CHAPTER 4

PROGRAMMING SCREEN

4.1 OVERVIEW

This chapter details the process for completing the Programming Screen of the Efficient Transportation Decision Making (ETDM) process. The Programming Screen aids the Florida Department of Transportation (FDOT) in the development of the FDOT Five Year Work Program by identifying environmental considerations. Required by Chapters 338 and 339, Florida Statutes (F.S.), the Five Year Work Program lists the schedule of specific projects and services planned by FDOT. It includes projects from the State Transportation Improvement Program (STIP), Metropolitan Planning Organization (MPO)/Transportation Planning Organization (TPO) Transportation Improvement Programs (TIP), and Priority Lists of non-MPO/TPO areas.

As described in Chapter 2, Section 2.3.1 of this Manual, a Programming Screen is required for all qualifying projects that will be included, or are already included in the Five Year Work Program but have not started the Project Development and Environment (PD&E) Study. This does not imply that the PD&E Study can only be placed in the fifth year. It may be possible to complete relevant technical studies prior to initiating the PD&E Study to aid in addressing issues identified through the project screening events and to focus the PD&E Study scope of services. Refer to FDOT Work Program Instructions, Part III, Chapter 23, Planning, for details. The scope of a project and its priority ultimately dictates how and in what year the project is programmed.

Importantly, the Programming Screen supports the project development process by concurrently addressing the following requirements:

1. Providing for early involvement of federal, state, and local agencies, as well as federally recognized Native American Tribes and the public, under 23 United States Code (U.S.C.) § 139, as amended.

2. Assisting with scope of services development for preparation of the PD&E phase environmental evaluation and documentation, and identifying studies that can be advanced prior to the PD&E phase.

3. Distributing the Advance Notification (AN) package when applicable. FDOT uses the AN process to inform stakeholders about a proposed transportation action and to provide opportunity for their input and involvement in the project. This fulfills the project initiation notification as required by 23 U.S.C. § 139, the President’s Executive Order 12372 (Intergovernmental Review of Federal Programs), and the Governor’s Executive Order 95-359 (Florida State Clearinghouse). The AN process may be initiated with the Programming Screen.
review or later, prior to beginning the PD&E Study. In addition, the AN may also provide notice of FDOT’s intent to apply for Federal-aid on a project, in which case the AN process includes the Federal Consistency Review as required by 15 Code of Federal Regulations (CFR) Part 930. See Section 4.4.6.1 for more information about Federal Consistency Reviews.

During the Programming Screen, interaction with MPOs/TPOs, federal and state agencies, and participating Native American tribes occurs through the Environmental Technical Advisory Teams (ETATs). ETAT members use the Environmental Screening Tool (EST) to review project information, identify potential project effects, and submit comments to FDOT during the transportation planning process. This web-based Geographic Information System (GIS) database and mapping tool provides access to project information and data about natural, physical, cultural, and community resources in the project area. The ETAT members provide input about potential project effects on the natural, physical, cultural, and community resources specific to their area of expertise. These project effects include potential direct and indirect effects. The ETAT members may also provide cumulative effect considerations during the screening.

Figure 4-1 provides an overview of the Programming Screen process. In many cases, projects entering the Programming Screen have been previously reviewed during the Planning Screen, as described in Chapter 3 of this Manual. The Planning Screen Summary Report documents the results of the earlier review and is available through the EST.
At the beginning of the Programming Screen review, the respective FDOT District enters project information into the EST. Once internally coordinated and ready, the FDOT ETDM Coordinator or PD&E Project Manager (if assigned) uses the EST to notify ETAT members to proceed with their Programming Screen review and inform interested parties through the ETDM Public Access Site. When the Programming Screen review is scheduled at the same time as the AN review, the email notification will initiate both processes.

The ETDM Public Access website (https://etdmpub.fla-etat.org/est/) provides an opportunity for the public to view project information and maps. The public can submit project comments to the contact person listed on the website for the project or through other public involvement activities coordinated by FDOT.

The Preliminary Programming Screen Summary Report documents the results of the review. For federal projects, FDOT, in conjunction with the Lead Federal Agency (see Section 2.5.10 of this Manual), reviews Programming Screen results to:
• Refine project alternatives (where applicable),

• Develop the PD&E Study scope of services, and

• Determine a Class of Action (COA).

The COA determination establishes the level of environmental documentation [e.g., Type 2 Categorical Exclusion (Type 2 CE) Environmental Assessment (EA), Environmental Impact Statement (EIS)] needed during the PD&E phase to satisfy the requirements of the National Environmental Policy Act (NEPA) and all other applicable federal and state laws and regulations. For projects using only state funds, the District determines whether the proposed project is a State Environmental Impact Report (SEIR) or Non-Major State Action (NMSA). SEIRs are screened through the EST. If the project is a Non-Major State Action, it is not screened and a checklist for non-major transportation projects will be required. Local projects may be screened and processed as a Project Environmental Impact Report (PEIR). For more information about COA determinations, see PD&E Manual, Part 1, Chapter 2: Environmental Class of Action Determination.

Publication of a Final Programming Screen Summary Report follows, and documents the Lead Agency approval of the COA. The final report also supports development of a project’s scope of work based on ETAT reviews, considerations, and recommendations received from the agencies.

4.2 PROGRAMMING SCREEN PROCESS

During the Programming Screen, FDOT provides opportunities for ETAT members and the public to comment on qualifying priority projects being considered for inclusion in the Five Year Work Program, or prior to being advanced to the PD&E phase. ETAT member comments assist with project scoping; identify opportunities for avoidance, minimization, and mitigation; and highlight potential “fatal flaws.” Ideally, before projects are selected for the Five Year Work Program, FDOT and the respective MPOs/TPOs should set sufficient time horizons into project schedules, because all qualifying projects must complete a Programming Screen.

ETDM Programming Screen reviews may or may not include the simultaneous delivery of the AN package. This optional timing helps to prevent duplicate reviews, additional work associated with reprocessing the AN packages, while also providing up-to-date information throughout the entire project delivery process.

The following sections detail the steps of the Programming Screen, as shown in Figure 4-2.
Figure 4-2: Programming Screen Process Flow
4.3 PROGRAMMING SCREEN PROJECTS

The Programming Screen is required prior to initiating the PD&E Study for qualifying state and federal transportation projects that are candidates for inclusion in the Five Year Work Program.

4.3.1 Identify Qualifying Projects

Qualifying projects come from a variety of plans, for example:

- FDOT STIP
- FDOT Strategic Intermodal System (SIS) Plan
- FDOT Statewide Deficient Bridge List
- MPO/TPO Long Range Transportation Plans (LRTPs)
- MPO/TPO TIPs and Project Priority Lists
- Rural County Project Priority Lists

Annually, MPOs/TPOs develop a list of priority projects (TIP Priority List) derived from their LRTPs and other sources for consideration of inclusion in the Five Year Work Program (refer to the FDOT Office of Policy Planning’s Metropolitan Planning Organization Program Management Handbook for additional guidance on selecting MPO/TPO projects for inclusion in the Five Year Work Program). Concurrently, FDOT selects priority projects from other plans and programs, including the SIS Plan and Statewide Deficient Bridge List, and also works with local governments in non-MPO/TPO areas to identify priority projects for inclusion in the Work Program.

FDOT ETDM Coordinators work with planners, FDOT MPO/TPO and Rural County Liaisons, managers, environmental staff and the District SWAT team to identify transportation projects based on criteria such as project type, transportation system designation, potential funding source (federal, state, or local), and responsible agency. In this context, “transportation system designation” refers to whether a proposed project is part of the SIS or State Highway System (SHS), also called on-system. “Responsible agency” refers to the agency required to meet federal, state, and other applicable requirements. See Chapter 2, Section 2.3.1, and Table 2.2 of this Manual for specific examples of qualifying projects and guidance on how to apply the selection criteria.

Unlike a Planning Screen, a FDOT ETDM Coordinator (or Project Manager) initiates and manages all Programming Screen reviews in the EST regardless of the project’s location and system; therefore, in some cases the planning organization designation transitions from the purview of an MPO/TPO to that of FDOT. Refer to the Environmental Screening Tool Handbook for instructions on screening projects in the EST.
4.3.2 Project Review Release Schedule

Based on the list of qualifying projects, FDOT ETDM Coordinators and PD&E Project Managers work with appropriate staff to develop/update a 12-month release schedule as described in Chapter 2 Section 2.3.2 of this Manual. Programming Screens should ideally occur one fiscal year prior to a project moving into the Five Year Work Program. If a project is placed in the Five Year Work Program before it completes a Programming Screen review, the project is still required to undergo Programming Screen prior to the PD&E Study being initiated. The schedule should be made available to the ETAT on the EST ETDM Calendar and updated as needed. FDOT Districts are also encouraged to hold periodic ETAT meetings (or webinars) to discuss projects included in their release schedule.

