

ADMINISTRATIVE ACTION
TYPE 2 CATEGORICAL EXCLUSION

Florida Department of Transportation

SR-9/I-95 @ LANTANA ROAD

District: FDOT District 4

County: Palm Beach County

ETDM Number: 14338

Financial Management Number: 413258-1-22-01

Federal-Aid Project Number: N/A

Project Manager: Vandana Nagole

The environmental review, consultation, and other actions required by applicable federal environmental laws for this project are being, or have been, carried out by the Florida Department of Transportation (FDOT) pursuant to 23 U.S.C. § 327 and a Memorandum of Understanding dated December 14, 2016 and executed by the Federal Highway Administration and FDOT.

This action has been determined to be a Categorical Exclusion, which meets the definition contained in 40 CFR 1508.4, and based on past experience with similar actions and supported by this analysis, does not involve significant environmental impacts.

Signature below constitutes Location and Design Concept Acceptance:

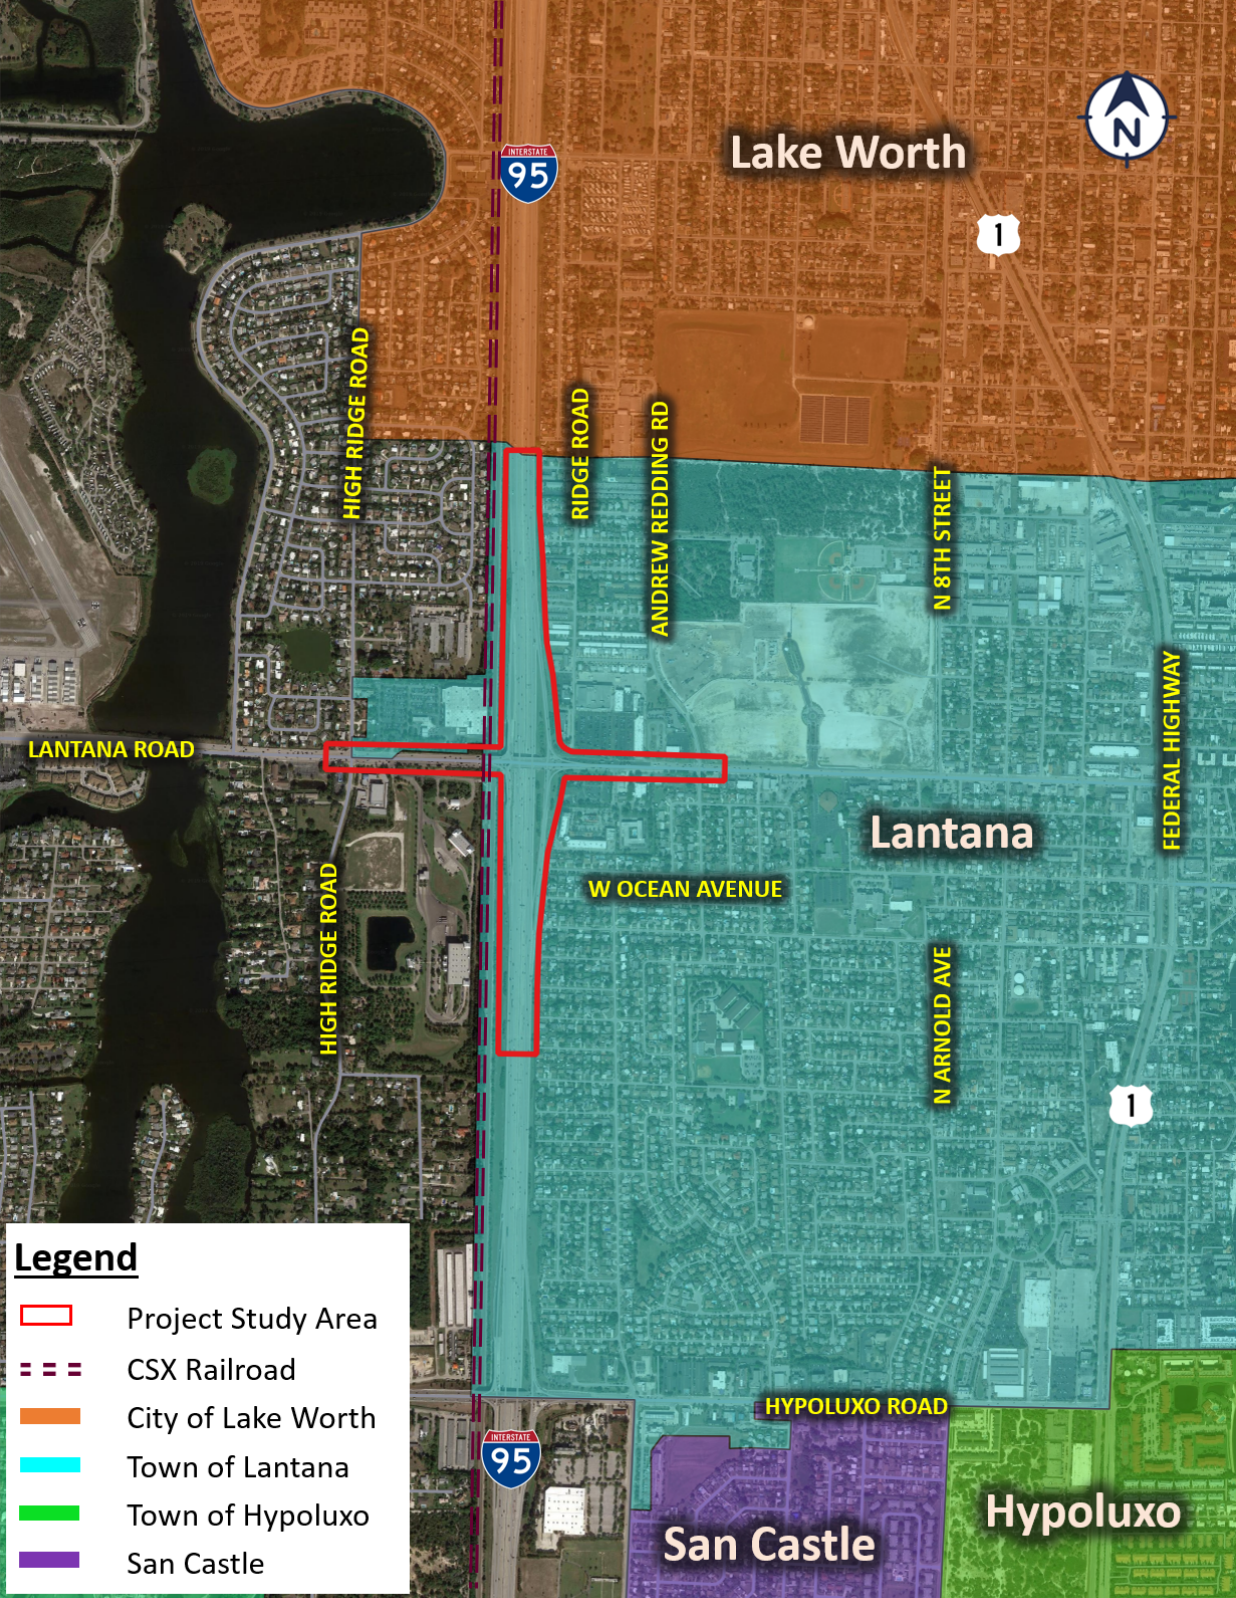

Figure 1-1 Project Location Map

1. Project Information

1.1 Project Description

The SR 9/I-95 at Lantana Road interchange is primarily located within the Town of Lantana in Palm Beach County, Florida, between the 6th Avenue South (1.54 miles to the north) and the Hypoluxo Road (1.04 miles to the south) interchanges (see Figure 1-1 Project Location Map). The project length is 0.74 miles along SR 9/I-95. The interchange provides access to the Palm Beach County Park/Lantana Airport, Hypoluxo Island, Lantana Scrub Natural Area, and the Lantana Lake Worth Health Center. The existing interchange is a Tight Urban Diamond Interchange (TUDI) and the project limits along Lantana Road extend from High Ridge Road to Andrew Redding Road. The South Florida Rail Corridor (SFRC)/CSX Railroad runs parallel along the west side of SR 9/I-95 in this area and crosses below an elevated section of Lantana Road.

SR 9/I-95 near the Lantana Road interchange is a ten-lane divided urban interstate, aligned south to north, providing four general purpose lanes and one High Occupancy Vehicle (HOV) lane in each direction. Auxiliary lanes are provided in both the northbound and southbound direction within the study area. At the Lantana Road interchange, SR 9/I-95 crosses below an elevated section of Lantana Road. SR 9/I-95 is a Strategic Intermodal System (SIS) designated highway as well as an emergency evacuation route.

