GENERAL NOTES

- shown in the plans.
- are not provided in this Index, refer to Index 536-001.

NOTES FOR GUARDRAIL TRANSITIONS CONNECTING TO TRAFFIC RAILING RETROFITS ON EXISTING BRIDGES

- railings, and (b) depict the typical alignments of the approach transitions.
- curb blunt ends are not in place.
- Specification 967.

- particular scheme. The associated pictorial views show the variations.
- notations on Sheets 15 through 18 and the flag notation on Sheet 26.

1. This index provides guardrail transition and connection details for approach end guardrail on existing bridges, and anchorage details for trailing end traffic railing retrofits and safety shapes on existing bridges. Sheets 1 through 26 apply to bridges with retrofitted traffic railings, (Sheet 26 shows the trailing end guardrail connections). Sheet 27 applies to bridges with safety shaped traffic railing. Construct the guardrail transitions and connections where

2. For trailing end guardrail connections for existing bridges with either Vertical Face Retrofits or Safety Shape Traffic Railing, see the Trailing End Transition Connection to Rigid Barrier detail shown in Index 536-001. Likewise, for miscellaneous guardrail construction details that

1. The transition detail shown on this sheet shows (a) the standard post spacings within the typical thrie-beam approach transitions connecting to existing bridges with retrofit traffic

2. The curb and gutter flare shown on this sheet is typical of flares that are to be constructed when approach slab curbs extend to the beginning of the slab, and where other treatment to

3. The special steel post for roadway thrie-beam transitions detailed on this sheet is specific to all transition applications on this index that require one or more steel posts.

The special steel post and base plate assembly shall be fabricated in accordance with

Anchor studs shall be fully threaded rods in accordance with ASTM F1554 Grade 36 or ASTM A193 Grade B7. All nuts shall be heavy hex in accordance with ASTM A563 or ASTM A19