It is important to ensure that the ETAT has enough time to review and provide comments. Therefore, when scheduling a Programming Screen review, it is recommended that no more than two projects be released at a time, and that project releases be scheduled at least two weeks apart. In addition, four months should be allowed per project to provide time for reviews, public involvement activities, possible review extensions, and preparation of the Programming Screen Summary Report.

4.3.3 Non-Qualifying Projects

FDOT and MPOs/TPOs can also use the EST to assist in identifying issues and prioritizing non-qualifying transportation projects. These projects are not intended to be released to the ETAT for a formal review. Instead, they are entered into the EST using the Area of Interest Tool with only enough information to generate the standardized EST GIS analyses (refer to the Environmental Screening Tool Handbook for details). Moreover, the EST may be used at the local option for any case highlighted in the ETDM Review Matrix shown in Chapter 2, Table 2-2, of this Manual where a formal screening is not applicable.

4.4 PREPARE PROJECT FOR SCREENING

In preparation for an ETAT review, FDOT enters transportation project information into the EST and runs the standardized GIS analyses while MPOs/TPOs and FDOT Community Liaison Coordinators (CLCs) gather and enter community data. For MPO/TPO projects, the FDOT project team works closely with the MPO/TPO to transition project sponsorship to FDOT. In addition, the ETAT representatives provide new and updated GIS data to the Florida Geographic Data Library (FGDL) for use within the EST, as available.

4.4.1 Identify Timeframe for Delivering the Advance Notification

The specific project and expected timeframe when the corresponding environmental study is slated to begin will be the determining factor as to whether the Programming Screen and AN will be reviewed together or separately.
When the environmental study is scheduled to occur within two years of the Programming Screen review, the Programming Screen notification includes the AN package.

When the environmental study is not expected to begin within the two years of the Programming Screen review, the AN package is distributed separately. In that scenario, the FDOT Project Team distributes the AN package separately right before the environmental study is scheduled to begin. This removes the need to process the same document multiple times (as there is a requirement to reprocess the AN if too much time has elapsed since it was originally distributed). It also provides an opportunity to communicate any new information that may have surfaced since the Programming Screen was completed.

For Federal-aid projects, the AN also begins the Federal Consistency Review process (see Section 4.4.6.1).

4.4.2 Enter or Update Project Information

FDOT ETDM Coordinators work with FDOT and MPO planners to enter or update project information in the EST and capture previous planning and public involvement activities as part of a general effort to link the Planning and PD&E phases. Information for projects not typically screened during the Planning Screen, such as bridge replacement projects or projects that result from amendments to adopted transportation plans is also entered.

To prepare a project for a Programming Screen review:

- Develop or refine the purpose and need for each qualifying project to be screened in accordance with the PD&E Manual, Part 2, Chapter 4, Project Description and Purpose and Need. Transportation planning data are used to assist in establishing the purpose and need. These data are drawn from LRTPs, MPO/TPO TIPs, corridor plans, subarea plans, analyses of travel and safety conditions, public sentiment, and other sources that help identify corridors and facilities where transportation improvements are needed. This information may be available from the MPO/TPO and other regional and local agencies. Staff preparing the purpose and need for the Planning Screen should coordinate with the MPO/TPO liaison or other appropriate planning staff to identify the proposed project purpose and need as they appear in the transportation plan. The initial purpose and need developed during the Planning phase may change as the project advances since new information or public input may be identified, supporting an updated purpose and need. Only describe the appropriate purpose and need categories that are applicable to the project.

- Develop a project description, which includes:
  - Project name;
- Name of the city(ies) and county(ies) where the project is located;
- Name of the planning organization responsible for the project;
- Limits of the proposed project, such as its logical termini and length;
- Description of the existing or general characterization of a new facility; and
- Description of planned improvements. Provide as much information as available, such as the facility type, number of lanes, type of median, major structures, and potential right-of-way requirements (for example, a description of a road widening could indicate if the project intends to use existing right-of-way).

If this replaces, supersedes, or includes a portion of a previously screened project, provide the ETDM number of the previous project(s).

Refer to PD&E Manual, Part 2, Chapter 4, Project Description and Purpose and Need and Chapter 3 of this Manual for additional guidance on project descriptions.

- Enter information showing the location of each project alternative using the EST Map Editor or by uploading a GIS file. For Alternative Corridor Evaluation (ACE) process projects, delineate or refine general corridor alternatives. Preliminary alternatives should offer potential solutions to the transportation problem identified in the purpose and need. The range of alternatives depends on the nature and scope of the project, as well as the context and intensity of potential impacts.

- Describe the project alternative(s). Refer to PD&E Manual, Part 2, Chapter 6, Alternatives, for further guidance. For each alternative, include information about the mode(s) served by the project, type of alternative (widening, new alignment, etc.), termini location, and length. Include the estimated cost of and the basis for the cost estimate, if available. When known, enter information about roadway functional classification, existing and predicted Annual Average Daily Traffic (AADT), and presence within an Urban Service Area or on a SIS facility. In addition, highlight information from the Preliminary Environmental Discussion (PED), such as the potential for Section 4(f) involvement (for federal projects), number of relocations, relationship to any special, unique or significant features, community needs that will be impacted, and right-of-way involvement.

- Provide project plan consistency status information known to date and the steps toward achieving consistency, as appropriate. Consistency with the approved LRTP should be identified for projects in MPO/TPO areas. Also identify whether the project is included in the STIP and MPO/TPO TIP. For projects in non-MPO areas, identify consistency with the STIP. The requested information reflects the Planning Requirements for Environmental
**Document Approvals** form that must be submitted with federal draft and final environmental documents (refer to the form found in the *PD&E Manual, Part 1, Chapter 4, Project Development Process and Engineering Considerations*). Coordinate with FDOT District MPO/TPO or Rural County Liaisons and either MPO/TPO or local government planning staff to compile and complete consistency information. Additional guidance is available on the FDOT Office of Policy Planning web page at:

- Indicate whether the project is being developed under the Local Agency Program (LAP) (requires federal funds already allocated in the adopted Five Year Work Program).

- Identify whether or not federal funds have been allocated for the project in the Five Year Work Program. Add Financial Project Identification number(s), if known.

- Indicate whether the project is being developed through the ACE process.

- For federal projects, identify the Lead Federal Agency and any Cooperating or Participating agencies, as appropriate.

- Designate exempted agencies (if applicable). Exempted agencies are notified about the Programming Screen review but not expected to submit comments or act on the purpose and need. When making the decision to exempt an agency, consider the nature of a project. For instance, a landlocked project may not require a review from the United States Coast Guard (USCG). Additionally, the Federal Transit Administration (FTA) has requested exemption from reviewing Planning Screen projects and Programming Screening projects without a transit component. Other agencies that may be exempt from a review include United States Forest Service, National Park Service, Federal Railroad Administration (FRA), and Federal Highway Administration (FHWA).

- Contact the Work Program Office to establish an ETDM identifier if not previously done for a Planning Screen (refer to *Work Program Instructions Part III, Chapter 23*).

- Identify whether the AN package will be distributed with the Programming Screen review notification or separately.
4.4.3 Designate Agency Roles

During the Programming Screen, agencies may request, or be invited, to serve as Participating or Cooperating Agency on a project. For federal projects, three important roles must be designated prior to the COA determination:

1. **Lead Agency** – The agency having primary responsibility for the environmental document, determining the preferred alternative in the PD&E phase, and inviting Cooperating and Participating Agencies. FDOT is the Lead Agency for non-federal projects; otherwise, a federal agency will be the Lead Agency and under *Title 23 U.S.C.*, FDOT serves as the co-lead. FDOT identifies whether or not a project will be processed as a federal or state project during COA determination at the end of the Programming Screen. Potential Lead Agencies are identified during the Programming Screen to expedite the COA process.