Within the project limits, Lantana Road is primarily a four-lane urban principal arterial under the jurisdiction of Palm Beach County, aligned west to east, with two through lanes in each direction. At the interchange location, Lantana Road is elevated over SR 9/I-95 and the SFRC/CSX Railroad. There is one dedicated left-turn lane in each direction to access the SR 9/I-95 on-ramps and two through lanes in each direction. A single free-flow right-turn lane is also provided in both eastbound and westbound directions along Lantana Road to serve the SR 9/I-95 on-ramps. Sidewalks are provided along both sides of Lantana Road; however, bicycle lanes do not exist. The segment of Lantana Road from SR 9/I-95 to SR 5/US-1 is designated as an emergency evacuation route.

The proposed improvements will include operational and safety improvements to the Interchange including capacity improvements along Lantana Road, additional turning lanes at the SR 5/I-95 ramp terminal intersections and signal improvements. The project will also include improvements to sidewalks, ADA ramps, guide signs, and designated bicycle lanes.

PROPOSED IMPROVEMENTS

Based on the analysis and evaluation of several key evaluation parameters including traffic operations, safety benefits, access impacts, utility impacts, right of way impacts, environmental impacts, construction costs as well as public comments, the Diverging Diamond Interchange (DDI) configuration is the Preferred Alternative.

The following improvements will be implemented as part of the interchange reconfiguration:

- Widen Lantana Road to provide 3 lanes in each direction between High Ridge Road and Andrew Redding Road.
- Replace the existing single Lantana Road bridge over I-95 and SFRC/CSX Railroad with two separate bridges over SR 9/I-95 and SFRC/CSX Railroad.
- Replace the existing ramp bridges for the southbound on and off ramps with embankment and MSE walls.
- Provide dual right-turn lanes and dual left-turn lanes for the SR 9/I-95 northbound and southbound off-ramps.

- Provide dual eastbound and westbound right-turn lanes from Lantana Road onto I-95 southbound and northbound on-ramps respectively.
- Provide dual eastbound and westbound left-turn lanes from Lantana Road onto the I-95 northbound and southbound on-ramps.
- Eliminate the eastbound left-turn movement at the Sunset Road intersection, widen the westbound right turn lane at Sunset Road to accommodate the design vehicle and provide a directional median opening.
- Provide an underpass road that connects Sunset Road and the existing Solid Waste Authority (SWA) service road underneath the reconstructed Lantana Road Bridge over SFRC/CSX Railroad.
- Provide exclusive southbound and northbound right-turn lanes along High Ridge Road.
- Provide 7-foot bicycle lanes and 6-foot sidewalks along Lantana Road in both directions
- Provide Intelligent Transportation System (ITS) improvements including Arterial Dynamic Message Signs (ADMS), Surveillance and verification Closed Circuit Television (CCTV) cameras and wrong way detection system for the interchange ramps.

1.2 Purpose and Need

The purpose of the project is to enhance the overall traffic operations and safety at the existing interchange of SR 9/I-95 and Lantana Road. The project will evaluate alternatives that eliminate traffic spillback onto SR 9/I-95, enhance interchange operations and safety, reduce congestion, while providing for multimodal accommodations at this interchange location.

1.2.1 System Linkage

Lantana Road is a county roadway (CR 812) that provides access to the Town of Lantana and Hypoluxo Island via East Ocean Avenue (Lantana) Bridge. To the west, Lantana Road provides access to the Palm Beach County Park/Lantana Airport and the City of Atlantis. Although Lantana Road is not a designated road in the state's SIS, SR 9/I-95 is a part of the SIS system. The SIS includes Florida's important transportation facilities that support the State's economy and mobility. Improved interchange operations at Lantana Road will help to reduce traffic spillback onto I-95 thereby enhancing connectivity among the local and regional network.

Based on Palm Beach County's Evacuation Routes and Zones Map, Lantana Road is classified as an evacuation route from SR 5/US-1 to SR 9/I-95 . Therefore, improvements to the interchange of I-95 and Lantana Road, along with improvements to nearby intersections, will decrease evacuation times by increasing connectivity between eastern and western towns/cities and SR 9/I-95. Additionally, emergency response times will be decreased by the proposed improvements due to the enhanced mobility.

1.2.2 Modal Interrelationships

The SR 9/I-95 at Lantana Road interchange accommodates east-west sidewalks on the north and south sides of Lantana Road, from High Ridge Road to Shopping Center Drive, extending beyond both intersections. Bicycle lanes are not currently provided in both directions along Lantana Road within the project limits. The Transportation Planning Authority (TPA) Master Comprehensive Bicycle Transportation Plan (MCBTP) includes recommendations to improve bicycle facilities throughout Palm Beach County. The MCBTP recommends a "Detailed Corridor Study" along Lantana Road. Additionally, the MCBTP designates segments of High Ridge Road as "Bike Level of Service (LOS) Threshold Met" and "Shoulder Candidate." As part of the study, provision of bike lanes were evaluated along Lantana Road.

Four schools are located within approximately one mile of the interchange: Barton Elementary School, Lantana Elementary School, Lantana Middle School, and Palm Beach Maritime Academy. There are no Palm Tran transit bus stops within the project limits. However, bus stops are located on Lantana Road west of High Ridge Road and east of Andrew Redding Road. Adding improvements to bicycle and pedestrian facilities at the intersections within the study area will increase the safety of pedestrian and bicycle users along the corridor.

1.2.3 Capacity and Transportation Demand

The SR 9/I-95 southbound ramps within the study area currently operate at an overall LOS E during the A.M. peak hours, while the northbound ramps operate at a LOS C. During the P.M. peak hours, the southbound ramps operate at LOS D, and the northbound ramps operate LOS C. If no improvements are made to the I-95/Lantana Road interchange, it is forecasted that by 2045, both the southbound and northbound ramps will operate at LOS F for both the A.M. and P.M. peak hours.

1.2.4 Safety

Crash data from 2014 to 2018 for SR 9/I-95 (Roadway ID: 93220000) from south of Lantana Road to the north of Lantana Road, SR 9/I-95 Ramps at Lantana Road (Roadway ID: 93220037, 93220038, 93220039, and 93220040), and Lantana Road (Roadway ID: 93530000) from High Ridge Road to Andrew Redding Road (MP 2.80 to MP 3.50) was obtained from the FDOT State Safety Office GIS (SSOGis) Query Tool on the Traffic Safety Web Portal. Based on the crash analysis, 313 crashes occurred on the SR 9/I-95 mainline, 157 crashes occurred on the SR 9/I-95 ramps at Lantana Road interchange and 172 crashes occurred on Lantana Road within the study area from 2014 to 2018. The predominant crash types that occurred within the study area were rear-end collisions, sideswipe collisions, and angled collisions. Crashes of these types are typically attributed to congested conditions along the arterials and interchange ramps and terminals. As such, providing capacity improvements for different modes of transportation within the study area will help to improve safety by alleviating congestion.

1.3 Planning Consistency

The project is identified in the FY 2020/2021 - FY 2024/2025 FDOT Work Program and the State Transportation Improvement Program (STIP) with \$6,583,825 allocated for design in 2021 and funded through right-of-way (FY 2022 - 2023) and construction (> 2024). The project is also included in the FY 2021 - FY 2024 Palm Beach TPA Transportation Improvement Program (TIP). There is a difference in funding for the right-of-way phase (-\$413,755), but no TIP/STIP amendment is required as the difference is below \$2,000,000 and 20% of the Total Project Threshold. Funding for the construction phase is consistent between the TIP and STIP. The FDOT SIS Plan of the TPA 2045 LRTP shows design and right of way funding in the TIP for FY 2020 - 2024, with construction funds in FY 2025 - 2030 (2030 Plan). The project is consistent with the Palm Beach County Comprehensive Plan. Construction is tentatively funded in FY 2029.

There is a difference in the TIP and STIP of -\$413755, a decrease for R/W phase (-\$314,306 in FY 2022 and -\$99,449 in FY 2024). The difference is below \$2,000,000 and 20% Total Project Threshold, so no TIP/STIP amendment is needed.

USCG Permit

- A USCG Permit IS NOT required.
- A USCG Permit IS required.

* **Impact Determination:** Yes = Significant; No = No Significant Impact; Enhance = Enhancement; NoInv = Issue absent, no involvement. Basis of decision is documented in the referenced attachment(s).

3. Social and Economic

The project will not have significant social and economic impacts. Below is a summary of the evaluation performed.

