OFFICE OF FREIGHT, LOGISTICS AND PASSENGER OPERATIONS OVERVIEW
OFFICE OF FREIGHT, LOGISTICS AND PASSENGER OPERATIONS

The Office of Freight, Logistics and Passenger Operations (FLP) encompasses a level of modal representation and industry engagement unlike any other state DOT organization.

FLP acts as a tool to better connect, develop, and implement a freight planning process that maximizes the use of existing facilities while integrating and coordinating the various modes of transportation, including both public and privately-owned resources.

Annually, FLP allocates funds toward transportation infrastructure improvements in all the modes. With progression in mind, the FLP Office is structured with the governor’s multimodal transportation initiatives in line – to transform Florida into a global hub for trade, logistics, and manufacturing-oriented activities.

The Florida Department of Transportation is decentralized in accordance with legislative mandates, and each district is managed by a District Secretary. Working collaboratively with our staff in the districts, FLP leads Florida’s multimodal-transportation initiatives through work with federal and local government partners in planning, coordination, financing, grant management, ridership, and regional analysis.

Each modal office strives to create and seek out opportunity through program and project management in order to support the FDOT comprehensive multimodal transportation system, working in coordination with a variety of offices in the Florida Department of Transportation (FDOT) and agency partners.

The Office of Freight, Logistics and Passenger Operations office includes the following:

- Aviation and Spaceports Office
- Freight and Multimodal Operations Office
- Seaports Office
- Transit Office
HOW WE’RE ORGANIZED

January 2019
The offices under FLP are responsible for developing motor carrier, rail, transit, seaport, waterways, aviation and spaceport opportunities through program and project management in order to support the FDOT comprehensive multimodal transportation system. Activities include system plan development, modal project identification and prioritization, research and support of FDOT districts and their partners.

<tr>
<td>Aaron Smith</td>
<td>State Aviation Manager</td>
<td>Overall responsibility for the development and management of the Florida Department of Transportation (FDOT) Aviation Program and related functions. Functional areas include: statewide aviation program funding policy; funding allocation for the seven districts; statewide system planning; airport development work program coordination and liaison; and aviation safety related regulatory responsibilities. The State Aviation Manager reports directly to the State Freight and Logistics Administrator.</td>
</tr>
<tr>
<td>Andy Keith</td>
<td>Aviation Development Administrator</td>
<td>Manages the Department’s statewide aviation development program. Formulation of aviation technical policies, procedures and criteria. Analyze long-range needs, issues and alternatives for the statewide airport system. Preparation of the Department aviation work program and budget. Development of aviation portion to the Florida Transportation Plan.</td>
</tr>
<tr>
<td>Nick Harwell</td>
<td>Aviation Program Development Manager</td>
<td>Reviews Department’s aviation work program and district aviation work programs. Reviews airport master plans, specifications and environmental studies produced by Florida airports. Develops aviation forecasts and management summary reports for Florida’s public airports. Assists the Department’s district office personnel with airport planning issues. Manages statewide planning projects.</td>
</tr>
<tr>
<td>Jim Halley</td>
<td>Aviation System Manager</td>
<td>Oversees the Department’s statewide aviation system planning program. Manages the Continuing Florida Aviation System Planning Process (CFASPP). Manages the Florida Aviation Database (FAD). Facilitates programming for both State and federal funding through the FAD. Serves as the office liaison to other FDOT offices, external partners, other state DOTs, and aviation industry organizations. Manages the aviation program performance measurement program.</td>
</tr>
<tr>
<td>Mike McClure</td>
<td>Aviation Environmental &amp; Freight Manager</td>
<td>Coordinates the review of environmental studies. Reviews all aviation and non-aviation related environmental studies. Manages the air cargo/air freight program. Serves as liaison and provides airport system data and financial needs to SIS planners.</td>
</tr>
<tr>
<td>Wayne Lambert</td>
<td>Spaceport Development Manager</td>
<td>Provides critical review and dissemination of analyses with regard to significant aerospace issues. Analyzes the effects of new requirements, and suggestions to meet requirements to key leadership and management in FDOT central and district offices. Promotes development and improvement of aerospace transportation facilities. Coordinates the development of spaceports. Provides input related to infrastructure and related transportation facilities contained in the Strategic Intermodal System Plan (SIS). Addresses intermodal requirements and impacts of space transportation facilities.</td>
</tr>

| David Roberts     | Administrator - Aviation Operations  | - Oversee the statewide Airport Site Approval, Inspection, Licensing, and Registration programs.  
- Oversee the statewide Airport Airspace Protection and Airport Land Use Compatibility programs.  
- Oversee the statewide Aviation Work Program Monitoring Program.  
- Oversee the statewide Airport Security Program.  
- Oversee the statewide Aviation Safety Program.  
- Respond to disasters as part of the Florida Air Operations Branch State Emergency Response Team. |
| Greg Jones        | Airspace & Land Use Manager          | - Manage the statewide Airport Airspace Protection and Airport Land Use Compatibility programs.  
- Provide technical assistance to political subdivisions on Airport Protection Zoning Regulation and Airport Land Use Compatibility Zoning Regulation development.  
- Conduct technical analysis of Airspace Obstruction Permit Applications.  
- Provide technical assistance to Department staff on compliance with federal airspace protection regulations.  
- Conduct technical analysis of Airport Master Plans and Airport Layout Plans for airspace issues.  
- Respond to disasters as part of the Florida Air Operations Branch State Emergency Response Team. |
| David Smith       | Airport Inspection & Safety Manager  | - Manage the statewide Public-Use Airport Site Approval, Inspection, and Licensing programs.  
- Manage the statewide Aviation Safety Program.  
- Conduct technical analysis of Public-Use Airport Site Approval Applications.  
- Conduct Public-Use Airport Licensing inspections.  
- Conduct technical analysis of Airport Master Plans and Airport Layout Plans for compliance issues.  
- Respond to disasters as part of the Department’s Recon Team. |
| Michael McDougall | Aviation Communications Manager      | - Manage the statewide Public-Use Airport Security Program.  
- Manage the statewide Aviation Communications and Educational Outreach programs.  
- Oversees the production of the Florida Airport Directory.  
- Oversees the production of the Florida Flyer Newsletter.  
- Maintains the Aviation and Spaceports Office website and SharePoint site.  
- Maintains the Florida Aviation Database. |
| Alice Lammert     | Private Airport & Finance Manager    | - Manage the statewide Private-Use Airport Site Approval, Inspection, Licensing, and Registration programs.  
- Manage the statewide Aviation Work Program Monitoring Program.  
- Conduct technical analysis of Private-Use Airport Site Approval Applications.  
- Conduct Private-Use Airport Licensing inspections.  
- Manage the statewide Private-Use Airport Security Program.  
- Respond to disasters as part of the Florida Air Operations Branch State Emergency Response Team. |

*District Modal Contacts located in each district section.*
AVIATION & SPACEPORTS OFFICE ACTIVITIES

FDOT’s Aviation and Spaceports Office is supported by representatives from each of the seven FDOT districts. District Aviation Office’s key areas of responsibilities include coordinating planning and capital improvement program activities with local governments, aviation grant program implementation, aviation system plan implementation, and project technical assistance. The district offices review and program airport planning and capital improvement projects in the Work Program after evaluating Department priorities and airport funding priorities, and evaluating consistency with the Florida Transportation Plan, Florida Aviation System Plan, the airport’s master plan and airport layout plan along with any long-range transportation plan, and applicable Federal Aviation Administration guidelines.

*As of July 5, 2018, FDOT Program & Resource Plan

KEY AREAS OF RESPONSIBILITY

FLORIDA AVIATION SYSTEM PLAN

As part of previous Continuing Florida Aviation System Planning Process projects, the Aviation and Spaceports Office of FDOT developed, a strategic plan that established goals and policies related to the development of the statewide aviation system. In the most recent update, included in the FASP 2035, examined the issues facing Florida and the challenges and opportunities relative to the statewide aviation system. As part of this process, goals and objectives were established, performance measures and indicators were developed, and policies were reviewed to determine how the existing Florida aviation system was performing. These goals and policies help to guide the Aviation and Spaceports Office in funding priorities. For more information, see Florida Aviation System Plan.

FLORIDA AVIATION DATABASE

The Florida Aviation Database (FAD) is the central repository for Florida Aviation System Data. The FAD was originally developed in 1994 as a means of collecting airport capital project requests. Since that time, it has been expanded for storing and providing data and applications for FDOT staff, FAA Airports District Office personnel, as well as public and private airport users. The system has been modified to share aviation system information with the State Emergency Response Team and improve the functionality of the Disaster Preparation section.

There has been a continuing effort to enhance applications within the FAD based on user recommendations, extended system functionality, and best management practices of the information management community. As one of the primary roles of the State Aviation and Spaceports Office is the approval, dissemination, and management of state public funding for the development and improvement of the Florida aviation system, the Joint Automated Capital Improvement Program (JACIP) and the JACIP Project Management (JPM) applications play vital roles in the day-to-day workflow of the industry.
AIRPORT INSPECTION AND LICENSING PROGRAM
FDOT implements a site approval process for proposed public-use airports in our state in order to help protect the public health, safety, and general welfare. Inspection and licensing of new and existing public-use airports is accomplished on an annual basis. Private-use airports with 10 or more based aircraft may request to be inspected annually for the purpose of licensing.

PRIVATE AIRPORT REGISTRATION
Florida law changed regarding private-use airports, effective October 1, 2003. Like public-use airports, the law still requires prior site approval by the Department for newly proposed private-use airports. However, changes to Chapter 330, Florida Statutes and Chapter 14-60, Florida Administrative Code now require only certification of required preliminary information by the owner for airport site approval plus subsequent certification of airport data in lieu of previously required inspection and licensing. Private-use airport owners must re-certify their Airport Registration every two years. For additional information, see Florida Private Airport.

ECONOMIC IMPACT STUDY
Every few years, FDOT’s Aviation and Spaceports Office performs an in-depth analysis of the economic impact of the aviation system. All public-use facilities are evaluated, as well as several military and private airfields. The latest update to the study was just finished in 2018 and shows that the aviation system in Florida contributes over $175 billion to the state’s economic activity each year. The study also takes an in-depth look at that overall number, and breaks it down into several categories. Every airport that participates in the study also receives an individual summary analysis that highlights airport specific economic impacts that were calculated as part of the study. This information is presented in individual brochures for use in educating local decision-makers and the public. For more information, please see Florida Statewide Economic Impact Study.

AIR SERVICE STUDY
Originally created in 2000 and updated every 2-3 years, this study provides FDOT with current and historical data to benchmark changes in Florida’s commercial airline service. The study examines international, national, and Florida aviation-specific trends and conditions and investigates how these trends may possibly affect Florida’s air service. Additionally, existing levels of non-stop service and the commercial airline service market are reviewed for intrastate, interstate, and international routes. The information obtained from this review will be used to help determine the adequacy of scheduled commercial airline service in Florida and ultimately to identify airports or FDOT Districts within the State that appear to be capable of supporting improvements in their commercial airline service. For more information, please see Air Service Studies.

FLORIDA AIR CARGO STUDY
In today’s global economy, the huge volume of time-critical, high-value products crossing national boundaries by aircraft results in markets and industries being connected together. In addition, air cargo companies are increasingly involved in manufacturers’ supply chain management. Highlights from the 2016 Florida Air Cargo Study include the following:

- Employment – Economic impacts of air freight extend beyond the 7,920 employees directly employed in the provision of air freight transport services. When trade-related users are included, air freight-related employment in Florida totals 625,410 jobs, which represent 5.8% of the 10.8 million jobs statewide.
- Income – The $31.2 billion earned by 625,410 total employees represent 6.2% of Florida’s total labor income.
- Value-Added – The combined value-added impact of $48.2 billion associated with the air freight services and users represents 5.8% of the state’s Gross State Product (GSP).
- Output – Total sales associated with all air freight-related activity equates to roughly $98.8 billion, representing 6.7% of Florida’s total economic output.
• Tax Revenues – The federal, state, and local tax revenues associated with air freight-related economic activity totals $4.1 billion (5.9% of State).

While many airports in Florida can accommodate air cargo activity to a certain degree, there are 14 airports in Florida that have scheduled air cargo service supporting business and industry throughout the State. Florida’s air cargo activity is heavily concentrated at Miami International Airport, which accounts for over 81 percent of the State’s 2014 total air cargo volume. In the same year, Florida’s SIS (Strategic Intermodal System) Airports moved a combined 2.7 million tons of air cargo around the globe. Florida’s airports directly served 41 domestic and 97 international destinations with either dedicated all-cargo or wide-body passenger aircraft. Additional information is available via the following link: Florida Air Cargo Executive Summary Brochure

**FAA STORMWATER POND STUDY**

The Florida Department of Transportation undertook a multi-year study of airport stormwater quality, quantity and compatible Best Management Practices. The objective was to improve airport safety by reducing wildlife attractants, while still meeting all state and federal water quality and quantity management requirements. The Florida Department of Environmental Protection (FDEP), the State Water Management Districts (WMDs) and the Federal Aviation Administration (FAA) provided review and guidance of the work. The FAA also assisted with project funding. Project documentation and training materials are located on the Aviation and Spaceports Office Stormwater Program and Documents & Publications web pages. The following project documents of the Stormwater Program were updated in 2016:

- Program Summary of the FAA Pond Post-Construction Monitoring at the Naples Municipal Airport (January 2016)

**CONTINUING FLORIDA AVIATION SYSTEM PLANNING PROCESS**

The Continuing Florida Aviation System Planning Process (CFASPP) is a method used within Florida to engage aviation stakeholders throughout the state and to continually monitor the aviation environment to determine the development requirements to best meet projected aviation demands. This process is a component of the Federal Aviation Administration’s Continuous Airport System Planning Process. For more information, see CFASPP.

