Index 455-160 60" CFRP & SS Prestressed Concrete Cylinder Pile

Design Criteria

*AASHTO LRFD Bridge Design Specifications; Structures Detailing Manual (SDM); Structures Design Guidelines (SDG); Fiber Reinforced Polymer Guidelines (FRPG)*

Design Assumptions and Limitations

Standard piles are designed to have 1000 psi uniform compression after prestress losses without any applied loads.

The piles are designed to have 0.0 psi tension using a load factor of 1.5 times the pile self weight during pick-up, storage and transportation as shown in the "Table of Maximum Pile Pick-Up and Support Lengths" on the standard.

Plan Content Requirements

In the Structures Plans:

Show and label the piles on the Foundation Layout, End Bent, Intermediate Bent, Pier, Footing, Typical Section and other sheets as required.

Complete the following "Data Table" in accordance with *SDG* 3.5 and *SDM* 11.4 and include it in the contract plans with the "Foundation Layout" sheets. Modify table and notes as required to accommodate the required number of piles, piers and/or bents and use of Test Piles. When not enough space is available on one plan sheet, continuations of the Data Table and/or separate pile cut-off elevation tables are acceptable. See Introduction I.3 for more information regarding use of Data Tables.

For projects without Test Piles change column heading "TEST PILE LENGTH (ft.)" to "PILE ORDER LENGTH (ft.)".
| PILE NUMBER | PILE SIZE (in.) | NOMINAL BEARING RESISTANCE (tons) | MINIMUM UPLIFT RESISTANCE (tons) | MINIMUM TIP LENGTH (ft.) | REQUIRED REY ELEVATION (ft.) | REQUIRED PREFERENCE ELEVATION (ft.) | FACTORED DESIGN LOAD (tons) | FACTORED DESIGN UPLIFT LOAD (tons) | TOTAL SOIL RESISTANCE (tons) | NET SOIL RESISTANCE (tons) | 100-YEAR SOIL RESISTANCE ELEVATION (ft.) | COMMENT |

**PILE INSTALLATION NOTES (Notes Data 3-0103):**

- Contractor to verify location of all utilities prior to any pile installation activities.
- Minimum 100-year elevation is required for lateral stability.
- When a required jetting elevation is shown, the jet shall be lowered to the elevation and continue to operate at this elevation until the pile driving is completed. If jetting or perforating elevations differ from those shown in the table, the Engineer shall be responsible for determinations of the required driving resistance.
- No jetting will be allowed without the approval of the Engineer.
- The Contractor should not anticipate being allowed to jet piles below the 100-year soil elevation or required jet elevation, whichever is deeper.
- At each bend, pile driving is to commence at the center of the bend and proceed outward.