3.1 Social

A Sociocultural Effects Evaluation (SCE) was prepared for the project to identify and address potential effects on the communities and community resources as a result of the Preferred Alternative and is included in the project file. The project improvements are proposed along already existing roadways. As such, the project will not divide neighborhoods or create social/cultural isolation. Demographic information was obtained from the 2012-2016 American Community Survey (ACS). A density analysis of the block groups within the study area is summarized in Table 3-1. Demographic data for Palm Beach County is 54.5% White (not Hispanic or Latino), 22.9% Hispanic, 19.7% Black of African American and 2.9% Other. In the Study Area, the population is mostly White (43.33%). Race and ethnicity are characterized as follows: Black or African American (26.74%), Hispanic or Latino (26.35%) and Other (3.58%).

Race	Population	Percentage
White - non-Hispanic	1,860	43.33
Black or African American	1,148	26.74
Hispanic	1,131	26.35
Native American, American Indian, Native Hawaiian, Pacific Islander, or Alaska Native	0	0
Asian	21	0.49
Other	133	3.09
TOTAL	4,293	100

According to the USEPA's environmental justice screening and mapping tool (EJSCREEN), the population in the Study Area is 56% minority compared to the state average of 43%. According to the 2017 U.S. Census Bureau, Palm Beach County has a median household income of \$57,256 compared to the State which is \$50,883. According to the 2015 ACS, the median household income for the Study Area is \$36,897, which is significantly lower than the state of Florida and Palm Beach County median incomes. The median age for the population within the Study Area is 41, which is lower than the overall median age for Palm Beach County (44), and the State of Florida (42). According to EJSCREEN, 20% of the population encompassing the project Study Area "speak English less than very well". The number of individuals who speak less than proficient English was evaluated in order to provide public information in appropriate methods and language(s). Therefore, both traditional and non-traditional outreach efforts have been utilized to produce more effective tools to reach out to communities and encourage participation. Public involvement activities consisted of newspaper advertisements, media advisories and releases in English and Spanish, various meetings with the adjacent businesses, Lantana Chamber of Commerce, door-to-door outreach, social media outreach, and a project website. The public meetings occurred in a public venue (Lantana Branch Public Library).

Community services located within the project area include five educational facilities, four healthcare facilities, four religious facilities, one government building, and four daycare centers. Based on the preferred alternative, no adverse impacts to community facilities and services are anticipated. Access to all properties in the immediate project vicinity will be maintained through various means. Access to bus stops is expected to be enhanced as a result of improved bicycle and pedestrian facilities within the project Study Area. The project provides dedicated bicycle lanes in both the eastbound and westbound directions on Lantana Road to improve access to residential and commercial areas.

The project improvements consist of operational and capacity improvements to the Interchange including adding turn lanes and signal improvements. These improvements will reduce travel times and congestion in the community. Discussion points from the Alternatives Public Workshop that are addressed by the Preferred Alternative include providing an underpass service road underneath the new Lantana Road Bridges over the SFRC/CSX Railroad that connects Sunset Road and the Solid Waste Authority service road as well as pedestrian and bicyclist improvements. Right-of-way impacts were also minimized to the extent possible to reduce impacts to parking at the medical offices building adjacent to Andrew Redding Road.

FDOT will maintain access to businesses and residences during construction and a Maintenance of Traffic (MOT) plan will be developed during Design. Businesses and residences will be advised during the construction phase of any temporary changes or limitations to access. The project is not anticipated to have effects on community cohesion, create isolated areas, disrupt social relationships and patterns, or disrupt connectivity to community activity centers.

The Palm Beach County Transportation Planning Agency's vision includes safe and convenient cycling as a means of transportation, as well as an attractive form of recreation for residents and visitors. The proposed project will promote mixed transportation use by incorporating designated bicycle lanes along Lantana Road. The project is anticipated to enhance bicycle and pedestrian improvements, which will provide better access to public transportation and other community resources in the area. Construction will not impede access to public transportation, and access to transit will be maintained through the implementation of a MOT plan for pedestrian, bicycle, and vehicular traffic.

The project will not change or alter the demographic mix of the population along the corridor, nor are negative impacts anticipated for the minority, low income, elderly, or other potentially underrepresented populations present in the Study Area. Since there are no effects to these populations and the project will not change the demographic composition of the area, mitigation measures are not included.

3.2 Economic

Based on the 2015 ACS data, median household income in the project area is estimated to be \$36,897, which is lower than the County and the state of Florida. Approximately 30% of the population is below the poverty level in the Sociocultural Effects (SCE) Study Area, compared to an overall average of 13% for Palm Beach County.

The project improves connectivity by providing operational improvements and dedicated bicycle lanes to improve access to residential and commercial areas. In turn, this makes available properties within this corridor more attractive for infill or development opportunities. Jobs generated could be both temporary by virtue of construction activity and ongoing permanent positions due to the resulting land uses permitted within the project corridor. The project supports the land use character depicted through the Palm Beach County Comprehensive Master Plan, including the multi-modal, mixed-use area. Minor right of way acquisition is required for the project, but will not adversely affect the tax base of Palm Beach

County or the other adjacent municipalities

The population in Palm Beach County was 1.47 million in 2017 and is expected to grow to 1.64 million by 2030, a 16% increase (U.S. Census Bureau and University of Florida Bureau of Economic and Business Research). Population growth will result in higher-density populations and new housing developments, commercial and industrial space demand and increased transportation. The enhanced traffic operations have the potential to support increased vehicular traffic in the project area and future development areas.

3.3 Land Use Changes

The project is compatible with the Town of Lantana's Comprehensive Plan and Town's development goals along with Palm Beach County's TPA 2045 LRTP. The project is not located within an Area of Critical State Concern, the Coastal High Hazard Area, or within or near a military base. Future land use maps suggest that the area will remain relatively unchanged. The project supports the land use character depicted through the Palm Beach County Comprehensive Master Plan, including the multi-modal, mixed-use area. Due to the fact that the project is consistent with the vision and character of the area, overall changes and effects to surrounding land uses as a result of the project are anticipated to be minimal.

The surrounding area is fully developed, with the exception of the Lantana Natural Scrub Area to the northeast of the project Study Area. The land use along Lantana Road is mainly retail/office and commercial spaces with areas of residential, solid waste disposal, institutional and public/semi-public use. Future land uses will continue to reflect mixed-use development. The Preferred Alternative proposes improvements to the existing Lantana Road and SR 9/I-95 transportation corridors, primarily within the right of way. Minor right of way acquisition is required which will result in minor changes in land use from commercial or institutional to transportation land use. The proposed operational improvements are expected to support the existing and future land uses in the project area.

Any changes in land use identified in the Future Land Use Plan were considered as part of the future traffic development through the transportation modeling process. The character of the Study Area remains unchanged in the Future Land Use Plan. The proposed improvements aim to achieve acceptable LOS in the future condition by accommodating future travel demand as a result of Palm Beach County population and employment growth. It will also allow SR 9/I-95 to continue to serve as a critical arterial in facilitating north-south movement of traffic in southeast Florida. The population in the project area is expected to fluctuate in response to regional factors unrelated to the project and it is anticipated that any future growth in the Study Area will be in accordance with the Palm Beach County Comprehensive Plan.

3.4 Mobility

SR 9/I-95 is included in the SIS for its role in supporting the state's economy and mobility. Lantana Road is primarily a four-lane Urban Principal Arterial and services local commuter traffic to and from several adjacent communities. The proposed project is anticipated to improve capacity deficiencies, traffic operations and multimodal use along Lantana Road. In addition, the project is expected to enhance mobility and safety to the non-driving population by providing bicycle lanes on Lantana Road. The existing bus service will remain.

The Preferred Alternative, the diverging diamond concept, requires drivers to briefly cross to the left, or opposite side of the road, at carefully designed crossover intersections. Drivers travel for a short distance, then cross back to the traditional or right side of the road. This design allows movements for the left and right-turns to and from the SR 9/I-95 ramps onto Lantana Road without crossing the path of opposing traffic. The crossover is made at the signal where the

opposing traffic flows split the signal green time. The major advantage of this type of interchange is that the left-turning vehicles do not require a signal phase which makes this a two-phased signal system with more green time for the opposing traffic. In addition, the DDI has fewer conflict points [i.e. 14 for DDI, 26 for Tight Urban Diamond Interchange (TUDI)] resulting in significant safety and operational improvement at the interchange. The enhanced traffic operations will improve the flow of traffic to SR 9/I-95 and surrounding arterials.

3.5 Aesthetic Effects

There are land uses, such as residential communities, businesses and schools within or near the project Study Area that could be affected by visual impacts. However, the project will have minimal, if any, impact on the viewshed of the surrounding communities due to the roads in the project already existing (I-95 and Lantana Road). Construction activities could result in temporary disturbances to the existing visual environment near the project. Due to the urbanized nature of the corridor, improvements are unlikely to permanently impact the aesthetics of the environment.

The public was afforded the opportunity to review the project alternatives and comment through the Alternatives Public Workshop. There are no parks or recreational facilities directly adjacent to the project corridor. The community and local governments did not identify any unique or historic features, and no potential impacts to notable aesthetic characteristics were anticipated by the public.

