Project Information			
Analyst	RS&H	Date	3/19/2025
Agency	RS&H	Analysis Year	2030 No-Build
Jurisdiction		Time Analyzed	AM Peak
Project Description	NB_South of Hollywood Blvd	Units	U.S. Customary

Geometric Data			
Number of Lanes (N), ln	4	Terrain Type	Level
Segment Length (L), ft	-	Percent Grade, %	-
Measured or Base Free-Flow Speed	Measured	Grade Length, mi	-
Base Free-Flow Speed (BFFS), mi/h	-	Total Ramp Density (TRD), ramps/mi	-
Lane Width, ft	-	Free-Flow Speed (FFS), mi/h	65.0
Right-Side Lateral Clearance, ft	-		

Adjustment Factors

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

HCM 7th Edition methodology does not support Non-NEMA phasing.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

HCM 7th Edition methodology does not support Non-NEMA phasing.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

HCM 7th Edition methodology does not support Non-NEMA phasing.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

HCM 7th Edition methodology does not support Non-NEMA phasing.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

HCM 7th Edition methodology does not support Non-NEMA phasing.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

HCM 7th Edition methodology does not support Non-NEMA phasing.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

HCM 7th Edition methodology does not support Non-NEMA phasing.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

HCM 7th Edition methodology does not support Non-NEMA phasing.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

HCM 7th Edition methodology does not support Non-NEMA phasing.

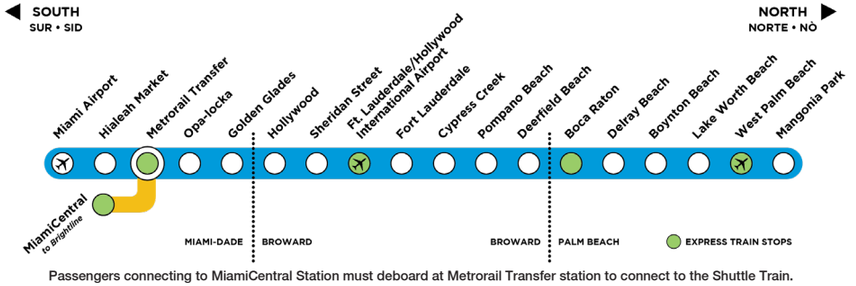
All passengers must purchase a valid ticket before boarding the train. Southbound trains board on Track 1 and Northbound trains board on Track 2, unless otherwise announced at train station.

Tri-Rail advises passengers to arrive at the station 20 minutes prior to departure and to call the Office of Customer Experience at 1-800-TRI-RAIL (874-7245) to verify schedule and connection information before traveling.



Passengers connecting to MiamiCentral Station must deboard at Metrorail Transfer station to connect to the Shuttle Train.

RÈG AK RÈGLEMAN YO

Ou dwe achte tike yoanvan ou monte nan tren an. Mwayen peman: lajan Etazini, Visa, MasterCard ak American Express

- PA pote sèfbòd
- PA fimen epi pa bwè bwèson ki gen alkòl
- Pa mete pye w sou chèz yo
- PA mandye
- PA fè fatra
- PA pote okenn zam afe oswa materyo ki kapab pran dife
- Rad kòrèk: soulye ak chemiz obligatwa
- Bèt: tout zannimo ki rann moun sèvis otorize
- Tout ti zannimo yo dwe rete nan yon kaj moun kapab pote
- Ou dwe ranje bagaj yo nan kazye pou bagaj yo
- Tri-Rail pa kapab responsab pou okenn bagay ki pèdi oubyen yo vole
- Ou dwe genyen ekoutè pou sèvi ak radyo epi aparèy kasèt yo

Pou kapab jwenn yon kopi tout règ ak règleman SFRTA/Tri-Rail, ou pou jwenn orè sa a nan fòma diferan, voye demann ou nan adrès sila a: SFRTA, 801 NW 33rd Street, Pompano Beach, FL 33064. Oubyen kontakte Depatman Eksperyans Kliyan an nan 1-800-TRI-RAIL (874-7245) oubyen TTY 711 (1-800-955-8771).

Protections of Title VI of the Civil Rights Act of 1964

The South Florida Regional Transportation Authority (SFRTA/Tri-Rail) operates its programs without regards to race, color or national origin in accordance with Title VI of the Civil Rights Act of 1964. Any person who believes he or she have been subjected to discrimination under Title VI, may file a written complaint with the South Florida Regional Transportation Authority, Executive Department. For more information on the South Florida Regional Transportation Authority's civil rights program, and the obligations and procedures to file a complaint, contact 1-800-TRI-RAIL (874-7245); or visit our administrative offices at, 801 NW 33rd Street, Pompano Beach, FL, 33064. A complaint may be filed directly with the Federal Transit Administration Office of Civil Rights, 1200 New Jersey Avenue, SE, Washington, DC 20590 or by calling (202) 366-4018.

Protecciones bajo el Título VI de la Ley de Derechos Civiles de 1964

La Autoridad Regional de Transporte del Sur de la Florida (SFRTA/Tri-Rail) se compromete a asegurar que ninguna persona sea excluida de participar en sus programas o actividades de tránsito, o de otra manera se le deniegue los beneficios de los mismos, en base a su raza, color u origen nacional, conforme las protecciones dispuestas en el Título VI de la Ley de Derechos Civiles de 1964. Toda persona que considere que ha quedado sujeta a una situación discriminatoria en virtud del Título VI, podrá presentar una queja escrita ante el Departamento Ejecutivo de la Autoridad de Transporte Regional del Sur de la Florida. Si desea más información sobre el programa de derechos civiles de la Autoridad de Transporte Regional del Sur de la Florida y las obligaciones y procedimientos para presentar una queja, contáctese al 1-800-TRI-RAIL (874-7245); o visite nuestra sede administrativa sita en 801 NW 33rd Street, Pompano Beach, FL, 33064. Se puede presentar una queja directamente ante la Administración Federal de Transporte (Federal Transit Administration) presentando una queja ante la Oficina de Derechos Civiles (Office of Civil Rights), 1200 New Jersey Avenue, SE, Washington, DC 20590, o llamar al (202) 366-4018.

Pwoteksyon Tit VI nan Lwa 1964 sou Dwa Moun

Ajans Transpò Rejyonal nan Sid Eta Florid (South Florida Regional Transportation Authority – SFRTA/Tri-Rail) angaje li tout bon vre pou asire tout moun kapab patisipe oswa kapab resevwa avantaj pwogram transpò oswa aktivite li ofri yo, san gade sou ras, koulè oswa kote yo fèt, jan Tit VI Lwa 1964 sou Dwa Moun pwoteje dwa moun. Si yon moun kwè li viktim diskriminasyon anba Tit VI la, moun sa a ka pote yon plent alekri ba South Florida Regional Transportation Authority, Depatman Egzekitif an. Pou jwenn plis enfòmasyon sou pwogram dwa sivil South Florida Regional Transportation Authority, ak enfòmasyon sou obligasyon ak pwosedi pou pote yon plent, kontakte 1-800-TRI-RAIL (874-7245); oswa ale nan biwo administratif nou yo nan 801 NW 33rd Street, Pompano Beach, FL, 33064. Ou gendwa pote plent dirèkteman nan Administrayon Tranzit Federal (Federal Transit Administration); pou fè sa, depoze plent ou devan Biwo Dwa Sivil (Office of Civil Rights), 1200 New Jersey Avenue, SE, Washington, DC 20590, oswa li ka rele (202) 366-4018.

RTA SOUTH FLORIDA REGIONAL TRANSPORTATION AUTHORITY

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 18, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-95 County Line to Griffin Rd No Build-T2
Project Comment: Created Fri Jan 16 12:42:42 EST 2026
Project Unit System: U.S. Customary

Highway Title: NB-I-95
Highway Comment: Created Fri Jan 16 12:43:07 EST 2026
Highway Version: 2

Evaluation Title: Evaluation 1
Evaluation Comment: Created Wed Feb 18 12:14:16 EST 2026

Minimum Location: 340+00.000
Maximum Location: 585+00.000

Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration

First Year of Analysis: 2030
Last Year of Analysis: 2050
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 340+00.000
Evaluation End Location: 585+00.000
Functional Class: Freeway
Type of Alignment: Divided, Multilane
Model Category: Freeway Segment
Calibration Factor: FI_MV=1.0; FI_SV=1.0; PDO_MV=1.0; PDO_SV=1.0;

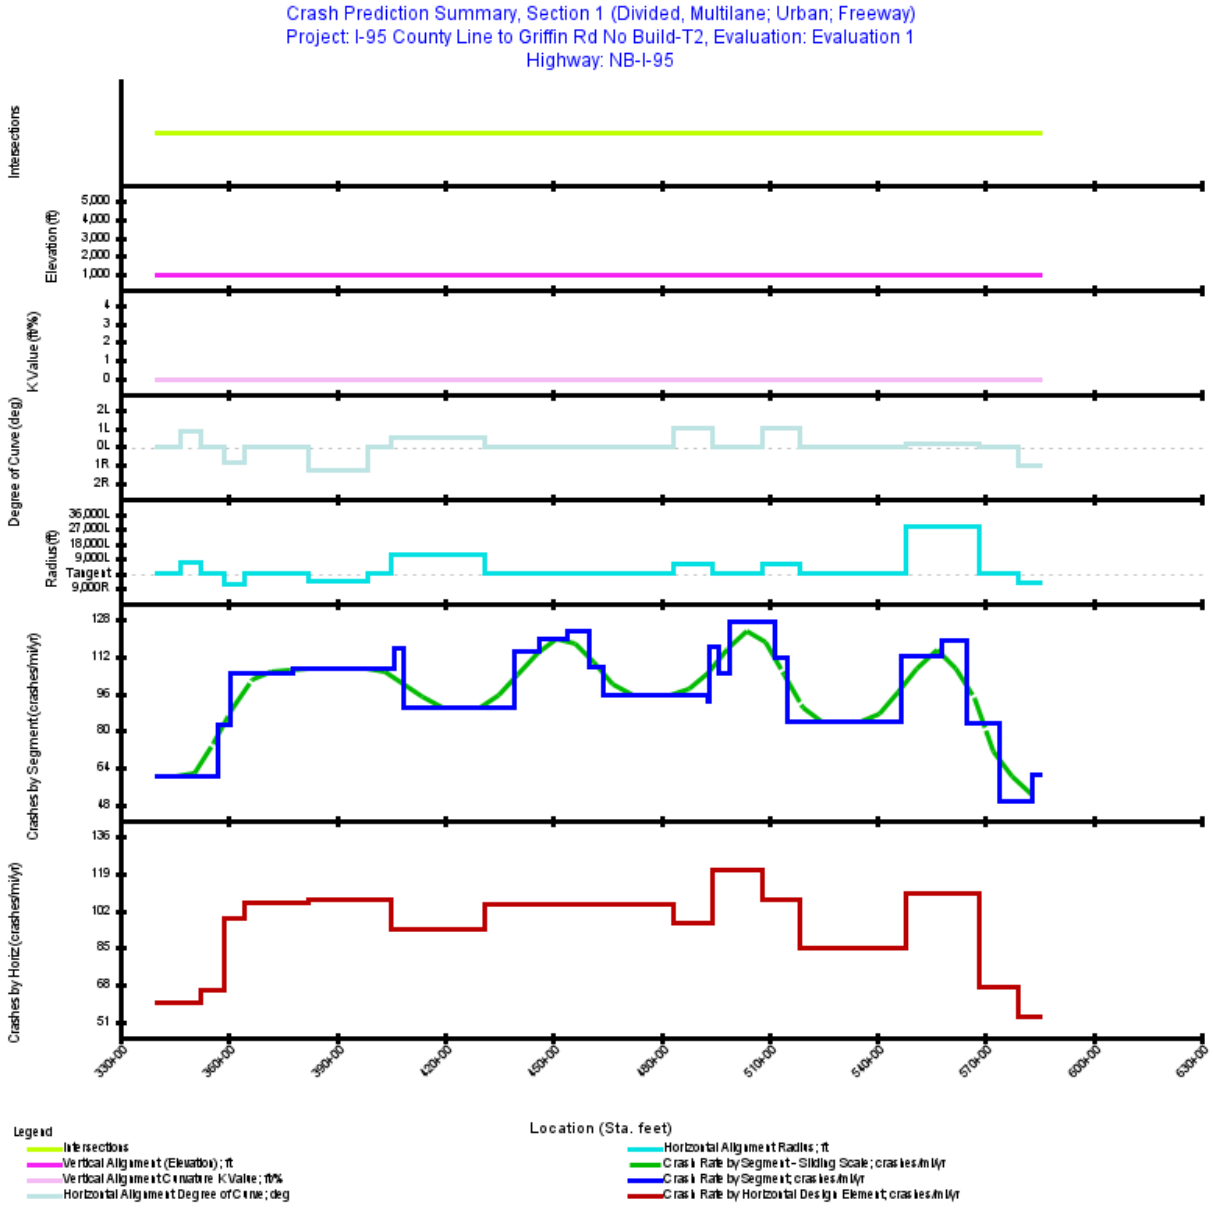

Figure 1. Crash Prediction Summary (Section 1)

Table 1. Evaluation Freeway - Homogeneous Segments (Section 1)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT	Median Width (ft)	Type	Effective Median Width (ft)

Table 2. Predicted Freeway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Effective Length (mi)	**4.6402**
Average Future Road AADT (vpd)	**249,559**
Predicted Crashes	
Total Crashes	**9,374.22**
Fatal and Injury Crashes	**2,636.11**
Property-Damage-Only Crashes	**6,738.11**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**28**
Percent Property-Damage-Only Crashes (%)	**72**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**96.2019**
FI Crash Rate (crashes/mi/yr)	**27.0527**
PDO Crash Rate (crashes/mi/yr)	**69.1491**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**8,876.02**
Travel Crash Rate (crashes/million veh-mi)	**1.06**
Travel FI Crash Rate (crashes/million veh-mi)	**0.30**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.76**

Note: *Effective Length* is the *segment length* minus the length of the *speed change lanes* if present.
Note: *Total Travel and Crash Rates/Million Vehicle Miles* for *Speed Change Lanes* reflect AADTs that are **half of the Freeway Segment AADTs** based on the assumption of 50/50 directional distribution.

