

Introduction

Permit Application System Demo

The Permit Application System, or PAS for short, is an online permitting program designed for issuance of Oversize and Overweight Road Use Permits. The following demo outlines how to use the program and its basic functions.

Permit Application System Demo Contents

- **Create ISA User Account** (required for access to PAS)
- **Create Account Profile** (optional)
- **Create Application** (required for obtaining a permit)
- **Searching for Applications** (informational)
- **Viewing Roadway Restrictions** (informational)
- **Viewing Blanket Maps** (informational)
- **Additional Assistance & Conclusion**

Create ISA User Account

ISA stands for Internet Subscriber Account. ISA's are used to access many of FDOT's external web applications. Anyone who is not an FDOT Employee or Staff Consultant is eligible to create and use an account if they need to access one or more applications that accept an ISA. In this case, to access the PAS application.

You only need one ISA to access multiple web applications

FDOT Disclaimer

By logging on to a FDOT system, you acknowledge your responsibility to comply with all laws, rules, directives, policies, and procedures related to the use and security of information technology resources. Unauthorized use is strictly prohibited. You are hereby on notice that you should have no expectation of privacy as to your use of Department information technology resources as all data is potentially subject to Florida's public records law.

Permits are issued for travel on the State and Federal network only. Do not attempt to obtain a permit for travel on the local network using this system.

FDOT Internet Subscriber Account (ISA) Terms of Use x

1. **ACCEPTANCE OF TERMS:** Welcome to the Florida Department of Transportation's Internet Subscriber Account System. This service is provided to you, subject to the following Terms of Use ("TOU"). In addition, when using the Service, you shall be subject to any posted guidelines or rules applicable to such services. All such guidelines or rules are hereby incorporated by reference into this TOU.

2. **YOUR ACCOUNT:** In consideration of your use of the Service, you agree to: (i) provide true, accurate, current and complete information about yourself as prompted by the Service's registration form and (ii) maintain and promptly update the Registration Data to keep it true, accurate, current and complete. If you provide any information that is untrue, inaccurate, not current or incomplete or the Department has reasonable grounds to suspect that such information is untrue, inaccurate, not current or incomplete, the Department has the right to suspend or terminate your account and refuse any and all current or future use of the Service, or any portion thereof with or without notice. You will receive a password and account designation (the email address you designate) upon completing the Service's registration process. You are responsible for maintaining the confidentiality of the password and account, and are fully responsible for all activities using your account. You agree to (i) immediately notify Customer Support of any unauthorized use of your password or account or any other breach of security, and (ii) ensure that you exit from your account at the end of each session. You are entirely responsible for all content that you upload, post, email, transmit or otherwise make available to the Department through the Service. The Department and its agents involved, directly or indirectly, in the delivery and operation of the Service, shall not be liable for any loss or damage arising from your failure to comply with this section.

3. **USE OF ACCOUNT / EMAIL ADDRESS:** You are responsible for maintaining the confidentiality of the password and account, and are fully responsible for all activities using your account. NOTE: Any person with access to the email address you provide as your account identifier will have access to your Internet Subscriber Account. For this reason, the email address you provide to us as your Internet Subscriber Account must not be shared with other persons or parties, or transferred to anyone.

4 **CUSTOMER SUPPORT:** The Department shall provide customer support to you sufficient for

The user will be prompted to read and agree to the “FDOT Internet Subscriber Account (ISA) Terms of Use” prior to completing registration and accessing the system.