3.6 Relocation Potential

A Conceptual Stage Relocation Plan (CSRP) was prepared for the project and is located in the project file. There are no residential household displacements, however the Preferred Alternative proposes one potential business relocation (Dunkin Donuts, 1400 W. Lantana Road). The nearest Dunkin Donuts is 1.5 miles away on South Dixie Highway and there are at least 3 other coffee shops in the area. Substantial controversy was not identified during the public outreach activities conducted during the study and therefore no significant impacts are anticipated from the potential relocation.

The FDOT provides advance notification of impending right of way acquisition. Before acquiring right of way, all properties are appraised on the basis of comparable sales and land use values in the area. Owners of property to be acquired will be offered and paid fair market value for their property rights. Relocation advisory services and resources are available to the resident and business to be relocated without discrimination.

In order to minimize the unavoidable effects of Right of Way acquisition and displacement of people, a Right of Way and Relocation Assistance Program will be carried out in accordance with Florida Statute 421.55, Relocation of displaced persons, and the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Public Law 91-646 as amended by Public Law 100-17).

3.7 Farmland Resources

Lands within the project vicinity do not meet the definition of farmland as defined in 7 CFR § 658 and the provisions of the Farmland Protection Policy Act of 1981 do not apply because the entire project area is located in the urbanized area of the Town of Lantana with no designated farmlands adjacent to the project corridor.

4. Cultural Resources

The project will not have significant impacts to cultural resources. Below is a summary of the evaluation performed.

4.1 Section 106 of the National Historic Preservation Act

A Cultural Resource Assessment Survey (CRAS), conducted in accordance with 36 CFR Part 800, was performed for the project, and the resources listed below were identified within the project Area of Potential Effect (APE). FDOT found that some of these resources meet the eligibility criteria for inclusion in the National Register of Historic Places (NRHP), and State Historic Preservation Officer (SHPO) has concurred with this determination. After application of the Criteria of Adverse Effect, and in consultation with SHPO, FDOT has determined that the proposed project will have No Adverse Effect on these resources.

The CRAS identified fifteen historic resources within the APE. On April 17, 2020, the SHPO concurred that two of the resources, the Seaboard Air Line Railroad (8PB12917) and the First Federal Savings and Loan Association (8PB18601) are eligible for listing in the NRHP. The remaining 13 resources (8PB18592-8PB18600 and 8PB18602-8PB18605) were determined to be ineligible for listing in the NRHP. The CRAS is included in the project file.

On May 12, 2020, FDOT submitted a letter to the SHPO to address project related effects relative to the Seaboard Air Line Railroad (8PB12917) and the First Federal Savings and Loan Association (8PB18601), which are eligible for inclusion in the NRHP. As part of the proposed improvements with the Preferred Alternative, the existing Lantana Road bridge over the Seaboard Air Line Railroad corridor will be replaced. The proposed bridge replacement will preserve the existing envelope over the railroad corridor by ensuring that the bridge piers and abutments are placed outside of the railroad right of way. The Preferred Alternative also includes an underpass access road connecting the service roads providing access to the Costco Warehouse on the north side and the Solid Waste Authority Transfer Station on the south side underneath the new bridge over the railroad corridor. This new underpass access road will require 0.04 acres of right of way from the existing railroad corridor to accommodate the new roadway alignment.

The proposed improvements to the Seaboard Air Line Railroad will not impact the integrity of the resource as no historic material will be removed and the use of the resource will not be impacted. The railroad will remain a historic transportation corridor and will continue to convey its significance in the planning and development of communities. Therefore, based on the nature of the improvements, FDOT determined the Preferred Alternative will have no adverse effect to the Seaboard Air Line Railroad.

The portion of Lantana Road adjacent to the First Federal Savings and Loan Association (8PB18601) located at 1300 W Lantana Road will be widened under the Preferred Alternative to accommodate three eastbound lanes, bicycle lanes, and a six-foot-wide sidewalk. The improvements will not require any right of way from the First Federal Savings and Loan Association parcel at 1300 W Lantana Road. The roadway is currently modernized with signage, markings, lighting, curbing, and traffic lights. The eastbound lanes are currently 2 through-lanes with a right-turn lane closest to the resource at 1300 W Lantana Road with curbing and a sidewalk. The proposed improvements will not alter the setting of the First Federal Savings and Loan Association (8PB18601) to a degree at which it will no longer convey its significance. Based on the nature of the improvements, FDOT determined the Preferred Alternative will have no effect on the historic First Federal Savings and Loan Association (8PB18601)

The SHPO reviewed the effect determinations and provided concurrence with the No Adverse Effect findings on May 21, 2020. The SHPO concurrence letters are included in the Appendix.

The CRAS identified no previously recorded or newly recorded archaeological sites within the archaeological APE. Background research and a pedestrian survey indicated that there is a low probability of finding intact archaeological sites within the archaeological APE. Subsurface archaeological testing was not feasible due to the presence of hardscape, landscaping, ditches, berms, and buried utilities.

4.2 Section 4(f) of the USDOT Act of 1966, as amended

The following evaluation was conducted pursuant to Section 4(f) of the U.S. Department of Transportation Act of 1966, as amended, and 23 CFR Part 774.

A Determination of Applicability has been prepared for two historic sites, the Seaboard Air Line Railroad and First Federal Savings and Loan Association (1300 W. Lantana Road). The railroad will continue to convey its significance in the planning and development of communities, and the Preferred Alternative will have no adverse effect on the Seaboard Air Line Railroad. However, due to the proximity of the proposed improvements, a determination of '*de minimis*' was made for this resource. Based on the Preferred Alternative, the proposed improvements will not alter the setting of the First Federal Savings and Loan Association to a degree that will no longer convey its significance. Therefore, the Preferred Alternative will have no effect on the this resource and a determination of 'not applicable' was made. OEM provided concurrence on June 22, 2020.

4.3 Section 6(f) of the Land and Water Conservation Fund Act of 1965

There are no properties in the project area that are protected pursuant to Section 6(f) of the Land and Water Conservation Fund of 1965.

4.4 Recreational Areas and Protected Lands

There are no other protected public lands in the project area.

5. Natural Resources

The project will not have significant impacts to natural resources. Below is a summary of the evaluation performed:

5.1 Protected Species and Habitat

The following evaluation was conducted pursuant to Section 7 of the Endangered Species Act of 1973 as amended as well as other applicable federal and state laws protecting wildlife and habitat.

A Protected Species and Habitat Evaluation was completed, as part of the Natural Resources Evaluation (NRE), to identify potential occurrence of any federal or state listed protected species, and habitat impacts within the proposed improvements associated with the preferred alternative. The Protected Species and Habitat Evaluation identified 13 federally and/or state listed species that could potentially occur within the project area.

The five federally listed and one candidate species (T = Threatened, E = Endangered, CS = Candidate) under the purview of the USFWS are: wood stork (T), Everglade snail kite (E), Florida scrub jay (T), West Indian manatee (T), Eastern indigo snake (T) and gopher tortoise (CS). The eight state listed species under the purview of FWC are: least tern, little blue heron, tricolored heron, reddish egret, black skimmer, burrowing owl, roseate spoonbill and gopher tortoise. Table 5-1 summarizes the names, protected status and occurrence potential of the 13 listed species.

Common Name	Scientific Name	Federal Status	State Status	Occurrence Potential	Observed
Mammals					
West Indian Manatee	<i>Trichechus manatus</i>	T	T	Low	No
Birds					
Everglade Snail Kite	<i>Rostrhamus sociabilis plumbeus</i>	E	E	Low	No
Florida Scrub-Jay	<i>Aphelocoma coerulescens</i>	T	T	Low	No
Wood Stork	<i>Mycteria americana</i>	T	T	Low	No
Black Skimmer	<i>Rynchops niger</i>	NL	ST	Low	No
Florida Burrowing Owl	<i>Athene cunicularia floridana</i>	NL	ST	Low	No
Least Tern	<i>Sterna antillarum</i>	NL	ST	Low	No
Little Blue Heron	<i>Egretta caerulea</i>	NL	ST	Low	No
Reddish Egret	<i>Egretta rufescens</i>	NL	ST	Low	No
Roseate Spoonbill	<i>Platalea ajaja</i>	NL	ST	Low	No
Tricolored Heron	<i>Egretta tricolor</i>	NL	ST	Low	No
Reptiles					
Eastern Indigo Snake	<i>Drymarchon corais couperi</i>	T	T	Moderate	No
Gopher Tortoise	<i>Gopherus polyphemus</i>	CS	ST	High	Yes

Legend: E = Endangered; T = Threatened; FE = Federally Endangered; FT = Federally Threatened; ST = State Threatened; CS = Candidate Species; NL = Not Listed

Field surveys conducted on September 6, 2019, found no evidence of occurrence of any of the listed species, with the exception of the gopher tortoise. No natural areas exist within the project area, and the limited habitat available for certain species, including the Florida burrowing owl, Eastern indigo snake and gopher tortoise is degraded. Only the gopher tortoise was observed during the species survey. Prior to construction, a 100% gopher tortoise survey will be completed, and any individuals observed within 25 feet of proposed construction will be relocated. A summary of effect determinations can be found in Table 5-2.