**AIRSPACE OBSTRUCTION PERMITTING**

FDOT Airspace Obstruction Permitting Program implements provisions of Chapter 333, Florida Statutes (F.S.) by administering provision aimed to protect the national airspace over Florida by preventing hazards to air navigation. The law gives FDOT responsibility and authority for issuance of Airspace Obstruction Permits for any proposed structure exceeding federal obstruction standards within 10 nautical miles of any public-use or military aviation facility. That requirement is only applicable under the condition that the local jurisdiction has not adopted a local airport protection-zoning ordinance, which meets requirements of Ch. 333, F.S. In that event, FDOT provides review of airspace impacts and technical assistance to local governments (when requested) as a part of the local zoning process. As a part of the airspace obstruction permitting process, the program manager reviews airspace obstruction permit applications in accordance with section 333.025, F.S. criteria, and in accordance with criteria contained in CFR Title 14 Part 77, as well as the FAA Advisory Circulars. Determination to issue or deny a permit is based upon an evaluation whether or not the proposed structure will result in an adverse impact on air navigation. Management of the Airspace Obstruction Permitting program also involves close coordination with the FAA and local zoning authorities, technical assistance on marking and lighting, tall structure evaluation and technical assistance to FDOT aviation staff. In order to assist the local zoning authorities the Aviation and Spaceports Office (ASO) has developed numerous resource documents regarding airport zoning regulation requirements of Chapter 333, F.S., and have posted them to the ASO website
LAND USE COMPATIBILITY

The issue of land use compatibility has been a matter of concern to the airport community for a couple of decades. The focus of the Florida DOT Airport Land Use Compatibility project has been shifting to assemble and examine nationwide best practices in active airport land use compatibility, and to provide guidance to Florida’s communities on policy implementation at the grassroots level. Several legislative measures on land use compatibility are contained within the amended Chapter 333, F.S., with focus on local government implementation with technical assistance by FDOT’s Aviation and Spaceports Office. Section 333.03(2), F.S., requires the political subdivisions to address certain specific land use compatibility issues. The Department is working to create land use compatibility guidelines to be implemented into an agency rule. The Airspace and Land Use Manager is responsible for managing consultant projects concerning the Land Use Compatibility Program.

AVIATION COMMUNICATION AND OUTREACH

FDOT’s Aviation and Spaceports Office has a variety of aviation information products and data serving FDOT Offices; various federal, State and local government agencies; and the aviation community. The office produces "The Florida Flyer", a quarterly newsletter, and the "Florida Airport Directory", an annual publication that contains vital information about both public and private airports. The "Florida Aeronautical Chart" an annual publication that depicts all the public airports in the state of Florida, has been placed on hold for this year. These publications are now provided in an electronic only format available on the office website at [www.fdot.gov/aviation/flpub.shtm](http://www.fdot.gov/aviation/flpub.shtm).

The office also promotes Aviation in Florida by participating in the Experimental Aircraft Association Fly-In at Lakeland Linder Regional Airport. The Aviation and Spaceports Office also coordinates with Enterprise Florida and Visit Florida, the state’s partnerships for economic and tourism development.

SERT AIR OPERATIONS BRANCH

The State Emergency Management Act, Chapter 252, F.S., mandates the development of the Florida Comprehensive Emergency Management Plan. The State Emergency Response Team Air Operations Branch was created as a part of that mandate as an interagency team, established under the authority of the Operations Section within the Division of Emergency Management, with the responsibility to improve the utilization of air assets during a response to an emergency. FDOT’s Aviation and Spaceports Office is a part of this interagency team, and provides personnel, assets, and information to the Air Operations Branch within its framework.

During activation, FDOT Aviation and Spaceports Office provide three staff members to serve in the Air Supports Group (currently, Aviation Operations Administrator, Airspace and Land Use Manager, and the Private Airport and Finance Manager). Staffs in the aforementioned positions are on-call essential personnel, however, in the event that additional staff or resources are required to supplement the response, other Aviation and Spaceports Office and District aviation personnel may be requested to assist. As a part of this effort, Aviation and Spaceports Office staff is closely collaborating with Office of Emergency Management staff. For more information, see State Emergency Response Team (SERT).

STATEWIDE AIRFIELD PAVEMENT MANAGEMENT PROGRAM (SAPMP)

The Florida Department of Transportation (FDOT) Aviation and Spaceports Office (ASO) supports a longstanding initiative for monitoring the condition and lifespan of the operational pavements at airports across the state. The primary goal of this program is to assist participating public airports with the data necessary to prioritize pavement maintenance and rehabilitation, conduct cost analysis, determine maintenance scheduling, perform pavement
evaluations and support design considerations. This effort incorporates the latest airfield pavement management procedures and policies from Federal Aviation Administration (FAA) and American Society Testing Materials (ASTM), and includes a pavement inspection program that has resulted in a series of Statewide Pavement Management Summary Reports, the District Pavement Management Summary Reports, the individual Airport Final Pavement Management Report, the Airfield Pavement Inspection Reference Manual, the Airfield Pavement Distress Repair Manual, and the Inspection Methodology for Whitetopping Manual. Pursuant to section 332.006, FS, the Statewide Pavement Inspection Program schedules inspections of pavements at participating airports on approximately a three year cycle. This program is funded jointly by the Federal 90% and State 10%. In conjunction with the above referenced SAPMP, the FDOT ASO conducts annual training for airfield pavement inspection and airfield pavement distress repair. The FDOT ASO designed these airfield pavement inspection/evaluation and pavement distress repair training courses as a means to meet the FAA requirement for airport pavement inspectors, and to assist the airports in maintaining their pavement condition.

AIRPORT SUSTAINABILITY

FDOT’s Aviation and Spaceports Office (ASO) developed the Florida Airport Sustainability Guidebook to lead Florida’s airports into a successful and sustainable future. To do so, the Guidebook presents airports with recommended methods and guidance for developing an effective sustainability plan and implementing sustainability initiatives. Its primary goal is to give airports the opportunity to become as sustainable as possible, thus enhancing the airport’s economic prosperity and operational efficiency. All of Florida’s airports, both commercial service and general aviation (GA), are faced with daily challenges of meeting roles and expectations within the Florida aviation system, meeting the demands of increased operations, and increased pressure to become as financially self-sufficient as possible. Sustainability planning can help airports handle increased air traffic, as well as create a strong public image of the airport, while simultaneously decreasing costs. Being such a diverse and important player to national aviation and to the State’s economy, Florida’s aviation system needs to evolve in concert with modern initiatives and strategies to enhance the overall airport.

By assisting airports in undertaking comprehensive sustainability initiatives and strategies, FDOT seeks to enhance their financial investment in Florida’s airports by providing the tools and resources necessary for airports to increase their financial self-sufficiency, operational efficiency, social responsibility, and environmental awareness.

AVIATION GRANTS

Strategic Airport Investment Program

In 2014, the Florida Legislature created the Strategic Airport Investment Program, which marked a milestone in Aviation infrastructure improvements, and investment. Section 332.007(9), F.S., provides additional funding flexibility for strategic airport projects that better positions the state to maximize international trade and aviation industry growth opportunities. The statute authorizes the Department to fund projects up to 100 percent if important access and on-airport capacity improvements are provided; the capital improvements strategically position the state to maximize opportunities in international trade, logistics, and the aviation industry; the goals of an integrated intermodal transportation system for the state are achieved; and feasibility and availability of matching funds through federal, local, or private partners are demonstrated. This new provision does not include any new funds or revenue sources. Projects funded utilizing the new flexibility will be vetted using criteria similar to the Strategic Port Investment Initiative passed by the 2012 Florida Legislature.

FDOT Aviation Grant Program

FDOT funding comes primarily through the State Transportation Trust Fund. This program is the result of contributions from multiple funding sources, including revenue from the state’s aviation fuel tax. Each year, the Florida Legislature
appropriates a portion of this fund to the State Aviation Program. For more information, see the FDOT Aviation and Spaceports Grant Program.

**The Airport Improvement Program (AIP)**
The AIP focuses on providing funding for capital projects on airport property, as well as off-site projects related to mitigation. All publicly owned Florida airports that are open for public use are eligible for AIP funding.

**Discretionary Capacity Program**
The Discretionary Capacity Program provides funding for capacity-related improvement projects, including those projects dealing with off-airport access. This funding program is available to airports with scheduled intercontinental service.

**Strategic Intermodal System (SIS)**
The SIS is a network of high-priority transportation facilities around the state. The aviation component of this program helps to fund capital projects that focus on mobility between economic regions. To be eligible for SIS funding, an airport must meet certain criteria focusing on transportation within the state and economic impact.

**Federal Aviation Administration (FAA) Aviation Funding**
A large portion of funding for Florida’s airports comes from the FAA’s various Airport Improvement Funding (AIP) programs. The FAA provides both entitlement and discretionary funds to airports. These funds are appropriated to certain projects based on the FAA’s prioritization system. For more information on FAA funding and airport eligibility criteria, refer to the FAA’s AIP website at [FAA](https://www.faa.gov).

**FUNDING**

**State Infrastructure Bank (SIB) loans**
The State Infrastructure Bank (SIB) is a loan and credit enhancement program used to leverage funds to increase transportation project feasibility. The SIB can provide loans and other assistance to public entities on projects eligible for assistance under state and federal law, but cannot provide assistance in the form of a grant. Projects requiring a SIB loan must provide increased mobility for the state’s transportation system, or provide intermodal connectivity with airports or other transportation hubs. Emergency loans for public-use airports are also available at SIB.

**Airport Revenue**
Airports generate revenue from landing and terminal fees, concessions, advertising, and fuel sales. Revenue is also increasingly being developed through airport land leasing, hangar rentals for non-aviation use, and commercial facilities located on airport property. One of the largest factors in funding commercial service airports is the Passenger Facility Charge (PFC). PFCs are charged by the airport to the operating airlines, and can be collected for every enplaned passenger at commercial airports controlled by public agencies. Airports use these fees to fund FAA-approved projects that enhance safety, security, or capacity; reduce noise; or increase air carrier competition.

**Bonding**
Airports and local governments can issue bonds as a way to raise funds for airport projects. Airports issue bonds in order to refinance existing debt or to raise funds for development projects such as a terminal, hangars, or maintenance facilities.
**Funding Needs**

Each year, the Aviation and Spaceports Office funds projects directly related to specific categories of airport improvements. These categories of funding are capacity, preservation, revenue/operational, safety, environmental, and security-related projects. For more information on the grant program, please see the [Florida Aviation Project Handbook](#).
SPACEPORTS

FDOT AND SPACEPORTS

Florida has one of the most dynamic transportation systems in the world. Besides roads, bridges, seaports, rail, and airports, we also have a leadership role in America’s space program. Substantial public benefits gained from the space program, such as global positioning systems (GPS), weather forecasting, disaster response, smartphones, and NextGen rely on satellites to enhance our transportation system and improve our quality of life.

The Florida Department of Transportation (FDOT) uniquely includes support for spaceports as part of our transportation network. FDOT and Space Florida work together to provide space transportation services and infrastructure in the State.

FDOT, through its Spaceport Improvement Program, provides funding assistance for projects that:

- Improve aerospace transportation facilities;
- Encourage coordination between airports and spaceports;
- Foster interagency efforts to improve space transportation capacity and efficiency.

Since the beginning of the United States space program, Florida has been at the forefront of all aspects of the space industry. As the center of National Aeronautics and Space Administration (NASA) and the United States Air Force’s (USAF) space launch infrastructure since the 1950’s, space transportation has had a major effect on Florida’s economy and its multi-modal transportation system. Though accommodating this mission has always been a significant role of FDOT, “space” itself was not previously considered a separate mode of transportation to be planned/programmed by the State. This view began to change as space transportation technology continued to mature and the prospect of commercial spaceflight became a greater reality.

In 1999, Florida designated “space” as an official mode of transportation and “spaceports” as the associated transportation facilities. This official designation gave “space” a standing within FDOT, similar to other long-established modes such as roads, bridges, rail, airports, and seaports. With this designation, spaceports and space transportation were aligned to help FDOT achieve its primary mission.

Most importantly, Florida law establishes a process for incorporating spaceport and aerospace industry related needs into the Florida Transportation Plan (FTP) and the Strategic Intermodal System (SIS). Both the FTP and the SIS are the primary drivers for delivering state transportation product in Florida.

The FTP provides the policy framework for allocating FDOT’s funding that will be spent to meet the transportation needs of residents, tourists, and businesses between now and 2060. The FTP identifies the goals and objectives for the next several decades and addresses the needs of the entire state transportation system. One of the stated goals of the FTP is to strengthen coordination among seaports, airports, spaceports, railroads and other modal partners. The SIS is a statewide system of transportation facilities that play a critical role in moving people and goods to and from other states and nations, as well as among economic regions within Florida. The SIS serves as the state’s highest priority for statewide mobility. Incorporating space and aerospace related needs into the FTP and the SIS is a significant commitment by the state to support a major sector of Florida’s economy.

Space Florida, an independent special district of the State of Florida, serves as the state’s lead entity for state aerospace-related activities with federal, military, and state agencies as well as the private sector. Space Florida promotes and assists Florida’s aerospace business sector by providing access to space transportation facilities, financing, support services, and innovative education programs. Created as an Independent Special District pursuant to Chapter 331, Part II, Florida Statutes, Space Florida is charged with fostering the growth and development of a sustainable and world-leading space industry in Florida.
Space Florida is required under state statute to “develop a spaceport master plan for the expansion and modernization of space transportation facilities within spaceport territories”. The Florida Spaceport System Plan functions in this role, incorporating the various individual spaceport master plans across the state, including the Cape Canaveral Spaceport Master Plan. Within this System Plan, Space Florida maintains a list of recommended capital projects eligible to be funded through FDOT.