Table 3. Predicted Crash Frequencies and Rates by Freeway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Effective Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Table 7. Predicted Freeway Crash Type Distribution (Section 1)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	1.86	0.0	17.92	0.2	19.79	0.2
Highway Segment	Collision with Fixed Object	336.60	3.6	583.34	6.2	919.93	9.8
Highway Segment	Collision with Other Object	23.78	0.3	113.25	1.2	137.02	1.5
Highway Segment	Other Single-vehicle Collision	96.97	1.0	87.17	0.9	184.14	2.0
Highway Segment	Collision with Parked Vehicle	6.99	0.1	13.04	0.1	20.03	0.2
Highway Segment	Total Single Vehicle Crashes	466.20	5.0	814.72	8.7	1,280.92	13.7
Highway Segment	Right-Angle Collision	67.27	0.7	106.62	1.1	173.89	1.9
Highway Segment	Head-on Collision	17.36	0.2	11.85	0.1	29.21	0.3
Highway Segment	Other Multi-vehicle Collision	67.27	0.7	142.16	1.5	209.43	2.2
Highway Segment	Rear-end Collision	1,627.43	17.4	4,087.14	43.6	5,714.57	61.0
Highway Segment	Sideswipe, Same Direction Collision	390.58	4.2	1,575.62	16.8	1,966.20	21.0
Highway Segment	Total Multiple Vehicle Crashes	2,169.91	23.1	5,923.39	63.2	8,093.30	86.3
Highway Segment	Total Highway Segment Crashes	2,636.11	28.1	6,738.11	71.9	9,374.22	100.0
	Total Crashes	2,636.11	28.1	6,738.11	71.9	9,374.22	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
558+00.000	565+00.000	Information: for segment #19 (558+00.000 to 565+00.000), Inside shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
565+00.000	573+80.000	Information: for segment #20 (565+00.000 to 573+80.000), Inside shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
573+80.000	583+00.000	Information: for segment #21 (573+80.000 to 583+00.000), Inside shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
583+00.000	585+00.000	Information: for segment #22 (583+00.000 to 585+00.000), Inside shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
357+20.000	360+40.000	Information: for segment #2 (357+20.000 to 360+40.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (271,130 vpd) for 2032 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (272,595 vpd) for 2033 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (274,060 vpd) for 2034 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (275,525 vpd) for 2035 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (276,990 vpd) for 2036 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (278,455 vpd) for 2037 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (279,920 vpd) for 2038 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (281,385 vpd) for 2039 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (282,850 vpd) for 2040 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (284,315 vpd) for 2041 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (285,780 vpd) for 2042 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (287,245 vpd) for 2043 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (288,710 vpd) for 2044 is not within the model limit (270,000 vpd) for reliable results for segment type 8F

Start Location (Sta. ft)	End Location (Sta. ft)	Message
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (290,175 vpd) for 2045 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (291,640 vpd) for 2046 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (293,105 vpd) for 2047 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (294,570 vpd) for 2048 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (296,035 vpd) for 2049 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Warning: for segment #3 (360+40.000 to 378+00.000), traffic volume (297,500 vpd) for 2050 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
360+40.000	378+00.000	Information: for segment #3 (360+40.000 to 378+00.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
378+00.000	406+00.000	Warning: for segment #4 (378+00.000 to 406+00.000), traffic volume (271,130 vpd) for 2032 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
378+00.000	406+00.000	Warning: for segment #4 (378+00.000 to 406+00.000), traffic volume (272,595 vpd) for 2033 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
378+00.000	406+00.000	Warning: for segment #4 (378+00.000 to 406+00.000), traffic volume (274,060 vpd) for 2034 is not within the model limit (270,000 vpd) for reliable results for segment type 8F

439+50.000	446+20.000	Warning: for segment #7 (439+50.000 to 446+20.000), traffic volume (281,900 vpd) for 2050 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (273,800 vpd) for 2030 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (275,280 vpd) for 2031 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (276,760 vpd) for 2032 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (278,240 vpd) for 2033 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (279,720 vpd) for 2034 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (281,200 vpd) for 2035 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (282,680 vpd) for 2036 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (284,160 vpd) for 2037 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (285,640 vpd) for 2038 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (287,120 vpd) for 2039 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (288,600 vpd) for 2040 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (290,080 vpd) for 2041 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (291,560 vpd) for 2042 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (293,040 vpd) for 2043 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (294,520 vpd) for 2044 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (296,000 vpd) for 2045 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
446+20.000	454+00.000	Warning: for segment #8 (446+20.000 to 454+00.000), traffic volume (297,480 vpd) for 2046 is not within the model limit (270,000 vpd) for reliable results for segment type 8F

499+00.000	511+60.000	Warning: for segment #15 (499+00.000 to 511+60.000), traffic volume (286,660 vpd) for 2048 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
499+00.000	511+60.000	Warning: for segment #15 (499+00.000 to 511+60.000), traffic volume (288,080 vpd) for 2049 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
499+00.000	511+60.000	Warning: for segment #15 (499+00.000 to 511+60.000), traffic volume (289,500 vpd) for 2050 is not within the model limit (270,000 vpd) for reliable results for segment type 8F

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 3, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Report Overview

Report Generated: Feb 3, 2026 9:04 AM
Report Template: System: Single Page, 508 Compliant [System] (mlcpm5, Sep 22, 2025 1:48 PM)

Evaluation Date: Tue Feb 03 09:03:40 EST 2026
IHSDM Version: v17.0.0 (Sep 22, 2021)
Crash Prediction Module: v12.0.0 (Sep 22, 2021)

User Name: fuentesa
Organization Name: RS&H
Phone:
E-Mail: antonio.fuentes@rsandh.com

Project Title: I-95 County Line to Griffin Rd
Project Comment: Created Fri Jan 16 12:42:42 EST 2026
Project Unit System: U.S. Customary

Highway Title: Hollywood Blvd NB On-Ramp
Highway Comment: Created Tue Jan 27 14:13:42 EST 2026
Highway Version: 2

Evaluation Title: Evaluation 1
Evaluation Comment: Created Tue Feb 03 09:03:29 EST 2026

Minimum Location: 342+60.000
Maximum Location: 358+60.000

Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration

First Year of Analysis: 2030
Last Year of Analysis: 2050
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 342+60.000
Evaluation End Location: 358+60.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

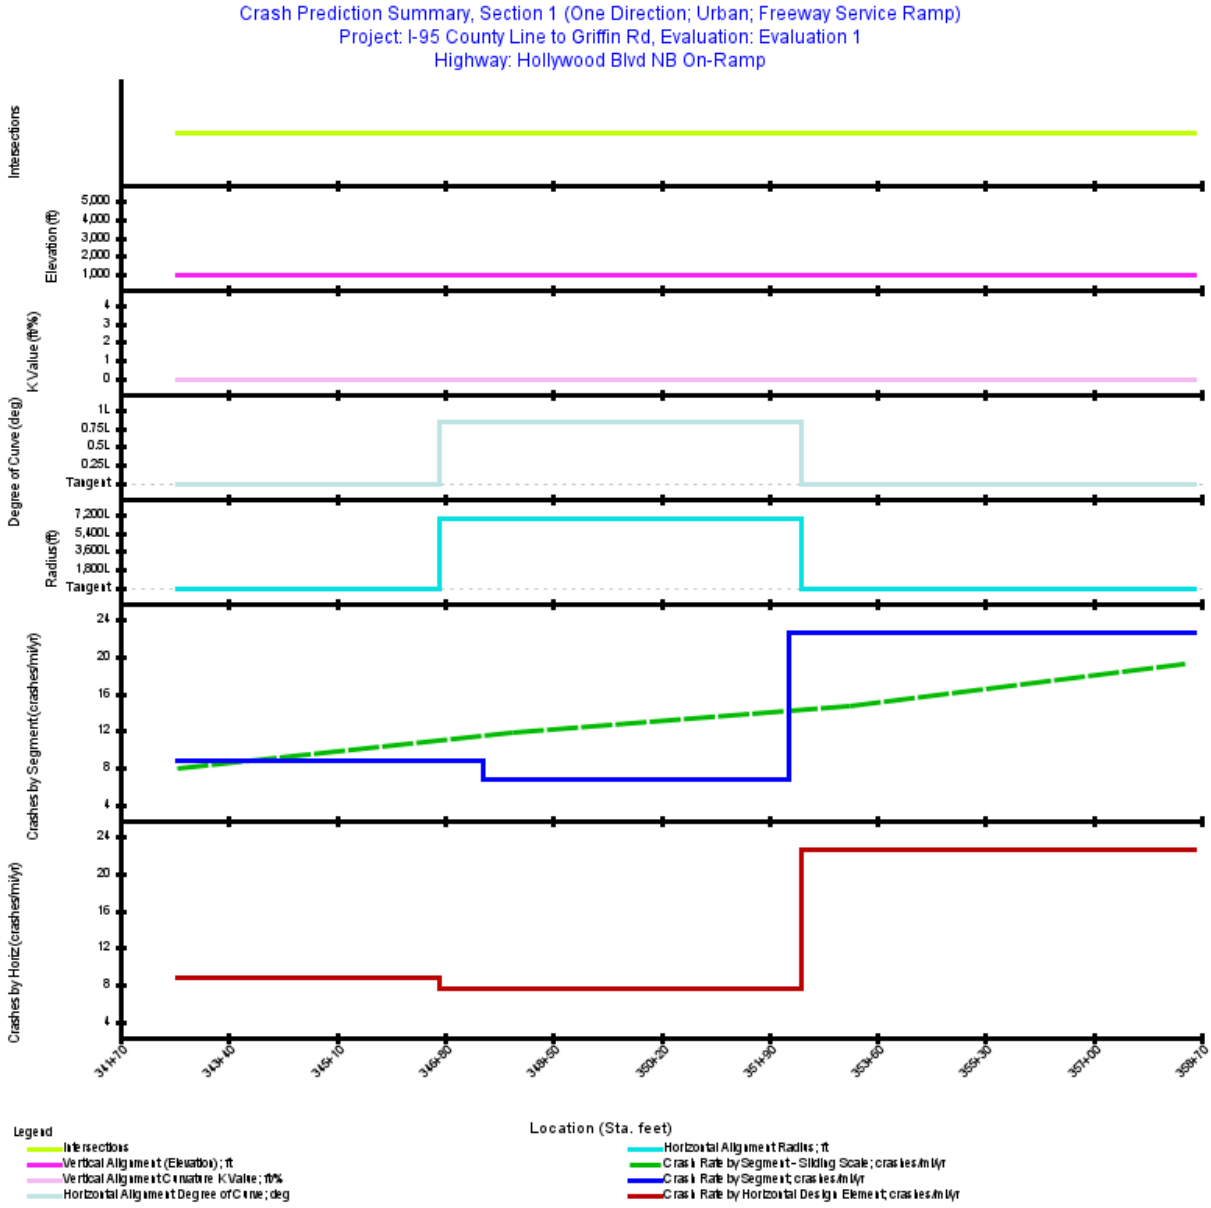

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road Two-lane Ramp Entrance	Urban	342+60.000	347+40.000	480.00	0.0909	2030: 19,000; 2031: 19,125; 2032: 19,250; 2033: 19,375; 2034: 19,500; 2035: 19,625; 2036: 19,750; 2037: 19,875; 2038: 20,000; 2039: 20,125; 2040: 20,250; 2041: 20,375; 2042: 20,500; 2043: 20,625; 2044: 20,750; 2045: 20,875; 2046: 21,000; 2047: 21,125; 2048: 21,250; 2049: 21,375; 2050: 21,500
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	347+40.000	352+20.000	480.00	0.0909	2030: 19,000; 2031: 19,125; 2032: 19,250; 2033: 19,375; 2034: 19,500; 2035: 19,625; 2036: 19,750; 2037: 19,875; 2038: 20,000; 2039: 20,125; 2040: 20,250; 2041: 20,375; 2042: 20,500; 2043: 20,625; 2044: 20,750; 2045: 20,875; 2046: 21,000; 2047: 21,125; 2048: 21,250; 2049: 21,375; 2050: 21,500

Table 5. Predicted Crash Frequencies by Year (Freeway Ramp Sections)