Common Name	Scientific Name	Federal Status	State Status	Effect Determination
Mammals				
West Indian Manatee	<i>Trichechus manatus</i>	T	T	No Effect
Birds				
Black Skimmer	<i>Rynchops niger</i>	NL	ST	No Effect Anticipated
Florida Burrowing Owl	<i>Athene cunicularia floridana</i>	NL	ST	No Effect Anticipated
Everglade Snail Kite	<i>Rostrhamus sociabilis plumbeus</i>	E	E	No Effect
Least Tern	<i>Sterna antillarum</i>	NL	ST	No Effect Anticipated
Little Blue Heron	<i>Egretta caerulea</i>	NL	ST	No Effect Anticipated
Reddish Egret	<i>Egretta rufescens</i>	NL	ST	No Effect Anticipated
Roseate Spoonbill	<i>Platalea ajaja</i>	NL	ST	No Effect Anticipated
Tricolored Heron	<i>Egretta tricolor</i>	NL	ST	No Effect Anticipated
Florida scrub-Jay	<i>Apelocoma coerulscens</i>	T	T	No Effect
Wood Stork	<i>Mycteria americana</i>	T	T	No Effect
Reptiles				
Eastern Indigo Snake	<i>Drymarchon corais couperi</i>	T	T	MANLAA
Gopher Tortoise	<i>Gopherus polyphemus</i>	CS	ST	No Adverse Effect Anticipated

Legend: E = Endangered; T = Threatened; FE = Federally Endangered; FT = Federally Threatened; ST = State

Threatened; CS = Candidate Species; NL = Not Listed; MANLAA = May Affect, Not Likely to Adversely Affect

Four federally listed species had an effect determination of "No Effect" (West Indian manatee, Everglade snail kite, Florida scrub jay and wood stork), and one had an effect determination of "May Affect, Not Likely to Affect" (Eastern indigo snake - Path Followed: A>B>C>D>E>MANLAA). No further actions or consultations are required unless project modifications are made, additional information involving potential effects becomes available, or new species are listed, in which case initiation of consultation may be necessary.

5.2 Wetlands and Other Surface Waters

There are no protected wetlands or other surface waters present in the project area.

5.3 Essential Fish Habitat (EFH)

There is no Essential Fish Habitat (EFH) in the project area.

5.4 Floodplains

Floodplain impacts resulting from the project were evaluated pursuant to Executive Order 11988 of 1977, Floodplain Management.

The project area is located outside the 100 and 500-year floodplain (Zone X). Zone X represents areas outside the 500-year flood plain with less than 0.2% annual probability of flooding.

It has been determined, through consultation with state water resources and floodplain management agencies that there is no regulatory floodway involvement on the project and that the project will not support base floodplain development that is incompatible with existing floodplain management programs.

5.5 Sole Source Aquifer

Biscayne Aquifer

The project limits lie within the boundaries of the recharge area for the Biscayne Sole Source Aquifer, the principal drinking water source for the area. In accordance with the Sole Source Aquifer Program, authorized by Section 1424(e) of the Safe Drinking Water Act of 1974, FDOT requested concurrence from the EPA regarding potential impacts to the Biscayne Aquifer. On January 5, 2021, the EPA concurred that the project is not expected to cause significant impacts to the aquifer system as long as proper protection measures were followed. The Sole Source Aquifer concurrence letter is attached in the Appendix.

5.6 Water Resources

The project area lies within the jurisdiction of the South Florida Water Management District (SFWMD), which requires that all projects meet State water quality and quantity criteria as set forth in Chapter 62- 302, Florida Administrative Code (FAC). One stormwater management feature, an FDOT detention pond located under the southbound I-95 on/off-ramps and Lantana Road overpass, will be impacted from the conversion of the existing deck bridges to MSE walls. This impact will reduce storage volume by 76%. To account for the volume loss, and provide additional storage for new impervious area, the pond will be relocated within the FDOT I-95 right of way. This relocation will require a permit modification for SFWMD ERP 50-03845-S.

The proposed roadway improvements under the Preferred Alternative will require drainage improvements along Lantana Road and the interchange ramps, including new drainage structures, pipes and stormwater treatment facilities. In addition to the existing stormwater management facilities that will be impacted from the reconstruction, the project will result in an increase in impervious area.

For Basin 1, the improvements will add 2.60 acres of additional impervious area. Treatment and attenuation for the additional 2.82 ac-ft of runoff volume will be provided with 160 linear feet of French drain and a proposed 0.61-acre dry retention pond. The dry retention pond will be located in the swale west of I-95 southbound between the proposed MSE wall for the southbound on-ramp and the basin boundary with a depth of 6.5-feet.

For Basin 2, improvements will add 3.02 acres of additional impervious area. Treatment and attenuation for the additional 3.82 ac-ft of runoff volume will be provided with 116 linear feet of French drain and a proposed 0.60-acre dry retention pond. The dry retention pond will be located in the NE infield between the proposed MSE wall on the I-95 northbound on-ramp and east of of I-95 with a depth of 8.0-feet.

For Basin 3, the proposed improvements will impact the dry detention pond, and the detention volume will be reduced by 76%. The improvements will add 1.50 acres of additional impervious area. Treatment and attenuation for the additional 1.98 ac-ft of runoff volume will be provided with 84 linear feet of French drain and a proposed 0.46-acre dry retention pond. The dry retention pond will be located north of the existing location along the FDOT swale between the proposed MSE wall and basin boundary with a depth of 4.5-feet.

In accordance with Section 403.0885, F.S., a National Pollutant Discharge Elimination System (NPDES) Construction Generic Permit (CGP) will be acquired prior to construction. Water quality impacts resulting from erosion and sedimentation during construction activities will be controlled in accordance with the NPDES permit, including the preparation of a Stormwater Pollution Prevention Plan (SWPPP); adhering to the latest edition of the FDOT Standard Specification for Road and Bridge Construction; and the Best Management Practices (BMPs) including temporary erosion features during construction. FDOT will continue to coordinate water quality and quantity impacts and stormwater management with the appropriate regulatory agencies as required throughout the design and permitting phases of the project, as well as during and after construction.

A Water Quality Impact Evaluation (WQIE) was completed for the project and is included in the project file. Results confirmed that the proposed stormwater facility design will include, at a minimum, the requirements for water quality impacts required by SFWMD. It is therefore anticipated that no adverse effects will occur to the water quality within the project area.

5.7 Aquatic Preserves

There are no aquatic preserves in the project area.

5.8 Outstanding Florida Waters

There are no Outstanding Florida Waters (OFW) in the project area.

5.9 Wild and Scenic Rivers

There are no designated Wild and Scenic Rivers or other protected rivers in the project area.

5.10 Coastal Barrier Resources

There are no Coastal Barrier Resources in the project area.

6. Physical Resources

The project will not have significant impacts to physical resources. Below is a summary of the evaluation performed for these resources.

6.1 Highway Traffic Noise

The following evaluation was conducted pursuant to 23 CFR 772 Procedures for Abatement of Highway Traffic Noise and Construction Noise, and Section 335.17, F.S., State highway construction; means of noise abatement.

This project is a Type I project pursuant to 23 CFR 772 and Section 335.17, F.S.

Traffic noise levels were predicted for noise sensitive locations along the project corridor for the existing (2017) conditions and the design year (2045) No-Build and Preferred Build Alternative. Build Alternative traffic noise levels are expected to range from approximately 36.2 to 70.6 dB(A) during the project's design year. The worst-case design year traffic noise levels with the Build Alternative are predicted to be no more than 3.9 dB(A) greater than existing levels and 2.2 dB(A) greater than the expected design year No-Build noise levels.