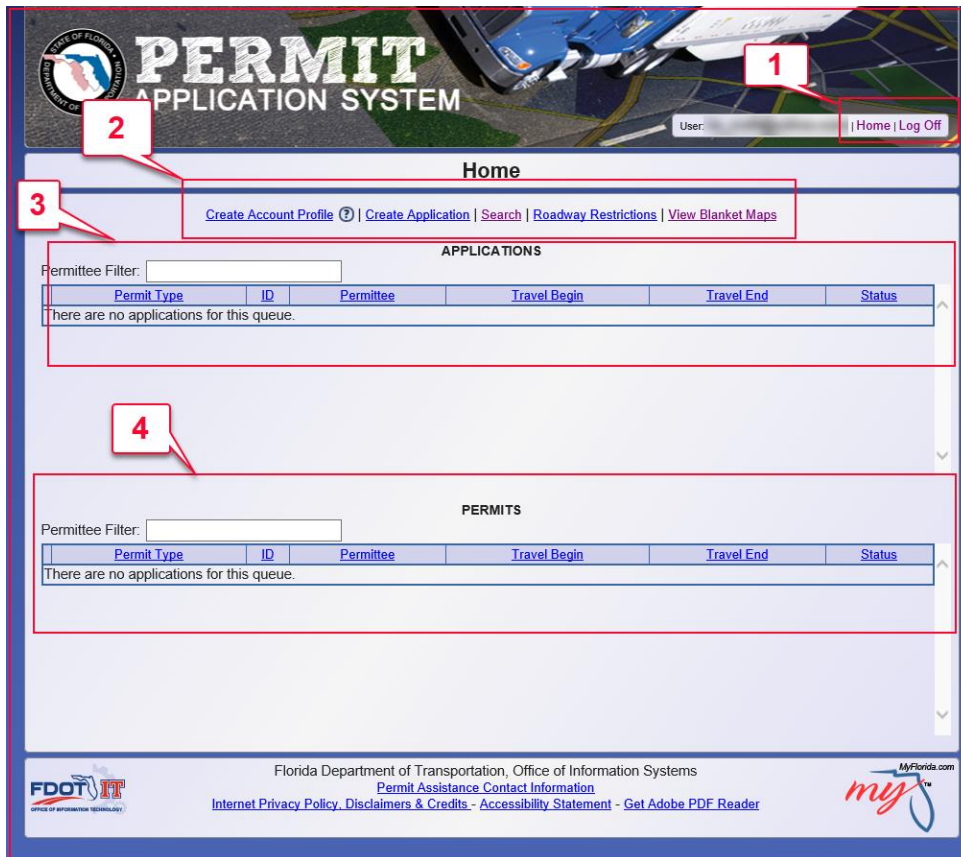

Permit Application System Demo

Create ISA User Account

- Once the user has registered, they will receive an email with a temporary password.
- The user will log into PAS using the temporary password.
- Once logged in, the system will prompt the user to change the password.
- When the password change is successful, the system will prompt the user to “Return to Logon Page” to log in using the new password.

The screenshot displays the Permit Application System (PAS) interface. At the top left is the Florida Department of Transportation logo. The main header reads "PERMIT APPLICATION SYSTEM" in large, bold, white letters. A "Log On" button is visible in the top right corner. The central message area shows a success notification: "ISA Temporary Password Change Success". Below this, a message states: "Your temporary password is changed. Please Login again with your new password". A link labeled "Return to Logon Page" is provided. The footer contains the text "Florida Department of Transportation, Office of Information Systems" and several links: "Permit Assistance Contact Information", "Internet Privacy Policy, Disclaimers & Credits - Accessibility Statement - Get Adobe PDF Reader". Logos for "FDOT IT" and "myFlorida.com" are also present.

After logging on with the new password the user will be able to start using the Permit Application System.

The screenshot shows the 'PERMIT APPLICATION SYSTEM' Home page. At the top right, there is a 'User:' field and a 'Log Off' link, with callout 1 pointing to it. Below the header, there is a 'Home' section with a navigation menu containing links for 'Create Account Profile', 'Create Application', 'Search', 'Roadway Restrictions', and 'View Blanket Maps', with callout 2 pointing to this menu. The main content area is divided into two sections: 'APPLICATIONS' and 'PERMITS'. Each section has a 'Permittee Filter' input field and a table with columns for 'Permit Type', 'ID', 'Permittee', 'Travel Begin', 'Travel End', and 'Status'. Both tables currently display 'There are no applications for this queue.', with callout 3 pointing to the 'APPLICATIONS' section and callout 4 pointing to the 'PERMITS' section. The footer contains the Florida Department of Transportation, Office of Information Systems logo and contact information, along with the 'myFlorida.com' logo.