**FDOT & SPACE FLORIDA RECENT COLLABORATION**

FDOT and Space Florida work closely together in order to provide space transportation services on spaceport properties throughout the State. With the Federal Aviation Administration’s (FAA) licensure of commercial spaceports at Cape Canaveral in 1999 and Cecil Spaceport in 2010, coupled with the potential for more in the future, Florida is in a unique position of having an expanding system of spaceports. Further, due to the programmatic changes associated with the retirement of the NASA Shuttle Program, access to an increasing number of unused federal space launch facilities led Space Florida, in partnership with FDOT, to take a more active role in the planning and funding of spaceport infrastructure. This expanding role has led to the Spaceport Improvement Program and other significant milestones that are securing Florida’s place as a global space transportation leader.

As Florida’s aerospace industry development organization, Space Florida fosters bold economic development activities to expand and diversify domestic and international opportunities. These efforts support talent development, enhance infrastructure, and support governments and organizations in improving the state’s competitive business climate. Space Florida does this by supporting, assisting, facilitating, and consulting on space industry-related needs for attracting, retaining, and expanding aerospace or related supply chain businesses (aerospace partners) that create economic opportunities in Florida.

Recent collaboration efforts include:

- Provided funding assistance to Space Florida for improvements to Launch Complex-36 at Cape Canaveral Spaceport. The improvements provide for rocket engine testing and development at the complex.
- Continued to support Space Florida’s efforts to obtain an FAA commercial launch site operator license for the Shuttle Landing Facility and the proposed Shiloh launch complex, both at the Cape Canaveral Spaceport.
- Provided Space Florida with engineering technical expertise for facility assessments of the Shuttle Landing Facility, Launch Complex-46, solid propellant processing areas, and future launch pad sites.
FUTURE OF SPACEPORTS

As the commercial space sector develops, Florida will face new challenges to provide a safe aviation/aerospace environment while promoting economic development. The challenge for FDOT going forward will be identifying, balancing, and incorporating the various regulatory and economic aspects of these evolving commercial space activities with its mission to provide a safe and secure air transportation system.

<tbody>
<tr>
<td>Rickie Fitzgerald</td>
<td>Freight &amp; Multi-Modal Operations Office Manager</td>
<td>Overall leadership, direction, and support for rail staff activities and lead support to Florida Rail Enterprise (FRE). Rail policy and technical support to executive leadership. Primary liaison with private rail industry, Federal Railroad Administration (FRA), and Amtrak. Provides direct support to the development and implementation of the Strategic Intermodal System (SIS) Plan. Oversees all facets of statewide rail system planning and freight mobility and trade planning. Manages the Department’s rail safety inspection program in coordination with the FRA. The Department’s primary liaison with the various federal, state and private entities involved with highway-rail grade crossing programs, rail system safety, and rail. Lead preparations and response to major rail incidents and emergencies. Lead on rail freight/rail passenger interoperability issues with freight railroads and intercity/commuter rail entities. Serves on Florida Operation Lifesaver Board of Directors Primary representative to AASHTO’s Standing Committee on Rail Transportation. Overall leadership, direction, and support for rail staff activities and lead support to FRE.</td>
</tr>
<tr>
<td>Rick Leggett</td>
<td>Inspection Program Manager</td>
<td>Primary liaison with FRA on inspection issues. Coordinate training of new inspectors &amp; prepare performance data on inspection activities. Investigate citizen complaints on rail issues. Technical liaison on Federal Railroad Administration (FRA) initiatives.</td>
</tr>
<tr>
<td>Charlie Yoakley</td>
<td>Track Inspection</td>
<td>ALL INSPECTORS PERFORM THE FOLLOWING DUTIES: Perform safety inspections on railroads within their respective disciplines to determine compliance with federal regulations. Investigate citizen complaints on rail issues. Respond to rail-related technical requests from districts and Central Office. Evaluate contract compliance on construction projects. Assist National Transportation Safety Board (NTSB) and Federal Railroad Administration (FRA) in investigating incidents.</td>
</tr>

### FREIGHT AND MULTIMODAL STAFF RESPONSIBILITIES

<table>
<thead>
<tr>
<th>Name</th>
<th>Contact Information</th>
<th>Position</th>
<th>Responsibilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scott Allbritton</td>
<td>850-414-4553</td>
<td>Rail Operations &amp; Programs Administrator</td>
<td>Manages the Department’s rail programs; Rail Corridor Hazard Elimination Program, the Rail Corridor Consolidation Program, and the Highway/Rail Safety Program. Provides engineering and technical support for the rail and freight programs, passenger rail service, and the Florida Rail Enterprise (FRE). Coordinates with railroad partners on statewide project production issues. Provides engineering guidance for advanced highway/rail grade crossing technology. Manages the Rail Highway Crossing Inventory (RHCI) program and serves as the point of contact with the rail industry and districts on hurricane disaster issues. Manage issues related to Quiet Zones and Americans with Disabilities Act. Provides rail policy and legislative analysis. Coordinates with Law Enforcement and Motor Carriers. Manages the non-profit organization, Florida Operation Lifesaver, which promotes rail safety and education. Official spokesperson for Florida Operation Lifesaver and is accountable to the Board of Directors. Leads coordination activities with District Rail Coordinators.</td>
</tr>
<tr>
<td>Laura Miller</td>
<td>850-414-4528</td>
<td>Rail Contracts &amp; Signal Programs Coordinator</td>
<td>Manages the statewide Signal Safety Improvement Program. Supervises and provides technical support for the relocation and installation of railroad facilities. Assists in project development, reviewing state and railroad construction plans, and making engineering evaluations for the district. Oversees the Intermodal Logistics Center (ILC) Infrastructure Support Grant program. The Department’s primary liaison for all entities involved with the ILC and rail programs Coordinates with Districts on projects and funding.</td>
</tr>
<tr>
<td>Rob Stapleton</td>
<td>850-414-4552</td>
<td>Freight &amp; Rail Planner</td>
<td>Provides direct support to Rail Capacity Production Engineer with managing construction contracts for rail and freight construction projects. Ensures contracted production schedules are met. Serves as the Department’s contact on all opening and closing requests and makes recommendations to the Rail Operations Administrator. Implements procedures for the opening and closing of public railroad-highway grade crossings in the State. Performs field inspections and evaluations of rail crossings and rail crossing sites for the public railroad-highway grade crossings opening and closure program. Participates in city and county government meetings and community forums. Assist with managing the RHCI software and program. Maintains liaison with districts, local government, rail companies, Federal Railroad Administration (FRA), and rail stakeholders.</td>
</tr>
<tr>
<td>Catherine Bradley</td>
<td>850-414-4271</td>
<td>Rail Capacity Production Engineer</td>
<td>Construction contract manager for rail construction projects; reviews design and construction plans. Inspect work performed to ensure consistency of construction practice with contracted plans and to verify invoiced items. Updates and oversee the development of in-house rail and freight design and construction standards, regulations and guidelines. Provides engineering and technical assistance in the development of passenger rail systems projects. Reviews design and construction plans. Manages engineering and environmental analysis and study activities for rail and freight. Provide engineering and technical review of implementation of positive train control (PTC). Provide engineering and technical review of rail/highway interconnection and preemption systems and analysis/development of related traffic studies/models.</td>
</tr>
<tr>

<tr>
<td>Khaleda Hatim</td>
<td>Freight &amp; Rail Analyst</td>
<td>Conducts complex planning analysis/evaluation of the complete multimodal transportation system. Conducts GIS analysis and mapping, and database and metadata file maintenance. Manages and coordinates the development of all criteria necessary to annually update the safety index. Manages the Rail Highway Crossing Inventory (RHCI) software and program. Assists the Freight and Rail Planning Administrators in developing Freight and Rail Plans. Coordinates with, and assists in training of district personnel in obtaining, processing, evaluating engineering and data. Manages the acquisition of data related to freight and rail activities. Coordinates with the other Florida Department of Transportation (FDOT) offices, Federal Highway Administration (FHWA) offices, Metropolitan Planning Organization (MPO), and external stakeholders and partners to disseminate information and identify data.</td>
<td></td>
</tr>
<tr>
<td>Marcus Richards</td>
<td>Florida Operation Lifesaver</td>
<td>Deputy coordinator for the Florida Operation Lifesaver activities including: finance, correspondence, and coordination with volunteers. Provides general administrative support to rail programs.</td>
<td></td>
</tr>
<tr>
<td>Ashley Coleman</td>
<td>Freight Intern</td>
<td>Shadows staff to gain an understanding of the purpose of outreach and coordination. Shall identify, contact and coordinate outreach efforts with a variety of public and private sector freight transportation stakeholders.</td>
<td></td>
</tr>
<tr>
<td>Valerie Jugger</td>
<td>Senior Clerk</td>
<td>Assist the Freight and Multimodal Office (FMO) Manager in managing the expense budget, travel for FMO staff, all purchase card (P-card) transactions and records, calendar of appointments, incoming correspondence, research, and various reports as required.</td>
<td></td>
</tr>
</tbody>
</table>
RAIL & FREIGHT

The Freight and Multimodal Office (FMO) is charged with creating statewide rail, freight and multimodal operations that supports the development of a congestion and fatality free transportation network, and that supports Florida’s economic growth. The FMO strategic focus is to achieve success through teamwork and efficiency by means of removing institutional, infrastructure and funding bottlenecks to build a well-connected, reliable and safe multimodal network.

Central Office is primarily dedicated to policy/procedure/plan development, quality assurance, safety inspection/compliance and technical assistance. FDOT District Offices handle matters regarding day-to-day operations.

**KEY AREAS OF RESPONSIBILITY**

**RAIL SYSTEM PLAN**

The Florida Rail System Plan guides the state’s freight and passenger rail transportation planning activities and project development. The plan describes the state’s existing rail networks, its challenges and opportunities, and rail-related economic and socio-environmental impacts. The plan is intended to integrate with and expand upon past Florida transportation plans including the Freight Mobility & Trade Plan and the Florida Transportation Plan.

*Florida Statutes 341.302(3)* requires the Department to develop a plan every five years for both freight and passenger rail that not only sets policy, but also identifies and prioritizes rail needs. At the Federal level, the *Passenger Rail Investment and Improvement Act (PRIIA)* of 2008 required states seeking FRA funding to adopt and submit state rail system plans on the same 5-year cycle. With the passage of the FAST Act (*Title 49, Section 22702*) in December 2015 the requirements to adopt and submit state rail plans changed to a 4-year cycle.

The plan can be found here: [Rail Publications](#).

**STATE FREIGHT PLAN: FREIGHT MOBILITY & TRADE PLAN**

The FMTP is Florida’s State Freight Plan that addresses multimodal goods movement in Florida. The Florida Legislature passed House Bill (HB) 599 in 2012, currently *Florida Statutes Section 334.044(33)*, which required the FDOT to develop a Freight Mobility and Trade Plan (FMTP). Thereafter, the FMO Office created an FMTP Addendum October 2017 to incorporate criteria required by the Fixing America’s Surface Transportation Act (FAST Act) *49 USC 70202*. Combined with the FMO Strategic Focus, the FMTP works to promote economic growth and to enhance the inextricable link between freight transportation infrastructure and Florida’s economic vitality.

To receive funding under the National Highway Freight Program (*23 USC 167*), the FAST Act requires each state to develop a state freight plan, which must comprehensively address the state’s freight planning activities and investments (both immediate and long-range). A state may develop its freight plan either separately from, or incorporated within, its statewide strategic long-range transportation plan required by *23 USC 135*. Additionally, *49 USC 70202* requires states to update its freight plan at least every five years, and may update its freight investment plan more frequently than the overall freight plan. FDOT will be updating the state freight plan in 2019.
The Florida Freight Advisory Committee (FLFAC) advises FDOT on freight issues, priorities, projects and funding needs for freight improvements. The FLFAC was established on April 21, 2017 as provided by 81 CFR 71185 and Section 8001 of the FAST Act, and will continue to be a key resource in FDOT’s freight planning processes.

More information on this program and the plans can be found on Freight Moves Florida.

**MOTOR CARRIER SYSTEM PLAN**

The Motor Carrier System Plan builds on the FMTP to formulate solutions for mobility, connectivity, and safety issues as they relate to Motor Carrier Operations. The purpose of the Motor Carrier System Plan is to integrate policy guidance across the Department to address trucking in a holistic manner and to coordinate efforts between offices and agencies that impact motor carriers in Florida.

The Motor Carrier System Plan has no statutory requirements; however, development was specifically coordinated with other modal plans developed under the FLP Office. Together, the full set of modal system plan provide FDOT with a cohesive planning process. The plan highlights critical issues and key performance analyses that are complemented by stakeholder input through outreach; it identifies strategies to address the issues; and finally, it concludes with key recommendations and implementation roles assigned to each strategy.

The plan can be found here: Rail Publications.

**HIGHWAY RAIL GRADE CROSSING SAFETY ACTION PLAN**

The Rail Safety Improvement Act (RSIA) of 2008 mandated the DOTs from the top 10 states with the most highway-rail grade crossing collisions on average from 2006 to 2008 to develop a grade crossing safety action plan. FDOT received approval of the Highway-Rail Grade Crossing Safety Action Plan (SAP) from the Federal Railroad Administration (FRA) on November 25, 2011.

Recently, the passing of the FAST Act mandated a new requirement to have a SAP completed by all states. No deadlines have yet been determined, however. In the meantime, FDOT will continue with our HRGCS program, and continue using our HSIP annual report and our updated SAP to report and address hazard elimination.

The plan can be found here: Rail Publications.

**HIGHWAY-RAIL GRADE CROSSING SAFETY IMPROVEMENT PROGRAM**

The Department works to identify crossings where certain improvements could potentially increase safety, with the goal of reducing fatalities and injuries. Florida uses an inventory of rail system data to produce the annual Safety Index, in which crossings are ranked in order of potential risk. Priority crossings are reviewed and selected crossings undergo Diagnostic Field Reviews performed by the Department’s review teams.