Design year traffic noise levels with the planned improvements are predicted to approach or exceed the Federal Highway Administration Noise Abatement Criteria (NAC) at six residences and a playground at the Sunshine Park Academy near the Lantana Road/High Ridge Road intersection. Noise barriers were evaluated at three locations to mitigate noise impacts. However, noise abatement is not recommended for further consideration and public input at any of these impacted sites. A noise barrier for the five impacted homes in the Lake Osborne Estates neighborhood would require acquisition of permanent right-of-way and a construction easement. Also, additional costs would be incurred to relocate overhead and underground utilities. As a result, the estimated cost of this noise barrier is \$1,753,400 overall and \$219,175 per benefited site. This estimated cost per benefited site far exceeds the FDOT's noise barrier cost criteria (\$42,000 per benefited site). The one impacted residence along the east side of High Ridge Road does not meet the FDOT's noise reduction feasibility criterion requiring that a noise barrier must provide a 5.0 dB(A) reduction for at least two impacted receptors to be considered feasible. The Sunshine Park Academy does not have sufficient usage to meet FDOT's reasonable cost criteria for special use sites (\$995,935/person-hours/square-foot). Based on the noise analyses performed to date, there are no apparent solutions available to mitigate the noise impacts at the one impacted residence or the preschool playground. The traffic noise impacts to these noise sensitive sites are considered to be an unavoidable consequence of the project. A Noise Study Report (NSR) was completed in August 2020 and is included in the project file. Please see Modeled Noise Receptor Locations and Noise Analysis Results attached in the appendix.

6.2 Air Quality

This project is not expected to create adverse impacts on air quality because the project area is in attainment for all National Ambient Air Quality Standards (NAAQS) and because the project is expected to improve the Level of Service (LOS) and reduce delay and congestion on all facilities within the study area.

An Air Quality Technical Memorandum (AQTM) was prepared and is included in the project file.

The traffic data input used in the model was from the roadway intersection forecast to have the highest total approach traffic volume. This location was at the I-95/Lantana Road interchange. The No-Action and Preferred Alternative for both the opening year (2025) and the design year (2045) were evaluated.

Estimates of CO were predicted for the default receptors which are located 10 feet to 150 feet from the edge of the roadway. Based on the results from the screening model, the highest project-related CO one-hour and eight-hour levels are not predicted to meet or exceed the one-hour or eight-hour NAAQS for this pollutant with either the No-Action or Preferred Alternative. As such, the project "passes" the screening model. The results of the screening model are attached to the AQTM.

The project is expected to improve traffic flow by improving the operation of the I-95 Interchanges and arterial roadways. The planned improvements are expected to improve overall traffic operations, thereby relieving congestion, within the project study area, which should reduce operational greenhouse gas emissions.

6.3 Contamination

A Contamination Screening Evaluation Report (CSER) was completed. This report evaluated potential and existing contamination sources within the project area buffer. The CSER is in the project file. Available state, local and federal records were reviewed to identify all contamination sites within 500 feet, non-landfill solid waste sites within 1000 feet, and superfund landfill sites within a 1/2 mile. Sites were evaluated independently.

Each site identified within the defined buffers from the proposed improvements was evaluated for its potential impact and assigned a rating of High, Medium, Low, or No potential risk. A total of 9 potential contamination sites were identified including 1 No Risk, 3 Low Risk, and 5 Medium Risk sites. Sites were rated based on their characteristics and distance from the proposed improvements. Level II Contamination Assessment investigations are recommended for Site #3 - Costco and Site #9 - CSX Railroad. Risk ratings were assigned in accordance with the FDOT PD&E Manual. The risk rating distribution for these identified sites/facilities is presented in Table 6-1. The Preferred Alternative was designed to avoid impacts at these sites to the greatest extent possible.

Map ID	Site Name (Facility ID)	Site Address	Risk Type	Risk Rating	Soil/Groundwater	Contamination Type	Distance from Proposed Improvements
1	Lake Worth Sanitary Landfill (65859)	1699 Wingfield Street	Inactive Landfill	Low	Groundwater	Benzene	1,015 feet east of the I-95 right of way
2	Publix Store (9808145)	1589 W Lantana Road	Aboveground Storage Tank (AST) for generator	Low	N/A	N/A	Approximately 400 feet north of Lantana Road and 275 feet east of the northbound I-95 on-ramp

3	Costco Gasoline (9701062)	1873 W Lantana Road	Underground Storage Tanks (USTs) - Petroleum	Medium	N/A	N/A	Adjacent to SFRC/CSX Railroad just west of the southbound I-95 right of way
4	R&R Transportation Spill (9803549)	I-95 Northbound Lane at Lantana Road (26.588687, -80.069011)	Petroleum Spill	Low	N/A	N/A	Within the median of I-95 northbound at Lantana Road
5	Waste MGMT Truck Spill (9803570)	I-95 Southbound Lane at Lantana Road in railroad right of way (26.586821, -80.069739)	Petroleum Spill	Medium	N/A	N/A	Within the SFRC/CSX Railroad right of way adjacent to southbound I-95
6	Shell Gas Station (8732176)	1320 Lantana Road	USTs - Petroleum	Medium	N/A	N/A	Adjacent to Lantana Road
7	Palm Beach Cleaners (9600101)	N/A - site no longer exists	Former dry cleaner	No	N/A	N/A	Site no longer exists, but was located approximately 330 feet east of the I-95 right of way
8	Solid Waste Authority of PBC-Central County Transfer Station (65564)	1810 Lantana Road	Solid Waste/Storage Tanks - diesel	Medium	N/A	N/A	Adjacent to SFRC/CSX Railroad just west of the southbound I-95 right of way and south of Lantana Road
9	CSX Railroad (No Facility ID)	N/A - Railroad right of way	Hazardous Treatment	Medium	Soil	Arsenic	Adjacent to southbound I-95 right of way

There are no existing Level II Evaluations available for FDOT District Four projects that overlap with the I-95 at Lantana Road project corridor. While asbestos surveys were not conducted as part of this PD&E Study, available Asbestos Containing Material (ACM) surveys that were previously conducted on bridges within the current PD&E Study Area are included in Table 6-2. Asbestos surveys were conducted in July 2011 for bridge #930274 (southbound I-95 off-ramp onto Lantana Road), bridge # 930275 (southbound I-95 on-ramp from Lantana Road), and bridge #930276 (Lantana Road over I-95 and CSX Railroad). There was no limitation to sampling locations; however, sampling of these bridges was representative and determined by experience of the field reviewer. The collected samples yielded positive results for asbestos in Class V finish on select areas of all three bridges.

Bridge Location	Bridge #	Direction	ACM Detected
I-95 off-ramp	930274	SB I-95	Regulated ACM (RACM) detected in Class V finish
I-95 off-ramp	930275	SB I-95	RACM detected in Class V finish
Lantana Road over I-95	930276	NB/SB Lantana Road	RACM detected in Class V finish

Asbestos removal was performed using wet method removal techniques for all three bridges between August 7, 2013 and October 24, 2013. Air monitoring conducted during abatement activities confirmed that the airborne fiber concentrations remained below the US EPA clean air standard of 0.01 fibers per cubic centimeter of air (f/cc). Following completion of asbestos removal, visual inspections confirmed that all known ACM had been suitably abated.

It should also be noted that no Lead Based Paint (LBP) surveys were required for this study due to the fact that the bridges are made of concrete and do not contain any materials that were coated with LBP.

6.4 Utilities and Railroads

There are 12 Utility Agency Owners (UAO) with facilities within the study area that were contacted as part of the study. Table 6-3 below shows the list of utility agency owners and utility contact data obtained from Sunshine State One Call of Florida (SSOCOF).

Table 6-3 Utilities in the Project Study Area		
ID	Utility Agency / Owner	Facility Type
1	AT&T Florida/BellSouth	Communication
2	City of Lake Worth-Electric	Power
3	City of Lake Worth-Water & Sewer	Water/Sewer
4	Comcast Cable	Cable TV
5	Crown Castle Fiber	Communication
6	Florida Power & Light-Distribution	Power
7	Florida Power & Light-Transmission	Power
8	Florida Public Utilities Co.	Gas
9	MCI/Verizon	Communication
10	Palm Beach County-Traffic	Traffic
11	Solid Waste Authority of Palm Beach Co.	Waste
12	Town of Lantana	Water/Sewer
*although master agreements with FDOT do not exist under current UAO ownership, master agreements were executed with FDOT under previous ownerships, Comcast ABB Management Corp. and FPL-Fibernet, LLC respectively.		

The Preferred Alternative will impact the following utilities within the study limits:

AT&T Florida

- A 6-4" Polyvinyl Chloride (PVC) duct bank along the south right of way of Lantana Rd. east of I-95 may be in conflict with roadway widening.
- Manhole located northeast of northbound off-ramp from I-95
- Buried copper and fiber facilities crossing southbound on-ramp to I-95

City of Lake Worth Water & Sewer

- 12" PVC Water Main (WM) and 3" PVC Force Main (FM) east of High Ridge Road
- Private lift station and 3" PVC FM interconnect within the adjacent property

Comcast

- Aerial Cables

Crown Castle Fiber

- Handholes along Lantana Road

Florida Public Utilities Co.

- 6" Polyethylene (PE) and 6" Steel Gas Main (GM) are generally present in these areas.

