### COMMENTARY

A spread footing option was added at the request of the Districts. This footing is intended for use where project space constraints inhibit placement of the shaft foundation. This typically occurs in urban areas. The footing serves as a sidewalk surface and may be placed immediately behind a raised curb. The Structures Design Office checked the spread footing dimensions and anchor bolt design.

### COMMENTS AND RESPONSES

**BLACK** = Industry Review Comments    **BLUE** = Standard Plans Response    **GREEN** = Change Made to Index

**Date:** 8/16/22

**COMMENT:** Would it be prudent to be consistent with the revisions to Index 715-001 luminaire tilt detail, by swapping out the graphical representations of the cobrahead fixtures with LED fixtures in all the details in Index 715-002?

**RESPONSE:** The light pole in Index 715-001 is now referenced to 715-002, so it won't be misinterpreted for something different. Currently, the basic luminaire visual in 715-002 allows for better visibility of the pole dimensions. Adding the more detailed luminaire graphic in 715-002 is not necessary, but it is logged for consideration in next year's publication.