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2030	3.61	1.72	47.726	1.89	52.274
2031	3.66	1.75	47.967	1.90	52.033
2032	3.71	1.79	48.213	1.92	51.787
2033	3.76	1.82	48.462	1.94	51.538
2034	3.81	1.86	48.717	1.95	51.283
2035	3.86	1.89	48.975	1.97	51.025
2036	3.91	1.93	49.238	1.99	50.762
2037	3.97	1.96	49.505	2.00	50.495
2038	4.02	2.00	49.777	2.02	50.223
2039	4.08	2.04	50.052	2.04	49.948
2040	4.13	2.08	50.332	2.05	49.668
2041	4.19	2.12	50.616	2.07	49.384
2042	4.25	2.16	50.904	2.09	49.096
2043	4.31	2.21	51.196	2.10	48.804
2044	4.37	2.25	51.492	2.12	48.508
2045	4.43	2.29	51.792	2.14	48.208
2046	4.50	2.34	52.096	2.15	47.904
2047	4.56	2.39	52.404	2.17	47.596
2048	4.62	2.44	52.716	2.19	47.284
2049	4.69	2.49	53.032	2.20	46.968
2050	4.76	2.54	53.351	2.22	46.649
Total	87.20	44.08	50.550	43.12	49.450
Average	4.15	2.10	50.550	2.05	49.450

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 6. Predicted Crash Severity by Ramp Segment (Freeway Ramp Sections)

Seg. No.	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
1	0.1402	0.4252	2.2006	4.1484	9.8115
2	0.1578	0.4783	3.0453	3.7158	5.6468
3	0.6037	1.8305	9.4745	17.8607	27.6630
Total	0.9016	2.7340	14.7204	25.7250	43.1212

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.06	0.1	0.40	0.5	0.46	0.5
Highway Segment	Collision with Fixed Object	11.21	12.9	13.02	14.9	24.23	27.8
Highway Segment	Collision with Other Object	0.79	0.9	2.53	2.9	3.32	3.8
Highway Segment	Other Single-vehicle Collision	3.23	3.7	1.95	2.2	5.17	5.9
Highway Segment	Collision with Parked Vehicle	0.23	0.3	0.29	0.3	0.52	0.6
Highway Segment	Total Single Vehicle Crashes	15.53	17.8	18.18	20.8	33.71	38.7
Highway Segment	Right-Angle Collision	0.89	1.0	0.45	0.5	1.33	1.5
Highway Segment	Head-on Collision	0.23	0.3	0.05	0.1	0.28	0.3
Highway Segment	Other Multi-vehicle Collision	0.89	1.0	0.60	0.7	1.48	1.7
Highway Segment	Rear-end Collision	21.41	24.6	17.21	19.7	38.62	44.3
Highway Segment	Sideswipe, Same Direction Collision	5.14	5.9	6.63	7.6	11.77	13.5
Highway Segment	Total Multiple Vehicle Crashes	28.55	32.7	24.94	28.6	53.49	61.3
Highway Segment	Total Highway Segment Crashes	44.08	50.5	43.12	49.5	87.20	100.0
	Total Crashes	44.08	50.5	43.12	49.5	87.20	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
342+60.000	347+40.000	Information: for segment #1 (342+60.000 to 347+40.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
342+60.000	347+40.000	Information: for segment #1 (342+60.000 to 347+40.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
347+40.000	352+20.000	Information: for segment #2 (347+40.000 to 352+20.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
347+40.000	352+20.000	Information: for segment #2 (347+40.000 to 352+20.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
352+20.000	358+60.000	Information: for segment #3 (352+20.000 to 358+60.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
352+20.000	358+60.000	Information: for segment #3 (352+20.000 to 358+60.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,125 vpd) for 2031 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,250 vpd) for 2032 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,375 vpd) for 2033 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,500 vpd) for 2034 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,625 vpd) for 2035 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,750 vpd) for 2036 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,875 vpd) for 2037 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,000 vpd) for 2038 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,125 vpd) for 2039 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,250 vpd) for 2040 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,375 vpd) for 2041 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Start Location (Sta. ft)	End Location (Sta. ft)	Message
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,500 vpd) for 2042 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,625 vpd) for 2043 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,750 vpd) for 2044 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,875 vpd) for 2045 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (21,000 vpd) for 2046 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (21,125 vpd) for 2047 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (21,250 vpd) for 2048 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (21,375 vpd) for 2049 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (21,500 vpd) for 2050 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 3, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 340+60.000
Evaluation End Location: 366+60.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

340+60.000	366+60.000	Warning: for segment #1 (340+60.000 to 366+60.000), traffic volume (49,000 vpd) for 2050 is not within the model limit (32,000 vpd) for reliable results for segment type 2EX

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 3, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-95 County Line to Griffin Rd
Project Comment: Created Fri Jan 16 12:42:42 EST 2026
Project Unit System: U.S. Customary

Highway Title: Sheridan St NB On-Ramp
Highway Comment: Created Wed Jan 28 15:20:33 EST 2026
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Tue Feb 03 09:10:34 EST 2026

Minimum Location: 0.000
Maximum Location: 16+80.000

Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration

First Year of Analysis: 2030
Last Year of Analysis: 2050
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 16+80.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 3, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 20+55.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 21+77.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

0.000	13+70.000	Warning: for segment #1 (0.000 to 13+70.000), traffic volume (19,100 vpd) for 2050 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 3, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 13+50.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

0.000	13+50.000	Information: for segment #1 (0.000 to 13+50.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
0.000	13+50.000	Information: for segment #1 (0.000 to 13+50.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (18,150 vpd) for 2041 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (18,300 vpd) for 2042 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (18,450 vpd) for 2043 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (18,600 vpd) for 2044 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (18,750 vpd) for 2045 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (18,900 vpd) for 2046 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (19,050 vpd) for 2047 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (19,200 vpd) for 2048 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (19,350 vpd) for 2049 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	13+50.000	Warning: for segment #1 (0.000 to 13+50.000), traffic volume (19,500 vpd) for 2050 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 3, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 22+40.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

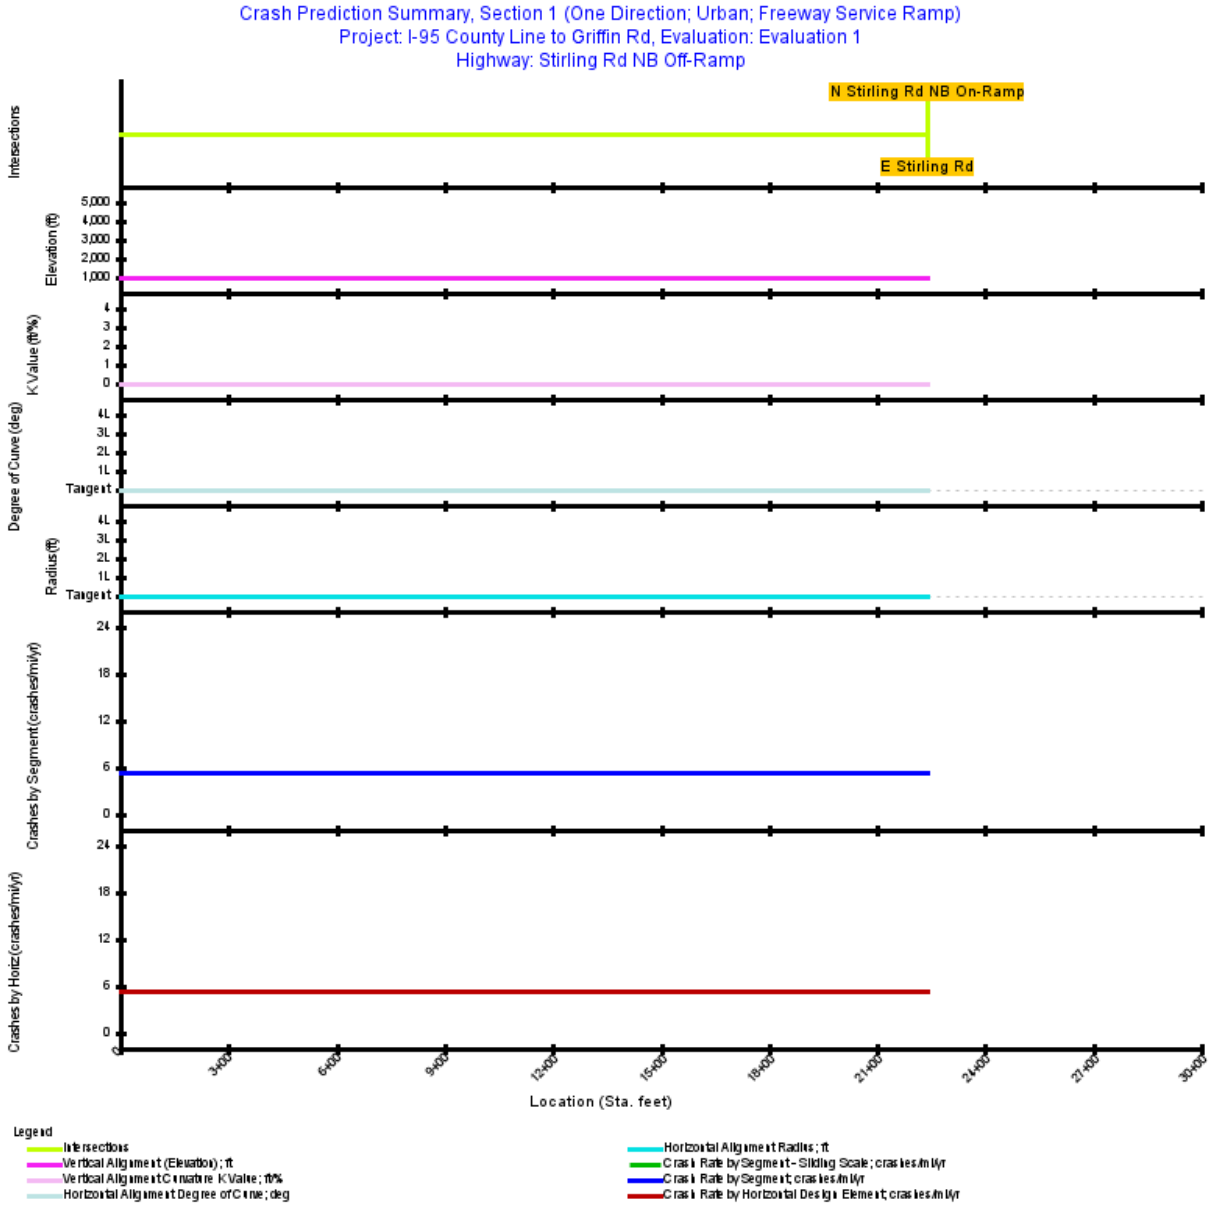

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	0.000	22+40.000	2,240.00	0.4242	2030: 17,500; 2031: 17,650; 2032: 17,800; 2033: 17,950; 2034: 18,100; 2035: 18,250; 2036: 18,400; 2037: 18,550; 2038: 18,700; 2039: 18,850; 2040: 19,000; 2041: 19,150; 2042: 19,300; 2043: 19,450; 2044: 19,600; 2045: 19,750; 2046: 19,900; 2047: 20,050; 2048: 20,200; 2049: 20,350; 2050: 20,500

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 19+30.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 13+30.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 17+30.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

0.000	21+00.000	Information: for segment #1 (0.000 to 21+00.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
0.000	21+00.000	Information: for segment #1 (0.000 to 21+00.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (18,250 vpd) for 2037 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (18,500 vpd) for 2038 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (18,750 vpd) for 2039 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (19,000 vpd) for 2040 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (19,250 vpd) for 2041 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (19,500 vpd) for 2042 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (19,750 vpd) for 2043 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (20,000 vpd) for 2044 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (20,250 vpd) for 2045 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (20,500 vpd) for 2046 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (20,750 vpd) for 2047 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (21,000 vpd) for 2048 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (21,250 vpd) for 2049 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
0.000	21+00.000	Warning: for segment #1 (0.000 to 21+00.000), traffic volume (21,500 vpd) for 2050 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 3, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Unit System: U.S. Customary

Highway Title: I-595 NB Off-Ramp
Highway Comment: Created Thu Jan 29 14:08:01 EST 2026
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Tue Feb 03 09:47:49 EST 2026

Minimum Location: 0.000
Maximum Location: 13+80.000

Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration

First Year of Analysis: 2030
Last Year of Analysis: 2050
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 13+80.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 26+73.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 7+00.000
Area Type: Urban
Functional Class: Arterial
Type of Alignment: Divided, Multilane
Model Category: Urban/Suburban Arterial
Calibration Factor: 6D=1.0; RT_SG_FI=1.0; RT_SG_PDO=1.0;