Florida Power & Light Distribution

- Pole 13 Kilovolts (kV) conductors located at the southeast corner of the intersection of High Ridge Road
- Poles with 13kV conductors at the entrance to Sunset Road
- Poles with 13kV immediately to the west of Andrew Redding Road

Lake Worth Electric Utilities

- 138kV Overhead Electric Transmission Facility runs north-south along the I-95 western R/W limit adjacent to the SFRC/CSX rail corridor. The transmission poles immediately to the north and south of Lantana Road will be directly impacted by the Preferred Build Alternative. The transmission poles will need to be relocated to accommodate new ramps.

Palm Beach County-Traffic/ITS

- Existing 2-2" PVC, buried fiber, pull boxes and devices along Lantana Rd.

Town of Lantana Water & Sewer

- 6" PVC FM generally present at back of north sidewalk from Publix Shopping Center entrance to east of Andrew Redding Rd.
- 6" WM also located within the same area
- Town-owned lift station and control panel
- Abandoned 6" FM
- An 8" DIP FM (in 18" Steel casing) and a 12" DIP WM (in 24" Steel casing) cross the I-95 on/off-ramps and mainline just north of the Lantana Road bridge over I-95.
- A 4" FM (in 20" Steel casing) crosses Lantana Rd. near the Solid Waste site west of I-95.
- 12" WM (in 24" Steel casing) that crosses I-95 approx. 1,000-ft south of Lantana Rd. (at W. Mango St).

Verizon/MCI

- Existing buried fiber lines within railroad right of way.

The City of Lake Worth 138kV Electric Transmission facility runs north-south along the SFRC/CSX railroad right of way within the study area. These transmission poles will be directly impacted by the proposed Diverging Diamond Interchange configuration proposed under the preferred alternative. The transmission poles will need to be relocated to accommodate

the new ramps.

Further coordination with the utility agency owners will occur during the design phase of the project.

The SFRC/CSX Railroad crosses the project corridor on the west side of I-95 at Lantana Road. The railroad currently passes beneath an elevated section of Lantana Road. The portion of the CSX railway located within the study area parallels I-95, consist of two tracks and is owned by the FDOT for use by Tri-Rail commuter trains. Currently, eight (8) freight, fifty (50) Tri-Rail, and four (4) Amtrak trains use the system daily. The SFRC/CSX railroad corridor right of way is 100-ft north of Lantana Road and varies from 100-ft to 191-ft south of Lantana Road.

6.5 Construction

Construction activities may cause short-term air quality impacts in the form of dust from earthwork and unpaved roads. These impacts will be minimized by adherence to applicable state regulations and to applicable FDOT Standard Specifications for Road and Bridge Construction.

Short-term impacts associated with construction of the proposed improvements are anticipated including potential erosion of areas cleared for construction, temporary increases in noise levels, from use of heavy construction equipment. Temporary impacts to traffic flow and travel patterns are anticipated during construction activities and would occur along existing roads and at intersections during construction activities.

The FDOT *Standard Specifications for Road and Bridge Construction*, latest edition, has standard construction practices which take into consideration many of the direct construction impacts and provides measures to minimize effects. BMPs will be employed during construction to ensure minimization of impacts.

7. Engineering Analysis Support

The engineering analysis supporting this environmental document is contained within the Preliminary Engineering Report (PER).

8. Permits

The following environmental permits are anticipated for this project:

State Permit(s)

DEP or WMD Environmental Resource Permit (ERP)
DEP National Pollutant Discharge Elimination System Permit
FWC Gopher Tortoise Relocation Permit

Status

To be acquired
To be acquired
To be acquired

Local Permit(s)

Lake Worth Drainage District (LWDD) Permit

Status

To be acquired

9. Public Involvement

The following is a summary of public involvement activities conducted for this project:

Summary of Activities Other than the Public Hearing

Project Kick-Off Meeting

The Elected Officials & Agency Kick-off Meeting was held on Tuesday, May 14, 2019, from 2:30 p.m. to 4:30 p.m. The meeting was intended to introduce the study and give local, state, and federal officials and agencies an opportunity to comment and provide initial input on the future transportation improvements. The Kick-Off Meeting began with an open house at 2:30 p.m., with a formal presentation at 3 p.m.

Three elected officials/representatives from the Town of Lantana, Palm Beach County Mayor's office and the State Senator's office attended the meeting. Some of the key discussion points included drainage concerns, additional traffic to be generated by the Water Tower Commons development (a 73-acre mixed-use development adjacent to the project corridor with 1,100 residential units and 209,000 square feet of commercial space for offices, retail stores and restaurants) and construction dates.

The Public Kick-off Meeting was also held on Tuesday, May 14, 2019. The meeting was held from 5:30 p.m. to 7:30 p.m. and was intended to introduce the project to the public and provide an opportunity to discuss the social, environmental, and economic issues of potential improvements.

Thirty-three people including 3 FDOT staff attended the meeting. Three written comments were provided by attendees. The discussion focused on additional traffic from the Water Tower Commons development, construction noise, and vibration, providing interim improvements along Lantana Road prior to the scheduled construction date, relocation and right of way acquisition, and traffic monitoring during construction.

The details of the Elected Officials/Agency and the Public Kick-Off Meetings are provided in the Project Kick-Off Meeting Summary Report.

Alternatives Public Workshop

The Alternatives Public Workshop was held on Wednesday, November 13, 2019, from 5:30 p.m. to 7:30 p.m. The purpose of this meeting was to provide an opportunity for the public to review the 3 preliminary Build Alternatives and the No-Action Alternative and provide feedback on their preferred improvement. The meeting was conducted as an open-house format, allowing the public to arrive at any time within the 2-hour meeting to review the display boards and discuss the project with the study team.

44 people attended the meeting including 19 FDOT and Consultant Team members. In general, the Attendees were in support of the project to provide the necessary mobility improvements and safety enhancements along Lantana Road. Most attendees identified Build Alternative 2 (Diverging Diamond Interchange (DDI) Configuration) as their preferred choice among the three Build Alternatives presented. Some of the key discussion points included the following:

- Provide an underpass to connect the access roads on the west side of I-95 by extending the bridge over the SFRC Railroad. This will allow for the removal of the EB and NB left turns to enhance safety of the Sunset Road intersection
- Concerns about drainage impacts from proposed improvements on the adjacent residential properties in the southeast quadrant of the interchange

- Provide an EB acceleration lane or extend the EB to SB storage lane to the Solid Waste Authority access road to "avoid a bottleneck"
- Need for walkable/livable communities consideration
- Need to provide sufficient capacity to handle the additional traffic associated with Water Tower Commons development
- Signal improvements to enhance mobility
- Minimize right of way impacts to the medical offices at the SW quadrant of Andrew Redding Road
- Current weaving issues from vehicles exiting the Costco wanting to make a U-turn at High Ridge Road

The details of the Alternatives Public Workshop are provided in the Alternatives Public Workshop Summary Report.

Date of Public Hearing: 12/15/2020

Summary of Public Hearing

The virtual public hearing was held on Tuesday, December 15, 2020 on the GoToWebinar platform while the in-person public hearing was held on Wednesday, December 16, 2020 at the Lantana Road Branch Library located at 4020 Lantana Road, Lake Worth, Florida 33462. Both hearings began at 5:30 p.m. with an open house followed by a formal presentation at 6:00 p.m., and a comment period.

Prior to the scheduled hearing, a Hybrid Public Hearing Strategy was developed and approved. The strategy detailed estimated attendance based on survey poll and extrapolation of attendance from the two prior public meetings, accommodations to ensure inclusion for members of the public with limited access to technology, as well as strategies to ensure safety at the in-person public hearing.

The survey poll was conducted among property owners within the study limits to gauge the public's readiness in attending the in-person hearing and their preferred participation method. The survey was mailed out on October 10, 2020 with options to complete online at the project website, or by return by prepaid mail. 1000 surveys were mailed out. 31 of these were completed online and 22 were completed and returned by mail. Based on the responses, most attendees opted for the virtual public hearing with a limited number opting to attend the in-person public hearing.

Draft documents were available for public review starting November 24, 2020 and remained accessible at the following locations through December 30, 2020.

- Town of Lantana Town Hall, 500 Greynolds Circle, Lantana, FL 33462
- Lantana Road Branch Library, 4020 Lantana Road, Lake Worth, FL 33462
- Project website: <https://www.fdot.gov/projects/95lantana>

Virtual Public Hearing

The virtual public hearing began at 5:30 pm with a virtual open house where the project team took attendees through the project displays shown as presentation slides. The open house included a video on the operations of a Diverging Diamond Interchange - The Preferred Alternative, and a simulation on the proposed access changes and its impact on travel patterns. A pre-recorded voiceover presentation was played at 6:00 p.m. The presentation included the project background, Alternatives, Alternatives Evaluation, right of way impacts and schedule. The presentation was followed by a comment period.

