Index 700-011 Single Column Cantilever Ground Mounted Signs

Design Criteria

AASHTO LRFD Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals (LRFDLTS-1); Structures Manual (SM), Volume 3, FDOT Modifications to LRFDLTS-1; Structures Manual (SM) Introduction, I.6 References; FDOT Design Manual (FDM)

Design Assumptions and Limitations

Index 700-011 may not be used as a substitute for *Index 700-020*. The custom cantilever sign is only intended for use on curb & gutter facilities where the distance between the curb and the sidewalk restricts the use of *Index 700-020*. The sign location should be checked to insure sufficient area exists behind the sidewalk for the column. Work with *Index 700-010*.

See notes on *Index 700-011*, *FDM 230*, *FDM 261*, and the *Structures Manual (SM)*, Volume 3.

Design Wind Speed is 110 MPH.

Foundation designs are based on the following conservative soil criteria which cover the majority of soil types found in Florida:

Classification = Cohesionless (Fine Sand)

Friction Angle = 30 degrees

Unit Weight = 50 pcf (assumed submerged)

Plan Content Requirements

See the *FDM 325*.

Payment

Item number	Item Description	Unit Measure
700-1-1B	Single Post Sign (F&I, Ground Mount)	AS

See the **BOE** and **Specification 700** for additional information on payment, pay item use and compensation.