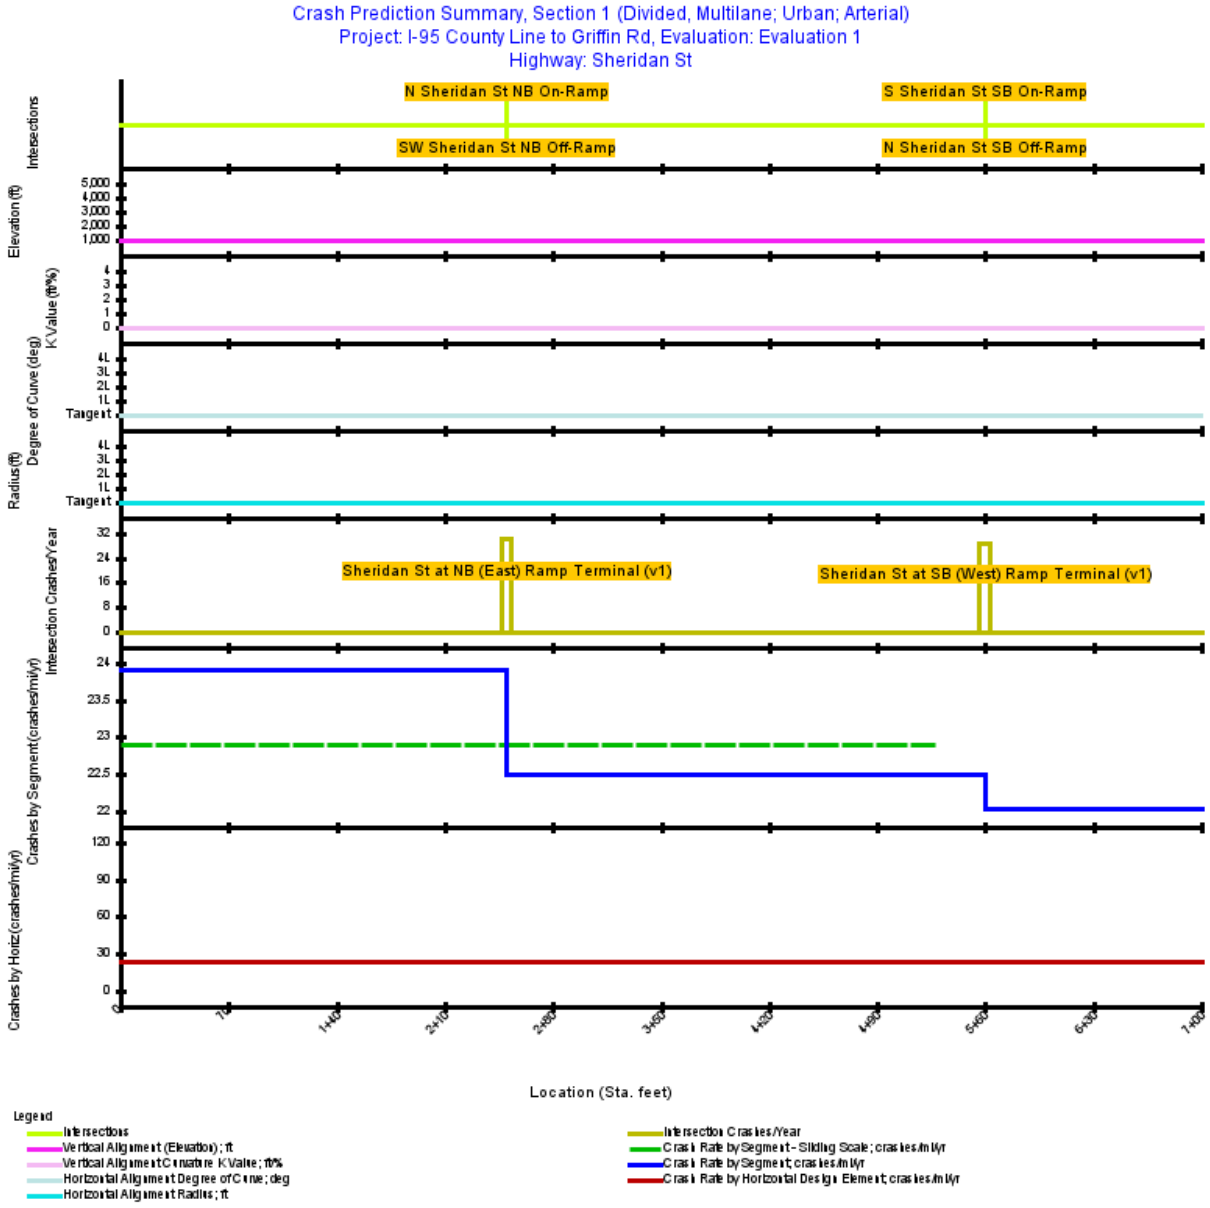

Figure 1. Crash Prediction Summary (Section 1)

Highway Segment	Other Multi-vehicle Collision	0.70	1.1	1.10	1.7	1.80	2.8
Highway Segment	Rear-end Collision	17.95	28.2	19.65	30.8	37.61	59.0
Highway Segment	Sideswipe, Opposite Direction Collision	0.26	0.4	0.67	1.0	0.92	1.4
Highway Segment	Sideswipe, Same Direction Collision	2.03	3.2	8.71	13.7	10.74	16.9
Highway Segment	Total Segment Multiple Vehicle Crashes	23.35	36.6	33.22	52.1	56.57	88.8
Highway Segment	Collision with Bicycle	0.50	0.8	0.00	0.0	0.50	0.8
Highway Segment	Collision with Fixed Object Left Side	0.76	1.2	1.12	1.8	1.87	2.9
Highway Segment	Collision with Fixed Object Right Side	0.85	1.3	1.26	2.0	2.10	3.3
Highway Segment	Collision with Other Object	0.08	0.1	0.23	0.4	0.31	0.5
Highway Segment	Other Single-vehicle Collision	0.86	1.4	0.56	0.9	1.43	2.2
Highway Segment	Collision with Pedestrian	0.94	1.5	0.00	0.0	0.94	1.5
Highway Segment	Total Segment Single Vehicle Six Lanes or More Crashes	3.98	6.2	3.17	5.0	7.15	11.2
Highway Segment	Total Highway Segment Crashes	27.33	42.9	36.39	57.1	63.72	100.0
	Total Crashes	27.33	42.9	36.39	57.1	63.72	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 11. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (58,500 vpd) for 2030 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (59,075 vpd) for 2031 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (59,650 vpd) for 2032 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (60,225 vpd) for 2033 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (60,800 vpd) for 2034 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (61,375 vpd) for 2035 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (61,950 vpd) for 2036 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (62,525 vpd) for 2037 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (63,100 vpd) for 2038 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (63,675 vpd) for 2039 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (64,250 vpd) for 2040 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (64,825 vpd) for 2041 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (65,400 vpd) for 2042 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (65,975 vpd) for 2043 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (66,550 vpd) for 2044 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (67,125 vpd) for 2045 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (67,700 vpd) for 2046 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (68,275 vpd) for 2047 is not within the model limit (47,000 vpd) for reliable results for intersection type D4

Start Location (Sta. ft)	End Location (Sta. ft)	Message
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (68,850 vpd) for 2048 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (69,425 vpd) for 2049 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+60.000	5+60.000	Warning: for intersection #1 (5+60.000 to 5+60.000), inside crossroad traffic volume (70,000 vpd) for 2050 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (58,500 vpd) for 2030 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (59,075 vpd) for 2031 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (59,650 vpd) for 2032 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (60,225 vpd) for 2033 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (60,800 vpd) for 2034 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (61,375 vpd) for 2035 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (61,950 vpd) for 2036 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (62,525 vpd) for 2037 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (63,100 vpd) for 2038 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (63,675 vpd) for 2039 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (64,250 vpd) for 2040 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (64,825 vpd) for 2041 is not within the model limit (47,000 vpd) for reliable results for intersection type D4

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 4, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 7+20.000
Area Type: Urban
Functional Class: Arterial
Type of Alignment: Divided, Multilane
Model Category: Urban/Suburban Arterial
Calibration Factor: 6D=1.0; RT_SG_FI=1.0; RT_SG_PDO=1.0;

Table 2. Evaluation Ramp Terminal - Site (Section 1)

Inter. No.	Title	Type	Area Type	Legs	Location (Sta. ft)	Traffic Control	AADT
1	Stirling Rd at SB (West) Ramp Terminal (v1)	Freeway Ramp Terminal A4 - Four-Leg at Four-Quadrant Parclo A	Urban	4	5+80.000	Signalized	Inside: 2030: 56,000; 2031: 56,550; 2032: 57,100; 2033: 57,650; 2034: 58,200; 2035: 58,750; 2036: 59,300; 2037: 59,850; 2038: 60,400; 2039: 60,950; 2040: 61,500; 2041: 62,050; 2042: 62,600; 2043: 63,150; 2044: 63,700; 2045: 64,250; 2046: 64,800; 2047: 65,350; 2048: 65,900; 2049: 66,450; 2050: 67,000; Outside: 2030: 52,500; 2031: 53,025; 2032: 53,550; 2033: 54,075; 2034: 54,600; 2035: 55,125; 2036: 55,650; 2037: 56,175; 2038: 56,700; 2039: 57,225; 2040: 57,750; 2041: 58,275; 2042: 58,800; 2043: 59,325; 2044: 59,850; 2045: 60,375; 2046: 60,900; 2047: 61,425; 2048: 61,950; 2049: 62,475; 2050: 63,000 :: Entrance: 2030: 16,000; 2031: 16,150; 2032: 16,300; 2033: 16,450; 2034: 16,600; 2035: 16,750; 2036: 16,900; 2037: 17,050; 2038: 17,200; 2039: 17,350; 2040: 17,500; 2041: 17,650; 2042: 17,800; 2043: 17,950; 2044: 18,100; 2045: 18,250; 2046: 18,400; 2047: 18,550; 2048: 18,700; 2049: 18,850; 2050: 19,000; Exit: 2030: 16,500; 2031: 16,700; 2032: 16,900; 2033: 17,100; 2034: 17,300; 2035: 17,500; 2036: 17,700; 2037: 17,900; 2038: 18,100; 2039: 18,300; 2040: 18,500; 2041: 18,700; 2042: 18,900; 2043: 19,100; 2044: 19,300; 2045-2050: 19,500
2	Stirling Rd at NB (East) Ramp Terminal (v1)	Freeway Ramp Terminal D4 - Four-Leg with Diagonal Ramps	Urban	4	2+50.000	Signalized	Inside: 2030: 56,000; 2031: 56,550; 2032: 57,100; 2033: 57,650; 2034: 58,200; 2035: 58,750; 2036: 59,300; 2037: 59,850; 2038: 60,400; 2039: 60,950; 2040: 61,500; 2041: 62,050; 2042: 62,600; 2043: 63,150; 2044: 63,700; 2045: 64,250; 2046: 64,800; 2047: 65,350; 2048: 65,900; 2049: 66,450; 2050: 67,000; Outside: 2030: 57,500; 2031: 58,050; 2032: 58,600; 2033: 59,150; 2034: 59,700; 2035: 60,250; 2036: 60,800; 2037: 61,350; 2038: 61,900; 2039: 62,450; 2040: 63,000; 2041: 63,550; 2042: 64,100; 2043: 64,650; 2044: 65,200; 2045: 65,750; 2046: 66,300; 2047: 66,850; 2048: 67,400; 2049: 67,950; 2050: 68,500 :: Entrance: 2030: 16,500; 2031: 16,650; 2032: 16,800; 2033: 16,950; 2034: 17,100; 2035: 17,250; 2036: 17,400; 2037: 17,550; 2038: 17,700; 2039: 17,850; 2040: 18,000; 2041: 18,150; 2042: 18,300; 2043: 18,450; 2044: 18,600; 2045: 18,750; 2046: 18,900; 2047: 19,050; 2048: 19,200; 2049: 19,350; 2050: 19,500; Exit: 2030: 17,500; 2031: 17,650; 2032: 17,800; 2033: 17,950; 2034: 18,100; 2035: 18,250; 2036: 18,400; 2037: 18,550; 2038: 18,700; 2039: 18,850; 2040: 19,000; 2041: 19,150; 2042: 19,300; 2043: 19,450; 2044: 19,600; 2045: 19,750; 2046: 19,900; 2047: 20,050; 2048: 20,200; 2049: 20,350; 2050: 20,500

Table 3. Predicted Highway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Evaluated Length (mi)	**0.1364**
Average Future Road AADT (vpd)	**61,292**
Predicted Crashes	
Total Crashes	**905.48**
Fatal and Injury Crashes	**449.70**
Property-Damage-Only Crashes	**455.78**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**50**
Percent Property-Damage-Only Crashes (%)	**50**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**316.1984**
FI Crash Rate (crashes/mi/yr)	**157.0370**
PDO Crash Rate (crashes/mi/yr)	**159.1614**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**64.06**
Travel Crash Rate (crashes/million veh-mi)	**14.13**
Travel FI Crash Rate (crashes/million veh-mi)	**7.02**
Travel PDO Crash Rate (crashes/million veh-mi)	**7.11**

Table 4. Predicted Crash Frequencies and Rates by Highway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)	Predicted Intersection Travel Crash Rate (crashes/million veh)
1	0.000	2+50.000	0.0473	21.897	1.0427	0.4455	0.5972	22.0217	0.96

Table 6. Predicted Crash Frequencies by Year (Section 1)

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2030	36.20	16.95	46.842	19.24	53.158
2031	36.83	17.34	47.097	19.48	52.903
2032	37.47	17.75	47.355	19.73	52.645
2033	38.13	18.15	47.616	19.97	52.384
2034	38.79	18.57	47.881	20.22	52.119
2035	39.47	19.00	48.149	20.46	51.851
2036	40.15	19.44	48.421	20.71	51.579
2037	40.85	19.89	48.696	20.96	51.304
2038	41.56	20.35	48.974	21.21	51.026
2039	42.28	20.82	49.255	21.45	50.745
2040	43.01	21.31	49.539	21.70	50.461
2041	43.76	21.80	49.827	21.95	50.173
2042	44.52	22.31	50.118	22.21	49.882
2043	45.29	22.83	50.412	22.46	49.588
2044	46.07	23.36	50.709	22.71	49.291
2045	46.87	23.91	51.009	22.96	48.991
2046	47.52	24.32	51.178	23.20	48.822
2047	48.17	24.74	51.353	23.43	48.647
2048	48.84	25.17	51.532	23.67	48.468
2049	49.51	25.61	51.716	23.91	48.284
2050	50.20	26.06	51.905	24.14	48.095
Total	905.48	449.70	49.664	455.78	50.336
Average	43.12	21.41	49.664	21.70	50.336

