

Index 700-041 Span Sign Structure

Design Criteria

AASHTO LRFD Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals (LRFDLTS); Structures Manual (SM), Volume 3, FDOT Modifications to LRFDLTS; **Structures Manual (SM)** Introduction, I.6 References; **Structures Design Guidelines (SDG); FDOT Design Manual (FDM)**

Design Assumptions and Limitations

The maximum span length of Span Sign Structures is 220 feet. See the notes on **Index 700-041**, **FDM 230**, **FDM 261**, **Structures Manual (SM)**, Volume 3 and the **SDG** for additional information.

Use **Index 700-041** in conjunction with **Index 700-030** and the **Span Overhead Sign** Mathcad 15 computer program located on the **Structures Design Programs Library** website.

Consider fabrication constraints when reviewing shop drawings. Mill lengths for large tubes (uprights and truss chords) are limited to 35 to 40 feet lengths; therefore, the general fabrication limits noted on **Index 700-041** may not be feasible for larger structures. The following required exceptions have been noted:

- The “three truss panel lengths” minimum cannot be met when panel lengths exceed 10 feet. Fabricator should minimize the number of splices by maximizing mill lengths.
- When the upright post exceeds mill lengths, a complete penetration weld is allowed in the top of the upright, but not within 12 inches of the truss support welds.

Plan Content Requirements

See the **FDM 940**.

Complete the “*Span Sign Structures Data Table*”. Much of the data for inclusion in the table may be found in the **Span Overhead Sign** output. Include Design Wind Speed and soils information.

Span Sign Structures Data Table:

NOTES [Notes Date 7-01-13]:

1. Work these Data Tables with Index 700-041.
2. Design Wind Speed = ___ mph
3. Upright wall thickness given is a minimum dimension.
4. Erection is the Contractor's responsibility.
To facilitate erection, the Contractor should consider using two vertical lift points, each located near a panel point approximately 20 to 25% of the truss length from each end.
5. 'DC' and 'FC' shall include quantity and size of reinforcing steel.

FOUNDATION NOTES [Notes Date 7-01-12]:

1. Design based on Borings taken sealed by _____
2. Assumptions and Values used in design:
Soil Type _____
Soil Layer Thickness = ___ ft.
Soil Friction Angle = ___ deg.
Soil Weight = ___ pcf
Design Water Table is ___ ft. below surface