- Projects are reviewed statewide and project selection occurs based on several factors including: safety index, project cost, incident history, corridor emphasis, and input from federal and local governments and transportation partners.
- In the interest of maximizing the impact of limited funding, low cost improvements are also considered. One low cost application the Department works to implement is to install light-emitting diode (LEDs) on east/west crossings to improve warning visibility for the motoring public.
PUBLIC HIGHWAY-RAIL GRADE CROSSING OPENING-CLOSURE PROGRAM
The Public Highway-Rail Grade Crossing Opening-Closure Program promotes the FMO Strategic Focus of building a well-connected, reliable and safe multimodal network. The program accomplishes this specifically by identifying hazardous public highway-rail grade crossing locations, and by identifying redundant and unnecessary public highway-rail grade crossings for potential roadway closure.

Based on Florida Statutes 335.141, the Department has regulatory authority over all public highway-railroad grade crossings in the state, including the authority to issue permits, which are required prior to the opening, and closing of such crossings.

More information on this program can be found in the FMO Office Handbook.

RAIL CAPACITY PROGRAM INSPECTIONS
The Florida Department of Transportation (FDOT) routinely funds improvements for privately owned railroads (as well as connections to seaports and airports) that help meet Florida’s Strategic Intermodal System (SIS) goals.

During the construction process, Department personnel inspect work activities to ensure progress of the project. Construction inspection activities include note and photo taking, progress reporting, and payment invoice approvals.

More information on this program can be found in the FMO Office Handbook.

STATE RAIL SAFETY INSPECTION PROGRAM
FDOT participates in a State Rail Safety Inspection Program. The purpose of the program is to ensure safety of the rail system by inspecting rail industry compliance with federal safety regulations.

This program is supplemental to the Federal Railroad Administration’s efforts in this area, but is required by state law [341.302(8), Florida Statutes]. Inspectors in the State program are required by federal law to be state employees 49 CFR 212.201(c). All inspectors must be certified by the Federal Railroad Administration (FRA). Inspections are done on track, motive power and equipment, signal and train control, operating practices and hazardous material handling to determine compliance with Federal safety regulations. Work is coordinated with FRA inspectors who cover areas throughout the southeastern U.S. Currently, FRA has eight inspectors stationed in Florida.

Inspectors also assist in incident investigation; provide technical expertise and work to educate railroad employees on safe practices. There are currently 31 states that participate in the Rail Safety Program employing safety inspectors in the five rail safety inspection disciplines. All southeastern states have programs with the exception of Georgia, Kentucky and Louisiana.

More information can be found at: State Rail Safety Participation.

FLORIDA RAIL ENTERPRISE PROGRAM
The State of Florida and FDOT created the Florida Rail Enterprise (FRE) to provide statewide governance for all passenger rail projects, stemming from House Bill 1B in 2009. FDOT owns the Central Florida Rail Corridor (CFRC) and the South Florida Rail Corridor (SFRC) on which SunRail and Tri-Rail operate respectively. As a part of the Strategic Focus to build a well-connected, reliable, and safe multimodal network, the Freight and Multimodal Operations Office (FMO) works with Strategic Development and FDOT District rail staff to manage the FRE program.

More information on this program can be found in the FMO Office Handbook.
FLORIDA OPERATION LIFESAVER

Florida Operation Lifesaver is a statewide, non-profit public awareness and education program dedicated to reducing collisions, fatalities, and injuries at highway-rail grade crossings and trespassing on or near railroad tracks. Operation Lifesaver provide public safety education and works to raise rail safety awareness.

The Florida Operation Lifesaver program is administered from the Florida Department of Transportation Freight and Multimodal Operations Central Office in Tallahassee. The Florida Operation Lifesaver program is comprised of volunteers including authorized speakers and trained instructors. These dedicated individuals provide free rail safety education programs across the state. Volunteer activities include speaking to:

- School groups
- Driver education classes
- Community audiences
- Professional drivers
- Law Enforcement officers
- Emergency responders

The programs are supported by the National Operation Lifesaver organization and funded by railroad partners operating within the State of Florida. Operation Lifesaver promotes the three E’s – education, enforcement and engineering – with the end goal of reducing railroad related incidents to keep people safe around the tracks and railway crossings within Florida.

EMERGENCY MANAGEMENT

Rail is subject to a wide array of emergency and incident response situation ranging from weather-related natural disasters to highway-rail crashes to derailments. The focus of the FMO Office activities is to minimize the impacts of these situations and to ensure that rail services are restored as quickly as possible.

FMO provides guidance for statewide planning and response to railroad systems to assist emergency management efforts. The Plan also supports the FMO Strategic Focus by assisting the state in maintaining a well-connected, reliable, and safe approach to before, during and after emergency/disaster conditions.

- Work with railroads and FDOT district offices prior to natural disasters to identify grade crossings that can be closed or must remain open during recovery periods. These include crossings on evacuation routes and primary emergency access routes. The FMO Office maintains a list of these crossings.
- Provide staff at the State Emergency Operations Center (SEOC) during and immediately after a natural disaster to facilitate the restoration of rail service and the movement of emergency supplies by rail to affected areas of the state.
- Work with the Federal Highway Administration (FHWA) and the Federal Emergency Management Administration (FEMA) during disaster clean-up to ensure proper distribution and reimbursement of FEMA recovery funds.
- Assist local law enforcement, the National Highway and Transportation Safety Administration (NHTSA) and Federal Railroad Administration (FRA) as requested during the investigation of highway-rail crashes and train derailments.
- Assist FRA in the investigation of safety-related incidents (injury and fatality) involving railroad employees. Railroad Construction Inspection.

More information on this program can be found in the FMO Office Handbook.
FUNDING

INFRA GRANT PROGRAM
The FAST Act that was signed into law in 2015 subsequently established the Nationally Significant Freight and Highway Projects (NSFHP) program to provide competitive federal grants to nationally and regionally significant freight and highway projects. This type of credit assistance has come to be known as FASTLANE grants, which stands for Fostering Advancements in Shipping and Transportation for the Long-Term Achievement of National Efficiencies. The FAST Act authorized the program at $4.5 billion for fiscal years (FY) 2016 through 2020, including $850 million for FY 2017 to be awarded by the Secretary of Transportation. FASTLANE grants may be used for up to 60 percent of future eligible project costs. Federal assistance other than a FASTLANE grant may be used to satisfy the non-Federal share of the cost of a project receiving a FASTLANE grant, but the total Federal assistance may not exceed 80 percent of future eligible project costs. See 23 U.S.C. 117(j) (2). These nationally and regionally significant freight and highway projects must align with the program goals to:

- Improve the safety, efficiency, and reliability of the movement of freight and people;
- Generate national or regional economic benefits and an increase in global competitiveness of the U.S.;
- Reduce highway congestion;
- Enhance the resiliency.

More information at: U.S. Department of Transportation

BETTER UTILIZING INVESTMENTS TO LEVERAGE DEVELOPMENT (BUILD) GRANT PROGRAM
Authorized and initially implemented under the American Recovery and Reinvestment Act of 2009, the Better Utilizing Investments to Leverage Development, or BUILD Transportation Discretionary Grant program, provides a unique opportunity for the DOT to invest in road, rail, transit and port projects that promise to achieve national objectives.

Previously known as Transportation Investment Generating Economic Recovery, or TIGER Discretionary Grants, Congress has dedicated nearly $5.6 billion for nine rounds of National Infrastructure Investments to fund projects that have a significant local or regional impact. Since 2009, the Program has awarded nearly $1.4 billion in Federal funding to 171 rural projects across the nation, leveraging an estimated $2.5 billion in non-TIGER funding. The 2016 TIGER round alone leveraged $500 million in federal investment to support $1.74 billion in overall transportation investments.

The eligibility requirements of BUILD allow project sponsors at the State and local levels to obtain funding for multi-modal, multi-jurisdictional projects that are more difficult to support through traditional DOT programs. BUILD can fund port and freight rail projects, for example, which play a critical role in our ability to move freight, but have limited sources of Federal funds.

More Information at: U.S. Department of Transportation

FEDERAL-STATE PARTNERSHIP FOR STATE OF GOOD REPAIR GRANT PROGRAM
This program was authorized in Sections 11103 and 11302 of the Passenger Rail Reform and Investment Act of 2015 (Title XI of the Fixing America’s Surface Transportation (FAST) Act, Pub. L. No. 114-94 (2015)); 49 U.S.C. § 24911. Funding under this program was made available by the Consolidated Appropriations Act, 2017, Public Law No. 115-31, Division K, Title I and the Consolidated Appropriations Act, 2018, Public Law No.115-141, Division L, Title I. This program provides $272,250,000 for capital projects within the United States to repair, replace, or rehabilitate qualified railroad assets to reduce the state of good repair backlog and improve intercity passenger rail performance.
Eligible projects repair, replace, or rehabilitate qualified railroad assets and improve intercity passenger rail performance. Eligible capital projects include those that:

- Replace existing assets in-kind;
- Replace existing assets with assets that increase capacity or provide a higher level of service;
- Ensure that service can be maintained while existing assets are brought to a state of good repair; and
- Bring existing assets to a state of good repair.

Eligible Recipients include:

- A State,
- A group of States
- An Interstate Compact,
- A public agency or publicly chartered authority established by one or more States,
- A political subdivision of a State,
- Amtrak, acting on its own behalf or under a cooperative agreement with one or more States, and
- Any combination of the entities described above.

More Information at: Federal Rail Administration

**LAW ENFORCEMENT STRATEGIES FOR REDUCING TRESPASSING PILOT GRANT PROGRAM**

FRA is initiating a “Pilot Grant Program” to assist communities at risk for rail trespassing related incidents and fatalities. The objective of this program is to evaluate the effectiveness of funding local law enforcement activities intended to reduce trespassing on the rail rights-of-way. This program provides $196,357 for enforcement activities focused on enforcing specific railroad trespassing law to reduce rail trespassing incidents and casualties, particularly in areas near railroad trespass “hot” spots. Funding was made available by the Consolidated Appropriations Act, 2016, Pub. L. 114-113, Div. L, Tit. I, 129 Stat. 2242, 2853 (2015), and authorized in 49 U.S.C. § 20108, 49 U.S.C. § 301(6) and 49 U.S.C. § 103(g)-(f). Eligible recipients include:

- The applicant and co-applicant pool is limited to state, county, municipal, local, and regional law enforcement agencies in the U.S.
- Applicants for this grant must have a demonstrated rail trespass problem in their community.
- At least one mile of FRA-regulated railroad mainline track must be within the boundaries of the applying agency’s jurisdiction.

To date, FDOT has only used this program for one project. The City of Lake Worth in Palm Beach County was awarded $75,000 to address railroad trespassing in the City of Lake Worth through enforcement activities and community awareness. The railway accommodates Tri-Rail commuter rail, Amtrak intercity passenger rail, and CSX freight trains.

More Information at: Federal Rail Administration

**CONSOLIDATED RAIL INFRASTRUCTURE AND SAFETY IMPROVEMENTS (CRISI) PROGRAM**

This program was authorized in Section 11301 of the Fixing America’s Surface Transportation (FAST) Act, Pub. L. 114-94 (2015); 49 U.S.C. § 24407. Funding under this program was made available by the Consolidated Appropriations Act, 2018, Division L, Title I, Public Law 115-141. This program provides $318.4M to fund projects that improve the safety, efficiency, and reliability of passenger and freight rail. Projects eligible for funding under this grant program include, but are not limited to:

- Deployment of non-PTC railroad safety technology and rail integrity inspection systems,
- Capital projects,
• Highway-rail grade crossing improvement projects,
• Rail line relocation and improvement projects,
• Regional rail and corridor service development plans and environmental analyses,
• Any project necessary to enhance multimodal connections or facilitate service integration between rail service and other modes,
• The development and implementation of a safety program or institute, and
• Any research to advance any particular aspect of rail-related capital, operations, or safety improvements.

Positive Train Control projects for intercity passenger and freight rail are eligible under other project eligibility categories.

Eligible Recipients include:
• State;
• Group of States;
• Interstate Compact;
• Public agency or publicly chartered authority established by one or more States;
• Political subdivision of a State;
• Amtrak or another rail carrier that provides intercity rail passenger transportation;
• Class I railroad or Class III railroad;
• Any rail carrier or rail equipment manufacturer in partnership with at least one of the entities described in bullets (1) through (5);
• Transportation Research Board together with any entity with which it contracts in the development of rail-related research, including cooperative research programs;
• University transportation center engaged in rail-related research; or
• Non-profit labor organization representing a class or craft of employees of rail carriers or rail carrier contractors.

More Information at: Federal Rail Administration

PTC SYSTEMS GRANTS UNDER THE CONSOLIDATED RAIL INFRASTRUCTURE AND SAFETY IMPROVEMENTS (CRISI) PROGRAM

PTC system funding was authorized under Section 11301 of the Fixing America’s Surface Transportation (FAST) Act, Public Law 114-94 (2015), 49 U.S.C. 24407; and funded in the Consolidated Appropriations Act, 2018, Div. L, Title I, Public Law 115-141 (2018 Appropriation). These grants will fund the deployment of PTC system technology for intercity passenger rail transportation, freight rail transportation, and/or commuter rail passenger transportation. Projects eligible for funding under this program that deploy PTC systems technology for intercity passenger rail transportation, freight rail transportation, and/or commuter rail passenger transportation include:

• Back office systems;
• Wayside, communications, and onboard hardware equipment;
• Software;
• Equipment installation;
• Spectrum;
• Any component, testing, and training for the implementation of PTC systems; and
• Interoperability.

Congress appropriated $250M to the program through two NOFOs in 2018. Maintenance and operating expenses incurred after a PTC system is placed in revenue service are ineligible.

