## YMBOLS

Zla work Are

- Channelizing Device (See Index 102-600)

『 Work Zone Sign
$\square$ Flagger
$\Longrightarrow$ Lane Identification + Direction of Traffic

WITHOUT TEMPORARY RAISED RUMBLE STRIPS

GENERAL NOTES:

1. Special Conditions may be required in accordance with these notes
A. Railroad Crossings:
A. Railroad Crossings:
a. If an active rail
the quacue length plus crossing is located closer to the Work Area tha
Sheet, extend the Buffer Space as shown on Sheet 3.
b. If the que
avoided queuing of venicles across an active railroad crossing cannot be
nifmed traffic control off ficer or flagger at the highway--rail grade crossing to prevent venicles frem stopopirg within
the highway-rail grade crossing, even if automatic train warning devices are in place.
B. If the Work Area encroan Temporary Lane Shift to Shoulder on Sheet 3 only if the Existing Temporary Lane shith is sufficient to provide for an 111' lane lan
Paved Shoulder wher
between the Work Area and the Edge of Existing Paved Shoulder between the Work Area and the Edge of Existing Paved Shoulder
Reduce the posted speed when appropriate.
2. Temporary Raised Rumble Strips:
A. Use when both of the following conditions are met concurrently
a. Existing Posted Speed is 55 mph or greater; b. Work duration is greater than 60 minutes.
B. Use a consistent Strip color throughout the work zone.
C. Place each Rumble Strip Set transversely across the lane at locations
D. Use Option 1 or Option 2 as shown on Sheet 2 . Use only one option
throughout work zone
3. Additional one-way control may be provided by the following means:
A. Flag-carrying vehicle;
B. official vehicle;
B. Pilot vehicles;
D. Traftic signals.

When flaggers are the sole means of one-way control, the flaggers
must be in sight of each other or in direct communication at all times.
4. When a side road intersects the highway within the TTC zone, place
additional TTC devices in accordance with other applicable TCZ Indexes
5. The two channelizing devices directly in front of the work area may be omitted provided vehicles in the work area have high-intensity rotating,
6. When Buffer Space cannot be attained due to geometric constraints, us greater than 25 mph.
7. ROAD WORK AHEAD and the BE PREPARED TO STOP signs may be omitted if of the following conditions are met:
A. Work operations are 60 minutes or less
C. There are no sight obstructions to vehicles approaching the work area for
a distance equal to the Buffer Space shown in Table
a distance equal to the Buffer Space shown in Table 1.
D. Vehicles in the work area have high-intensity, rotating, flashing, oscillating, or strobe lights operating.
E. Volume and complexity of
F. If a railroad crossing is present, vehicles will not queue across rail tracks. F. If a railroad crossing
8. See Index 102-600 for general TCZ requirements and additional information.
9. Automated Flagger Assistance Devices (AFADs) may be used in accordance with Specifications Section 102, 990 and the APL vendor drawings.