1. Links to return to the Home screen or to Log Off of PAS.
2. Links to Create an Account Profile, Create & Search Applications, View Roadway Restrictions & Blanket Maps.
3. Displays Applications created in the account the user is logged onto. Here the user can manage, pay, and/or duplicate applications.
4. Displays Permits Issued based on applications created in the account the user is logged onto. Here the user can print permits, and duplicate an application from an issued permit.

[Back to Menu](#)

Create Account Profile

The “Account Profile” feature allows users to save and manage Permittee Information, Vehicle Configurations and Routes. Account profiles are not tied to any other part of the system and the user is not required to create an account profile in order to apply for permits in PAS. This feature simply allows the user to enter and save an unlimited amount of permittees, vehicle configurations, and routes for future permit applications. Once the information is saved, the account owner or its delegates can create permit applications by selecting stored account information to populate the permit application. Users can also edit existing account information and save the newly modified information to the account from the permit application screens.

Travel Begin Date: * Travel End Date:

Will there be nighttime travel? ?

Select Profile Vehicle:

* - Required input fields
Note: Data will not be saved for a given tab until all validation errors are corrected on that tab.

*Permit Types:

- **Blanket Permit** – Allows unlimited trips on designated roads/highways and is not assigned to a specific vehicle. The original blanket permit printed on FDOT goldenrod paper with the FDOT logo must be on board the permitted vehicle to be valid, no photocopies. Blanket permits are mailed to the permittee or picked up in person and are valid for twelve (12) months from the start date. Refunds are only considered when the original permit is returned within thirty (30) days of issuance.
- **Route Specific Blanket Permit** – Is reserved for loads that exceed the size or weight criteria for a regular blanket permit. This permit allows for unlimited trips on a specific route for a specific vehicle configuration. Additional permit restrictions such as law enforcement escorts may be required. The application review process may take up to ten (10) business days. A Letter of Essentiality is required at the time of submission of the application. The original permit must be on board the permitted vehicle to be valid, no photocopies. Route specific blanket permits are mailed to the permittee or picked up in person. Route specific blanket permits are valid for three (3) months and **all sales are final, no amendments or refunds.**
- **Trip Permit** – Allows a single trip on a single route. A single trip is from a single point to a destination with **NO** deliveries/pickup between the two points. Trip permits can be the original, faxed, email copy, or displayed electronically by the driver on a phone, tablet, or other electronic device. Trip permits are valid for ten (10) days from the start date and **all sales are final, no amendments or refunds.**
- **Vehicle Specific Blanket Permit** – Is the same as a blanket permit except it is assigned to a specific vehicle. The Vehicle Identification Number (VIN) of the power unit utilizing the permit is required on the application and the permit is only valid for that power unit. The VIN number will be printed on the permit. Vehicle specific blanket permits can be the original, faxed, email copy, or displayed electronically by the driver on a phone, tablet, or other electronic device. Vehicle specific blanket permits are valid for twelve (12) months from the start date and **all sales are final, no amendments or refunds.**

Permit Application System Demo

Create Application

“Permit & Vehicle Conf.” Tab 2. (Vehicle Information)

Here the user can load information from a saved Vehicle Profile. If creating an application for a Vehicle Configuration for which a profile has not been created select “New Vehicle”.

Select the applicable vehicle configuration. The layout and required fields to be completed will vary depending on the configuration selected.

Only check Divisible Load when applying for an overweight only permit which exceeds the legal weight by up to 10% and hauling a divisible load (e.g. Sand, Rock, Gravel, Timber, etc.) These permits do not allow travel on Interstate Roadways.

Load Description is a brief description of the item that is creating the oversize/overweight situation.

Select one item from the drop down menu and provide the number in the box below.

If the vehicle configuration is legal weight, check this box. Checking this box removes the Axle Information.

Select Profile Vehicle: ▼

Vehicle Information

Vehicle Configuration: ▼ *

Gross Vehicle Weight: 0 lbs.

Divisible Load:

Total Height: ft in *

Load Description: *

Total Width: ft in *

Identity Of Load: ▼ *

Total Length: ft in *

Outer Bridge: 0 ft 0 in

Trailer Length: ft in *

Kingpin Distance: ft in *

Front Overhang: ft in *

Rear Overhang: ft in *

This Vehicle Is Legal Weight As Per [F.S. 316.535](#)

The Total Dimensions refer to the Overall Loaded Dimensions of the configuration:

- Total Height is measured from the ground to the highest point on the loaded configuration.
- Total Width is measured from the widest part of the loaded configuration.
- Total Length is measured from the extreme front-end to the extreme rear-end of the loaded configuration, including any overhang.

[Back to Menu](#)

Permit Application System Demo

Create Application

“Permit & Vehicle Conf.” Tab 2. (Axle Information)

Axle Information

Number of Axles:

Weight	Axle Spacings	# of Tires	Tire Width
Axle 1: <input type="text"/> lbs *		<input type="text" value="N/A"/>	<input type="text" value="N/A"/> in Remove Duplicate
Axle 2: <input type="text"/> lbs *	Axle 1 to 2: <input type="text"/> ft <input type="text"/> in *	<input type="text" value="N/A"/>	<input type="text" value="N/A"/> in Remove Duplicate

Note: Number of Tires must be between 2 and 16 for each Axle.

Note: Please round Tire Width to the nearest whole inch.

Add Optional Transverse Information (Select an axle to add Transverse Information)

Note: Transverse information is only required if any axle weight is more than 30K lbs

Note: If any transverse axle spacings are entered, your permit will be manually reviewed and will not be auto issued by the system.

?

Number of axles is the total number of axles on the loaded configuration that touch the ground. The default number in this field is “2”, however this can be changed. (Most configurations will consist of more than two axles)

“# of Tires” and “Tire Width” are only required for Self Propelled Configurations and Configurations that provide Transverse Information.

After entering the number of axles, provide the individual axle weights (axle 1 is the steering axle) and the axle spacings (distance between each set of two axles measured from center hub to center hub).

Transverse information is only required for configurations which contain at least one axle whose weight exceeds 30,000 lbs. and/or for configurations which require Alternate/Dual Lane Loading review.

Click here to create a profile for the Vehicle Configuration entered on this tab.

This is beneficial if the user will order multiple permits for the vehicle configuration being entered.

After completing Tab 2 “Permit & Vehicle Conf.” save and click on the next appropriate tab, or cancel to Undo changes.

[Back to Menu](#)

Permit Application System Demo

“Routing” Tab 3:

Select “New Route” unless you want to load a route that was created in another application and saved to the account profile.

Entering Starting & Destination Locations.

The system provides the user with several options: Providing a Florida Street Address, selecting a predefined Airport, Seaport or State Boundary, or by using the Freeform function to manually define the location on the Florida Map.

(Note: PAS only issues permits for travel in the State of Florida, therefore all starting/destination locations must be located either on the Florida border, or within the State of Florida in order for the system to locate a route.)

Selecting “Reverse Route” only swaps the saved starting & destination locations. It doesn’t allow a return trip on the same application.

Select “Avoid Toll Roads?” if you do not want the system to route on the Turnpike.

“Generate Unvalidated Route” generates a route that has not been validated for weight.

“Generate Validated Route” generates a route that has been validated for weight.

(Note: The PAS system doesn’t route around Roadway Restrictions. When validating a route, it will notify the user if Roadway Restrictions are located on the route, and the user must route around them by manipulating the route line generated on an unvalidated route, or define a route using the “Stops” tab to place waypoints on the map prior to generating a route.)

* - Required input fields

Note: Data will not be saved for a given tab until all validation errors are corrected on that tab

Permit Application System Demo

Create Application

“Routing” Tab 3: (PAS Generated Route)

The PAS system is designed to automatically plot a route between the starting and destination locations defined by the user. However, sometimes the system will plot a route that contains unrealistic maneuvers, such as U-turns or shortcutting through a neighborhood. Therefore, if the user is going to use a PAS generated route, it is important that they review the route in detail prior to submitting the application.

If the user wants to edit the route, or use a different route, they have two options:

1. They can manipulate the route line for an Unvalidated Route. This option is sufficient for small changes to a PAS generated route.
2. They can place waypoints on the map along a route they wish to use prior to generating a route. This option is better for routes that would require many changes to a PAS generated route.

Example of a PAS generated route.