Eligible recipients include:
• A State;
A group of States;
An Interstate Compact;
A public agency or publicly chartered authority established by one or more States;
A political subdivision of a State;
Amtrak or another Rail Carrier that provides Intercity Rail Passenger Transportation (as defined in 49 U.S.C. § 24102);
A Class II railroad or Class III railroad (as defined in 49 U.S.C. § 20102);
Any Rail Carrier or rail equipment manufacturer in partnership with at least one of the entities described in 1-5 above;
The Transportation Research Board together with any entity with which it contracts in the development of rail-related research, including cooperative research programs;
A University transportation center engaged in rail-related research; or
A non-profit labor organization representing a class or craft of employees of Rail Carriers or Rail Carrier contractors.

More Information at: Federal Rail Administration

RAIL LINE RELOCATION (RLR) & IMPROVEMENT CAPITAL GRANT PROGRAM
Authorized under SAFETEA-LU in 2005, Congress did not appropriate funding for this program until 2008. Only states, political subdivisions of states (such as a city or county), and the District of Columbia are eligible for grants under the program. Grants may only be awarded for construction projects that improve the route or structure of a rail line and:

- are carried out for the purpose of mitigating the adverse effects of rail traffic on safety, motor vehicle traffic flow, community quality of life, or economic development; or
- involve a lateral or vertical relocation of any portion of the rail line.

Congress appropriated $90.1M to the program through FY 2011 and 23 Rail Line Relocation and Improvement grants were obligated within the Fiscal Year 2014.

More information at: Federal Rail Administration

TRANSPORTATION INNOVATION AND FINANCE (TIFIA) LOANS
A Federal credit assistance program for major surface transportation projects of national or regional significance. Eligible projects include highway, transit and rail.

There are three types of assistance under this program:

- Secured direct loans (max 35 years);
- Loan guarantees (to non-Federal lender);
- Standby lines of credit.

To date, FDOT has only used this program for five projects:

- Wekiva Parkway ($587.4M TIFIA loan);
- I-4 Ultimate ($949M TIFIA loan);
- Port of Miami tunnel ($341M TIFIA loan);
- Miami Intermodal Center ($270M TIFIA loan); and
- I-595 Corridor roadway improvements in Broward County ($603M TIFIA loan).

More Information at: U.S. Department of Transportation
RAILROAD REHABILITATION AND IMPROVEMENT FINANCING (RRIF) LOANS
A Federal direct loan/loan guarantee program specifically for financing railroad capital improvements up to a program total of $35B, with $7B reserved for non-Class I railroads. Loans up to 100% of cost with repayment up to 35 years. Funding may be used to:

- Acquire, improve or rehabilitate intermodal or rail equipment/facilities;
- Refinance outstanding debt incurred for the purpose above; and
- Develop/establish new intermodal or railroad facilities.

This program is typically accessed by private railroads, and has not yet been used by any Florida railroads.

More information at: U.S. Department of Transportation

NATIONAL HIGHWAY FREIGHT PROGRAM
The purpose of the National Highway Freight Program, which was established by the FAST Act in 2015, is to improve the efficient movement of freight on the National Highway Freight Network (NHFN) and support many goals in freight planning nationwide.

These goals include:

- Invest in infrastructure and operational improvements that strengthen economic competitiveness, reduce congestion, reduce the cost of freight transportation, improve reliability and increase productivity;
- Improve the safety, security efficiency and resiliency of freight transportation in rural and urban areas;
- Improve the state of good repair of the NHFN;
- Use innovation and advanced technology to improve the NHFN, as well as, it’s safety, efficiency, and reliability;
- Improve the efficiency and productivity of the NHFN;
- Improve state flexibility to support multi-state corridor planning, address highway freight connectivity, and reduce its environmental impacts.

Funding features include contract authority from the Highway Account of the Highway Trust Fund, subject to the overall Federal-Aid obligation limitation. As previously in accordance under MAP-21, the FAST Act directs FHWA to apportion funding as a lump sum for each State and then divides the total among apportioned programs. A proportionate share of each state’s respective NHFP funding is set aside for the State’s Metropolitan Planning Program. This occurs prior to apportionment, and the set-aside funds are combined with the state’s regular Metropolitan Planning Program funds.

More information at: U.S. House of Representatives

The National Highway Freight Network that was established by The FAST Act consists of the following components:

- The Primary Highway Freight System;
- Critical Rural Freight Corridors;
- Critical Urban Freight Corridors;
- Portions of the Interstate System that are not part of the PHFS.

The FAST ACT designates the PHFS and requires the Federal Highway Administration (FHWA) to select it again every five years. It also provides for the designation of Critical Rural Freight Corridors and Critical Urban Freight Corridors. The Federal Highway Administrator will determine the percentage of the national total of PHFS mileage that is located within each individual state.

More information at: Federal Highway Administration
FLORIDA RAIL ENTERPRISE PROGRAM
The Florida Rail Enterprise (FRE) annually receives $60 million in funds from the Transportation Regional Incentive Program to enhance the state’s rail system to improve freight and passenger mobility. The Florida Department of Transportation, through the FRE, is authorized to use funds provided pursuant to Florida Statute (F.S.) 201.15(4)(a)4. to fund:

- Up to 50 percent of the nonfederal share of the costs of any eligible passenger rail capital improvement project.
- Up to 100 percent of planning and development costs related to the provision of a passenger rail system, including, but not limited to, preliminary engineering, revenue studies, environmental impact studies, financial advisory services, engineering design, and other appropriate professional services.
- The high-speed rail system.
- Projects necessary to identify or address anticipated impacts of increased freight rail traffic resulting from the implementation of passenger rail systems as provided in F.S. 341.302(3)(b).

More information at: The Florida Legislature

INTERMODAL LOGISTICS CENTER (ILC) INFRASTRUCTURE SUPPORT PROGRAM
The Intermodal Logistics Center (ILC) Infrastructure Support Program is a statewide initiative used to support on-site investments at a designated ILC. This program requires the applicant to cover at least 50 percent of the total project cost. ILC’s that meet SIS criteria can use statewide SIS managed funds to support improvements to designated SIS intermodal connectors that link the ILC to the state’s major highway and rail corridors, and from there to consumer and business markets in Florida and other states. Rail connections to SIS facilities are eligible for a state match of up to 75% and roadway connections to a SIS facility are eligible for a state match of up to 100%.

More information at: Freight Moves Florida

STATE INFRASTRUCTURE BANK (SIB) LOANS
The State Infrastructure Bank (SIB) is a loan and credit enhancement program used to leverage State Federal-aid (Title 23) highway funds to increase transportation project feasibility. The SIB can provide loans and other assistance to public entities on projects eligible for assistance under state and federal law, but cannot provide assistance in the form of a grant. Projects requiring a SIB loan must provide increased mobility for the state’s transportation system, or provide intermodal connectivity with airports or other transportation hubs.

More information at: U.S Department of Transportation

STRATEGIC INTERMODAL SYSTEM (SIS) PROGRAM
The Strategic Intermodal System (SIS) program is a state-funded grant program to be used for projects of interstate, statewide and regional significance. Grant funding is administered by FDOT and projects for any transportation mode are eligible provided they are SIS designated and meet the specific project eligibility criteria for that mode. Some examples of projects eligible for funding include: multi-modal terminal facilities and connections, terminal buildings, and terminal buildings and gates needing capacity improvements to facilitate the movement of people and goods.

For Urban Fixed Guideway Transit Terminals, for example, there is a potential for funding of 50% for each SIS Hub. For rail, eligible projects include any type of capacity or rehabilitation project. Rail projects typically require a 50% match from Class I, Class II railroads, and a 25% match from Class IIIs. Rail projects for privately owned lines are subject to a benefit-cost analysis. Projects selected for rail funding must also be consistent with the goals and objectives outlined in the Florida Rail System Plan.

More information, see Figure 5.4 in the 2016 Strategic Intermodal System Handbook.
HIGHWAY-RAIL OPERATIONS FUNDING

Funds for this program were originally authorized under the Safe, Accountable, Flexible, and Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) program (formerly known as "Section 130") used for Highway-Rail Crossing Hazard Elimination and Highway-Rail Crossing Warning Devices. The FAST Act increased the set-aside amount for each fiscal year. In addition, the Consolidated Appropriations Act of 2016 (Public Law 114-113) provided a one-time increase for fiscal year 2016. The annual set-aside via the FAST ACT is:

- FY 2016: $350 million
- FY 2017: $230 million
- FY 2018: $235 million
- FY 2019: $240 million
- FY 2020: $245 million

The funds are apportioned to States by formula. In accordance with 23 USC 130(f), Section 130 projects are funded at a 90% federal share.

Safe Routes to Schools funding program provides federal-aid highway funds to State Departments of Transportation to make bicycling and walking to school a safer and more appealing transportation alternative.

More information at: Federal Highway Administration

The Federal Highway Administration’s Rail- Highway Grade Crossing Handbook specifically states: “The first alternative that should always be considered for a highway-rail at-grade crossing is elimination.” Elimination can be accomplished by grade separating the crossing, closing the crossing to highway traffic, or closing the crossing to railroad traffic through the abandonment or relocation of the rail line. The Department also conducts a corridor analysis each year that provides notice of potential closures to stakeholders. The Department participates in this effort with incentive funds of $7,500 per crossing closure.

<td>Liaison with District and FPC staff on projects/programming. Track project programming and spend-downs, coordinate with work program office staff. Manage the annual FSTED application cycle. Coordinate district review of FSTED projects. Coordinate the state’s participation in federal ferry boat programs. Work with SeaCIP consultants to manage database program and needed updates. Manage contracts and coordinate Public Transportation Grant Agreements (PTGAs).</td>
</tr>
</tbody>
</table>
SEAPORT OFFICE ACTIVITIES

The Seaport Office (the “Office”) is responsible for assisting in the development of Florida's 15 public seaports through statewide seaport system planning, and coordinating seaport project planning and funding with FDOT Strategic Intermodal System (SIS) planning and implementation, and the Florida Seaport Transportation and Economic Development (FSTED) Council. Seaports submit specific project funding requests to the Florida Department of Transportation (FDOT or Department) and FSTED. Projects are evaluated for consistency with local, regional and statewide plans and priorities. Funded projects are included in FDOT’s Five-Year Work Program.

A variety of specific project support and funding programs are managed by the Seaport Office. These programs include the FSTED Program (section 311.07, F.S.) and the Strategic Port Investment Initiative (SPII; section 311.10, F.S.). As of July 2018, the minimum annual funding level for these two programs is $60 million (FSTED: $25 million; and, SPII: $35 million). An additional $35 million is allocated each year for debt payments on seaport project Bonds that were issued in 1996, 1999 and fiscal year 2013. FDOT grant funds that are allocated to seaports generally require local matching funds of 25% to 50% depending on the project type. The Office also coordinates data, monitors issues and prepares a profile of the state’s coastal and inland waterways, including system constraints and needs, and coordination with federal agencies to implement federal ferry boat funding program.

KEY AREAS OF RESPONSIBILITY

PROGRAM PLANNING

- Develop, in coordination with stakeholders, the Florida Seaport System Plan and the Florida Waterway System Plan. These statewide plans provide an overview and vision; profiles of the state seaports and waterway systems; statewide statistics, trends and conditions; stakeholder perspectives; infrastructure funding and investments; and, the focus areas and strategies to support the seaport and waterways of the state.
- Implement funding programs for seaport and waterway projects.
- Conduct studies to support seaport system development, as well as other associated seaport research.
- Perform and coordinate industry related research, data collection and analysis to support seaport and waterway programs.
- Assist in policy formulation affecting seaports at the state and federal level.
- Assist district staff to implement the Intermodal Access program.
- Coordinate with studies conducted by Metropolitan Planning Organizations or district offices, as requested.
- Coordinate with Florida seaports in their master planning work, as requested.
- Integrate data from the FSTED Council’s annual Seaport Mission Plan into Department resources and plans.
- Provide information and technical support to FDOT management, the Legislature, federal agencies, state agencies, districts staff, local governments, businesses and citizens as required.
FINANCIAL PROJECT MANAGEMENT

- Work with partners to identify, evaluate and program strategic seaport project funding.
- As a financing and advisory partner with the FSTED Council, coordinate the review and financing of the FSTED program.
- Assist in coordinating and financing oversight of the seaport bond programs.
- Develop policies, procedures, and management system components relative to seaport program functions.
- Monitor and report on project status and Public Transportation Grant Agreement (PTGA) status statewide.
- Coordinate the statewide’s participation in federal Ferry Boat programs.

FLORIDA SEAPORT TRANSPORTATION AND ECONOMIC DEVELOPMENT (FSTED) COUNCIL

While Florida’s ports are independently governed and operated, in 1990, the Legislature adopted the foundational language now contained in Chapter 311, F.S. This Chapter created the Florida Seaport Transportation and Economic Development (FSTED) program, established a collaborative relationship between FDOT and the seaports and codified an annual seaport grant program provisions in sections 311.07 and 311.09, F.S.

The FSTED Program is managed by the FSTED Council, which consists of fifteen public port directors, and the Secretary of FDOT and the Executive Director of the Department of Economic Opportunity. The FSTED Council annually solicits and approves project applications submitted by each of the individual seaports.

The FSTED Council is also responsible for preparing a five-year Florida Seaport Mission Plan with annual updates, and for the Small County Dredging Program.

As per section 311.09(11), F.S., the council has selected the Florida Ports Council (FPC) serve as FSTED Council staff, providing administrative support services on matters related to FSTED Council activities and the FSTED Program. In addition, by agreement, the FPC staff provides similar services to the Florida Ports Financing Commission.

The Florida Ports Council (FPC), a Florida nonprofit corporation, serves as the professional association for Florida’s 15 deepwater seaports and their management. The FPC is governed by a Board of Directors comprised of the fifteen port directors with staff support located in Tallahassee. The FPC provides leadership, advocacy and information on seaport-related issues before the Legislative and Executive Branches of State and Federal Government.
The 2015 Florida Seaport System Plan, Florida Waterways System Plan and a combined Executive Summary, were published in 2016. The plans provide a historical perspective, current review and future look at Florida’s seaport and waterways systems. The 2015 Florida Seaport System Plan discusses the factors influencing the growth and development of Florida ports, and the goals and strategies to meet user demands and encourage growth, efficiency and intermodal connectivity. The 2015 Florida Waterways System Plan provides a physical and use profile of the state’s coastal and inland waterways and identify issues and factors affecting uses of the waterways.