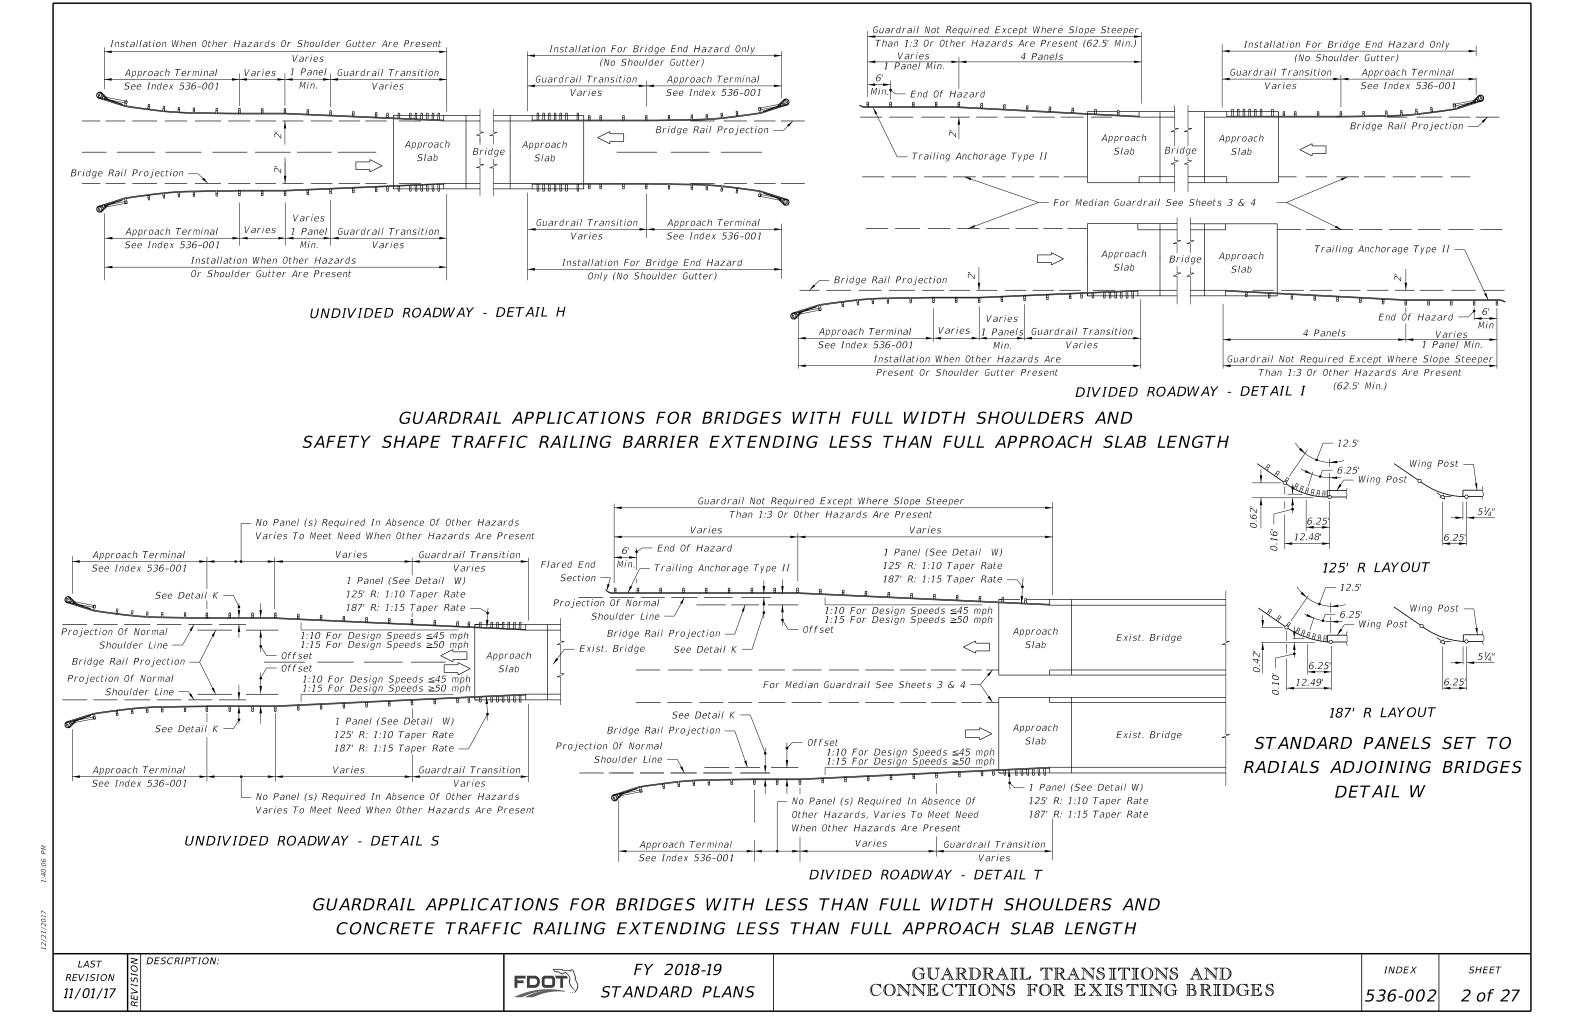

4. Anchor studs and nuts shall be hot-dip zinc coated in accordance with the Specifications. After the nuts have been snug tightened, the anchor stud threads shall be single punch distorted immediately above the top nuts to prevent loosening of the nuts. Distorted threads shall be coated with a galvanizing compound in accordance with the Specifications.