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 7. Predicted Crash Severity by Urban Arterial/Intersection (Section 1)

Seg. No.	Type	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
1	USASegment 6+ Lanes	0.1199	0.6306	2.4521	6.1531	12.5408
2	USASegment 6+ Lanes	0.1539	0.8096	3.1480	7.8992	16.1583
3	USASegment 6+ Lanes	0.0607	0.3194	1.2421	3.1167	6.4362
Total		0.3346	1.7596	6.8422	17.1690	35.1353

Table 8. Predicted Crash Severity by Ramp Terminal or Roundabout (Section 1)

Seg. No.	Type	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
2	FRERampTerminal	0.2969	7.4150	48.6068	267.1373	304.1486
1	FRERampTerminal	0.0919	2.2955	15.0477	82.7003	116.4965

Table 9. Predicted Five Lane or Fewer Crash Type Distribution (Section 1)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Ramp Terminal	Collision with Animal	0.00	0.0	0.00	0.0	0.00	0.0
Ramp Terminal	Collision with Fixed Object	13.98	1.7	21.03	2.5	35.01	4.1
Ramp Terminal	Collision with Other Object	0.42	0.1	0.84	0.1	1.26	0.1
Ramp Terminal	Other Single-vehicle Collision	7.62	0.9	2.94	0.3	10.57	1.3
Ramp Terminal	Collision with Parked Vehicle	0.42	0.1	0.84	0.1	1.26	0.1
Ramp Terminal	Total Single Vehicle Crashes	22.45	2.7	25.66	3.0	48.11	5.7
Ramp Terminal	Angle Collision	110.13	13.0	92.54	11.0	202.68	24.0
Ramp Terminal	Head-on Collision	4.66	0.6	2.94	0.3	7.60	0.9
Ramp Terminal	Other Multiple-vehicle Collision	3.81	0.5	8.41	1.0	12.22	1.4
Ramp Terminal	Rear-end Collision	264.75	31.4	228.41	27.1	493.15	58.4
Ramp Terminal	Sideswipe, Same Direction Collision	17.79	2.1	62.68	7.4	80.47	9.5
Ramp Terminal	Total Multiple Vehicle Crashes	401.14	47.5	394.99	46.8	796.13	94.3
Ramp Terminal	Total Ramp Terminal Crashes	423.59	50.2	420.64	49.8	844.24	100.0
	Total Crashes	423.59	50.2	420.64	49.8	844.24	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 10. Predicted Six Lane or Greater Crash Type Distribution (Section 1)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Angle Collision	2.02	3.3	2.59	4.2	4.61	7.5
Highway Segment	Head-on Collision	0.27	0.4	0.38	0.6	0.65	1.1
Highway Segment	Other Multi-vehicle Collision	0.67	1.1	1.05	1.7	1.72	2.8
Highway Segment	Rear-end Collision	17.06	27.9	18.89	30.9	35.95	58.7
Highway Segment	Sideswipe, Opposite Direction Collision	0.24	0.4	0.64	1.0	0.88	1.4
Highway Segment	Sideswipe, Same Direction Collision	1.93	3.2	8.38	13.7	10.30	16.8
Highway Segment	Total Segment Multiple Vehicle Crashes	22.18	36.2	31.93	52.2	54.12	88.4
Highway Segment	Collision with Bicycle	0.48	0.8	0.00	0.0	0.48	0.8
Highway Segment	Collision with Fixed Object Left Side	0.75	1.2	1.12	1.8	1.87	3.1
Highway Segment	Collision with Fixed Object Right Side	0.84	1.4	1.26	2.1	2.10	3.4
Highway Segment	Collision with Other Object	0.08	0.1	0.23	0.4	0.31	0.5
Highway Segment	Other Single-vehicle Collision	0.86	1.4	0.56	0.9	1.42	2.3
Highway Segment	Collision with Pedestrian	0.90	1.5	0.00	0.0	0.90	1.5
Highway Segment	Total Segment Single Vehicle Six Lanes or More Crashes	3.92	6.4	3.17	5.2	7.09	11.6
Highway Segment	Total Highway Segment Crashes	26.10	42.6	35.10	57.4	61.21	100.0
	Total Crashes	26.10	42.6	35.10	57.4	61.21	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 11. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (56,000 vpd) for 2030 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (56,550 vpd) for 2031 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (57,100 vpd) for 2032 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (57,650 vpd) for 2033 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (58,200 vpd) for 2034 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (58,750 vpd) for 2035 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (59,300 vpd) for 2036 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (59,850 vpd) for 2037 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (60,400 vpd) for 2038 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (60,950 vpd) for 2039 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (61,500 vpd) for 2040 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (62,050 vpd) for 2041 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (62,600 vpd) for 2042 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (63,150 vpd) for 2043 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (63,700 vpd) for 2044 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (64,250 vpd) for 2045 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (64,800 vpd) for 2046 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (65,350 vpd) for 2047 is not within the model limit (47,000 vpd) for reliable results for intersection type D4

2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (65,900 vpd) for 2048 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (66,450 vpd) for 2049 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #2 (2+50.000 to 2+50.000), inside crossroad traffic volume (67,000 vpd) for 2050 is not within the model limit (47,000 vpd) for reliable results for intersection type D4

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 4, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Comment: Created Fri Jan 16 12:42:42 EST 2026
Project Unit System: U.S. Customary

Highway Title: Griffin Rd
Highway Comment: Created Fri Jan 30 10:04:53 EST 2026
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Wed Feb 04 21:49:46 EST 2026

Minimum Location: 0.000
Maximum Location: 7+30.000

Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration

First Year of Analysis: 2030
Last Year of Analysis: 2050
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 7+30.000
Area Type: Urban
Functional Class: Arterial
Type of Alignment: Divided, Multilane
Model Category: Urban/Suburban Arterial
Calibration Factor: 6D=1.0; RT_SG_FI=1.0; RT_SG_PDO=1.0;

2048	75.42	46.64	61.837	28.78	38.163
2049	78.06	48.78	62.489	29.28	37.511
2050	80.81	51.02	63.143	29.78	36.857
Total	1,234.91	711.29	57.598	523.63	42.402
Average	58.80	33.87	57.598	24.93	42.402

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 7. Predicted Crash Severity by Urban Arterial/Intersection (Section 1)

Seg. No.	Type	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
1	USASegment 6+ Lanes	0.0795	0.4182	1.6261	4.0803	8.7658
2	USASegment 6+ Lanes	0.1194	0.6279	2.4415	6.1263	12.9974
3	USASegment 6+ Lanes	0.0593	0.3116	1.2118	3.0407	6.2972
Total		0.2582	1.3577	5.2793	13.2474	28.0605

Table 8. Predicted Crash Severity by Ramp Terminal or Roundabout (Section 1)

Seg. No.	Type	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
1	FRERampTerminal	0.3596	8.9804	58.8684	323.5339	242.9716
2	FRERampTerminal	0.2748	6.8635	44.9920	247.2711	252.5942

Table 9. Predicted Five Lane or Fewer Crash Type Distribution (Section 1)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Ramp Terminal	Collision with Animal	0.00	0.0	0.00	0.0	0.00	0.0
Ramp Terminal	Collision with Fixed Object	22.81	1.9	24.78	2.1	47.59	4.0
Ramp Terminal	Collision with Other Object	0.69	0.1	0.99	0.1	1.68	0.1
Ramp Terminal	Other Single-vehicle Collision	12.44	1.0	3.47	0.3	15.91	1.3
Ramp Terminal	Collision with Parked Vehicle	0.69	0.1	0.99	0.1	1.68	0.1
Ramp Terminal	Total Single Vehicle Crashes	36.63	3.1	30.23	2.5	66.86	5.6
Ramp Terminal	Angle Collision	179.70	15.1	109.02	9.2	288.72	24.3
Ramp Terminal	Head-on Collision	7.60	0.6	3.47	0.3	11.07	0.9
Ramp Terminal	Other Multiple-vehicle Collision	6.22	0.5	9.91	0.8	16.13	1.4
Ramp Terminal	Rear-end Collision	431.96	36.4	269.09	22.7	701.06	59.1
Ramp Terminal	Sideswipe, Same Direction Collision	29.03	2.4	73.84	6.2	102.87	8.7
Ramp Terminal	Total Multiple Vehicle Crashes	654.51	55.2	465.34	39.2	1,119.85	94.4
Ramp Terminal	Total Ramp Terminal Crashes	691.14	58.2	495.57	41.8	1,186.71	100.0
	Total Crashes	691.14	58.2	495.57	41.8	1,186.71	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 10. Predicted Six Lane or Greater Crash Type Distribution (Section 1)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Angle Collision	1.52	3.2	2.04	4.2	3.56	7.4
Highway Segment	Head-on Collision	0.20	0.4	0.30	0.6	0.50	1.0
Highway Segment	Other Multi-vehicle Collision	0.50	1.0	0.83	1.7	1.33	2.8
Highway Segment	Rear-end Collision	12.88	26.7	14.87	30.9	27.75	57.6
Highway Segment	Sideswipe, Opposite Direction Collision	0.18	0.4	0.50	1.0	0.69	1.4
Highway Segment	Sideswipe, Same Direction Collision	1.46	3.0	6.59	13.7	8.05	16.7
Highway Segment	Total Segment Multiple Vehicle Crashes	16.75	34.8	25.14	52.2	41.89	86.9
Highway Segment	Collision with Bicycle	0.38	0.8	0.00	0.0	0.38	0.8
Highway Segment	Collision with Fixed Object Left Side	0.68	1.4	1.02	2.1	1.71	3.5
Highway Segment	Collision with Fixed Object Right Side	0.77	1.6	1.15	2.4	1.92	4.0
Highway Segment	Collision with Other Object	0.07	0.2	0.21	0.4	0.28	0.6
Highway Segment	Other Single-vehicle Collision	0.78	1.6	0.51	1.1	1.30	2.7
Highway Segment	Collision with Pedestrian	0.71	1.5	0.00	0.0	0.71	1.5
Highway Segment	Total Segment Single Vehicle Six Lanes or More Crashes	3.39	7.0	2.90	6.0	6.29	13.1
Highway Segment	Total Highway Segment Crashes	20.14	41.8	28.04	58.2	48.18	100.0
	Total Crashes	20.14	41.8	28.04	58.2	48.18	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 340+00.000
Evaluation End Location: 585+00.000
Functional Class: Freeway
Type of Alignment: Divided, Multilane
Model Category: Freeway Segment
Calibration Factor: FI_MV=1.0; FI_SV=1.0; PDO_MV=1.0; PDO_SV=1.0;