Several other studies and informational documents can be found on the Documents and Publications page of the Seaport Office webpage: fdot.gov/seaport/publications.

FUNDING

The statutorily required minimum annual funding to the seaport program totals $95 million. This includes $25 million in grants for the FSTED Program; $35 million in grants for the Strategic Port Investment Initiative (SPII); which typically comes from Strategic Intermodal System funding) and $35 million to support debt payments on the 1996, 1999 and the 2013 series bond programs.

FSTED FUNDS

Chapter 311.07, F.S. requires that the Department allocate a minimum of $25 million annually to fund the FSTED Program. Projects are solicited by the FSTED Council annually in accordance with the Department’s deadlines for building the tentative work program. FDOT’s staff, including the district seaport coordinators, reviews the projects for consistency with the Florida Transportation Plan. Central Office staff also assess the net transportation and economic benefits from each project, and use this information to rank the projects into three categories (high, medium, and low).

STRATEGIC PORT INVESTMENT INITIATIVE (SPII)

The Strategic Port Investment Initiative (SPII; section 311.10, F.S.) is for strategic seaport project funding. These projects implement Department plans and policies for achieving the state’s economic development goals of becoming a hub for trade, logistics, and export oriented activities, and often focus on increasing the efficiency of cargo movements. This program is funded from the State Transportation Trust Fund and requires an annual minimum of $35 million in project investments.
THE SEAPORT INVESTMENT PROGRAM – BOND FUNDS

During the 2012 legislative session, the Legislature created section 339.0801, F. S., the Seaport Investment Program. This program authorized a bond issue in 2013. FDOT allocated approximately $150 million of project funding in fiscal year 2014, as a result of this program. FSTED and FDOT developed the allocation list from projects identified by each of the ports as top priorities needed to implement their capital improvement plans.

PAST BOND PROGRAMS

The legislature authorized two previous bond programs, in 1996 and again in 1999. These funds were allocated to projects completed in the mid-2000s, and the Department is currently making payments from the State Transportation Trust Funds to repay these bonds over a 30-year period.

STRATEGIC INTERMODAL SYSTEM

The Strategic Intermodal System (SIS) program is a state-funded grant programs to be used for projects of interstate, statewide and regional significance. Grant funding is administered by FDOT and projects for any transportation mode are eligible provided they are on a SIS designated facility and meet the specific project eligibility criteria for that mode. For seaports, eligible projects include on-port roadways or rail projects that link directly to a SIS connector, cranes, warehouses, container and bulk storage areas, Intermodal Container Transfer Facilities (ICTFs), and capacity dredging projects.

STATE INFRASTRUCTURE BANK (SIB) LOANS

The State Infrastructure Bank (SIB) is a loan and credit enhancement program used to leverage funds to increase transportation project feasibility. The SIB can provide loans and other assistance to public entities, to finance eligible projects for assistance under state and federal law, but cannot provide assistance in the form of a grant. Projects requiring a SIB loan must provide increased mobility for the state’s transportation system, or provide intermodal connectivity with airports or other transportation hubs.

FDOT DISTRICT INTERMODAL FUNDS

FDOT Districts receive Intermodal Development funding each year – distributed by formula according to their population and gas tax revenue. These funds can be used for intermodal projects for any mode as authorized in section 341.053(6), F.S. Districts use these funds to support important smaller projects and, in some cases, to support planning work for smaller seaports without in-house staff. Districts also have the option of programming available district discretionary funding on seaport projects, as available.

SEAPORT OPERATIONS

Seaports finance most of their needed infrastructure through revenues from leases and other normal port operations. Seaports also borrow funds from the private lending market; most seaports also have the ability to issue bonds to fund needed improvements.

LOCAL OR FEDERAL GOVERNMENT PROGRAMS

Ports may also receive funding support from local city or county programs and resources. Additionally, seaports may directly apply for a variety of federal grant and funding programs.

PUBLIC PRIVATE PARTNERSHIPS

Most of Florida’s seaports are landlord ports, meaning they lease land to terminal operators who handle day-to-day operations at the port. Many of Florida’s seaports also partner with their terminal operators and steamship lines to
share the costs associated with major improvements. This could mean the port completes port-authority infrastructure, such as dredging and/or bulkheads, while the terminal operator invests in facilities such as a needed warehouse. For example, JAXPORT’s TraPac container terminal was financed through a partnership between Mitsui O.S.K. Lines (MOL) and the seaport, with some state assistance, primarily through the SIB loan program and FSTED funds.

TRANSIT OFFICE ACTIVITIES

The mission of the FDOT Transit Office is to "identify, support, advance and manage cost effective, efficient and safe transportation systems and alternatives to maximize the passenger carrying capacity of surface transportation facilities."

The FDOT Transit Office consists of three sections (Grants Administration; Transit Operations; Transit Planning) each of which has specific areas of responsibility.

*As of July 5, 2018, FDOT Program & Resource Plan

KEY AREAS OF RESPONSIBILITY

STATE NEW STARTS PROGRAM

- Work with Districts and project sponsors to qualify New Starts projects through FTA process;
- Allocate and program funding for selected projects;
- Work with project sponsors and FTA to implement selected projects.

EVALUATE STATE LEGISLATIVE PROPOSALS AND FEDERAL AUTHORIZATIONS AND APPROPRIATIONS

- Participate in Legislative Bill development;
- Analyze Legislative Bills;
- Analyze and comment on Federal Authorization proposals;
- Incorporate new and changing Federal law and guidance into state administered programs.

REPRESENT FDOT ON STATEWIDE AND NATIONAL ORGANIZATIONS, COMMITTEES, COMMISSIONS, ETC.

- AASHTO Standing Committee on Public Transportation;
- APTA State Affairs Committee;
- Florida Commission for the Transportation Disadvantaged;
- Florida Public Transportation Association;
- National Center for Transit Research;
- Association for Commuter Transportation.

FLORIDA VEHICLE PROCUREMENT PROGRAM

- Design of vehicle and equipment specifications;
- Establishment of vendor contracts;
- Procurement of transit vehicles and equipment;
- Ensuring vendor warranty compliance for local agency grantees under the Federal Sections 5310 and 5311 programs;
- Management and oversight of inspection facilities and operations;
• Coordinate and implement a statewide vehicle procurement program to assist transit agencies in acquiring transit vehicles of high quality at lower costs;
• Ensure vendor warranty compliance for local agency grantees under the Federal Sections 5310 and 5311 programs.

TECHNICAL ASSISTANCE AND TRAINING PROGRAMS
• Oversight of vehicle Warranty procedures;
• Crashworthiness Assessment testing;
• Mechanics Training Program;
• Mechanic Apprenticeship Program;
• Regional Training Center;
• Establish Contracted Maintenance Services;
• District technical assistance;
• Maintenance and vehicle audits;
• Management and oversight of inspection facilities and operations;
• Management of the crashworthiness program that provides crash standards for paratransit buses procured under the statewide vehicle procurement program;
• Provide technical assistance to transit systems and district offices on equipment leases, operating requirements, equipment procurement specifications, requirements, and modifications;
• Provide technical assistance to transit systems on maintenance and safety matters relating to the purchase and operation of vehicles;
• Provide technical assistance, management and coordination for the Statewide Mechanic's Training Program for transit system employees. Develop maintenance inspection and repair procedures for use by transit systems. Perform on-site inspections of vehicles to ensure compliance with proper maintenance procedures and contractual agreements;
• Research and identify existing training, technical assistance, and education programs which may be utilized by the Department and transit agencies;
• Propose, review and analyze state and federal legislation pertaining to transit operational matters;
• Provide management, coordination and direction to the State Fleet Leasing Program. Develop procedures for leasing and accountability of equipment;
• Act as the Department's representative in matters relating to transit operations and provide liaison to the Florida Public Transit Association on technical and operational issues.
RAIL FIXED GUIDEWAY SAFETY AND SECURITY OVERSIGHT PROGRAM

- Establish safety and security standards;
- Ensure Compliance with Federal regulations;
- Ensure Compliance with state standards;
- Establish implementation guidelines;
- Conduct safety and security audits every 3 years;
- Maintain web based document management system;
- Prepare and submit annual reports;
- Provide Technical assistance and training related to safety;
- Coordinate, establish, and develop state and federal fixed guideway transportation safety and security standard through the Safety and Security Oversight Program for Florida Fixed Guideway Transportation Systems Standards Manual (Incorporated by Rule 14-15.017, Florida Administrative Code) for the management, implementation, and oversight of safety and security standards for Florida fixed guideway transportation systems;
- Monitor transit industry developments, legislation and federal and state regulatory issues that could influence or impact fixed guideway and bus transit system safety programs;
- Develop and implement a statewide safety and security review program for bus and fixed guideway transit systems.

BUS SAFETY AND SECURITY PROGRAM

- Establish safety and security standards;
- Establish implementing procedures;
- Oversee/ensure program implementation/compliance;
- Conduct safety and security audits every 3 years;
- Technical assistance and training;
- Coordinate, establish, and develop state and federal bus safety and security standards through Rule 14-90, Florida Administrative Code (Equipment and Operational Safety Standards for Bus Transit Systems) for management, implementation, and oversight of safety and security standards for Florida bus transportation systems;
- Develop and implement research activities related to bus and fixed guideway transportation safety and security programs and facilities and equipment in support of district and transit agency needs;
- Manage the Florida Transit Safety Network which serves as a forum by which transit agencies can discuss transit safety issues, opportunities, best practices, and provide a stakeholder input for any proposed modifications to Rule 14-90, F.A.C. as a result state or federal MAP-21 requirements.

SUBSTANCE ABUSE MANAGEMENT PROGRAM

- Oversee compliance with Federal regulations for 5311 Grantees;
- Establish implementing procedures;
- Oversee/ensure program implementation/compliance;
- Conduct on-site audits once each year;
- Technical assistance and training;
- Establish/manage statewide testing services contract;
- Prepare/submit annual report to FTA;
- Implementation and oversight of the Public Transit Office Substance Abuse Program in accordance with federal regulations.
• Coordinate, develop and implement a statewide third-party contract to provide drug and alcohol testing services and technical assistance to transit agencies for compliance with federal regulations;
• Conduct drug and alcohol compliance record reviews of Section 5311 sub recipient agencies.

**OTHER**

• Provide emergency response functions;
• Manage research studies/contracts.

**PLANNING AND TECHNOLOGY**

• Provide training and technical assistance in the implementation of Transit Development Plans (TDP);
• Establish requirements and monitor implementation of Transit Development Plans;
• Support District review of Transit Development Plans;
• Provide guidance and support on national and statewide transit planning policies and procedures;
• Maintain national transit databases and transit information for FDOT general planning activities;
• Strategic planning for the integration of transit into the Department’s Statewide Intelligent Transportation Systems Plan;
• Develop, review and report statewide transit performance measure for various department reports;
• Support the networking of transit planning professionals through a listserv, conference calls on topical issues, and coordination of panels at the two annual conferences of the Florida Public Transportation Association;
• Develop a design handbook for transit agency use in the design and construction of stations and stops consistent with federal Americans with Disabilities Act (ADA) requirements;
• Technical assistance to local agencies in the planning, procurement, acquisition and implementation of Advanced Public Transportation Systems (transit ITS);
• Support the Statewide Toll and Express Lanes Team and assist in developing policies for transit in express lanes;
• Develop guidance for buses on shoulders and buses operating in exclusive lanes;
• Conduct training and develop guidance for FDOTs role in the New Starts process;

**TOOLS**

• Develop, maintain, support and provide training for various technical tools that assist District staff and transit agencies in the area of transit planning. These include:

  − Urban Integrated National Transit Database, ([Urban iNTD](#)), is a database of quantitative transit information used for performance monitoring, planning and peer review. This system provides an easy to use database tool for searching and reporting transit information for any agency required by FTA to report National Transit Data. The tool provides historical data, performance data, operational data and information on key variables to compare with peer transit agencies of similar service size and types. Although the system was developed to assist FL transit agencies, it has become popular worldwide because of its accessibility (free on the web) and user friendliness with over 1,000 users;

  − Rural Integrated National Transit Database, ([Rural iNTD](#)), is a system that integrates the rural NTD data dating back to 2007 (i.e., the first year the data were made available by FTA) and provides user-friendly tools to facilitate data access and performance analysis;
Florida Transit Data Exchange, (FTDE), is an online repository for transit agencies’ GIS and GTFS files that can be freely downloaded by the general public. It also provides transit agency contact information and other metadata regarding specific agency data.

Automated Transit Stop Inventory Model, (ATSIM), is a handheld tool which geocodes bus stop locations and provides an accompanying computerized database, editable in the field, to maintain up-to-date bus stop characteristics inventory. This asset management tool issues work order and assists in identifying assets that need to be repaired or replaced;

Transit Boarding Estimation and Simulation Tool, (TBEST), is a GIS based transit ridership forecasting tool, which estimates ridership under changing demographics, economic, and service supply conditions. It determines ridership at the stop level to compare various route alternatives and estimates accessibility of populations and jobs to transit at a local level.

TRAINING

• National Transit Database, supports transit agency compliance with Federal Transit Administration reporting requirement and improves quality of data for performance monitoring;
• Design requirements for Transit Facilities to enhance safety, improve mobility and support the American with Disabilities Act;
• Transit Development Planning, supports the preparation of Transit Development Plans and communicates expectations;
• Transit Capacity and Quality of Service, supports collection and use of qualitative and customer oriented transit performance;
• Transit Oriented Design, supports local governments in the development of Comprehensive Plans and Local Development Regulations where desired;
• Transit New Starts Process;
• FTA Simplified Trips on Project (STOPs) model.