2. **Cooperating Agency** – Federal, state, or local agencies (other than the Lead Federal Agency) that have jurisdiction by law or special expertise with respect to any environmental impact involved in a proposed project or project alternative (*40 CFR § 1508.5*). When effects are on lands of tribal interest, a Native American Tribe may become a Cooperating Agency. Cooperating Agencies have a higher degree of authority, responsibility, and involvement in the environmental review process and participate in developing the environmental document. They may, upon request by the Lead Federal Agency, assume responsibility for developing information and preparing environmental analyses, including portions of the environmental document (*40 CFR § 1501.6*). They may also review pre-draft environmental documents. Note that the USCG should automatically be designated as a Cooperating Agency for all ETDM projects involving a bridge permit when the FHWA is designated as the Lead Federal Agency due to a programmatic approach agreed to by the FHWA and the USCG (Shapley, 2007).

3. **Participating Agency** – Other agencies with an interest in the project that are invited by the Lead Federal Agency (pursuant to *23 U.S.C. § 139, as amended*) to respond to requests for technical assistance, attend scoping and coordination meetings, attend joint field reviews, provide substantive and early input on issues of concern, scope agreements for issues and required technical studies, review Lead Federal Agency-approved draft/final environmental documents. Designation as a Participating Agency does not indicate project support and does not provide an agency with increased oversight or approval authority above its statutory limits. It is not necessary to invite agencies as Participating Agencies that have only a tangential, speculative, or remote interest in the project.

Please note that while ETDM Master Agreements designate ETAT members as Participating Agencies, this is not analogous to the federal designation made by the Lead Federal Agency pursuant to *23 U.S.C § 139, as amended* (refer to *PD&E Manual, Part 1, Chapter 3, Preliminary Environmental Discussion and Advance Programming Screen*).
Notification for additional guidance on Cooperating and Participating Agency roles and responsibilities).

Prior to the Programming Screen review, the FDOT ETDM Coordinator or PD&E Project Manager identifies a potential Lead Agency. Alternatively, a federal agency may also request the Lead Federal Agency designation. The selection should be made based upon project type and funding source and in coordination with the federal agency. FDOT must designate a potential Lead Federal Agency prior to identifying potential Cooperating and Participating Agencies, as well as initiating an ACE process Methodology Memorandum (MM) review (when applicable). In cases where a project may fall under multiple agency jurisdictions (for example, a project has both transit and highway components), the FDOT ETDM Coordinator works with the applicable agencies to identify one as the Lead Federal Agency and one as a Cooperating Agency. The potential Lead Federal Agency becomes the official Lead Federal Agency once the COA determination is made.

When needed, FDOT can recommend Participating and Cooperating Agencies, and discuss such designations with the Lead Federal Agency. Invitations to Participating and Cooperating Agencies must be processed before submitting a proposed COA determination. The recommendations include requests received by FDOT from ETAT members to serve in one of these capacities during the review period. As appropriate, the Lead Federal Agency accepts or declines the recommendations; the Lead Federal Agency may also invite other ETAT members or non-ETAT agencies to serve in these roles. The Lead Federal Agency has 30 days to accept or decline the recommendations and send official invitations using the Manage Participating/Cooperating Invitations page in the EST. ETAT members have 30 days to respond to an invitation from the Lead Federal Agency.

4.4.4 Review Standardized EST GIS Analyses and Project Data

Standardized EST GIS analyses identify natural, physical, cultural, and community resources within a specified buffer distance of the proposed project alternatives to help identify potential project effects. These analyses are performed automatically in the EST prior to a project being released for review. The analyses quantify and summarize the amount of resources (for example, wetlands acreage and demographic statistics) found within proximity to a transportation project. The EST includes analyses that have been requested by the ETAT, FDOT, or MPO/TPO representatives to help in their review of potentially affected resources. The results of the buffer analyses are organized within the EST by resource issue (see Section 2.6 of this Manual for a description of each) and reported along with issue-specific maps displaying the project location and selected environmental resources.

Prior to initiating the Programming Screen review, the FDOT project team studies the results of the EST GIS analyses, along with site visits, local knowledge, and any other available information sources, to gain an understanding of the project area and to support the development of the PED (refer to PD&E Manual, Part 1, Chapter 3, Preliminary Environmental Discussion and Advance Notification, for more
information about PED). For projects on the SIS, the SIS Coordinators from the Systems Planning Office review the project for consistency with the SIS Plan. Once all data preparation steps are complete, the project status is updated in the EST to indicate that the project information is ready for final quality review. The PD&E Project Manager (if assigned), environmental specialists, and ETDM Coordinator perform quality reviews to verify the accuracy and completeness of all project information.

The mapped features should be consistent with the location described in the EST Project Description report. Confirm, for example, that:

1. The logical termini of linear alternatives recorded in the EST Project Description report match the beginning and ending locations on the map.

2. Project features follow an existing facility, such as a highway or rail line, if intended.

3. The project linework is digitized accurately in relation to other mapped features (e.g., if you intend for the project to go around a resource, verify the digitized linework shows that intent).

Specific data quality review procedures depend on project context and scope; refer to Section 6.4 of this Manual for further guidance.

### 4.4.5 Develop the Preliminary Environmental Discussion

After reviewing the standardized EST GIS analyses and considering information supplied by local knowledge, planning studies, internal FDOT coordination, and other evaluations in the project area, FDOT prepares a Preliminary Environmental Discussion (PED). The PED conveys FDOT’s knowledge of a project area and potential potentially affected resources prior to the Programming Screen review. This involves a multi-disciplinary approach based on local knowledge, FDOT analysis, and may include a field review of the project for potential involvement.

FDOT uses the PED to inform the ETAT members and other agencies, as appropriate, of FDOT's initial assessment of a project’s potential effects on the environment and how FDOT intends to address or evaluate these effects as the project advances. The PED provides reviewers with context to aid them in providing actionable comments. FDOT bases the PED on local knowledge, planning studies, previous screening information, and any other evaluations relevant to the project area. The PED may be provided at both the project and alternative level. If applicable, the FDOT District can view their Summary Degrees of Effect (SDOE) from previous screens as a starting point when developing the PED.

For additional instructions on completing a PED, refer to PD&E Manual, Part 1, Chapter 3, Preliminary Environmental Discussion and Advance Notification.
4.4.6 Prepare Advance Notification Package

The AN process may be initiated with the Programming Screen review or later, prior to initiating the PD&E Study. For Federal-aid projects, the AN also begins the Federal Consistency Review process. Figure 4-3 provides an overview of the AN process. Refer to Section 2.3.4 of this Manual and PD&E Manual, Part 1, Chapter 3, Preliminary Environmental Discussion and Advance Notification, for more information about the AN process.

Prior to distributing the AN (either with the Programming Screen review or later), the FDOT ETDM Coordinator, Project Manager, or a member of the project team creates the AN package. The AN package consists of a cover letter, transmittal list, Application for Federal Assistance (if appropriate)\(^1\), location maps, and a Fact Sheet. The AN Fact Sheet includes the project description, purpose and need, and PED (refer to PD&E Manual, Part 1, Chapter 3, Preliminary Environmental Discussion and Advance Notification for additional guidance). The AN package is created using the EST (with the exception of the cover letter). Information entered for the Fact Sheet that corresponds to other reports in the EST (e.g., project description) is reflected in those reports. Any other reports or supporting materials used to develop the AN package should be uploaded to the EST for reference.

A transmittal list is a record of the recipients of the AN, and must be provided in the AN package. Recipients of the AN include: ETAT members, Consistency Reviewers, elected officials, federally-recognized tribes, and other local, state, and federal agencies that need, or have requested, to be notified. The State Environmental Management Office (SEMO) maintains contact information on the EST for mandatory state and federal agencies and federally-recognized Native American Tribes receiving AN packages. The responsibility for adding local or project-specific contacts falls to the FDOT project team.

The AN package is available as a draft document for internal review. Once distributed and published through the EST, all users of the EST can view and download the AN package. The public may also view the AN package on the ETDM Public Access Site (https://etdmpub.fla-etat.org/est/). This makes it possible to distribute it upon request to non-ETAT members. Whenever possible, the AN package should be sent electronically after coordinating with the recipient. However, all federally-recognized Native American Tribes affiliated with Florida should be sent a hardcopy of the AN package. More information about distributing the AN package through the EST is included below in Section 4.5.1. Also refer to PD&E Manual, Part 1, Chapter 3 Preliminary Environmental Determination and Advance Notification for additional guidance on distributing the AN package.

