COMMENTARY
Sheets 1, 4, & 7: Changed general concrete requirement from Class I to Class II.

Specification 346 is being revised to better reflect concrete type availability in the industry, so these changes from concrete class I to class II accommodate that.

COMMENTS AND RESPONSES
BLACK = Internal Review Comments  RED = Standard Plans Response  GREEN = Change Made to Index

COMMENT: Sheet 2: Wildlife-sensitive mounting heights. The FWC and lighting designers believe FDOT requires wildlife-sensitive lights can only be placed at 20 or 25 feet. This causes difficulty with lighting design and meeting requirements for uniformity ratios. Please clarify if wildlife-sensitive lights can be mounted at standard heights too (30 feet and higher).

RESPONSE: This is beyond scope of original revision, but clarification is a small change and can be made.
Change made to Index: Sheet 2: Added clarification to callout. Wildlife-Sensitive lighting may also be used with standard mounting heights 30 feet through 50 feet (original intent).