RESEARCH

• Conduct innovative transit planning research and explore new transit technologies with our partner universities around the state.

PERFORMANCE MONITORING

• Develop and monitor statewide transit performance measures for incorporation into various Department reports;
• Publishes the Florida Transit Information Handbook every year containing key performance measures for each transit system in the state. The report is widely used for public information and satisfies one requirement of section 341.071, Florida Statutes;
• Collect Farebox Recovery Report per section 341.071, Florida Statutes. Data is collected on farebox recovery and agency strategies to improve farebox recovery ratio.

COMPLETE STREETS AND CONTEXT SENSITIVE DESIGN

• Explore the integration of transit into the Department’s Complete Streets initiatives.

INTRA-AGENCY COORDINATION

• Provide data and make recommendations for tracking Florida’s transit progress in the FTP, Short Range Component, Program Objectives and Accomplishments, Transportation Commission, etc;
• Participate in the ongoing improvements for the Florida Standard Urban Transportation Modeling Systems through joint projects and participation on the working groups and committees as requested;
• Participate in training on community planning issues with the Policy Planning office;
• Participate on Design Office teams developing the Florida Greenbook and FDOT Design Manual;
• Member of the Florida team for AASHTO’s Greenbook.

TRANSPORT GRANTS

FEDERAL GRANT PROGRAMS
• Make application for annually appropriated funds;
• Submit quarterly financial and progress milestone reports;
• Develop program guidance and procedures;
• Sub allocate funds to the Districts;
• Develop statewide program of projects;
• Monitor DBE compliance and reporting;
• Monitor and submit Title VI reports;
• Process orders for the 5310 Enhanced Mobility of Seniors and Individuals with Disabilities Program;
• Programs managed include: 5305(d) MPO Transit Planning, 5307 Urbanized Area formula program, 5339 Bus and Bus Facilities Discretionary program, 5311 Rural Area formula program;
• Compile and submit annual federal program performance measures reports;
• Submit FFATA reports to OMB.

STATE GRANT PROGRAMS
• Develop program guidance and procedures;
• Sub allocate funds to the Districts;
• Develop tools and resources for transit providers (urban and rural) and commuter assistance programs;
• Programs managed include: Public Transit Block Grant, Service Development, Transit Corridor, Park and Ride, Commuter Assistance.

TECHNICAL ASSISTANCE AND TRAINING
• Operators Training and Network;
• Transit Marketing Network;
• Statewide Technical Assistance and Training Program for Transit Agencies;
• TDM Training and Certification Program;
• TDM Clearinghouse and Research;
• Rural Transit Technical Assistance and Training;
• Regional Training Centers;
• Individual District Training;
• District New Employee Training.

OTHER
• Provide emergency support functions;
• Manage research studies and contracts;
• In cooperation with the Operations Section, monitor District sub-recipient oversight.

FUNDING
Many federal and state transportation funding programs are available to provide assistance to local transit agencies and planning agencies and organizations, including those programs that are funded by the Florida Department of Transportation (FDOT) or other state programs and those funded by the United States Department of Transportation through the Federal Transit Administration (FTA) and the Federal Highway Administration (FHWA). Provided within this
section is a summary of each program, applicant and project eligibility criteria, funding participation, and the process for receiving an allocation or “apportionment.”

FDOT TRANSIT FUNDING PROGRAMS

**Commuter Assistance Program**
The Commuter Assistance Program was established to encourage public/private partnerships to provide brokerage services to employers and individuals for carpools, vanpools, express bus service, subscription transit service, group taxi services, heavy and light rail, and other systems designed to increase vehicle occupancy. The program encourages the use of transportation demand management strategies including employee trip reduction planning; Transportation Demand Management Association activities; alternative work hour programs such as telecommuting and compressed work weeks; parking management; and bicycle and pedestrian programs. Funding for the Commuter Assistance Program is allocated to each FDOT district based on a statewide assessment of Commuter Assistance Program need. For more information, see Commuter Assistance Program.

**County Incentive Grant Program (CIGP)**
The purpose of the program is to provide grants to counties to improve a transportation facility (including transit) that is located on the State Highway System or that relieves traffic congestion on the State Highway System. CIGP funds are distributed to each FDOT district office by statutory formula. The District ranks the projects according to the selection criteria and selects projects, as funds are made available. Eligible projects include:

- Projects that improve the mobility on the State Highway System (SHS);
- Encourage, enhance, or create economic benefits;
- Foster innovative public-private partnerships;
- Maintain or protect the environment;
- Enhance intermodal activity and safety;
- Projects that advance other projects;
- New technologies such as intelligent transportation systems that enhance the efficiency of projects;

For more information, see Transit Resource Guide.

**Intermodal Development Program**
The Intermodal Development Program was developed to provide funding for major capital investments in fixed-guideway transportation systems; access to seaports, airports and other transportation terminals; and construction of intermodal or multimodal terminals. FDOT is authorized to fund projects within the Intermodal Development Program, which are consistent, to the maximum extent feasible, with approved local government comprehensive plans of the units of local government in which the project is located. Eligible projects include:

- Major capital investments in public rail and fixed-guideway transportation facilities and systems which provide intermodal access; road, rail, intercity bus service, or fixed-guideway access to, from, or between seaports, airports, and other transportation terminals;
- Construction of intermodal or multimodal terminals;
- Development and construction of dedicated bus lanes;
- Projects that otherwise facilitate the intermodal or multimodal movement of people and goods

For more information, see Intermodal.
New Starts Transit Program (NSTP)
The New Starts Transit Program was established by the 2005 Florida Legislature to assist local governments in developing and constructing fixed-guideway and bus rapid transit projects to accommodate and manage urban growth and development. A secondary purpose of the program is to leverage State of Florida funds to generate local transportation revenues and secure Federal Transit Administration (FTA) funding for Florida projects.

Eligible projects include those capital projects that support the Strategic Intermodal System (SIS). NSTP projects may be used to support final design, right-of-way acquisition, and construction projects. The NSTP will follow the selection guidelines of the FTA Section Major Capital Investment Program. Proposed projects should have stakeholder support, be included in local plans, and have a dedicated funding commitment. Funds may be transferred from FDOT’s Central Office Incentive Account to any FDOT district office and are programmed on a “dollar for dollar” basis with dedicated local funding. For more information, see Florida New Starts Program.

Park and Ride Lot Program
The statewide Park and Ride Lot Program were initiated in 1982 to provide organized, safe parking for vehicles constantly congregating on roadsides. The program provides for the purchase and/or leasing of private land for the construction of park and ride lots, the promotion of these lots, and the monitoring of their usage. This program is an integral part of the commuter assistance program efforts to encourage the use of transit, carpools, vanpools and other high occupancy modes. It is essential in efforts to meet federal, state, regional and local goals for reducing single occupant vehicle travel. FDOT has established criteria for park and ride planning to assist in siting, sizing, and disposal of park and ride facilities. These criteria are contained in the State Park and Ride Lot Planning Handbook. Local agencies may request the use of Park and Ride Lot Programs funds by filing a project proposal with an FDOT district office, which sends a project priority list to FDOT’s Central Office. FDOT’s Central Office determines which projects will be funded. FDOT will fund up to one-half the non-federal share of Park and Ride Lot capital projects. For more information, see the State Park and Ride Guide.

Public Transit Block Grant Program
The Public Transit Block Grant Program was established by the Florida Legislature to provide a stable source of funding for public transit. Funds are awarded by FDOT to those public transit providers eligible to receive funding from the FTA’s Sections 5307 and 5311 programs and to Community Transportation Coordinators. The United States Department of Transportation distributes 85 percent of the funds to FTA Section 5307 providers and to FTA Section 5311 providers who are not Community Transportation Coordinators. The Florida Commission for the Transportation Disadvantaged distributes 15 percent of the funds to Community Transportation Coordinators according to their own funding formula. Public Transit Block Grant funds may be used for eligible capital and operating costs of providing public transit service. Program funds may also be used for transit service development and transit corridor projects. Public Transit Block Grant projects must be consistent with applicable approved local government comprehensive plans. Specific program guidelines are provided in FDOT Procedure Topic Number 725-030-030.
Public Transit Service Development Program
The Public Transit Service Development Program was enacted by the Florida Legislature to provide initial funding for special projects. The program is selectively applied to determine whether a new or innovative technique or measure can be used to improve or expand public transit services. Service Development Projects specifically include projects involving the use of:

- New technologies;
- Services, routes, or vehicle frequencies;
- Purchase of special transportation services other techniques for increasing service to the riding public;
- Projects involving the application of new technologies or methods for improving operations, maintenance, and marketing in public transit systems are also eligible for Service Development Program funding. Projects submitted for funding must be justified in the recipient’s Transit Development Plan (TDP) (or transportation disadvantaged service plan, if applicable). Specific program guidelines are provided in FDOT Procedure Topic Number 725-030-005.

Transit Corridor Program
The Transit Corridor Program provides funding to transit agencies to support new services within specific corridors when the services are designed and expected to help reduce or alleviate congestion or other mobility issues within the corridor. Transit Corridor funds are discretionary and are distributed based on documented need. Transit Corridor Program funds may be used for capital or operating expenses. Eligible projects must be identified in a Transit Development Plan, Congestion Management System Plan, or other formal study undertaken by a public agency.

FDOT’s Central Office annually reviews all existing (i.e., currently approved and operating as of the annual review) Transit Corridor projects and allocates, to the respective FDOT district office sufficient funds to cover these ongoing projects. First priority for funding under this program is for existing projects meeting their adopted goals and objectives. Any remaining funds are allocated to the each of the districts by formula, based on each district’s percentage of the total state urbanized population. Specific program guidelines are provided in FDOT Procedure Topic Number 725-030-003.

Transportation Regional Incentive Program (TRIP)
TRIP was created by the 2005 Legislature to improve regionally significant transportation facilities in "regional transportation areas." State funds are available throughout Florida to provide incentives for local governments and the private sector to help pay for critically needed projects that benefit regional travel and commerce. FDOT will pay for 50 percent of project costs, or up to 50 percent of the non-federal share of project costs for public transportation facility projects. This program can be used to leverage investments in regionally significant transportation facilities and must be linked to growth management objectives.

Eligible TRIP projects must be identified in appropriate local government capital improvements program(s) or long-term concurrency management system(s) that are in compliance with State comprehensive plan requirements. In addition, projects must be consistent with the Strategic Intermodal System and support facilities that serve national, statewide, or regional functions and function as an integrated transportation system. For more information, see TRIP.

LOCAL MATCH RESOURCES/OPTIONS
Sources are available to local governments and other agencies to provide for a local share of project costs. While local cash is an acceptable form of project match, other sources may also be used within the guidelines for each funding program.

Toll Revenue Credit Program
It is the policy of FDOT to make available the option to use toll revenue credits, authorized by Title 23 U.S.C. 120(j)(1), to Florida transit systems for use as soft match on eligible federal transit capital projects. On an annual basis, the State Freight, Logistics, and Passenger Operations Administrator will be responsible for notifying Florida’s transit systems of
the availability of toll revenue credits and for approving the use of toll revenue credits on proposed transit capital projects.

**Rural Economic Development Initiative (REDI) Waiver**

Section 288.06561, Florida Statutes, provides that, notwithstanding any other law, member agencies and organizations of the REDI will review the financial match requirements for projects in rural areas. Counties and communities that meet certain statutory criteria may request a waiver or reduction of the match requirements for such projects. To be eligible to request a waiver or reduction of matching requirements, a county or community must meet the statutory definition of "rural," as provided below, and that county or community must have three or more of the "economic distress" conditions. For more information, see REDI Waiver.

**In-Kind and Other Soft Match**

In limited circumstances, local governments and other agencies may use in-kind and/or other contributed services as soft match for projects. Office space, staff services, contract expenses, and other local operating costs may be allowable in-kind match to certain grant funded projects. (The use of in-kind match must be approved by the FDOT district offices). In addition, real property may also be used toward the local share of certain capital projects.

**FEDERAL FUNDING PROGRAMS**

The following section provides information on federal funding programs, primarily those funded by the U.S. Department of Transportation, Federal Transit Administration, codified in Chapter 49 of the United States Code (U.S.C.). Programs revised or created through the Safe, Accountable, Flexible, and Efficient Transportation Equity Act—A Legacy for Users (SAFETEA-LU) and Moving Ahead for Progress in the 21st Century (MAP-21) are also included in this Resource Guide.

**Metropolitan Planning Program 49 U.S.C. Section 5305(d)**

This program provides funding to support the cooperative, continuous, and comprehensive planning program for making transportation investment decisions in metropolitan areas. State DOTs and metropolitan planning organizations (MPOs) may receive funds for:

- Purposes that support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity, and efficiency;
- Increasing the safety of the transportation system for motorized and non-motorized users;
- Increase the security of the transportation system for motorized and nonmotorized users;
- Increasing the accessibility and mobility options available to people and for freight;
- Protecting and enhancing the environment, promoting energy conservation, and improving quality of life;
- Enhancing the integration and connectivity of the transportation system, across and between modes, for people and freight;
- Promoting efficient system management and operation;
- Emphasizing the preservation of the existing transportation system;
- Funds are apportioned by a complex formula to states that includes consideration of each state’s urbanized area population in proportion to the urbanized area population for the entire nation, as well as other factors. States can receive no less than 0.5 percent of the amount apportioned.

For more information, see Section 5305(d).

**Urbanized Area Formula Program (49 U.S.C. Section 5307)**

This program makes federal resources available to urbanized areas and to governors for transit capital and operating assistance in urbanized areas and for transportation related planning. Eligible projects include:

- Planning, engineering, design and evaluation of transit projects
- Capital investments in bus and bus-related activities
- Replacement of buses;
- Overhaul of buses;
- Rebuilding of buses, crime prevention and security equipment;
- Construction of maintenance and passenger facilities.

