

## BEAM NOTES

- 2. All bar bend dimensions are out-to-out.
- 3. Concrete cover: 2 inches minimum. Maximum aggregate size is a No. 67.
- 5. Strands N: ¾" Ø minimum, stressed to 10,000 lbs. each.
- Table of Beam Variables sheet in Structures Plans).
- 7. For beams without skewed ends or vertically beveled end conditions (see Note 8) the Engineer may approve the use of deformed WWR in lieu of Bars 6A1, 4A2, 5B, 4C, 3D,
- accommodate fall protection systems. See shop drawings for details and spacing of any anchorage devices or other required embedded hardware.
- removing the beam from casting bed.
- - Α. Drain Pipe: 2" NPS Schedule 80 PVC.
  - Β.
- С. pipes after casting.
- 12. Protection of Strands:
- bottom row of strands.
- В. Specification Section 926.
- 13. Use Stay-In-Place metal deck forms inside the beams.

- minimum of four days after the deck is placed.
- any required temporary bracing between the U Beams.

1. Work this Index with the Florida-U Beam Standard Details (Index 450-248, 450-254, 450-263 and 450-272) and the Table of Beam Variables in Structures Plans.

4. Concrete face may be sloped with a maximum 1:24 draft to facilitate formwork removal.

6. Tie Bars 5K to the fully bonded strands in the bottom row (see "STRAND PATTERN" on the

5E, 4F, 4G, 4H, 5K, 5L and 4M. The spacing and sizes of deformed WWR must match the reinforcing sizes shown on the Florida-U Beam Standard Details sheets.

8. For Beams with vertically beveled end conditions, where "Dim. P" exceeds 1", place Bars 5E, and the first Bars 4F and 5K parallel to the end of the beam. Fan the remaining Bars 4F and 5K within the limits of "Dim. B" (End Diaphragm) at equal spaces until vertical. 9. Embedment of Safety Line Anchorage Devices are permitted in the top flange to

10. Intermediate diaphragms must be cast and concrete release strength obtained prior to

11. Place drains pipes adjacent to each web at each beam end (four drains per beam).

Cover, wrap and secure wire screen around the end of the pipe prior to casting. Extend screen a minimum of 1" down the pipe sides.

Provide removable pipe plugs during casting. Remove plugs from the inside of

A. Provide a 2" deep recess around all strands (including dormant) or strand groups. Extend the recessed blockout to the web face and bottom of the flange for the

After detensioning, cut strands  $\frac{1}{2}$ " from recessed surface and fill the blockout to protect strands with Type F-2 or Q Epoxy Compound in accordance with

14. Prior to deck placement, provide temporary blocking under each web at both ends of every beam. Ensure the temporary blocking is adequate to resist movements and rotations during deck placement. Leave temporary blocking and bracing in place for a

15. Based on the deck forming system and deck placement sequence, evaluate and provide