At exit 6 keep left on I-10 E toward TALLAHASSEE
At exit 17 take ramp on the right to US-90
Turn left on SCENIC HWY (SR-10A)
Finish at 8301 Scenic Hwy, Pensacola, Florida, 32514, on the left
Total driving distance: 11.80 miles

How do I modify my route ?
Note: This route is not yet validated and cannot be saved until bridge analysis is performed. Once you have replicated the route indicated by the applicant please click the validate route button to validate and save the route.

“Routing” Tab 3. (Manipulating the Route Line):

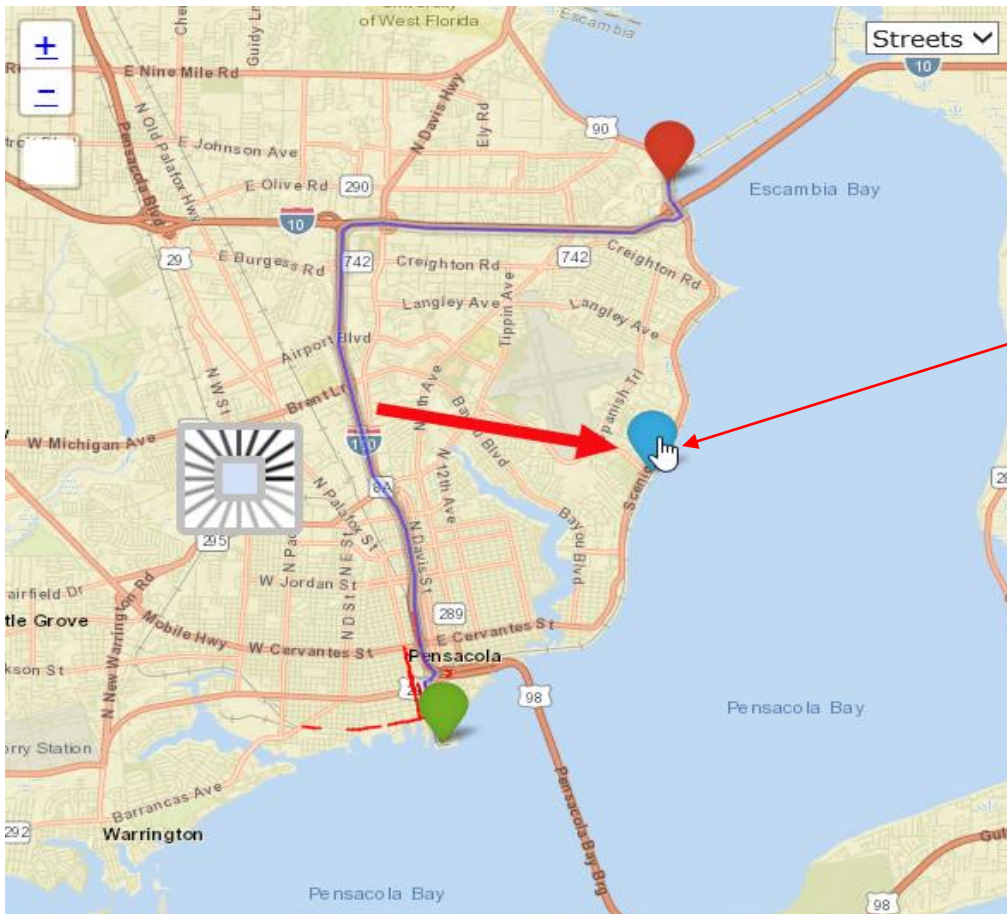

After generating an unvalidated route click on the route line to generate a waypoint.