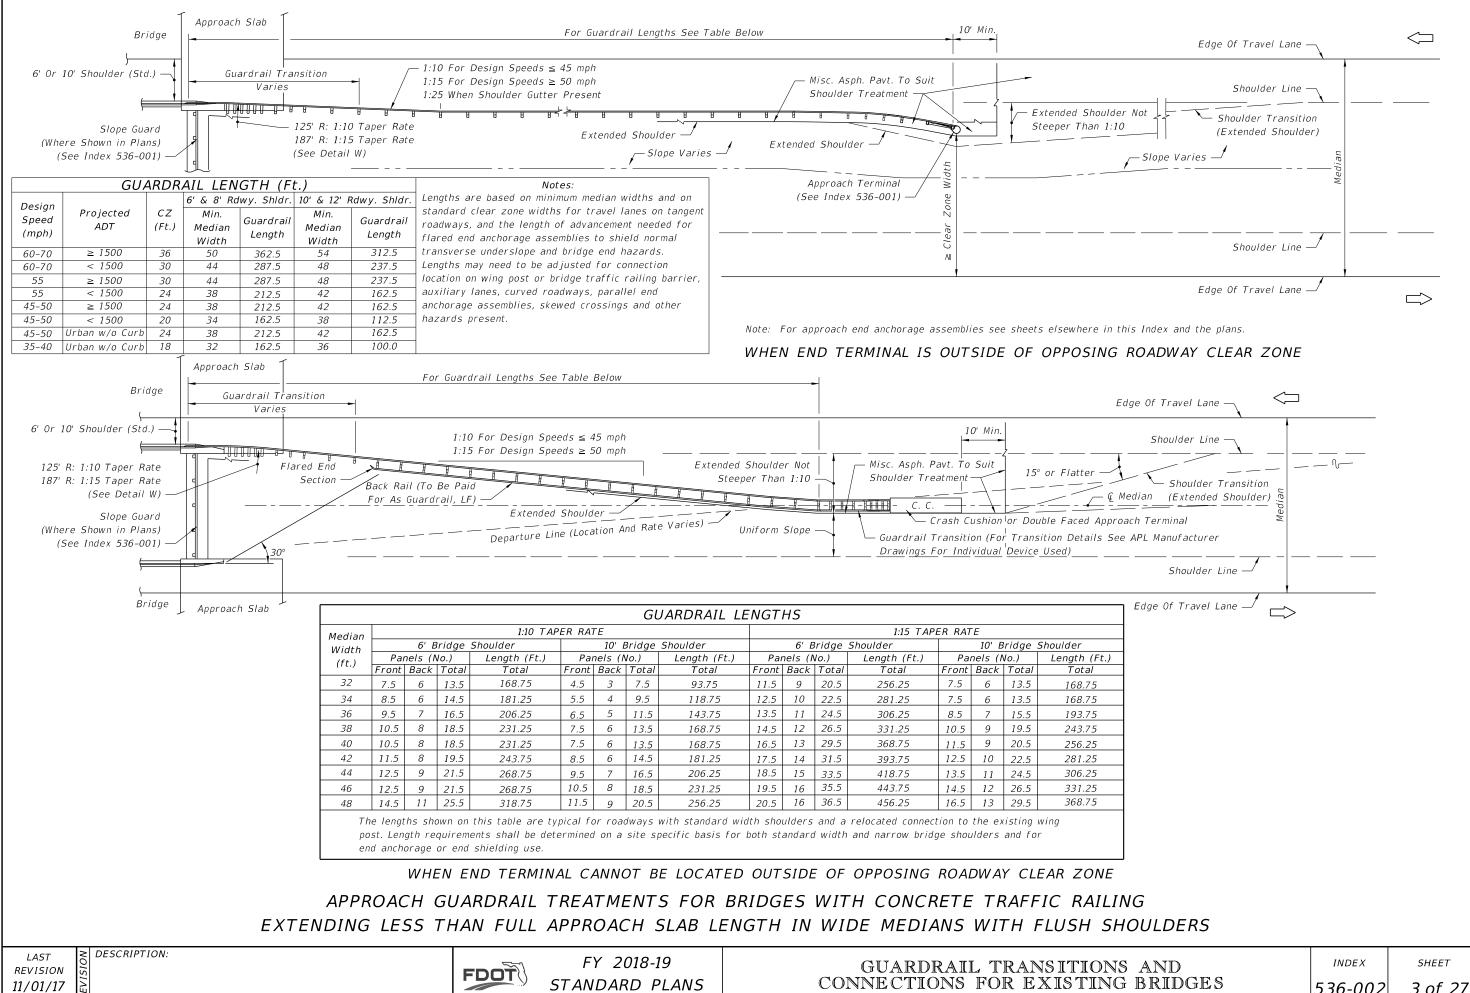

Adhesive bonding material systems for anchors shall comply with Specification 937 and be installed in accordance with Specification 416.4. Nested beam extensions and points for terminal connector attachments will vary for traffic railing barrier vertical face retrofits. The plan views for the vertical face retrofit barriers show the primary configurations for each

5. For installing thrie-beam terminal connector to traffic railing vertical face retrofits, see

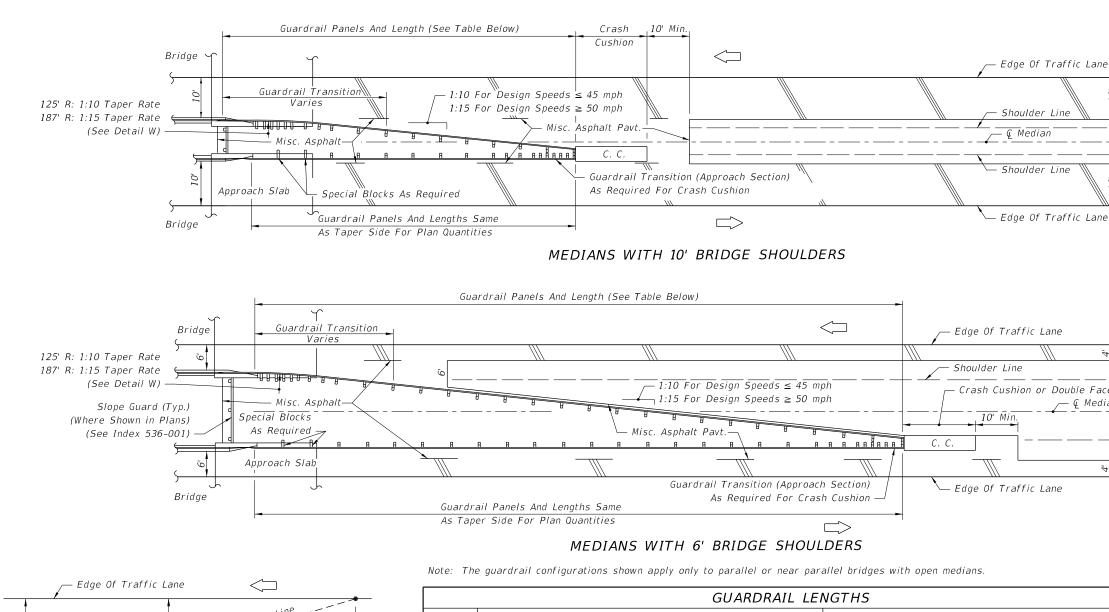

6. Payment for connections to traffic railing vertical face retrofits are to be made under the contract unit price for Bridge Anchorage Assembly, EA., and shall be full compensation for bolt hole construction, terminal connector, terminal connector plate and bolts, nuts and washers.

24	8.5	106.25	11.5	143.75	5.5*	68.75	5.5*

The lengths shown in this table are based on standard widths for roadway and bridge median shoulders. Length requirement standard width and narrow bridge shoulders and end anchorage or end shielding requirements shall be determined on a site s When crash cushions are required on opposing roadway shoulders, their sizes may be determined by the residual speeds (S1's runouts from the approach roadways; however, when calculated speeds (S_{I} 's) are less than 30 mph crash cushions shall be no than for 30 mph; see speed diagram left. The number of panels may be reduced when installing a crash cushion more than 2. see * below.

*Number shown is the minimum number of panels plus a W-Thrie beam transition panel; single faced quardrail must have a len or more panels.