---

\(^{1}\) The SF-424 form is only required in the AN package if there are federal funds or the desire to maintain federal funding eligibility.
Figure 4-3: ETDM Advance Notification Process
4.4.6.1 Federal Consistency Review

Federal Consistency Review refers to the authority given to Florida under the *Coastal Zone Management Act* to review certain federal activities for consistency with the adopted Florida Coastal Management Program (FCMP). Federal consistency reviewers assess project consistency based on the laws under their jurisdiction and issue their findings and recommendations to the Florida State Clearinghouse (SCH) managed by the Florida Department of Environmental Protection (FDEP), which issues the Federal Consistency Review determination on behalf of Florida. The FCMP addresses the requirements of 24 Florida Statutes administered by nine state agencies and the five water management districts.

Projects requiring federal funding or the desire to maintain federal funding eligibility, or involving a federal action need a Federal Consistency Review determination. A state-funded project involving a federal action, such as a connection to an Interstate, or a federal permit, also requires a Federal Consistency Review determination. When a federal permit is involved, consistency is verified and finalized during permitting.

Upon receipt of the Advance Notification, the Consistency Reviewers have 45 days to indicate a project’s consistency with jurisdictional statutes and requirements as outlined under the FCMP. Inconsistency findings must cite the relevant statute’s section under the agency’s authority with which the project is inconsistent, and must identify actions that can be taken to resolve the conflict. Prior to issuing an inconsistency finding, the reviewing agency should immediately notify the SCH of identified problems.

At the end of the 45-day comment period, the SCH has another 15 days to review the Consistency Reviewers’ comments in the EST. The SCH then submits a Federal Consistency Review determination with the FCMP. The SCH also issues a notice of inconsistency (when applicable).

Additional information about the Federal Consistency Review process may be found in *PD&E Manual, Part 1, Chapter 3, Preliminary Environmental Discussion and Advance Notification* and *PD&E Manual, Part 2, Chapter 25, Coastal Zone Consistency*.

4.4.6.2 Other Interested Parties

Local or project-specific recipients of the AN package have the same 45-day review period to comment on the AN package. They send their responses to the project contact indicated on the cover letter.

4.5 PROGRAMMING SCREEN AND ADVANCE NOTIFICATION REVIEWS

Before a Programming Screen review, the ETDM Coordinator should consider holding an online meeting or webinar to introduce the project before submitting it to the ETAT. The meeting allows the ETDM Coordinator or PD&E Project Manager to present project
details, highlight issues, and communicate specific expectations to help the ETAT provide quality comments. For assistance with setting up these meetings, contact the ETDM Help Desk by emailing help@fla-etat.org.

During the Programming Screen review and the AN commenting period, the public, ETAT members, and Federal Consistency Reviewers (when applicable) have an opportunity to provide comments to FDOT about potential project effects, recommended technical studies and permits, and the need for further ETAT member involvement. The FDOT ETDM Coordinator also begins to work with FDOT CLC and, as appropriate, MPO/TPO ETDM Coordinators and CLCs to evaluate sociocultural effects.

4.5.1 Distribution of Notifications

After performing a final quality review of project data, the FDOT ETDM Coordinator or PD&E Project Manager uses the EST to notify project stakeholders to proceed with their review. An email notification is automatically customized according to the type of review the recipient conducts and may be tailored further to include project-specific review instructions. When applicable, the email includes a link to the AN package. The email is sent to the following recipients:

- ETAT members
- FDOT CLC
- Interested parties who may set up notification preferences through the ETDM Public Access website
- Advance Notification recipients (when applicable):
  - SCH
  - Agencies on the SCH contact list when the Consistency Reviewer of the agency is not the same as the ETAT reviewer (if the project requires a Federal Consistency Review)
  - Other AN transmittal list recipients not included in the above, such as regional planning council and local government officials

Certain agencies may be exempt from performing a project review based on the type of project being screened and their jurisdiction. For example, a completely landlocked project may not require a review from the USCG. In these instances, the agency will still receive the Programming Screen review start notification and AN package but will be designated as exempt in the Fact Sheet and Preliminary Programming Screen Summary Report.
4.5.2 Review Time Frame

As established in the ETDM Agency Operating Agreements (AOAs), reviews occur for 45 calendar days following the distribution of the email notification from the EST. If additional review time is required, an ETAT member may request a 15-day extension. When needed, the ETAT member must submit a written request to the ETDM Coordinator within the initial 45-day comment period. Should a shorter extension period be necessary, it may be negotiated with the ETAT members; contact SEMO for more information. An extension applies to all reviewers and is announced via email.

ETAT members may submit and edit comments at any time during the review period using the EST. After the review period ends, the ETAT can no longer submit comments on the EST or edit submitted comments. If an ETAT member needs to revise comments, the member should contact the ETDM Coordinator.

For projects involving a Federal Consistency Review determination, the SCH has 15 days following the end of the 45-day review period to complete their consistency review. An inconsistency finding by any review agency requires a discussion with the SCH and possibly initiation of the Issue Resolution process.

4.5.3 Programming Screen Review

Upon receipt of the Programming Screen notice, ETAT members review the purpose and need and provide comments about potential project effects to the natural, physical, cultural, and community resources related to their regulatory authority. Project effects include direct, indirect, and (when appropriate) cumulative.
Figure 4-4: ETAT Review Tasks
4.5.3.1 ETAT Review Tasks

ETAT members perform the following tasks when evaluating a project (refer to Figure 4-4 for a summary flow chart):

1. **Develop Understand of Project** – Develop an understanding of the proposed transportation project by reviewing the project description, purpose and need, PED, EST GIS analyses and locational information, and comments from previous activities.

2. **Assess Resource Data** – Verify the information available in the EST is the best available; refer to Chapter 6, Section 6.4.5.2 of this Manual, for data review considerations. Identify information gaps or data needed to support further evaluation. ETAT members are expected to supplement the information in the EST with additional sources and personal knowledge, such as data gathered from site visits. If the ETAT members have relevant knowledge or information not already contained in the EST, provide and discuss such information.

3. **Identify Appropriate Analysis Area** – Typically, the analysis area for a project is influenced by the nature of the ETAT member’s resources of interest, the project’s context, and the potential for resource effects. The buffers used in the EST, range from 100 feet to one mile (5,280 feet) in width. These areas represent typical distances used by the ETAT to evaluate a variety of resources in different contexts, although the size of any individual study area depends on the nature of the project.

To help carry forward information produced during the Planning phase to the environmental documents prepared during the PD&E phase, the ETDM process uses definitions consistent with NEPA as stated in 40 CFR 1508.7 and 1508.8:

- **Direct effects**... are caused by the action and occur at the same time and place as the action.

- **Indirect effects**... are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable.

- **Cumulative effect** is the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or non-federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time.

The terms “effects” and “impacts” are synonymous in CEQ regulations (40 CFR §1508.8) and are used interchangeably in this
4. **Perform Analysis** – Review projects for existing conditions and potential direct and indirect effects to jurisdictional resources. Assess the need for potential agency coordination in subsequent project phases. Each ETAT member performs analyses consistent with the criteria and methodologies established by the member’s organization for each specific resource.

5. **Indicate Understanding of Purpose and Need** – Review the project’s purpose and need and acknowledge understanding or ask for clarification from the District ETDM Coordinator. During the Programming Screen review, the Lead Federal Agency (if applicable) indicates acceptance of the purpose and need. In the event the Lead Federal Agency does not accept the purpose and need, the Lead Federal Agency provides guidance with the objective of leading to its acceptance. Before determining a COA, the Lead Federal Agency must accept the purpose and need. Federal Consistency Reviewers enter their Federal Consistency Review determinations, as well.