Permit Application System Demo

Create Application

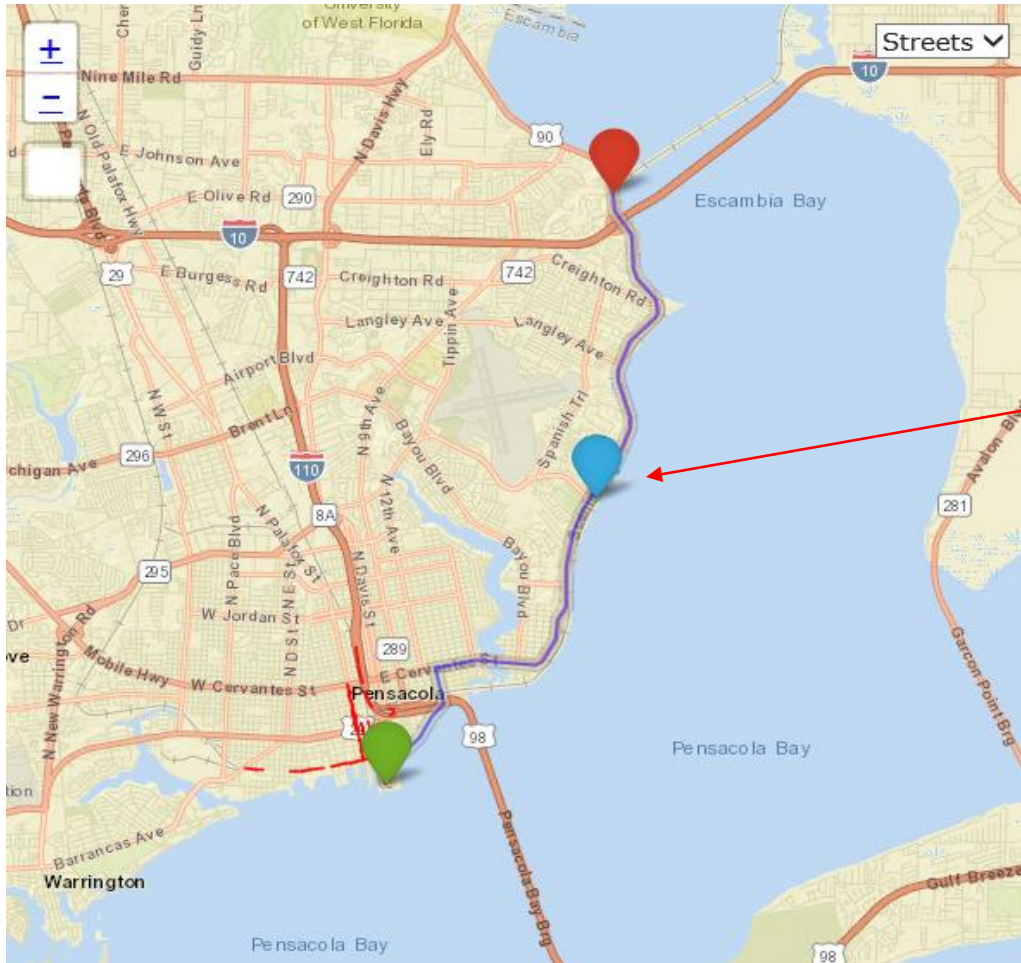

“Routing” Tab 3. (Manipulating the Route Line):

After the waypoint appears, click on the waypoint and drag it to the desired location.

It will be necessary to zoom into the map where the waypoint is placed to ensure it is appearing on the correct roadway and on the correct side of a divided hwy.

“Routing” Tab 3. (Manipulating the Route Line):

The system will then regenerate the route connecting from the starting location to the waypoint, then from the waypoint to the destination location. The system routes to the waypoints in the order they are created.

*After the system regenerates the route, any existing blue waypoint can be moved by clicking and dragging it. Sometimes the waypoints may need re-positioning.

“Routing” Tab 3: (Conclusion)

Route Disclaimer [Close]

A route has been successfully generated for your vehicle. The Department has not analyzed this route for width, length or height. The Department has not analyzed any roadways or bridges on the local network associated with this route. You are responsible for verifying that the route is complete and accurate before submitting this application.

Once a validated route has been generated, the system will require the user to accept a routing disclaimer by selecting “I Understand”. Selecting “Modify Route” will clear the generated route, so the user can create a different one.

“Attachments” Tab 4:

This is where the user can attach additional documents to their permit request.

Note: Attaching documents to the application will result in the application going into a review status and will not auto issue.

Letter of Essentiality is a Letter composed, signed, & dated by the ultimate recipient of the load or service, and explains the essential reason why the permit request must be approved.

Schematic is any schematics detailing measurements of the load or loaded configuration.