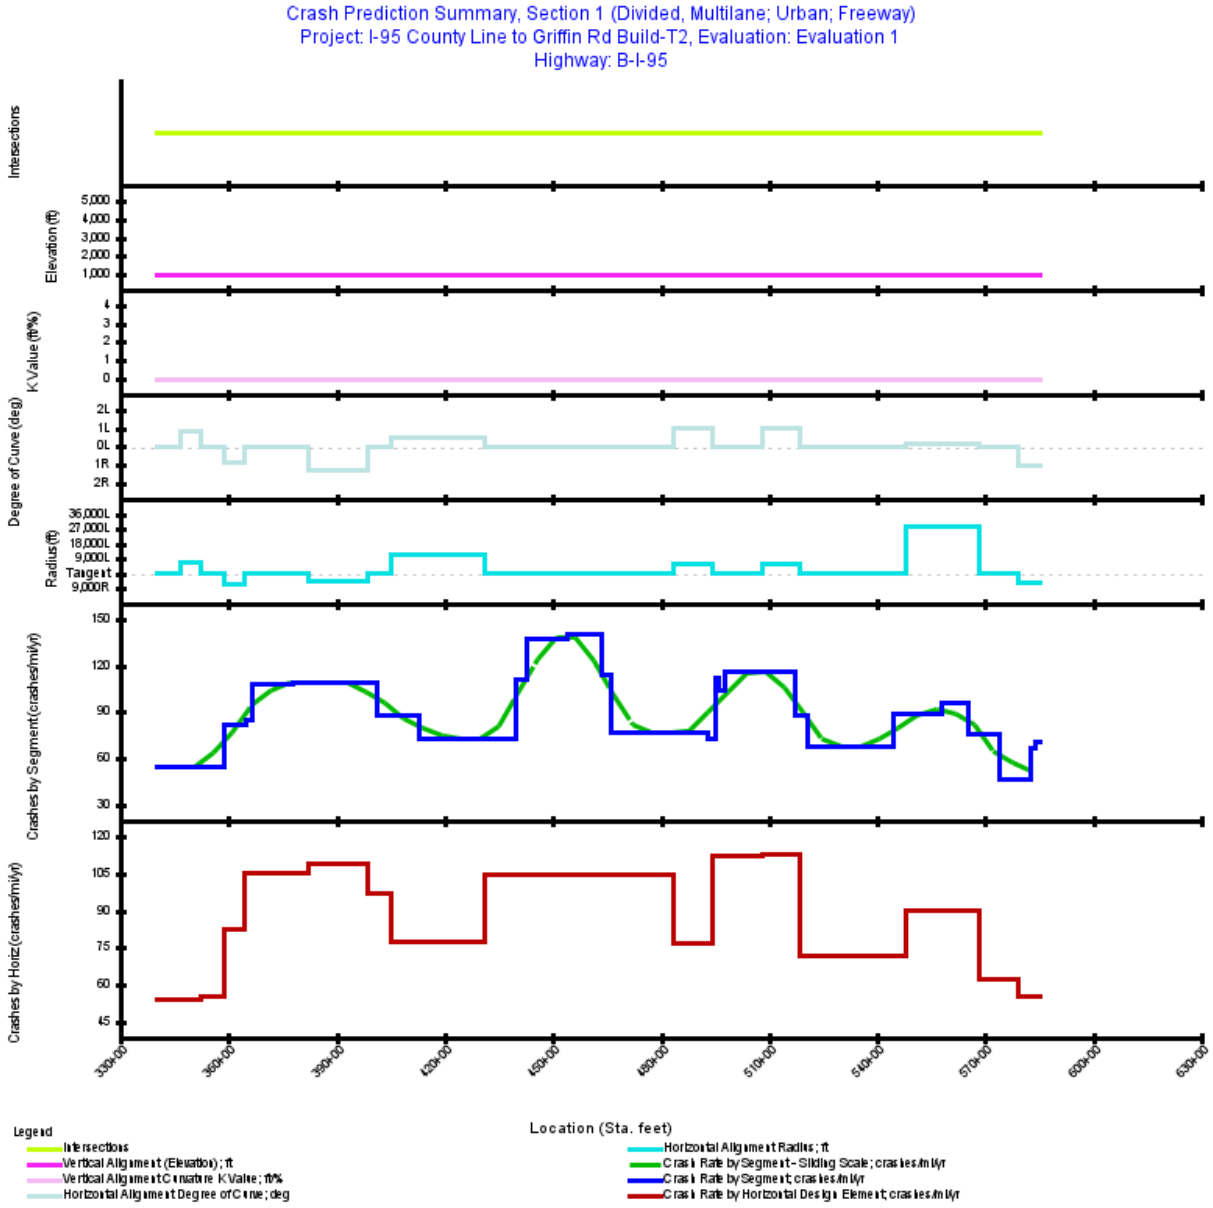

Figure 1. Crash Prediction Summary (Section 1)

Table 1. Evaluation Freeway - Homogeneous Segments (Section 1)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT	Median Width (ft)	Type	Effective Median Width (ft)

Table 2. Predicted Freeway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Effective Length (mi)	**4.6402**
Average Future Road AADT (vpd)	**244,837**
Predicted Crashes	
Total Crashes	**8,658.07**
Fatal and Injury Crashes	**2,634.62**
Property-Damage-Only Crashes	**6,023.45**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**30**
Percent Property-Damage-Only Crashes (%)	**70**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**88.8525**
FI Crash Rate (crashes/mi/yr)	**27.0375**
PDO Crash Rate (crashes/mi/yr)	**61.8151**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**8,708.06**
Travel Crash Rate (crashes/million veh-mi)	**0.99**
Travel FI Crash Rate (crashes/million veh-mi)	**0.30**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.69**

Note: *Effective Length* is the *segment length* minus the length of the *speed change lanes* if present.
Note: *Total Travel and Crash Rates/Million Vehicle Miles* for *Speed Change Lanes* reflect AADTs that are **half of the Freeway Segment AADTs** based on the assumption of 50/50 directional distribution.

Table 3. Predicted Crash Frequencies and Rates by Freeway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Effective Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Table 7. Predicted Freeway Crash Type Distribution (Section 1)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	2.34	0.0	17.90	0.2	20.24	0.2
Highway Segment	Collision with Fixed Object	421.95	4.9	582.70	6.7	1,004.65	11.6
Highway Segment	Collision with Other Object	29.81	0.3	113.12	1.3	142.93	1.7
Highway Segment	Other Single-vehicle Collision	121.56	1.4	87.08	1.0	208.64	2.4
Highway Segment	Collision with Parked Vehicle	8.77	0.1	13.02	0.1	21.79	0.3
Highway Segment	Total Single Vehicle Crashes	584.42	6.8	813.83	9.4	1,398.25	16.1
Highway Segment	Right-Angle Collision	63.56	0.7	93.77	1.1	157.33	1.8
Highway Segment	Head-on Collision	16.40	0.2	10.42	0.1	26.82	0.3
Highway Segment	Other Multi-vehicle Collision	63.56	0.7	125.03	1.4	188.59	2.2
Highway Segment	Rear-end Collision	1,537.64	17.8	3,594.64	41.5	5,132.29	59.3
Highway Segment	Sideswipe, Same Direction Collision	369.04	4.3	1,385.76	16.0	1,754.80	20.3
Highway Segment	Total Multiple Vehicle Crashes	2,050.19	23.7	5,209.63	60.2	7,259.82	83.8
Highway Segment	Total Highway Segment Crashes	2,634.62	30.4	6,023.45	69.6	8,658.07	100.0
	Total Crashes	2,634.62	30.4	6,023.45	69.6	8,658.07	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
340+00.000	358+60.000	Information: for segment #1 (340+00.000 to 358+60.000), Effective median width (94.00 feet) is greater than specified boundaries (90.00 feet); adjusted in CMF calculations.
358+60.000	365+00.000	Information: for segment #2 (358+60.000 to 365+00.000), Effective median width (94.00 feet) is greater than specified boundaries (90.00 feet); adjusted in CMF calculations.
365+00.000	366+60.000	Information: for segment #3 (365+00.000 to 366+60.000), Effective median width (94.00 feet) is greater than specified boundaries (90.00 feet); adjusted in CMF calculations.
366+60.000	378+00.000	Information: for segment #4 (366+60.000 to 378+00.000), Effective median width (94.00 feet) is greater than specified boundaries (90.00 feet); adjusted in CMF calculations.
558+00.000	565+20.000	Information: for segment #21 (558+00.000 to 565+20.000), Inside shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
565+20.000	574+00.000	Information: for segment #22 (565+20.000 to 574+00.000), Inside shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
574+00.000	582+60.000	Information: for segment #23 (574+00.000 to 582+60.000), Inside shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
582+60.000	584+00.000	Information: for segment #24 (582+60.000 to 584+00.000), Inside shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
584+00.000	585+00.000	Information: for segment #25 (584+00.000 to 585+00.000), Inside shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
358+60.000	365+00.000	Information: for segment #2 (358+60.000 to 365+00.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
366+60.000	378+00.000	Warning: for segment #4 (366+60.000 to 378+00.000), traffic volume (270,780 vpd) for 2042 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
366+60.000	378+00.000	Warning: for segment #4 (366+60.000 to 378+00.000), traffic volume (272,170 vpd) for 2043 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
366+60.000	378+00.000	Warning: for segment #4 (366+60.000 to 378+00.000), traffic volume (273,560 vpd) for 2044 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
366+60.000	378+00.000	Warning: for segment #4 (366+60.000 to 378+00.000), traffic volume (274,950 vpd) for 2045 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
366+60.000	378+00.000	Warning: for segment #4 (366+60.000 to 378+00.000), traffic volume (276,340 vpd) for 2046 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
366+60.000	378+00.000	Warning: for segment #4 (366+60.000 to 378+00.000), traffic volume (277,730 vpd) for 2047 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
366+60.000	378+00.000	Warning: for segment #4 (366+60.000 to 378+00.000), traffic volume (279,120 vpd) for 2048 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
366+60.000	378+00.000	Warning: for segment #4 (366+60.000 to 378+00.000), traffic volume (280,510 vpd) for 2049 is not within the model limit (270,000 vpd) for reliable results for segment type 8F

Start Location (Sta. ft)	End Location (Sta. ft)	Message
366+60.000	378+00.000	Warning: for segment #4 (366+60.000 to 378+00.000), traffic volume (281,900 vpd) for 2050 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
366+60.000	378+00.000	Information: for segment #4 (366+60.000 to 378+00.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
378+00.000	401+20.000	Warning: for segment #5 (378+00.000 to 401+20.000), traffic volume (270,780 vpd) for 2042 is not within the model limit (270,000 vpd) for reliable results for segment type 8F

378+00.000	401+20.000	Warning: for segment #5 (378+00.000 to 401+20.000), traffic volume (281,900 vpd) for 2050 is not within the model limit (270,000 vpd) for reliable results for segment type 8F
378+00.000	401+20.000	Information: for segment #5 (378+00.000 to 401+20.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
401+20.000	413+00.000	Information: for segment #6 (401+20.000 to 413+00.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
413+00.000	425+00.000	Information: for segment #7 (413+00.000 to 425+00.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
565+20.000	574+00.000	Information: for segment #22 (565+20.000 to 574+00.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
574+00.000	582+60.000	Information: for segment #23 (574+00.000 to 582+60.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
582+60.000	584+00.000	Information: for segment #24 (582+60.000 to 584+00.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 10, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 342+80.000
Evaluation End Location: 358+60.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

Table 5. Predicted Crash Frequencies by Year (Freeway Ramp Sections)

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2030	3.58	1.71	47.785	1.87	52.215
2031	3.63	1.74	48.027	1.89	51.973
2032	3.68	1.77	48.274	1.90	51.726
2033	3.73	1.81	48.525	1.92	51.475
2034	3.78	1.84	48.781	1.94	51.219
2035	3.83	1.88	49.041	1.95	50.959
2036	3.88	1.91	49.305	1.97	50.695
2037	3.94	1.95	49.574	1.98	50.426
2038	3.99	1.99	49.847	2.00	50.153
2039	4.04	2.03	50.124	2.02	49.876
2040	4.10	2.07	50.405	2.03	49.595
2041	4.16	2.11	50.690	2.05	49.310
2042	4.22	2.15	50.980	2.07	49.020
2043	4.28	2.19	51.273	2.08	48.727
2044	4.34	2.24	51.571	2.10	48.429
2045	4.40	2.28	51.872	2.12	48.128
2046	4.46	2.33	52.178	2.13	47.822
2047	4.52	2.38	52.487	2.15	47.513
2048	4.59	2.42	52.800	2.17	47.200
2049	4.66	2.47	53.117	2.18	46.883
2050	4.72	2.52	53.438	2.20	46.562
Total	86.51	43.79	50.624	42.71	49.376
Average	4.12	2.08	50.624	2.03	49.376

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 6. Predicted Crash Severity by Ramp Segment (Freeway Ramp Sections)

Seg. No.	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
1	0.1344	0.4075	2.1090	3.9757	9.4029
2	0.1578	0.4783	3.0453	3.7158	5.6468
3	0.6037	1.8305	9.4745	17.8607	27.6630
Total	0.8958	2.7163	14.6288	25.5522	42.7127

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.06	0.1	0.40	0.5	0.46	0.5
Highway Segment	Collision with Fixed Object	11.10	12.8	12.88	14.9	23.98	27.7
Highway Segment	Collision with Other Object	0.78	0.9	2.50	2.9	3.28	3.8
Highway Segment	Other Single-vehicle Collision	3.20	3.7	1.93	2.2	5.12	5.9
Highway Segment	Collision with Parked Vehicle	0.23	0.3	0.29	0.3	0.52	0.6
Highway Segment	Total Single Vehicle Crashes	15.37	17.8	17.99	20.8	33.36	38.6
Highway Segment	Right-Angle Collision	0.88	1.0	0.45	0.5	1.33	1.5
Highway Segment	Head-on Collision	0.23	0.3	0.05	0.1	0.28	0.3
Highway Segment	Other Multi-vehicle Collision	0.88	1.0	0.59	0.7	1.47	1.7
Highway Segment	Rear-end Collision	21.32	24.6	17.06	19.7	38.38	44.4
Highway Segment	Sideswipe, Same Direction Collision	5.12	5.9	6.58	7.6	11.69	13.5
Highway Segment	Total Multiple Vehicle Crashes	28.42	32.9	24.73	28.6	53.15	61.4
Highway Segment	Total Highway Segment Crashes	43.79	50.6	42.71	49.4	86.51	100.0
	Total Crashes	43.79	50.6	42.71	49.4	86.51	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
342+80.000	347+40.000	Information: for segment #1 (342+80.000 to 347+40.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
342+80.000	347+40.000	Information: for segment #1 (342+80.000 to 347+40.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
347+40.000	352+20.000	Information: for segment #2 (347+40.000 to 352+20.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
347+40.000	352+20.000	Information: for segment #2 (347+40.000 to 352+20.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
352+20.000	358+60.000	Information: for segment #3 (352+20.000 to 358+60.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
352+20.000	358+60.000	Information: for segment #3 (352+20.000 to 358+60.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,125 vpd) for 2031 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,250 vpd) for 2032 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,375 vpd) for 2033 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,500 vpd) for 2034 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,625 vpd) for 2035 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,750 vpd) for 2036 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (19,875 vpd) for 2037 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,000 vpd) for 2038 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,125 vpd) for 2039 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,250 vpd) for 2040 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,375 vpd) for 2041 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Start Location (Sta. ft)	End Location (Sta. ft)	Message
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,500 vpd) for 2042 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
347+40.000	352+20.000	Warning: for segment #2 (347+40.000 to 352+20.000), traffic volume (20,625 vpd) for 2043 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

