Design Approval Requests

The Design Approval Request (DAR) module in Project Suite Enterprise Edition (PSEE) enables the Project Manager (PM) to request and document approvals of selected design items. These design approval request types include the following:

- Exception
- Green Pavement Markings
- Pavement Design
- Pavement Type Selection Report
- Sole Sourcing
- Typical Sections
- Variation

Each request that is entered into the DAR module is routed to the identified individuals for review based on the workflow for that type of approval. Once a request has been reviewed by the appropriate Project, District, Central, Office and/or FHWA reviewers, the request can be approved. Once approved, the request will be shown in the Design Package Approvals within PSEE.

Additional information on the DAR Module can be found in the DAR Module help document within PSEE.