- Capital investments in new and existing fixed guideway systems
  - Rolling stock;
  - Overhaul and rebuilding of vehicles, track, signals, communications;
  - Computer hardware and software;
  - Operating assistance.

- No limitation on operating assistance in UZAs with population less than 200,000
- Systems operating 1,000 fewer buses at peak times in UZAs with population greater than 200,000 may use 5307 for operating assistance based on the following
- 76 - 99 buses may use 50% of the apportionment attributable to vehicle service laws
- 75 or less may use 75% of the apportionment attributable to vehicle service laws

For more information, see Section 5307.

**Small Transit Intensive Cities (apportionment when eligible rolled into 5307) (49 U.S.C. Section 5336(j))**

The Small Transit Intensive Cities program was established by SAFETEA-LU within the Urbanized Area Formula Program and has continued as part of the FAST Act. The program is available to transit intensive urbanized areas with less than 200,000 in population and is funded through a set-aside from the formula program. Eligible projects include both operating and capital programs consistent with the guidelines provided for the Urbanized Area Formula Program.

**Growing States and High-Density States Program (apportionment included in 5307) (49 U.S.C. Section 5340)**

The Growing States and High-Density States Program distributes funds to the urbanized and non-urbanized area formula programs. The funding is distributed based on a number of factors. One-half of program funds will be allocated based on population forecasts for 15 years out from the last census (through 2015). Florida will benefit by moving up to the third most populous state in 2015. One-half will be based on population densities in excess of 370 persons per square mile. Eight states, not including Florida, will share this portion of the allocation (Florida ranks 9th in population density).

**Bus and Bus Facilities Program (49 U.S.C. Section 5339)**

The Bus and Bus Facilities Program (49 U.S.C. 5339) provides capital funding to replace, rehabilitate and purchase buses and related equipment and to construct bus-related facilities. Eligible recipients include designated recipients and states that operate or allocate funding to fixed-route bus operators. Sub recipients may include public agencies or private nonprofit organizations engaged in public transportation, including those providing services open to a segment of the general public, as defined by age, disability, or low income.

Eligible projects include:

- Capital projects to replace, rehabilitate and purchase buses, vans, and related equipment, and to construct bus-related facilities.

For more information, see Section 5339.
Major Capital Investment Grants over $300 Million (New Starts Program) (49 U.S.C. Section 5309(d))
The Federal Transit Administration’s (FTA) discretionary New Starts program is the federal government’s primary financial resource for supporting locally-planned, implemented, and operated transit guideway capital investments. From heavy to light rail, from commuter rail to bus rapid transit systems, the New Starts program has helped to make possible hundreds of new or extended transit fixed guideway systems across the country. These rail and bus investments, in turn, have improved the mobility of millions of Americans, helped to reduce congestion and improve air quality in the areas they serve, and fostered the development of viable, safer, and more livable communities.

Major Capital Investment Grants under $300 Million (Small Starts Program) (49 U.S.C. Section 5309(e))
This program provides funding for smaller projects with a federal New Starts share of less than $100 million, including streetcar, trolley, bus rapid transit (if a substantial portion of the project operates in a separate right of way in a defined corridor dedicated for public transit use during peak hours or it has other characteristics of a fixed guideway system), and commuter rail projects. Small Starts projects may not total more than $300 million. Simplified procedures and criteria apply to the program.

Formula Grants Enhanced Mobility of Seniors and Individuals with Disabilities (49 U.S.C. Section 5310)
This program provides formula funding to states and designated recipients to improve mobility for seniors and individuals with disabilities. Funds are apportioned based on each state’s share of population for these groups of people.

The FDOT administers the funds for rural and small urban areas. Each UZA over 200,000 selects a designated recipient to administer the funding. The majority of large UZAs in Florida selected the Department to administer the program for their UZA.

Formula Grant for Rural Areas (49 U.S.C. Section 5311)
This program provides formula funding to states for the purpose of supporting public transportation in areas of less than 50,000 in population. Program funds are apportioned to each state in an amount proportional to each state’s non-urbanized population. Program funds may be used for:

- Capital expenses;
- Operating expenses;
- State administration;
- Project administration expenses.

Each state prepares an annual program of projects, which must provide for fair and equitable distribution of funds within the states, including American Indian tribes, and must provide for maximum feasible coordination with transportation services assisted by other federal sources. The state must use 15 percent of its annual apportionment to support intercity bus service, unless the governor certifies that these needs of the state are adequately met.

In Florida, the Section 5311 Program is administered by FDOT. Program funds are distributed to each FDOT district office based on its percentage of the state’s rural population. Each district office allocates program funds to designated eligible recipients through an annual grant application process.

For more information, see Section 5311.
Flexible Funding Programs
Flexible funds are certain legislatively specified funds that may be used for either transit or highway purposes. Flexible funds allow a local area to choose to use certain federal surface transportation funds based on local planning priorities, not on a restrictive definition of program eligibility. Flexible funds include FHWA Surface Transportation Program (STP) and Congestion Mitigation and Air Quality Improvement Program (CMAQ) funds and FTA Urban Formula Funds.

When FHWA funds are transferred to FTA, they can be used for a variety of transit improvements such as:

- New fixed guide way projects;
- Bus purchases;
- Construction and rehabilitation of rail stations;
- Maintenance facility construction and renovations;
- Alternatively-fueled bus purchases;
- Bus transfer facilities;
- Multimodal transportation centers;
- Advanced technology fare collection systems.

Once they are transferred to FTA for a transit project, the funds are administered as FTA funds and take on all the requirements of the FTA program. Transferred funds may use the same non-federal matching share that the funds would have if they were used for highway purposes and administered by FHWA.

For more information, see Flexible Funds.

RESOURCES
FDOT Transit Home Page - http://www.dot.state.fl.us/transit/
The Florida Department of Transportation is decentralized in accordance with legislative mandates. Each of the districts is managed by a District Secretary. The districts vary in organizational structure, but in general, each has major divisions for Administration, Planning, Production and Operations. In addition, each district has a Public Information Office that reports to the District Secretary and a District Chief Counsel who reports to the DOT General Counsel in Tallahassee.

- District 1 - Southwest Florida (Bartow)
- District 2 - Northeast Florida (Jacksonville)
- District 3 - Northwest Florida (Chipley)
- District 4 - Southeast Florida (Ft. Lauderdale)
- District 5 - Central Florida (Deland)
- District 6 - South Florida (Miami)
- District 7 - West Central Florida (Tampa)
- Florida's Turnpike Enterprise
District 1, with a land area of nearly 12,000 square miles, represents 12 counties in Southwestern Florida. Its 3.0 million residents contribute to the 21 million miles traveled daily on its state highways. See the Agency Resources page for District 1 for more information.

FDOT provides capital and operating assistance to nine public transit systems, six of which are major with 291 passenger vehicles in District One. In addition, there are 121 private airports, 21 public airports, five major rail lines, and one deep-water port in operation.

The District One Office of Intermodal Systems Development manages and promotes implementation of the District’s multimodal projects and manages intergovernmental coordination between the Metropolitan Planning Organizations (MPO’s), Transportation Planning Organizations (TPO’s) and local governments.
# DISTRICT 1 OFFICE OF MODAL DEVELOPMENT

## STAFF RESPONSIBILITIES

<table>
<thead>
<tr>
<th>Name</th>
<th>Title</th>
<th>Responsibilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>John Kubler</td>
<td>Director of Transportation Development</td>
<td>Responsible for the overall direction and management of the Transportation Development functions within the District. Directs the production management staff in analyzing the 5-year transportation Plan for conformity with production capability and financial programs. Directs the comprehensive Right of Way program. Directs the activities of the Roadway Design, drainage, structures, specifications, Utilities, Surveying and Mapping, Permits and Project Management sections in the preparation and development of all plans related to roadways that are advertised for letting to contractors. Directs the activities of the Environment, Project Development, and Rail Sections. Directs the activities of the modal development intermodal, transit, systems planning and community liaison functions.</td>
</tr>
<tr>
<td>Nicole Mills</td>
<td>ISD Administrator</td>
<td>Serves as the Planning and Environmental Manager and is responsible for the overall management and coordination of the daily operation of the Planning and Environmental Office which includes, as well as supervising subordinate employees. Supervises and evaluates the staff responsible for the programming and oversight of the implementation of District Aviation, Transit, Ports, Rail, Intermodal and Freight Programs. Manages efforts to develop and maintain departmental planning documents required by state and federal requirements and update of the Strategic Intermodal System (SIS)/Florida Interstate Highway System (FINS), Action plans, Corridor Studies and Project Traffic Reports. Manages staff providing liaison support between the Department and other government and community agencies according to the Florida Statutes and the Florida Administrative Code. This includes required Metropolitan Planning Organization (MPO) and rural planning requirements in order to be eligible for State and Federal certification and funding. Manages and directs the activities of the Environment, and Project Development Sections. Evaluates the environmental impacts associated with the development of transportation projects. Obtains required National Environmental Policy Act (NEPA) documentation, location, and design concept acceptance from the Federal Highway Administration (FHWA). Manages all aspects of the Efficient Transportation Decision-Making (ETDM) process. Provides local officials and public with a direct source of contact with the Department for planning, production, and operational issues. Develops District One's Five-year Transportation Plan in coordination with the Southwest Area Office (SWAO). Represents the District Secretary at meetings and functions, including public hearings and serves as the Department of Transportation (DOT) liaison with various civic organizations, Chamber of Commerce, Metropolitan Planning Organizations (MPOs) and local governments to explain the DOT Work Program and policy related information.</td>

<tr>
<td>Paul Simmons</td>
<td>District Modal Development</td>
<td>Supervises and directs Modal Development staff to produce quality work within required timeframes. Responsible for oversight of all public airports, transit systems, and seaport directors on related matters for the district. Directs staff in the development of projects eligible for participation in the airport improvement programs and other state-funded aviation initiatives. Directs staff in the administration of the Intermodal and Ports Program based on applicable program procedures. Directs staff in the administration of programs funded by the state and federal governments to address transit needs in cooperation with local planning agencies and transportation operators for District 1.</td>
</tr>
<tr>
<td>Keith Robbins</td>
<td>District Freight and Seaport</td>
<td>Serves as the primary contact for the respective district in coordinating on matters of freight and act as a resource for freight issues with other governmental organizations and the private sector. Assists in facilitating public-private, state-local and state-federal freight transportation investment decisions. Communicates, informs and seeks input from freight customers/partners (shippers, carriers, and other related state and federal government agencies) using methods such as targeted e-mail lists, surveys, interviews, focus groups and forums. Assists in collaborating on a statewide multimodal freight mobility program, including—highways, air, marine, spaceports and rail, and involving multiple public agencies and private businesses, to ensure these programs are in alignment with strategic objectives and work program. Assists in collaborating with the Aviation, Rail, Seaport, Spaceport and SIS (Strategic Intermodal Systems) coordinators/managers. Develops and implements efforts to improve freight mobility, freight infrastructure, and related operations throughout the District as part of one integrated, multimodal system regardless of funding or ownership (i.e., public, private, or mixed public-private) within the state. Establishes relationships and serve as an active resource and advocate for freight issues in coordination with other governmental organizations and the private sector. As Seaport Coordinator, conducts quarterly agency coordination meetings and formulates, processes, and monitors Public Transportation Grant Agreements (PTGA’s) as defined by Florida Department of Transportation (FDOT) procedures. Assists with formulating, developing, and monitoring Seaport five-year work program by determining local needs and priorities, including reviewing grant applications. Provides technical assistance, advises modal agencies on project funding eligibility, and assists them with project prioritization, developing strategies for project financing, phasing, and value engineering. Leads district, state, and industry discussions for the advancement of the Seaport mode. Manages specialized Seaport projects such as master plans, the Seaport planning program, and innovative technology projects at seaports. Project Manager for the freight services consultant contract. Develops tasks for Seaport and Freight consultant services and reviews consultant work products providing feedback as necessary.</td>
</tr>
<tr>
<td>Arlene Barnes</td>
<td>District Rail Administrator</td>
<td>Responsible for Rail Program Activities for the District Highway Grade Crossing Program and the Rough Crossing Rehabilitation Program which includes directing, managing, and developing these programs. Directs, implements, and monitors the Railroad Grade Crossing Safety Improvement Program by determining the program needs through needs and priorities (Safety Priority Number), Diagnostic field reviews, collection of data, coordination with Central Office, Railroad Companies Traffic Operations, Counties, and Cities. Manages, formulates, and monitors the District Five Year Work Program and any Rail Studies. Assists Central Office with monitoring and implementing activities for rail line relocation projects.</td>

District Six encompasses Miami-Dade and Monroe counties in South Florida. The district is home to 2,550,220 people. Its roads are traveled more than 30.8 million miles daily. As of December 31, 2009, daily vehicle miles traveled (DVMT) on state roads for the district is 31,559.8. In 2008, for all public roads in the district, it is 56.7 million DVMT.

FDOT provides funding assistance to Miami-Dade Transit, which operates 893 buses in the district and the City of Key West Department of Transportation, which operates 17 buses. The area is also served by seven public airports, 78 private airports, two rail lines, and two deep-water ports: the Port of Miami and the Port of Key West.

With nearly 500 miles of safe and beautifully maintained toll roads, the Turnpike offers convenient routes and easy access to major highways throughout the state. Once nicknamed “Florida’s Main Street,” the Turnpike provides travelers with outstanding customer service and amenities. The Turnpike System is used daily by more than two million motorists and is operated by Florida’s Turnpike Enterprise, part of the Florida Department of Transportation.

Florida’s Turnpike System includes the Mainline from Miami to Central Florida, as well as the Homestead Extension (HEFT), Sawgrass Expressway, Seminole Expressway, Beachline Expressway, Southern Connector Extension, Veterans Expressway, Suncoast Parkway, Polk Parkway, Western Beltway and the I-4 Connector.

A complete Turnpike System overview can be found here:
