

**SIGNAL PLACEMENT AT RAILROAD CROSSING
(2 - LANE DESIGN)**

**SIGNAL PLACEMENT AT RAILROAD CROSSING
(4 - LANE DESIGN)**

NOTE: Arrows denote direction of travel not pavement markings.

FIGURE 1

GENERAL NOTES:

1. No guardrail is proposed for signals; however, some form of impact attenuation device may be specified for certain locations.
2. Advance flasher to be installed when and if called for in Plans or Specifications.
3. Top of foundation shall be no higher than 4" above finished shoulder grade.
4. Type of traffic control device
 - I Flashing warning devices
 - II Flashing warning devices with cantilever
 - III Flashing warning devices with gate
 - IV Flashing warning devices with cantilever and gate
 - V Gate
5. Class of traffic control devices (Not Shown)
 - I 2 Quadrant flashing warning devices-one track
 - II 2 Quadrant flashing warning devices-multiple tracks
 - III 2 Quadrant flashing warning devices and gates-one track
 - IV 2 Quadrant flashing warning devices and gates-multiple tracks
 - V 3-4 Quadrant flashing warning devices and gates-one track
 - VI 2-4 Quadrant flashing warning devices and gates-multiple tracks

NOTE:

1. Two separate foundations may be required (one for signals, one for gate), depending on type of equipment used.
2. When 10' is deemed impractical the control device can be located as close as 2' from the edge of a paved shoulder but not less than 6' from the edge of the near traffic lane.

ACUTE ANGLE (AND RIGHT ANGLE)

SIGNAL PLACEMENT AT RAILROAD CROSSING
(2 LANES, CURB & GUTTER)

OBTUSE ANGLE

SIGNAL PLACEMENT AT RAILROAD CROSSING
(2 LANES, CURB & GUTTER)

NOTES:

1. The location of flashing warning devices and stop lines shall be established based on future (or present) installation of gate with appropriate track clearances.
2. Where plans call for railroad traffic control devices to be installed in curbed medians, the minimum median width shall be 12'-6".
3. Location of railroad traffic control device is based on the distance available between face of curb & sidewalk. 0' to 6' - Locate device outside sidewalk. Over 6' - Locate device between face of curb and sidewalk.
4. Stop line to be perpendicular to edge of roadway, approx. 15' from nearest rail; or 8' from and parallel to gate when present.
5. When a cantilevered-arm flashing warning device is used, the minimum vertical clearance shall be 17'-6" from above the Crown of Roadway to the Lowest Point of the Overhead Signal Unit.

TRAFFIC CONTROL DEVICES FOR CURBED ROADWAY
