COMMENTARY

Change line letters in figures and table to minimize confusion with section letters. Update table to remove 50 mph as option since Index is for low speed highways.

COMMENTS AND RESPONSES

COMMENT: The slope ratio tables should be replaced by “SE Transition Slope Rates” of the FDM, for consistency. Although it is outside of the scope of the proposed changes, I feel it is important.

RESPONSE: This comment is outside the scope of the current revisions and will be considered at a later date.

No changes at this time

COMMENT: On sheet 2 of 2, there is a table *d (slope ratio) that includes values for 50 mph.. Low speed in the AASHTO Criteria terms is 45 or less. Is there anywhere in this standard where low speed is defined?

RESPONSE: Low speed is defined in both the FDM and AASHTO criteria as 45 mph or less.

Change made to Index: 50 mph option deleted from the table.