6. **Provide Comments about Potential Effects and Recommendations to Avoid or Address Effects** – Comment on project concepts and alternatives based on analysis in Task 4. Be as specific as possible. Submit comments in the EST for each screened alternative for the issues identified in the AOA. Comments should not only list resources found within the standard EST buffer areas but reflect historical documentation, previous studies, site visits, and personal knowledge of the project area. For example:

   a) If potential direct and indirect effects could exist, comment on the type, quality, and sensitivity of the resources involved in relation to the resources’ location to the proposed project and related activities. If the project does not impact resources of interest or a detailed evaluation is not necessary during the PD&E phase, indicate this as well.

   b) If there is a concern about potential cumulative effects, provide considerations to help the Lead Agency decide on the level of evaluation needed in the environmental document (see **Section 2.5** of this **Manual** for an explanation about the Lead Agency role). ETAT members are not expected to evaluate cumulative effects during the Planning and Programming Screen reviews nor assign Degrees of Effect (DOEs). Cumulative effects can be both positive and negative. See the **FDOT Cumulative Effects Evaluation Handbook** for more information.

   c) Provide information about agency plans, studies, or other data and regulatory information that may affect the project or are affected by the project. Fill in data gaps and validate data, as needed.

   d) Provide specific recommendations to address resource concerns which may arise during permitting, such as potential avoidance, minimization, or mitigation opportunities; be specific.
e) Specifically identify differences in potential jurisdictional resource impacts among alternatives.

f) Identify specific activities FDOT or other ETAT members can complete between the Programming Screen and the PD&E phase to answer questions, address concerns, or fill in data gaps (e.g., seasonal studies, site inspections, and advancing technical studies). Identify required permits or technical studies along with sufficient detail to document any unique conditions.

g) Indicate a DOE for each alternative and issue being reviewed. A DOE reflects the magnitude of both potential direct and indirect effects caused by a particular alternative to a resource. Table 4-1 provides guidance for assigning a DOE. Include the rationale for selecting a DOE. More specific evaluation criteria should be used by each ETAT member for the resources under the member’s jurisdiction.

h) Indicate the need for future coordination (e.g., permits and technical studies). Request Participating or Cooperating Agency status per the directives in Section 4.4.2 of this Manual for consideration by the Lead Federal Agency.

i) Identify technical studies, permits, authorizations, or approvals which may be required, and any potential concerns, or available mitigation opportunities.

### 4.5.3.2 ETDM Resource Issues

ETAT members comment on the potential project effects to one or more of the following ETDM issues as defined by their respective AOAs and/or in accordance with their regulatory authority:

**Social and Economic**
- Aesthetic Effects
- Economic
- Farmlands
- Land Use Changes
- Mobility
- Relocation Potential
- Social

**Cultural**
- Historic and Archaeological Sites
- Recreation Areas
- Section 4(f) Potential

**Natural**

- Coastal and Marine
- Floodplains
- Water Quality and Quantity
- Wetlands and Surface Waters
- Wildlife and Habitat

**Physical**

- Air Quality
- Contamination
- Infrastructure
- Navigation
- Noise

**Special Designations**

Within the EST, ETAT members use the *Special Designations* issue to identify involvement with any of the following:

- Outstanding Florida Waters
- Aquatic Preserves
- Scenic Highways
- Wild and Scenic Rivers

Refer to *Chapter 2, Section 2.6*, of this *Manual* for additional explanation and guidance regarding each ETDM issue.

### 4.5.3.3 Assigning a Degree of Effect

ETAT representatives should use available information to evaluate and comment on the potential direct and indirect effects of a project. This includes using the data layers in
the EST, historical documentation, previous studies, site visits, communication with agency experts and FDOT District staff, as well as personal knowledge of the project area. The potential effects inform the DOE selection, which reflects the potential magnitude of project effects on a resource, not the level of coordination involved in addressing the effect. The level of coordination with the ETAT during future project phases reflects the issues that need to be addressed, regardless of the DOE. The FDOT ETDM Coordinator, PD&E Project Manager, the District SWAT team and Lead Agency use DOEs and comments to help identify potentially critical issues and determine how to address them. The ETAT DOE selections and supporting comments help the FDOT ETDM Coordinator and PD&E Project Manager assign a SDOE and assist the Lead Federal Agency in determining an appropriate COA at the conclusion of the Programming Screen.

Table 4-1 provides guidance on assigning a DOE. ETAT members are encouraged to develop specific guidance describing their organizations’ DOE selection criteria and coordinate it with FDOT for mutual understanding and partnering. This promotes consistency when ETAT members from the same organization assign a DOE.

Table 4-1: Potential Project Effects Degree of Effect Guidance – Programming Screen

<table>
<thead>
<tr>
<th>Degree of Effect</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not Applicable/ No Involvement</td>
<td>The issue/resource in question is not a part of, in any way involved with, or affected by the proposed alternative.</td>
</tr>
<tr>
<td>Enhanced</td>
<td>The proposed alternative has a positive effect on the resource or can reverse a previous adverse effect leading to environmental improvement.</td>
</tr>
<tr>
<td>None</td>
<td>Resources exist, but there is no potential impact by the proposed alternative.</td>
</tr>
<tr>
<td>Minimal</td>
<td>The proposed alternative has little potential for negative effects on the resources.</td>
</tr>
<tr>
<td>Moderate</td>
<td>Resources are potentially affected by the proposed alternative, but avoidance, minimization, or mitigation options are available and can be addressed during the PD&amp;E phase.</td>
</tr>
<tr>
<td>Substantial</td>
<td>The proposed alternative potentially affects unique or sensitive resources. Avoidance, minimization, or mitigation options may be difficult to identify.</td>
</tr>
<tr>
<td>Dispute Resolution</td>
<td>Potential effects are anticipated to the degree that the proposed alternative may need to be modified or eliminated. Issue Resolution is required before the project proceeds to final design.</td>
</tr>
</tbody>
</table>

Note: The DOE reflects the potential magnitude of both direct and indirect project impacts.
The responsibility for performing Sociocultural Effects (SCE) evaluations and assigning a DOE to the six SCE issues (Social, Economic, Land Use Changes, Mobility, Aesthetic Effects, and Relocation Potential) rests with the MPOs/TPOs and FDOT. Public involvement activities assist in identifying concerns and desired project features. The FDOT and MPO/TPO CLCs should take a collaborative team approach during these evaluations. Much of the data preparation and initial analysis involved with SCE evaluations can be conducted prior to a Programming Screen review and made available to the ETAT as part of the PED. *PD&E Manual, Part 2, Chapter 9, Sociocultural Effects Evaluation*, the *FDOT Public Involvement Handbook*, and the *FDOT Sociocultural Effects Evaluation* web page provide guidance on identifying SCE issues and techniques for gathering public input.

For further guidance on how to evaluate cultural and historical resources, refer to *PD&E Manual, Part 2, Chapter 12, Archaeological and Historical Resources* and the *FDOT Cultural Resources Management Handbook*. For guidance on potential Section 4(f) issues, refer to *PD&E Manual, Part 2, Chapter 13, Section 4(f) Evaluations*.

### 4.5.4 Advance Notification Review

Recipients of the AN package may provide input to FDOT about the AN package. ETAT members and Consistency Reviewers submit comments through the secure EST site. All other recipients email or mail comments to the contact provided on the AN cover letter or listed on the ETDM Public Access Site ([https://etdmpub.fla-etat.org](https://etdmpub.fla-etat.org)).

The FDOT ETDM Coordinator and the PD&E Project Manager review all provided comments to determine if any unresolved or conflicting issues exist. Reviewers failing to respond by the end of the review period, but having jurisdiction by law or anticipated to have an interest in the proposed action may be contacted directly (verbal, electronic, or written form) for input.

### 4.5.5 ETAT Coordination

During the Programming Screen review, the ETDM Coordinator should monitor preliminary ETAT responses and conduct personal communication to clarify issues or respond to questions. Specifically, they should review relevant ETAT commentary to identify actions necessary to advance the project. Actionable ETAT commentary should be transmitted to the appropriate staff as the project advances. Following the screening event, the FDOT ETDM Coordinator, CLC, and PD&E Project Manager assess ETAT commentary to assign a SDOE for each issue and prepare the *Preliminary Programming Screen Summary Report*. The FDOT ETDM Coordinator works with the ETAT to gain a better understanding of identified concerns, clarify any instances where DOEs for an issue differed between ETAT members, and address commentary that raised additional questions or need for additional information. When differences in DOE assignment occur between agencies for an issue, greater consideration should be given to the ETAT member with jurisdictional authority over the resource of concern.
Additionally, after the Programming Screen review, the ETAT member may be asked to:

1. Participate in identifying solutions to project concerns
2. Provide technical assistance during the PD&E phase and subsequent project phases
3. Serve as a Participating or Cooperating Agency
4. Review and approve the COA determination (if Lead Agency)
5. Provide feedback to FDOT regarding the Preliminary and Final Programming Screen Summary Reports.

### 4.5.6 Publish Preliminary Programming Screen Summary Report

The Preliminary Programming Screen Summary Report documents key recommendations and results from the review, including the assigned SDOE for each issue, the Federal Consistency Review determination, and comments received about the AN package (when available).

The FDOT ETDM Coordinator and PD&E Project Manager generate and publish the Preliminary Programming Screen Summary Report within 60 days from the end of the 45-day review period. The FDOT project team reviews comments, coordinates with the ETAT, and assigns a SDOE to all issues and alternatives based on project comments and ETAT DOE selections.

The SDOE represents the position of FDOT and is based on all known information about the project area, including ETAT member and public comments and other technical resources. There is no requirement to select the highest DOE assigned by an ETAT member. However, when assigning an SDOE lower than an ETAT member’s assigned DOE the ETDM Coordinator or PD&E Project Manager should include a rationale for the decision. Coordination with an agency is expected when selecting a lower SDOE than an ETAT member’s assigned DOE and should be documented in the EST during the development of the SDOE; email exchanges can be uploaded to the EST as a project attachment. The ETDM Coordinator or PD&E Project Manager should coordinate with the FDOT team to discuss the issue and reach consensus on the proposed SDOE before publishing the summary report.

If an ETAT member indicates a Dispute Resolution DOE, the FDOT ETDM Coordinator or PD&E Project Manager begins coordination with the ETAT member to seek a mutually agreeable avoidance and minimization option. If they cannot identify a mutually agreeable option, the ETDM Coordinator, in consultation with the Lead Agency, assigns Dispute Resolution as the SDOE and initiates the ETDM Issue Resolution process. See Chapter 2, Section 2.7, of this Manual for more information about the ETDM Issue Resolution process.
In the event that no reviews are received on a specific ETDM issue assigned to an ETAT member through an executed AOA and there appears to be involvement with a resource under their jurisdiction, the FDOT ETDM Coordinator or PD&E Project Manager should contact the respective ETAT member(s) and ask for comments. If the member does not have comments or concerns regarding the issue, the member should indicate this in the EST. The outcome of those efforts and the FDOT's knowledge regarding the issue should be the basis for determining the SDOE. If coordination attempts fail, the FDOT ETDM Coordinator should seek assistance from FDOT staff (particularly the PD&E Project Manager) to help with issue assessment and to provide the basis for the SDOE determination; documentation of a non-responsive member should be provided in the EST to support the project record.

During the development of the Preliminary Programming Screen Summary Report, it may be determined, when multiple alternatives are screened, that a particular alternative should be eliminated from further consideration. For instance, an alternative that does not adequately meet the purpose and need of the project or is found to be unreasonable can be eliminated with justification, documentation, and concurrence by the Lead Agency.

When the AN process is completed after the Programming Screen review and before the COA determination, the FDOT project team responds to AN comments in the EST and then re-publishes the Preliminary Programming Screen Summary Report. The project phase cannot be changed in the EST from Programming Screen to Project Development until the summary report is re-published.

When the FDOT ETDM Coordinator publishes a Preliminary Programming Screen Summary Report, ETAT members, Consistency Reviewers, relevant MPO/TPO and local government staff, and interested public (https://etdmpub.fla-etat.org) are notified that the report is available.

4.6 ALTERNATIVE CORRIDOR EVALUATION (ACE) PROCESS

FDOT uses the ACE process to provide a consistent, coordinated, and documented method for corridor identification and evaluation. Projects with the potential to require the preparation of an EIS generally need a corridor evaluation to identify reasonable alternatives for NEPA analysis from a possible range of alternatives. FDOT may perform ACE as part of the Planning Screen and/or the Programming Screen; and, in some cases, ACE may be part of the PD&E Study.

During the ACE process, the District develops a MM based on stakeholder comments and other information and then uses it to refine or eliminate alternative corridors in order to avoid potential environmental effects (Section 4.6.4). The Lead Federal Agency must approve the elimination of unreasonable alternatives (FHWA Guidance on Using Corridor and Subarea Planning to Inform NEPA, April 5, 2011, and 23 U.S.C. § 168).
Different corridors are often considered when a new route is needed between two locations and may include multimodal options. Corridors can be identified that largely avoid sensitive environmental areas and still satisfy the identified transportation need. Projects that typically require the ACE process include the following:

- New alignments – new roadways; new roadway connections or extensions; new transit and rail lines
- Major realignments
- Major bypasses – truck bypasses; city/town bypasses; rail lines
- Other types of projects based on consultation with FHWA, FTA, or FRA

Many transportation projects may already have existing corridor options from completed action or master plans, for example, projects located on the existing SIS. These analyses should be evaluated and considered prior to advancing into the ACE process. Decisions made in these action or master plans should be included in the project documentation, and during the PD&E Phase, should become part of the NEPA project record (e.g., project file, Environmental Document, etc.). All planning products incorporated into the NEPA process must follow the conditions of 23 U.S.C. § 168 as discussed below.

The ACE process and ETDM screenings may produce the following planning products identified in Federal Highway Administration Guidance on Using Corridor and Subarea Planning to Inform NEPA:

1. Purpose and need or goals and objective statements
2. General travel corridor and/or general mode(s) definition (e.g., highway, transit, or highway/transit combination)
3. Preliminary screening of alternatives and elimination of unreasonable alternatives
4. Basic description of the environmental setting and/or
5. Preliminary identification of environmental impacts and environmental mitigation

23 U.S.C § 168 provides planning decisions that may be adopted for use in the NEPA process. The ACE process provides the framework for advancing planning products into the NEPA/PD&E process. The following is the list of planning products that may be advanced to NEPA pursuant to 23 U.S.C. § 168:

(A) Whether tolling, private financial assistance, or other special financial measures are necessary to implement the project
(B) A decision with respect to modal choice, including a decision to implement corridor or subarea study recommendations to advance different modal solutions as separate projects with independent utility

(C) A basic description of the environmental setting and

(D) A decision with respect to methodologies for analysis

In accordance with **23 U.S.C. § 168**, the following conditions must be met for adoption and use of these planning products:

1. The planning product was developed through a planning process conducted pursuant to applicable federal law.

2. The planning product was developed by engaging in active consultation with appropriate federal and state resource agencies and Indian tribes.

3. The planning process included broad multidisciplinary consideration of systems-level or corridor-wide transportation needs and potential effects, including effects on the human and natural environment.

4. During the planning process, notice was provided through publication or other means to federal, state, local, and tribal governments that might have an interest in the proposed project, and to members of the general public, of the planning products that the planning process might produce and that might be relied on during any subsequent environmental review process. These entities should have been provided an opportunity to participate in the planning process leading to the planning product.

5. After initiation of the environmental review process, but prior to determining whether to rely on and use the planning product, the Lead Federal Agency has made planning document/product available to federal, state, local, and tribal governments that may have an interest in the proposed action, and to members of the general public, and has considered any resulting comments.

6. There is no significant new information or new circumstance that has a reasonable likelihood of affecting the continued validity or appropriateness of the planning product.

7. The planning product has a rational basis and is based on reliable and reasonably current data and reasonable and scientifically acceptable methodologies.

8. The planning product is documented in sufficient detail to support the decision or the results of the analysis and to meet requirements for use of the information in the environmental review process.
(9) The planning product is appropriate for adoption and use in the environmental review process for the project.

(10) The planning product was approved not later than five years prior to date on which the information is adopted pursuant to this section.

Figure 4-4 outlines the ACE process when conducted during the Programming Screen. Sections 4.6.1 through 4.6.6 of this Manual further describe the ACE process when conducted during the Programming Screen. For details about ACE during the Planning Screen, see Chapter 3 of this Manual. For information about the ACE process during the PD&E phase, refer to PD&E Manual, Part 2, Chapter 6, Alternatives.
Figure 4-5: ACE Process During the Programming Screen
4.6.1 Identify the Need to Complete the ACE Process during Programming Screen

The ACE process may begin or continue during the Programming Screen. FDOT makes the determination of designating a project to go through the ACE process in coordination with the Lead Federal Agency. Projects with the potential to be EISs are typically recommended. The Districts can use ACE for non-federal projects at their discretion.

The District internally considers the involvement and potential impacts to environmental issues/resources and the presence of any fatal flaws to decide if the project should be advanced. Consideration should be given to GIS data, what is known of the area, early stakeholder involvement, etc. The District should ensure that the level of detail of the analysis is appropriate to the range of alternatives being considered. Once the decision has been made to advance the project, the goals of using the ACE process (e.g., performing an action plan level corridor analysis or determining reasonable alternatives for NEPA analysis) are defined.

4.6.2 Define Initial Corridor Alternatives

Regardless of when the District begins the ACE process, the next step is to define corridors. If a previous planning study identified corridors, these are used as a starting point for the ACE process. Others can be added by the District at their discretion. There is also the possibility that as stakeholders (such as the ETAT) become involved, additional corridors could be identified. The ability to meet the purpose and need must serve as a baseline to identify and delineate corridors. Depending on the phase of development of the project, the District identifies a study area, swaths, or narrower alignments as corridor(s). The ACE process varies depending on whether it is started in the Planning Screen, Programming Screen, or PD&E phase. It is important that the naming of each corridor or alternative remain consistent throughout ACE and be carried through the PD&E phase.

When continuing the ACE process from the Planning Screen, FDOT uploads the resulting corridor alternatives to the EST prior to the beginning of the Programming Screen. These reflect the changes presented in the Alternative Corridor Evaluation Report (ACER), which can be found on the EST as an attachment to the Project Description report. If the project began as a study area analysis, by the time it reaches the Programming Screen, more refined corridor alternatives replace the study area.

When the ACE process begins in the Programming Screen, the project team defines corridor alternatives. While these corridor alternatives are still rather conceptual, they provide enough detail to allow analysis. Standard GIS analyses are run against this geometry (see Section 4.4 of this Manual, Prepare Project for Screening, for more information) and the project team develops the AN package (see Section 4.4.4, Prepare the Advance Notification Package of this Manual).
4.6.3 Conduct Standard EST Programming Screen

Next, the Programming Screen review proceeds as described in Section 4.5. For ACE process reviews, the ETDM Coordinator assigns SDOEs following ETAT review and then publishes a Preliminary Programming Screen Summary Report (see Section 4.5.5 of this Manual).

4.6.4 Methodology Memorandum (MM) Review

Using the Programming Screen results, the District develops or refines the MM detailing the goals of the evaluation, the alternatives analysis methodology, how coordination with stakeholders will occur, and the basis for decision-making. The MM integrates local land use plans, public involvement and ETAT member commentary, and Planning phase analyses, as well as highlights specific data, tools (e.g., Land Suitability Mapping and Corridor Analysis Tool), and timelines to govern corridor refinements. The MM includes:

1. Background
   a. Contact personnel
   b. Basic project information
      i. Include any previous planning studies or relevant information
      ii. Include any known issues of concern
   c. Brief project description
   d. Brief Purpose and Need of the project

2. Describe the goals and objectives of the ACE
   a. Provide the status in project delivery
   b. Define the intent of the study
   c. Identify the decision points/milestones

3. Describe the methods that will be used to analyze the alternatives and make decisions
   a. Describe alternative corridors
   b. Describe screening criteria
   c. Briefly describe the data that will be used and how it will support the decision making process going forward
d. Describe the rationale that will be used to eliminate alternatives

e. Describe the data tools that will be used in the analysis [i.e., EST, Land Suitability Mapping (LSM), Quantum, etc.]

4. A brief description of stakeholder involvement

In certain situations, the MM may need to be reviewed by project stakeholders more than once. This may take place when one or more of the following apply:

1. There is a change in project termini (expanded).
2. There is a change in purpose and need.
3. There is a change in project concept(s) (e.g., number of lanes, adding interchanges, etc.).
4. There is a change in supporting data that may affect the methodology and any resulting decisions made from it (e.g., population changes, economic changes, land use changes, etc.).
5. When stakeholder input results in significant revisions to the methodology.

When the ACE process is conducted as part of the Programming Screen, the District submits the MM to the ETAT for review through the EST. The ETAT members have 30 days to provide comments and indicate if the MM is understood. The District then revises the MM, as necessary, to address any comments received before sending the document for Lead Federal Agency review. Depending on the nature of the ETAT comments, the Lead Federal Agency may recommend that the ETAT review the revised MM. Subsequently, the Lead Federal Agency is expected to provide acceptance (within 30 days), as appropriate. This review process is consistent with the requirements of 23 U.S.C. § 168.

After the Lead Federal Agency accepts the MM, the FDOT ETDM Coordinator republishes the Preliminary Programming Screen Summary Report with the approved MM to document concurrence.

4.6.5 Refine or Eliminate Corridor Alternatives

The District applies the approved MM to refine the alternatives and documents these activities in the ACER. This report summarizes the refinements made in consideration of ETAT and/or stakeholder assessments, project purpose and need, public involvement commentary, analytical methodology, and evaluation criteria. It also identifies the alternatives that should move forward for NEPA analysis, and provides supporting justifications for eliminating alternatives. When completed, the ACER is uploaded to the EST for review. The ETAT members have 30 days to acknowledge their understanding of the ACER and submit comments in the EST. After ETAT review, the ACER is submitted to the Lead Agency for approval with a request to eliminate

Programming Screen
unreasonable alternatives not satisfying the approved criteria in the MM. The Lead Federal Agency approves the eliminated alternatives and identifies the alternatives to be advanced for NEPA analysis. Documentation regarding the elimination of alternatives and the ACER becomes a part of the project’s Administrative Record (refer to PD&E Manual, Part 1 Chapter 6, Alternatives).

4.6.6 Publish Preliminary Programming Screen Summary Report

The Lead Federal Agency must concur with any eliminated corridor alternatives not advancing into the PD&E phase. For alternatives eliminated due to environmental impacts, the ACER must describe the nature of the impacts and show that they cannot be avoided. The ETDM Coordinator publishes a Preliminary Programming Screen Summary Report after uploading the ACER and receiving Lead Federal Agency concurrence on any corridor alternatives recommended for elimination.

During the PD&E phase, the environmental document summarizes and references the ACER (see PD&E Manual, Part 2 Chapter 6, Alternatives).

4.7 ADVANCING THE PROJECT TO PD&E

Based on the results of the Preliminary Programming Screen Summary Report and any ACE process activities, the FDOT ETDM Coordinator and PD&E Project Manager work with FDOT management (and MPO/TPO management if the project is in an MPO/TPO area) to determine whether to advance the project to the PD&E phase. Should FDOT decide to delay moving the project forward, a COA determination and subsequent publishing of the Final Programming Screen Summary Report is not required until the project advances. Delays typically occur as a result of project reprioritization, funding availability, or when uncertainty exists regarding the appropriate COA.

When advancing a project to PD&E, it must be included in a long range plan (e.g., LRTP in an MPO area) or priority list (if in a non-MPO area) and be in the TIP/STIP. The PD&E phase must be in the adopted Five Year Work Program in the year the PD&E Study is scheduled to begin. The project must use the ETDM identifier as described in the Work Program Instructions Part III Chapter 23, Planning. Additionally, prior to requesting NEPA approval, at a minimum, the next phase of the entire project must be fully funded in the TIP or STIP; or if the project has multiple segments, at least one segment must be fully funded all the way through construction.

If a project does not move forward within four years of the distribution of the Programming Screen Review notification, the Programming Screen must be re-initiated when the project is ready to advance. Similarly, an expansion in project termini or changes in project concept prior to COA determination necessitate a new review unless the PD&E phase has been initiated. A project may advance if less than four years have elapsed since the project was reviewed and no changes have occurred regarding the project’s concept or termini. See Chapter 2, Section 2.3.7 of this Manual for more information about rescreening projects See PD&E Manual, Chapter 3, Preliminary
**Environmental Discussion and Advance Notification** for information about reprocessing the AN.

### 4.8 BEGIN DEVELOPING PD&E SCOPE OF WORK

At the end of the Programming Screen, the FDOT project team and District SWAT team members begin to develop the scope of work for the PD&E phase. The scope of work reflects the activities necessary to complete the PD&E Study and focuses on addressing the issues raised and technical studies identified by the ETAT during the review. It is important when writing the scope of services for an EA not to assume that the decision will be a Finding of No Significant Impact (FONSI), but rather that the result could be either a FONSI or the need to prepare an EIS. The *Programming Screen Summary Report* lists project recommendations and anticipated permits and technical studies. Chapter 5 of this Manual provides additional guidance for transitioning to the PD&E phase.