Survey Letters are route survey affidavits composed, signed, and dated by the Permittee that verifies the requested route has been surveyed and found to safely accommodate the loaded configuration.

Maps are any maps detailing/clarifying the route the hauler is requesting to use.

Other is for attachments that do not fall into the previous categories. (i.e. Previously Issued Permit for reference or Special Requests such as preapproval for weight only)

“Review & Submit” Tab 5:

Here the applicant can review the application to confirm accuracy prior to submission. If changes need to be made to the application, the applicant will have to click on the appropriate tab to change the information.

The applicant must check “Accept” on the routing disclaimer before the system will let them submit the application.

When ready, click “Submit” to submit the application. After submitting the application it will enter one of two statuses:

1. Approved - If auto approved, then the “Payment” tab will become enabled allowing the applicant to provide their payment information.
2. Review - If the request doesn't qualify for auto issuance, then the system will forward the application to the Department for additional review by qualified staff who will determine if the request can be approved. The applicant may call the Permit Office at (850) 410-5777 to check the status of the review process. Once the review process is completed, the applicant will receive an email notifying them of the approval or rejection of the application.

Note: No changes can be made after submitting the application. All information is locked. If a change needs to be made, a new application will have to be submitted.

Viewing Blanket Maps

“View Blanket Maps” allows the user to view the location of weight restrictions on the map in PAS. When issued an Overweight Blanket Permit, the permit will display the name of the applicable map. The user can also use the “Weight Restriction Charts” located on the Permit Office webpage* to find out which map their vehicle configuration fits. This will be useful for planning a route for an overweight vehicle configuration, so as to avoid the weight restrictions that apply to the configuration.

* <http://www.fdot.gov/maintenance/OWODPermits.shtm>

Note: Overweight Blanket permits must have a hard copy of the applicable map with the permit at all times. These are mailed to the hauler with the permit, however the hauler is responsible for checking the Permit Office Webpage* periodically for updates.

Permit Application System Demo Viewing Blanket Maps

There are currently six blanket maps. Which map applies to the user's application is determined by their axle configuration. The current bridge restrictions for the map selected will show.

In this example, "TTT1" has been selected, so only weight restrictions for TTT1 display.

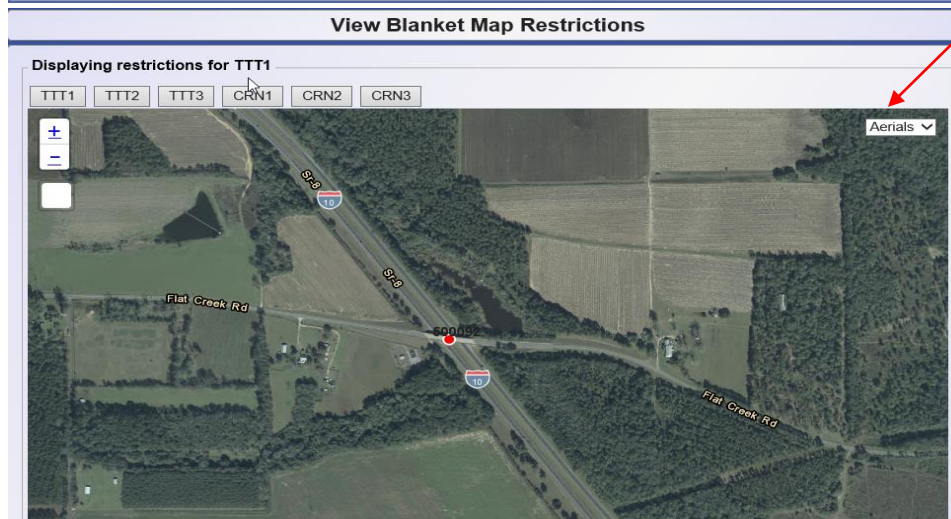

The weight restricted structures will show up on the map as red dots. The number associated with the dot is the bridge number.

Permit Application System Demo Viewing Blanket Maps

When viewing the map, the user can switch from “Streets” view to “Aerials” view to see the actual bridge on the roadway. This can be useful when a restriction is located at an intersection and it is difficult to determine which road the restricted bridge is on.

(this feature is available on all the maps in PAS)