352+20.000	358+60.000	Warning: for segment #3 (352+20.000 to 358+60.000), traffic volume (46,000 vpd) for 2050 is not within the model limit (32,000 vpd) for reliable results for segment type 2EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 6, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 342+80.000
Evaluation End Location: 366+60.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Highway Segment	Sideswipe, Same Direction Collision	1.14	3.2	1.89	5.3	3.03	8.5
Highway Segment	Total Multiple Vehicle Crashes	6.34	17.8	7.09	20.0	13.43	37.8
Highway Segment	Total Highway Segment Crashes	18.24	51.3	17.30	48.7	35.54	100.0
	Total Crashes	18.24	51.3	17.30	48.7	35.54	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
425+80.000	439+80.000	Information: for segment #1 (425+80.000 to 439+80.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
425+80.000	439+80.000	Information: for segment #1 (425+80.000 to 439+80.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (20,500 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (20,600 vpd) for 2031 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (20,700 vpd) for 2032 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (20,800 vpd) for 2033 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (20,900 vpd) for 2034 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,000 vpd) for 2035 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,100 vpd) for 2036 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,200 vpd) for 2037 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,300 vpd) for 2038 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,400 vpd) for 2039 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,500 vpd) for 2040 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,600 vpd) for 2041 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,700 vpd) for 2042 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,800 vpd) for 2043 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (21,900 vpd) for 2044 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (22,000 vpd) for 2045 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Start Location (Sta. ft)	End Location (Sta. ft)	Message
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (22,100 vpd) for 2046 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (22,200 vpd) for 2047 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (22,300 vpd) for 2048 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (22,400 vpd) for 2049 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
425+80.000	439+80.000	Warning: for segment #1 (425+80.000 to 439+80.000), traffic volume (22,500 vpd) for 2050 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 6, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 401+20.000
Evaluation End Location: 424+00.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Start Location (Sta. ft)	End Location (Sta. ft)	Message
401+20.000	424+00.000	Information: for segment #1 (401+20.000 to 424+00.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
401+20.000	424+00.000	Information: for segment #1 (401+20.000 to 424+00.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 6, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 425+80.000
Evaluation End Location: 442+60.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

413+00.000	424+00.000	Warning: for segment #1 (413+00.000 to 424+00.000), traffic volume (18,990 vpd) for 2049 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
413+00.000	424+00.000	Warning: for segment #1 (413+00.000 to 424+00.000), traffic volume (19,100 vpd) for 2050 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 6, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Table 5. Predicted Crash Frequencies by Year (Freeway Ramp Sections)

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2030	1.56	0.79	50.777	0.77	49.223
2031	1.56	0.79	50.777	0.77	49.223
2032	1.56	0.79	50.777	0.77	49.223
2033	1.56	0.79	50.777	0.77	49.223
2034	1.56	0.79	50.777	0.77	49.223
2035	1.56	0.79	50.777	0.77	49.223
2036	1.56	0.79	50.777	0.77	49.223
2037	1.56	0.79	50.777	0.77	49.223
2038	1.56	0.79	50.777	0.77	49.223
2039	1.56	0.79	50.777	0.77	49.223
2040	1.56	0.79	50.777	0.77	49.223
2041	1.56	0.79	50.777	0.77	49.223
2042	1.56	0.79	50.777	0.77	49.223
2043	1.56	0.79	50.777	0.77	49.223
2044	1.56	0.79	50.777	0.77	49.223
2045	1.56	0.79	50.777	0.77	49.223
2046	1.56	0.79	50.777	0.77	49.223
2047	1.56	0.79	50.777	0.77	49.223
2048	1.56	0.79	50.777	0.77	49.223
2049	1.56	0.79	50.777	0.77	49.223
2050	1.56	0.79	50.777	0.77	49.223
Total	32.80	16.66	50.777	16.14	49.223
Average	1.56	0.79	50.777	0.77	49.223

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 6. Predicted Crash Severity by Ramp Segment (Freeway Ramp Sections)

Seg. No.	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
1	0.3552	1.0770	6.8565	8.3662	16.1450

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.04	0.1	0.21	0.7	0.26	0.8
Highway Segment	Collision with Fixed Object	8.19	25.0	7.00	21.3	15.18	46.3
Highway Segment	Collision with Other Object	0.58	1.8	1.36	4.1	1.94	5.9
Highway Segment	Other Single-vehicle Collision	2.36	7.2	1.05	3.2	3.40	10.4
Highway Segment	Collision with Parked Vehicle	0.17	0.5	0.16	0.5	0.33	1.0
Highway Segment	Total Single Vehicle Crashes	11.34	34.6	9.77	29.8	21.11	64.4
Highway Segment	Right-Angle Collision	0.17	0.5	0.12	0.3	0.28	0.9
Highway Segment	Head-on Collision	0.04	0.1	0.01	0.0	0.06	0.2
Highway Segment	Other Multi-vehicle Collision	0.17	0.5	0.15	0.5	0.32	1.0
Highway Segment	Rear-end Collision	3.99	12.2	4.40	13.4	8.38	25.6
Highway Segment	Sideswipe, Same Direction Collision	0.96	2.9	1.70	5.2	2.65	8.1
Highway Segment	Total Multiple Vehicle Crashes	5.32	16.2	6.37	19.4	11.69	35.6
Highway Segment	Total Highway Segment Crashes	16.66	50.8	16.14	49.2	32.80	100.0
	Total Crashes	16.66	50.8	16.14	49.2	32.80	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
480+80.000	495+00.000	Information: for segment #1 (480+80.000 to 495+00.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
480+80.000	495+00.000	Information: for segment #1 (480+80.000 to 495+00.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2031 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2032 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2033 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2034 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2035 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2036 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2037 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2038 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2039 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2040 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2041 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2042 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
480+80.000	495+00.000	Warning: for segment #1 (480+80.000 to 495+00.000), traffic volume (19,500 vpd) for 2043 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 6, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 463+40.000
Evaluation End Location: 478+20.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.06	0.2	0.37	0.9	0.43	1.1
Highway Segment	Collision with Fixed Object	11.09	28.2	11.96	30.4	23.04	58.6
Highway Segment	Collision with Other Object	0.78	2.0	2.32	5.9	3.10	7.9
Highway Segment	Other Single-vehicle Collision	3.19	8.1	1.79	4.5	4.98	12.7
Highway Segment	Collision with Parked Vehicle	0.23	0.6	0.27	0.7	0.50	1.3
Highway Segment	Total Single Vehicle Crashes	15.35	39.1	16.70	42.5	32.05	81.5
Highway Segment	Right-Angle Collision	0.06	0.2	0.10	0.2	0.16	0.4
Highway Segment	Head-on Collision	0.02	0.0	0.01	0.0	0.03	0.1
Highway Segment	Other Multi-vehicle Collision	0.06	0.2	0.13	0.3	0.19	0.5
Highway Segment	Rear-end Collision	1.48	3.8	3.64	9.3	5.12	13.0
Highway Segment	Sideswipe, Same Direction Collision	0.36	0.9	1.40	3.6	1.76	4.5
Highway Segment	Total Multiple Vehicle Crashes	1.98	5.0	5.28	13.4	7.25	18.5
Highway Segment	Total Highway Segment Crashes	17.33	44.1	21.98	55.9	39.30	100.0
	Total Crashes	17.33	44.1	21.98	55.9	39.30	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
463+40.000	478+20.000	Information: for segment #1 (463+40.000 to 478+20.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
463+40.000	478+20.000	Information: for segment #1 (463+40.000 to 478+20.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 480+80.000
Evaluation End Location: 497+60.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

	Total Crashes	12.86	50.5	12.60	49.5	25.46	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
466+20.000	478+20.000	Information: for segment #1 (466+20.000 to 478+20.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
466+20.000	478+20.000	Information: for segment #1 (466+20.000 to 478+20.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (18,150 vpd) for 2041 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (18,300 vpd) for 2042 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (18,450 vpd) for 2043 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (18,600 vpd) for 2044 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (18,750 vpd) for 2045 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (18,900 vpd) for 2046 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (19,050 vpd) for 2047 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (19,200 vpd) for 2048 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (19,350 vpd) for 2049 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
466+20.000	478+20.000	Warning: for segment #1 (466+20.000 to 478+20.000), traffic volume (19,500 vpd) for 2050 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 6, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Highway Segment	Sideswipe, Same Direction Collision	0.44	2.4	0.89	4.7	1.33	7.1
Highway Segment	Total Multiple Vehicle Crashes	2.45	13.1	3.34	17.9	5.79	31.0
Highway Segment	Total Highway Segment Crashes	9.37	50.1	9.34	49.9	18.70	100.0
	Total Crashes	9.37	50.1	9.34	49.9	18.70	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
533+80.000	544+60.000	Information: for segment #1 (533+80.000 to 544+60.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
533+80.000	544+60.000	Information: for segment #1 (533+80.000 to 544+60.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 6, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
520+80.000	532+20.000	Information: for segment #1 (520+80.000 to 532+20.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
520+80.000	532+20.000	Information: for segment #1 (520+80.000 to 532+20.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (18,250 vpd) for 2037 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (18,500 vpd) for 2038 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (18,750 vpd) for 2039 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (19,000 vpd) for 2040 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (19,250 vpd) for 2041 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (19,500 vpd) for 2042 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (19,750 vpd) for 2043 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (20,000 vpd) for 2044 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (20,250 vpd) for 2045 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (20,500 vpd) for 2046 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (20,750 vpd) for 2047 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (21,000 vpd) for 2048 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (21,250 vpd) for 2049 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
520+80.000	532+20.000	Warning: for segment #1 (520+80.000 to 532+20.000), traffic volume (21,500 vpd) for 2050 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 6, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 13+80.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

0.000	13+80.000	Warning: for segment #1 (0.000 to 13+80.000), traffic volume (42,496 vpd) for 2046 is not within the model limit (32,000 vpd) for reliable results for segment type 2EX

Start Location (Sta. ft)	End Location (Sta. ft)	Message
0.000	13+80.000	Warning: for segment #1 (0.000 to 13+80.000), traffic volume (42,692 vpd) for 2047 is not within the model limit (32,000 vpd) for reliable results for segment type 2EX
0.000	13+80.000	Warning: for segment #1 (0.000 to 13+80.000), traffic volume (42,888 vpd) for 2048 is not within the model limit (32,000 vpd) for reliable results for segment type 2EX
0.000	13+80.000	Warning: for segment #1 (0.000 to 13+80.000), traffic volume (43,084 vpd) for 2049 is not within the model limit (32,000 vpd) for reliable results for segment type 2EX
0.000	13+80.000	Warning: for segment #1 (0.000 to 13+80.000), traffic volume (43,280 vpd) for 2050 is not within the model limit (32,000 vpd) for reliable results for segment type 2EX

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 6, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 26+73.000
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

Project Unit System: U.S. Customary

Highway Title: B-Sherdian St
Highway Comment: Created Thu Feb 05 11:15:25 EST 2026
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Tue Feb 10 11:47:04 EST 2026

Minimum Location: 0.000
Maximum Location: 7+00.000

Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration

First Year of Analysis: 2030
Last Year of Analysis: 2050
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 7+00.000
Area Type: Urban
Functional Class: Arterial
Type of Alignment: Divided, Multilane
Model Category: Urban/Suburban Arterial
Calibration Factor: 6D=1.0; RT_SG_FI=1.0; RT_SG_PDO=1.0;