### 4.9 DETERMINE CLASS OF ACTION

Transportation projects involving a federal action must comply with NEPA and require a COA determination. The process for identifying the appropriate COA generally occurs after the publication of the *Preliminary Programming Screen Summary Report*. There may be instances when it is prudent to delay the COA in order to perform additional studies or coordination prior to or during the PD&E Study to better inform the COA determination. The FDOT ETDM Coordinator and PD&E Project Manager and others as appropriate consult with the Lead Federal Agency to determine the COA. This is a critical decision to the advancement of a project and should be fully considered prior to COA proposal in the EST. The three COA determination categories as defined in 23 CFR 771 are Categorical Exclusions (CEs), EAs, and EISs. The environmental document for FDOT non-federal projects reviewed through the EST is a State Environmental Impact Report (SEIR). The environmental document for local projects screened through the EST is a PEIR. These five documents and procedures for determining the appropriate COA are described in detail in PD&E Manual, Part 1, Chapter 2, Environmental Class of Action Determination or PD&E Manual, Part 1, Chapter 10, State, Local, or Privately Funded Project Delivery.

The FDOT ETDM Coordinator uses the COA determination form in the EST to propose a COA to the Lead Agency for approval. The Lead Federal Agency receives recommendations to approve the COA for federal projects. Proposals to complete SEIRs are approved by the District Environmental Administrator, or designee. Proposals to complete PEIRs are approved by the local agency. Once the Lead Agency approves the proposed COA, it becomes part of the project record and is published in the *Final Programming Screen Summary Report*.

The COA can be modified as needed. However, all modifications require concurrence from the Lead Agency.
4.10 PUBLISH FINAL PROGRAMMING SCREEN SUMMARY REPORT

FDOT publishes the Final Programming Screen Summary Report following the COA determination by the Lead Agency and the updating of the scope of work outline. For ACE process projects, the Final Programming Screen Summary Report is renamed to Final Programming Screen Summary Report with Alternative Corridor Evaluation Report and also contains Lead Federal Agency concurrence on the MM and agreed upon eliminated alternatives. The Final Programming Screen Summary Report contains any updates to information previously published in the Preliminary Programming Screen Summary Report. If the AN process is completed after the COA determination, the FDOT project team re-publishes the Final Programming Screen Summary Report to document the comments and responses.

Upon publication, an email to access the Final Programming Screen Summary Report is automatically submitted to original project notification email recipients. The email identifies changes made since the previous publication. The report is available for public review on the ETDM Public Access Site (https://etdmpub.fla-etat.org/est). ETAT members review the report and provide comments, if applicable, within 30 days of notification.

4.11 ISSUE RESOLUTION PROCESS

ETAT commentary regarding potential project effects during the Programming Screen offers an opportunity to find solutions to complex issues among agencies by identifying mutually agreeable activities or conditions that will address a resource of concern while meeting transportation needs.

A strong commitment exists among the participants in the ETDM process to make every reasonable attempt resolve issues within the ETAT, prior to elevating them to higher level management. To facilitate meeting this commitment, potential disputes should be addressed as early as possible to make the best use of agency skills and resources. Projects with unresolved issues following the ETAT review and publication of the Preliminary Programming Screen Summary Report require commencement or continuation of the ETDM issue resolution process.

The informal issue resolution process begins when the ETDM Coordinator in consultation with the Lead Agency assigns an “Issue Resolution Process Required” SDOE during a Programming Screen review. When assigning the SDOE, the ETDM Coordinator uses all known information including comments and DOEs from ETAT members. The ETDM Coordinator reviews the potential dispute commentary to determine its consistency with the definition of “Issue Resolution Process Required” (see Table 4-1) and in conjunction with the disputing agency’s regulatory authority. Initially, the FDOT ETDM Coordinator works with the appropriate ETAT representative(s) to informally resolve the disputed issue(s) at the agency staff level before elevating the discussion to the Formal Issue Resolution process. Refer to Chapter 2, Section 2.7, of this Manual for issue resolution procedures.
4.12 PROGRAMMING SCREEN ACTIVITIES

The ETDM process involves participants from a wide range of professions. As detailed throughout this chapter, ETDM process participants are engaged in a variety of activities to accomplish a Programming Screen. The list below provides a quick reference, summarizing the activities of these participants during a Programming Screen. For details, refer to the preceding sections of this chapter, and Chapter 2, Section 2.5, ETDM Coordination of this Manual.

4.12.1 Programming Screen Preparation

**ETDM Project Information (FDOT)**

- Facilitate timely information flow between FDOT and MPOs/TPOs and local governments (as applicable).
- Identify priority projects for inclusion in the Five Year Work Program.
- Identify and develop review schedule of qualifying transportation projects.
- Develop or update project descriptions and purpose and need for candidate projects.
- Document planning consistency information in coordination with FDOT District MPO/TPO or Rural County Liaison.
- Map the location of each project.
- Identify previous studies and documents that can be included with project reviews.
- Prepare PEDs and ANs.
- Enter information into the EST or coordinate with the GeoPlan Center to upload batch files of project data.
- Perform quality assurance check of project data and mappings (including project geometry and termini).
- For SIS projects, work with the SIS Central Office to ensure candidate projects are consistent with Florida transportation goals and objectives.

**ETAT Member Resource Data (ETAT members and GeoPlan Center)**

- Identify new or updated environmental resource information and coordinate with the GeoPlan Center to upload or secure these GIS files.
• Perform quality assurance check of information provided to the GeoPlan Center after it has been made available through the EST.

**Sociocultural Data (FDOT or MPO/TPO)**

• Identify activities to gather information to support the SCE Evaluation.

• Gather or identify sociocultural data required for SCE Evaluation.

• Enter sociocultural data into the EST or coordinate with the GeoPlan Center to upload or secure GIS files.

• Perform quality assurance checks of sociocultural data and mappings (including project geometry and termini).

### 4.12.2 Programming Screen Reviews

ETAT members perform the following tasks for their resources; the FDOT CLC performs the tasks for the six SCE issues:

• Conduct project reviews of potential direct and indirect effects using the EST.

• Recommend cumulative effects considerations as appropriate.

• Conduct purpose and need reviews.

• Recommend potential avoidance, minimization, and mitigation opportunities.

• Identify required technical studies and permits.

• Electronically submit comments within the 45-day review period.

• Review and comment on **MMs** and **ACERs** within 30 days, when requested.

Lead agencies perform these additional tasks during the Programming Screen reviews:

• Review provided project planning consistency information i.e., LRTP, State Transportation Improve Program (STIP), and Transportation Improvement Program (TIP).

• When applicable, review and comment on AN package and assist with scoping activities.

• Review, comment, and approve the **MM**, within 30 calendar days when requested.
- Approve elimination of unreasonable alternatives not meeting the purpose and need or evaluated through application of the approved methodology MM and documented in the ACER.

- Invite Participating and/or Cooperating Agencies, as appropriate.

- Review and approve the Class of Action (COA) for the environmental document development in the NEPA study.

- Review and adopt planning products for use during NEPA.

### 4.12.3 ETAT Coordination

The FDOT ETDM Coordinator, Project Manager, or designee performs the following tasks during the Programming Screen:

- Initiate Programming Screen and send AN packages.

- Promote awareness of the proposed project, including the purpose and need and the project description, and how the public can provide input.

- Coordinate with ETAT members to ensure timely reviews of direct and indirect effects.

- Monitor relevant ETAT commentary to identify actions necessary to advance the project.

- Identify actionable commentary from the ETAT and transmit it to the appropriate staff as the project advances.

- Communicate responses about transportation issues to the community during the Planning and Programming Screens.

- For ACE process projects, coordinate reviews and lead Federal Agency concurrence for MM and ACER.

- Participate in discussions regarding potential project effects or clarification of comments, as needed.

- Conduct or participate in ETAT meetings and webinars.

- Participate in issue resolution activities, if needed.

- Initiate technical studies to support consultation process, if needed.
• Convey to the ETAT members about how project plans or concepts have been adapted to address their concerns, or communicate to them the rationale for not incorporating their input.

4.12.4 Programming Screen Summary Report

The FDOT ETDM Coordinator, Project Manager, or designee, performs the following tasks related to developing and publishing the Programming Screen Summary Report:

• Review and respond to commentary received during the Programming Screen review.
• Incorporate the SCH Federal Consistency Review determination.
• Assign an SDOE to each ETDM resource issue.
• Summarize public comments received during the review.
• Develop the Scope of Work for the PD&E phase.
• Publish the Preliminary Programming Screen Summary Report.
• Determine the COA in conjunction with the Lead Federal Agency.
• Coordinate with appropriate FDOT District staff to identify potential candidate projects for the Five Year Work Program.
• Publish the Final Programming Screen Summary Report.
• Provide results of the Programming Screen to the PD&E project team, MPO/TPO and local governments (as applicable), and with the interested public.
