# Index 548-030 MSE Retaining Wall Systems - Temporary

## **Design Criteria**

AASHTO LRFD Bridge Design Specifications; Structures Design Guidelines (SDG); Structures Detailing Manual (SDM) AASHTO-AGC-ARTBA Task Force 27 (Ground Modification Techniques), Insitu Soil Improvement Techniques, January 1990.

## **Design Assumptions and Limitations**

See the "Design Criteria" note on the Standard.

## **Plan Content Requirements**

In the Structures or Roadway Plans:

Prepare Control Plans in accordance with the requirements of *FDM* 262, and *SDM Chapter 19* include them in the plans.

Complete the following Data Tables using the following instructions and include the Data Tables on the retaining wall supplemental detail sheets. See *FDM* **115** for more information regarding use of Data Tables.

- 1. Complete the Notes and add/modify/delete as necessary.
- Complete the "Geotechnical Information" table based on project soil conditions. See SDG Chapter 3 for required design based internal friction angle and unit weight of Reinforced Soil and Random Backfill.
- Complete the "Retaining Wall Variables" and "Soil Reinforcement Lengths for External Stability" tables based on project requirements. The Wall Heights in the "Soil Reinforcement Lengths for External Stability" table refer to the height above the foundation soil, measured to the top of the wall. See *SDG* Chapter 3 Figures for details.
- Include the pay item for Polyethylene Sheeting on Concrete Piles per Specifications Section 459 (to minimize downdrag) for all piles and drilled shafts that are located within the wall limits.

### Standard Plans Instructions Index 548-030 MSE Retaining Wall Systems - Temporary

#### TEMPORARY MSE RETAINING WALL SYSTEM DATA TABLES

GEOTECHNICAL INFORMATION								
		Reinforced Soil & Random Backfill	Loose Fine Sand	Firm Fine Sand	Loose Clayey Fine Sand	Firm Claye Fine Sand		
Depth Below Existing Ground Line (ft.)	Wall No. 1	_						
	Wall No. 2	—						
Effective Unit Weight (pcf)								
Cohesion (psf)		0						
Internal Friction Angle								

NOTE:

NULE: If the unit weight and/or internal friction angle of the fill proposed by the Contractor differs from that shown above, the Project Engineer will contact both the District Geotechnical Engineer and the Wall Designer for a possible redesign.

	Table Date 7-01-					
Wall No.	Long Term Settlement (in.)	Short Term Settlement (in.)	Differential Settlement (%) (ft./100ft.)	Air Contaminants Classification		
1						
2						

NOTE:

Design walls for the settlements noted in the table. Long term settlement is measured from the beginning of wall construction.

	SOIL REINFORCEMENT LENGTHS FOR EXTERNAL STABILITY Table Date 1-01-11							1-01-11		
1 .	Wall Height (ft.)									
all No	Reinforcement Length (ft.)									
Wē	Factored Bearing Resistance (psf)									
2	Wall Height (ft.)									
1	Reinforcement Length (ft.)									
Wa	Factored Bearing Resistance (psf)									

NOTES:

The reinforcement strap lengths shown above are the minimum lengths required for external stability. The reinforcement lengths used in the construction of the retaining walls will be the longer of that required for external or internal stability (determined by proprietary wall companies).
The Factored Bearing Resistances shown above are the critical (lowest) values from all the load cases analyzed using LRFD methodology.

### NOTES [Notes Date 07-01-14]:

See the Approved Products List for approved Wall Systems (FDOT Wall Type 3).
See Standard Plans Index 548-030 for General Notes and Details.
