filter material must conform to Standard Specifications. The minimum grade of underdrain pipe is 0.02.

8. The term "Bottom of Organic Material" as used in this Index shall be established complimentary to the outer roadway that will accommodate one future median lane on each roadway unless specified otherwise by the plans.

9. In areas of curbed roadway, where underdrain is to be constructed beneath the proposed pavement, the grade of the underdrain filter material must conform to Standard Specifications. The minimum grade of underdrain pipe is 0.02.

10. The term "Organic Material" as used on this Index is defined as any soil which has an average organic content greater than five (5.0) percent, or an individual organic content test result which exceeds seven (7.0) percent. Remove organic material as shown on this Index.

11. Organic material will not extend above the bottom of the stabilized section of the subgrade. Gradation of the filter material must conform to AASHTO T267 and the plans unless directed otherwise by the District Geotechnical Engineer. Determine the average organic content from the percent, or an individual organic content test result which exceeds seven (7.0) percent. Remove organic material as shown on this Index.

12. In areas of curbed roadway, where underdrain is to be constructed beneath the proposed pavement, the grade of the underdrain filter material must conform to Standard Specifications. The minimum grade of underdrain pipe is 0.02.
DIVIDED FREeways, ARTERIALs, MAJOR COLLECTORS HAVING FLUSH MEDIANs, ON UNDIVIDED ARTERIALS AND MAJOR COLLECTORS

INTERSTATE FACILITIES, FREEWAYS, DIVIDED ARTERIALS AND MAJOR COLLECTORS HAVING DEPRESSED MEDIANs

NOTES:

1. See Sheet 1 for the GENERAL NOTES.

2. When the typical cut details are applied to minor collectors and local facilities, the undercut may be reduced from 24" to 18".

3. Where frequency of median breaks indicates that it is impractical to leave plastic material in the median, the designer may elect to indicate total removal of this material. If during construction it becomes apparent, due to normal required construction procedures, that it is impractical to leave the plastic material in the median, total removal of this material shall be approved by the Engineer.

4. Refer to roadway cross sections to determine whether minimum or preferable removal is used.

5. Where the Preferable Removal method is shown in the plans and it is impossible to place the underdrain at the Inner Cut Limit due to conflict with storm drain trunk lines, remove to Inner Cut Limit and place underdrain at location shown for Minimum Removal. (See Special Removal Details)

6. Cross slopes of 0.02 shown above are minimums. Follow the cross slope of the pavement to the extent possible.

CONSTRUCTION AND LOCATION OF UNDERDRAIN IN CURBED ROADWAY

REMOVAL OF PLASTIC MATERIAL
