NOTES

Work this Index with the Noise Wall Data Tables, and Wall Control Drawings in the Plans. A. Prestressed concrete posts with equivalent strength resistance may be substituted for
conventionally reinforced precast posts shown in this index when approved as part of a Producer's Quality Control Plan
B. Producer shop drawings for prestressed concrete post designs must be approved by the State Structures Design Office prior to inclusion in the Quality Control Plan.
2. Construct Noise Walls in accordance with the requirements of Specification Section 534, and Augers Cast Piles in accordance with Specification Section 455.
3. Field verify the location of all overhead and underground services shown in the Wall Control Drawings.
4. Wall Height is the nominal height of the walls above finished grade. The Wall Embedment Depth for design is $1^{\prime}-0^{\prime \prime}$. The actual embedment depth may vary plus or minus $6^{\prime \prime}$ along the length of the wall.
5. Post Spacing in this Index are nominal, and are measured from centerline to centerline of the auger cast piles. Actual post spacing may vary as shown in the Wall Control Drawings.
6. Panels:

The sum of the individual stacked panel heights is the Wall Height plus $1^{\prime}-0$
(embedment depth).
B. Where special graphics are required, locate the horizontal panel joints ousida of the gra
constant elevation.
c. Side Installed Panels are only permitted when reduced overhead clearance between posts prohibits installing panels from the top.

For Fush Face panels, install panel may posts from the roadway (front of the wall.
2. After pane/s are installed and centered between posts, grout between both panel ends and the adjoining posts (see Sheets 4 and 5 for details). D. Individual panel heights should be between $6^{\prime}-0^{\prime \prime}$ and ${ }^{\prime \prime} \mathbf{l}^{\prime \prime}$ and the minimum panel height is $4^{\prime \prime}-0^{\prime \prime}$ and may be used where overhead
7. Concrete And Grout:
A. Concrete Class and Compressive Strenoth for:

1. Precast Panels, Posts, and Post
2. Cast-In-Place Collars: Class IV
B. Minimum Compressive Strength for form removal and handing of posts and panels:
3. 2,500 psi for horizontally cast post and panels

2,000 psi for vertically cast panels or when tilt-up tables are used for
c. Grout for Auger Cast Piles:

1. Maximum Working Compressive Strength $=2,000$ ps
2. Minimum 28 day strength $=5,000$ psi
3. Reinforcing Steel:
A. In addition to the requirements of Specification Section 415, tie post and pile In addition to the requirements of Specification
stirrups at the following locations as a minimum:
4. Post Stirrups Tie at all four corner bars and at every third interior bar
5. Pile Stirrups Tie to the main vertical reinforcing at alternate intersections lor circular configurations and at the four corners and at every third
. Casting Tolerances for precast panels and posts:
A. Overall Height and Width: $+/-1 / 4$
B. Thickness: $+/-1 / 4$
B. Thickness: $+/-\frac{1 / 11}{\prime \prime}$
C. Plane of side mold:
C. Plane of side mon
E. Out of Square: $1 / 8^{\prime \prime}$ per 6 ft ., but not more than $3 / 8^{\prime \prime}$ total along any side
F. Warping: $1 / 16^{\prime}$
per foot distance to nearest . Warping: $1 / 16^{\prime \prime}$ per foot distance to nearest corner
G. Bowing: $1 / 240$ panel dimension
H. Surface Smoothness for Type " $A$ " Smooth Surface Texture Option: +/- 1/16"
6. Provide Plain or Fiber Reinforced Bearing Pads meeting the requirements of Specification Section 932 for Ancillary Structures
A. For Collar Bearing Points provide.
7. $4^{\prime \prime} \times 4^{\prime \prime} \times 1 / 2 /$ Fiber Reinforced Pads; sufficient bearing area is available Fiber Reinforced Pads when following:
a. 10' Post Spacing: $4^{\prime \prime} \times 4^{\prime \prime} \times 1 / 2^{\prime \prime}$
b. 20' Post Spacing and Wall Height < 17 feet: $4 " \times 4^{\prime \prime} \times 1 /{ }^{1 / \prime}$
B. At panel bearing points between stacked panels, use Plain or Fiber Reinforced Bearing Pads.

HALF ELEVATION
(Front Face Post and Panel Texture Type " H " shown)
(Graphic Type SE-2 shown)
(Two stacked panels shown, three stacked panels similar)

Back Face Panel Texture Formed, Rolled or Pressed
into Plastic Concrete) into Plastic Concrete)

TYPICAL FORMING DETAIL
(Front Face Panel Texture Type " H " shown)
(Back Face Panel Texture Type "D" shown) (Post Forming Details Similar)

NOTES

1. Submit specific form liner samples for approval by the Engineer
2. Textures and graphics shown are for demonstration purposes only. See Noise Wall Data Tables in the plans for project specific texture and graphic requirements.

table note:
TABLE NOTE:

1. Bars D and Bars E are for $45^{\circ}$ Corner Posts only
2. Bars $D$ and Bars E are for 45 Corner Posts
3. See Contract Plans for project wind speed.
4. Soil $1=$ Loose Granular Soil, $N=4$ to 9 ;
5. Soil $1=$ Loose Granular Soil, $N=4$ to 9 ;
Soil $2=$ Medium Dense Granular Soil, $N=10$ to 40 .