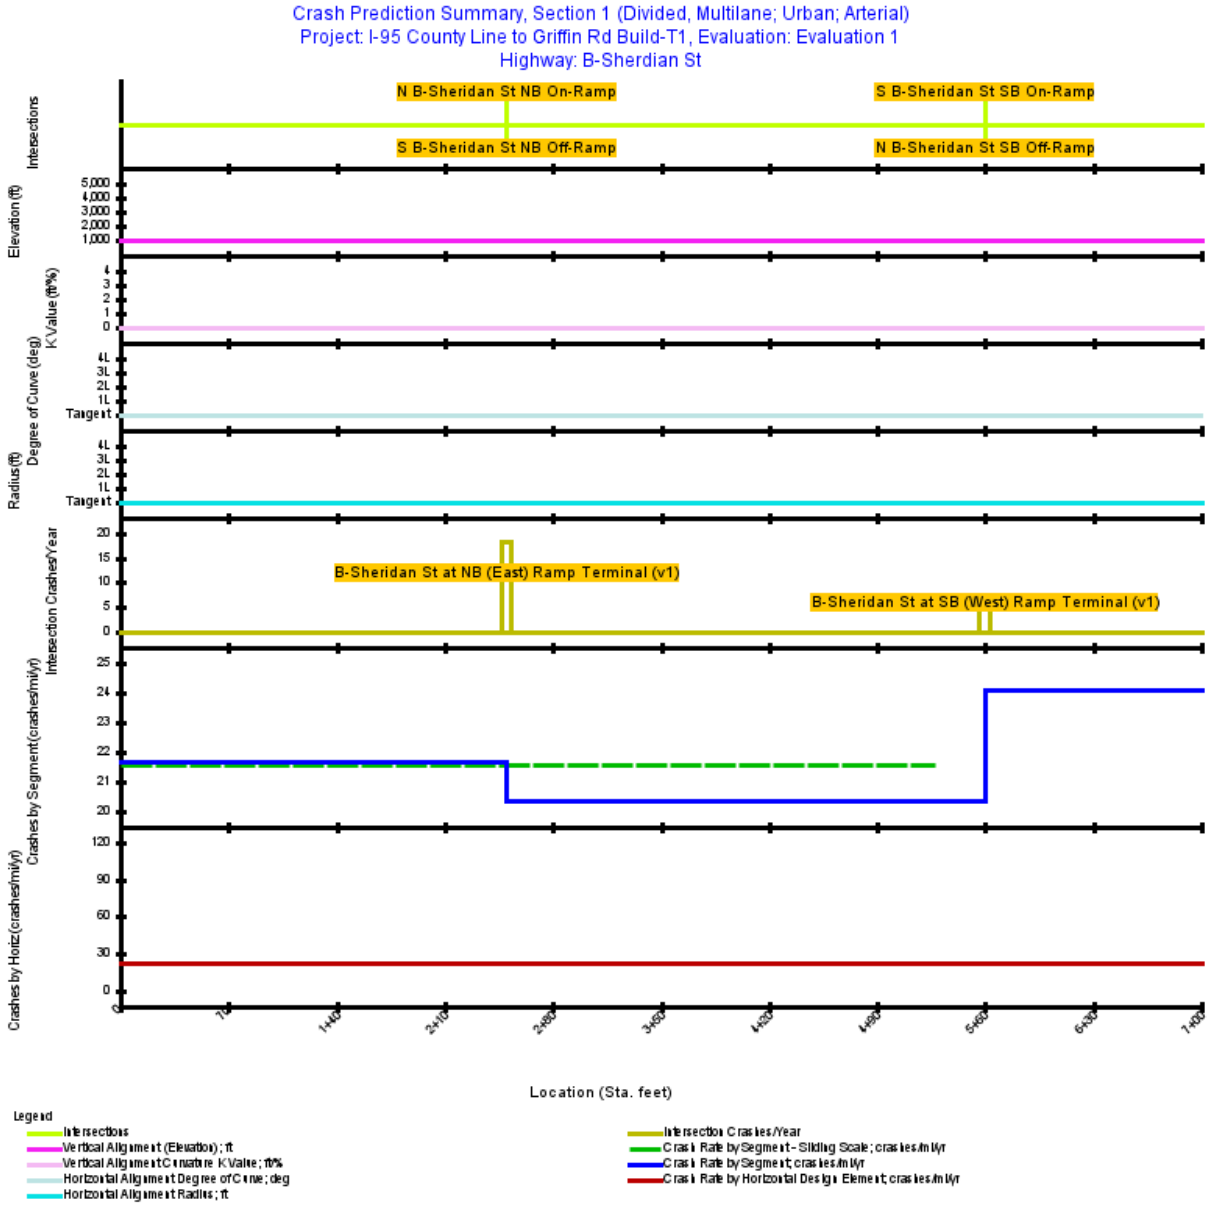

Figure 1. Crash Prediction Summary (Section 1)

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 10, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-95 County Line to Griffin Rd Build-T1
Project Comment: Created Wed Feb 04 09:57:30 EST 2026
Project Unit System: U.S. Customary

Highway Title: B-Stirling Rd
Highway Comment: Created Thu Feb 05 11:25:56 EST 2026
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Tue Feb 10 11:50:30 EST 2026

Minimum Location: 0.000
Maximum Location: 7+20.000

Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration

First Year of Analysis: 2030
Last Year of Analysis: 2050
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 7+20.000
Area Type: Urban
Functional Class: Arterial
Type of Alignment: Divided, Multilane
Model Category: Urban/Suburban Arterial
Calibration Factor: 6D=1.0; RT_SG_FI=1.0; RT_SG_PDO=1.0;

Table 4. Predicted Highway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Evaluated Length (mi)	**0.1364**
Average Future Road AADT (vpd)	**61,292**
Predicted Crashes	
Total Crashes	**879.20**
Fatal and Injury Crashes	**375.35**
Property-Damage-Only Crashes	**503.85**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**43**
Percent Property-Damage-Only Crashes (%)	**57**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**307.0220**
FI Crash Rate (crashes/mi/yr)	**131.0742**
PDO Crash Rate (crashes/mi/yr)	**175.9478**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**64.06**
Travel Crash Rate (crashes/million veh-mi)	**13.72**
Travel FI Crash Rate (crashes/million veh-mi)	**5.86**
Travel PDO Crash Rate (crashes/million veh-mi)	**7.87**

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

February 10, 2026

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-95 County Line to Griffin Rd Build-T1
Project Comment: Created Wed Feb 04 09:57:30 EST 2026
Project Unit System: U.S. Customary

Highway Title: B-Griffin Rd
Highway Comment: Created Thu Feb 05 11:29:18 EST 2026
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Tue Feb 10 11:55:28 EST 2026

Minimum Location: 0.000
Maximum Location: 7+30.000

Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration

First Year of Analysis: 2030
Last Year of Analysis: 2050
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 0.000
Evaluation End Location: 7+30.000
Area Type: Urban
Functional Class: Arterial
Type of Alignment: Divided, Multilane
Model Category: Urban/Suburban Arterial
Calibration Factor: 6D=1.0; RT_SG_FI=1.0; RT_SG_PDO=1.0;

Table 3. User Defined CMF Used in the Eval Intersection CPM Evaluation (Section 1)

Site No.	Name	Description	Start CMF Year	End CMF Year	Severity	CMF Value
1	CMF ID: 3948	Install Left-Turn Lane	2030	2050	Total	0.7900
2	CMF ID: 3948	Install Left-Turn Lane	2030	2050	Total	0.7900

Table 4. Predicted Highway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2050**
Evaluated Length (mi)	**0.1383**
Average Future Road AADT (vpd)	**48,260**
Predicted Crashes	
Total Crashes	**802.73**
Fatal and Injury Crashes	**383.18**
Property-Damage-Only Crashes	**419.56**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**48**
Percent Property-Damage-Only Crashes (%)	**52**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**276.4799**
FI Crash Rate (crashes/mi/yr)	**131.9748**
PDO Crash Rate (crashes/mi/yr)	**144.5051**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**51.14**
Travel Crash Rate (crashes/million veh-mi)	**15.70**
Travel FI Crash Rate (crashes/million veh-mi)	**7.49**
Travel PDO Crash Rate (crashes/million veh-mi)	**8.20**

Table 5. Predicted Crash Frequencies and Rates by Highway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)	Predicted Intersection Travel Crash Rate (crashes/million veh)
1	0.000	2+50.000	0.0473	14.970	0.7129	0.2954	0.4174	15.0555	0.94

Table 6. Predicted Crash Frequencies and Rates by Horizontal Design Element (Section 1)

Title	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)
Tangent	0.000	7+30.000	0.1383	48.203	2.2954	0.9592	1.3362	16.6022	0.94

Table 7. Predicted Crash Frequencies by Year (Section 1)

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2030	28.88	12.64	43.760	16.24	56.240
2031	29.69	13.09	44.078	16.60	55.922
2032	30.52	13.55	44.403	16.97	55.597
2033	31.36	14.03	44.734	17.33	55.266
2034	32.22	14.52	45.073	17.70	54.927
2035	33.10	15.03	45.418	18.07	54.582
2036	33.99	15.56	45.770	18.43	54.230
2037	34.91	16.11	46.128	18.81	53.872
2038	35.85	16.67	46.494	19.18	53.506
2039	36.81	17.25	46.866	19.56	53.134
2040	37.80	17.86	47.245	19.94	52.755
2041	38.80	18.48	47.630	20.32	52.370
2042	39.84	19.13	48.022	20.70	51.978
2043	40.89	19.80	48.420	21.09	51.580
2044	41.97	20.49	48.825	21.48	51.175
2045	43.08	21.21	49.236	21.87	50.764
2046	44.22	21.95	49.654	22.26	50.346
2047	45.38	22.73	50.078	22.65	49.922
2048	46.57	23.52	50.508	23.05	49.492
2049	47.80	24.35	50.944	23.45	49.056
2050	49.05	25.21	51.387	23.85	48.613
Total	802.73	383.18	47.734	419.56	52.266
Average	38.23	18.25	47.734	19.98	52.266

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Predicted Crash Severity by Urban Arterial/Intersection (Section 1)

Seg. No.	Type	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
1	USASegment 6+ Lanes	0.0795	0.4182	1.6261	4.0803	8.7658
2	USASegment 6+ Lanes	0.1194	0.6279	2.4415	6.1263	12.9974
3	USASegment 6+ Lanes	0.0593	0.3116	1.2118	3.0407	6.2972
Total		0.2582	1.3577	5.2793	13.2474	28.0605

Table 9. Predicted Crash Severity by Ramp Terminal or Roundabout (Section 1)

Seg. No.	Type	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
1	FRERampTerminal	0.1161	2.9001	19.0106	104.4802	191.9476
2	FRERampTerminal	0.2171	5.4222	35.5437	195.3442	199.5494

Table 10. Predicted Five Lane or Fewer Crash Type Distribution (Section 1)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Ramp Terminal	Collision with Animal	0.00	0.0	0.00	0.0	0.00	0.0
Ramp Terminal	Collision with Fixed Object	11.98	1.6	19.57	2.6	31.55	4.2
Ramp Terminal	Collision with Other Object	0.36	0.0	0.78	0.1	1.15	0.2
Ramp Terminal	Other Single-vehicle Collision	6.54	0.9	2.74	0.4	9.28	1.2
Ramp Terminal	Collision with Parked Vehicle	0.36	0.0	0.78	0.1	1.15	0.2
Ramp Terminal	Total Single Vehicle Crashes	19.24	2.5	23.88	3.2	43.12	5.7
Ramp Terminal	Angle Collision	94.39	12.5	86.13	11.4	180.52	23.9
Ramp Terminal	Head-on Collision	3.99	0.5	2.74	0.4	6.73	0.9
Ramp Terminal	Other Multiple-vehicle Collision	3.27	0.4	7.83	1.0	11.10	1.5
Ramp Terminal	Rear-end Collision	226.90	30.1	212.58	28.2	439.48	58.2
Ramp Terminal	Sideswipe, Same Direction Collision	15.25	2.0	58.33	7.7	73.58	9.8
Ramp Terminal	Total Multiple Vehicle Crashes	343.79	45.6	367.62	48.7	711.41	94.3
Ramp Terminal	Total Ramp Terminal Crashes	363.03	48.1	391.50	51.9	754.53	100.0
	Total Crashes	363.03	48.1	391.50	51.9	754.53	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 11. Predicted Six Lane or Greater Crash Type Distribution (Section 1)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Angle Collision	1.52	3.2	2.04	4.2	3.56	7.4
Highway Segment	Head-on Collision	0.20	0.4	0.30	0.6	0.50	1.0
Highway Segment	Other Multi-vehicle Collision	0.50	1.0	0.83	1.7	1.33	2.8
Highway Segment	Rear-end Collision	12.88	26.7	14.87	30.9	27.75	57.6
Highway Segment	Sideswipe, Opposite Direction Collision	0.18	0.4	0.50	1.0	0.69	1.4
Highway Segment	Sideswipe, Same Direction Collision	1.46	3.0	6.59	13.7	8.05	16.7
Highway Segment	Total Segment Multiple Vehicle Crashes	16.75	34.8	25.14	52.2	41.89	86.9
Highway Segment	Collision with Bicycle	0.38	0.8	0.00	0.0	0.38	0.8
Highway Segment	Collision with Fixed Object Left Side	0.68	1.4	1.02	2.1	1.71	3.5
Highway Segment	Collision with Fixed Object Right Side	0.77	1.6	1.15	2.4	1.92	4.0
Highway Segment	Collision with Other Object	0.07	0.2	0.21	0.4	0.28	0.6
Highway Segment	Other Single-vehicle Collision	0.78	1.6	0.51	1.1	1.30	2.7
Highway Segment	Collision with Pedestrian	0.71	1.5	0.00	0.0	0.71	1.5
Highway Segment	Total Segment Single Vehicle Six Lanes or More Crashes	3.39	7.0	2.90	6.0	6.29	13.1
Highway Segment	Total Highway Segment Crashes	20.14	41.8	28.04	58.2	48.18	100.0
	Total Crashes	20.14	41.8	28.04	58.2	48.18	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 12. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (47,350 vpd) for 2039 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (48,000 vpd) for 2040 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (48,650 vpd) for 2041 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (49,300 vpd) for 2042 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (49,950 vpd) for 2043 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (50,600 vpd) for 2044 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (51,250 vpd) for 2045 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (51,900 vpd) for 2046 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (52,550 vpd) for 2047 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (53,200 vpd) for 2048 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (53,850 vpd) for 2049 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
2+50.000	2+50.000	Warning: for intersection #1 (2+50.000 to 2+50.000), inside crossroad traffic volume (54,500 vpd) for 2050 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+90.000	5+90.000	Warning: for intersection #2 (5+90.000 to 5+90.000), outside crossroad traffic volume (48,500 vpd) for 2030 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+90.000	5+90.000	Warning: for intersection #2 (5+90.000 to 5+90.000), outside crossroad traffic volume (49,300 vpd) for 2031 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+90.000	5+90.000	Warning: for intersection #2 (5+90.000 to 5+90.000), outside crossroad traffic volume (50,100 vpd) for 2032 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+90.000	5+90.000	Warning: for intersection #2 (5+90.000 to 5+90.000), outside crossroad traffic volume (50,900 vpd) for 2033 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+90.000	5+90.000	Warning: for intersection #2 (5+90.000 to 5+90.000), outside crossroad traffic volume (51,700 vpd) for 2034 is not within the model limit (47,000 vpd) for reliable results for intersection type D4
5+90.000	5+90.000	Warning: for intersection #2 (5+90.000 to 5+90.000), outside crossroad traffic volume (52,500 vpd) for 2035 is not within the model limit (47,000 vpd) for reliable results for intersection type D4

Start Location (Sta. ft)	End Location (Sta. ft)	Message