55 members of the public pre-registered to attend the virtual public hearing. However, only 23 members of the public and 9 FDOT and consultant team members attended. There was a court reporter present at the virtual public hearing. 11 questions and comments were submitted through the GoToWebinar question pane. In addition, 2 verbal comments were expressed during the formal comment period. One email comment was received after the virtual public hearing. The questions and comments centered on the following:

- Maintaining the Lantana Road access to the Lantana Self Storage during and after construction.
- Impact of increased traffic volume from the proposed underpass service road on the operations of the SWA trucks.
- Travel pattern for SWA trucks accessing northbound I-95 via Lantana Road.
- Noise impacts and provision of additional noise walls to mitigate highway noise along I-95.
- Maintenance of Traffic and access to businesses and property during construction.
- Lighting for the proposed underpass service road.
- Support for Preferred Alternative - DDI for its safety and operational benefits.

The virtual public hearing ended at 6:41 p.m.

In-Person Public Hearing

The in-person public hearing began at 5:30 pm with an open house where the project team walked attendees through the project displays. A pre-recorded voiceover presentation was played at 6:00 p.m. followed by a comment period. The formal presentation included a video on the operations of a Diverging Diamond Interchange which is the preferred Alternative 7 members of the public and 11 FDOT and consultant team members were also present at the in-person public hearing. There was a court reporter present at the in-person public hearing. 2 verbal comments were expressed during the formal comment period and 2 additional email comments were received after the in-person public hearing. The questions and comments centered on the following:

- Maintaining the Lantana Road access to the Lantana Self Storage during and after construction.
- Right of way impacts at the medical offices located at 1280 Lantana Road. Business owners at this location were concerned that any loss of parking at their property would damage their business.
- Concerns about the drainage impacts and its effect on the adjacent residential neighborhoods.
- Support for the underpass service road to enhance safety at the High Ridge Road and Sunset Road intersections.

The in-person public hearing ended at 6:35 p.m.

The details of the Virtual Public Hearing and In-Person Public Hearing are provided in the Public Hearing Summary Report which is included in the project file.

10. Commitments Summary

1. To minimize adverse effects to gopher tortoises, a survey is needed prior to the start of construction. Surveys should be conducted within the existing and proposed right of way, dry swales, and area underneath the proposed underpass service road. Any gopher tortoises located within 25 feet of proposed construction will be relocated by a Florida Fish and Wildlife Conservation Commission (FWC) Authorized Gopher Tortoise Agent to an approved recipient site.
2. The FDOT will adhere to the most recent version of the U.S. Fish and Wildlife Service's (USFWS) "Standard Protection Measures for the Eastern Indigo Snake" during construction to prevent adverse impacts to this species.
3. The FDOT will continue to coordinate with South Florida Regional Transportation Authority (SFRTA) and CSX Transportation during design phase of the project to ensure that the proposed interchange improvements provide a clear envelope over the South Florida Rail Corridor (SFRC) when placing bridge piers in order to accommodate future planned expansion.

11. Technical Materials

The following technical materials have been prepared to support this environmental document.

Sociocultural Effects Evaluation Report
Conceptual Stage Relocation Plan
Cultural Resources Assessment Survey (CRAS)
Section 4(f) Determination of Applicability
Drainage Analysis Report (DAR)
Natural Resources Evaluation (NRE)
Water Quality Impact Evaluation (WQIE)
Noise Study Report (NSR)
Contamination Screening Evaluation Report (CSER)
Air Quality Technical Memorandum (AQTM)
Utility Assessment Memorandum (UAM)
Typical Section Package
Bridge Analysis Report (BAR)
Geotechnical Report
Location Hydraulic Report (LHR)
Preliminary Engineering Report (PER)
Interchange Modification Report (IMR)
Drainage Analysis Report (DAR)
Public Involvement Plan
Project Kick-off Meeting Summary Report
Alternative Public Workshop Summary Report

Cultural Resource Assessment Survey
SR 9/I-95 at Lantana Road
Financial Management #: 413258-1-22-01
Palm Beach County, Florida

Attention: Adrienne Daggett

Dear Dr. Daggett;

This Cultural Resource Assessment Survey (CRAS) for the State Road 9 (SR-9)/Interstate 95 (I-95) Project Development and Environment (PD&E) Study was undertaken for the Florida Department of Transportation (FDOT), District 4. The objective of this survey was to identify cultural resources within the project area of potential effect (APE) and assess their eligibility for listing in the National Register of Historic Places (National Register) according to criteria set forth in 36 Code of Federal Regulations (CFR) Section 60.4. This CRAS addresses Efficient Transportation Decision Making (ETDM) agency comments requiring a comprehensive survey of the project area documenting all cultural resources and assessing their National Register eligibility.

The PD&E Study is proposing improvements to the Lantana Road interchange. This project will evaluate the potential modification of existing entrance and exit ramps serving the Lantana Road interchange within the project limits. Widening and turn lane modifications will be evaluated along Lantana Road to facilitate the ramp modifications and improve the access and operation of the corridors upstream and downstream from the interchanges.

This assessment complies with Section 106 of the *National Historic Preservation Act (NHPA) of 1966* (Public Law 89-665, as amended), as implemented by 36 CFR 800 -- *Protection of Historic Properties* (incorporating amendments effective August 5, 2004); Stipulation VII of the *Programmatic Agreement among the Federal Highway Administration (FHWA), the Advisory Council on Historic Preservation (ACHP), the Florida Division of Historical Resources (FDHR), the State Historic Preservation Officer (SHPO), and the FDOT Regarding Implementation of the Federal-Aid Highway Program in Florida* (Section 106 Programmatic Agreement, effective March 2016, amended June 7, 2017); Section 102 of the *National Environmental Policy Act (NEPA) of 1969*, as amended (42 USC 4321 et seq.), as implemented by the regulations of the Council on Environmental Quality (CEQ) (40 CFR Parts 1500-

HISTORIC PRESERVATION

*Cultural Resources Assessment Survey
I-95 @ Lantana Road
FM 413258.1*

1508); Section 4(f) of the *Department of Transportation Act of 1966*, as amended (49 USC 303 and 23 USC 138); the revised Chapter 267, *Florida Statutes (F.S.)*; and the standards embodied in the FDHR's *Cultural Resource Management Standards and Operational Manual* (February 2003), and Chapter 1A-46 (*Archaeological and Historical Report Standards and Guidelines*), *Florida Administrative Code*. In addition, this report was prepared in conformity with standards set forth in Part 2, Chapter 8 (*Archaeological and Historical Resources*) of the FDOT *Project Development and Environment Manual* (effective June 14, 2017). All work also conforms to professional guidelines set forth in the *Secretary of Interior's Standards and Guidelines for Archaeology and Historic Preservation* (48 FR 44716, as amended and annotated).

No newly or previously recorded archaeological resources were identified within the archaeological APE during the current survey. The pedestrian survey confirmed the modified nature and low archeological potential of the archaeological APE. No subsurface testing was conducted due to the presence of hardscape, landscaping, ditches, berms, and buried utilities. The historic resources survey resulted in the identification of a total of fifteen historic resources. Of the fifteen resources, one is previously recorded and fourteen are newly recorded. The previously recorded resource has been determined National Register-eligible outside of the current project APE: Seaboard Air Line Railroad (8PB12917) within the current project APE. The segment of this resource, within the project APE was recorded in 2010 but was not evaluated by the SHPO. Therefore, an updated FMSF form was completed for this resource. The current survey considers the segment of the Seaboard Air Line Railroad (8PD12917) within the current project APE to be National Register-eligible under Criterion A in the categories of Transportation and Community Planning and Development. The fourteen newly recorded resources (8PB18592-8PB18605) are standing structures. Of those, thirteen are Masonry Vernacular style buildings and one is Mid-Century Modern. Only one of the fourteen newly recorded resources is considered to be National Register-eligible: First Federal Savings and Loan Association (Chase Bank) (8PB18601) at 1300 W Lantana Road. This building is a well-intact example of Mid-Century Modern architecture. It is a rare example of this style of architecture within the Lantana area, in which there are few well-intact Mid-Century Modern style structures. Due to its high integrity and significance as a rare example of this style of architecture in the area, the First Federal Savings and Loan Association (Chase Bank) (8PB18601) at 1300 W Lantana Road is considered eligible for listing in the National Register under Criterion C in the area of Architecture.

The remaining thirteen newly recorded standing structures (8PB18592-8PB18600, 8PB18602-8PB18605) do not possess sufficient significant historic associations to meet National Register criteria for listing individually. These resources are Masonry Vernacular in style, a common style across South Florida. In addition, each of these resources exhibit moderate or extensive exterior alterations which affect their historic integrity. Therefore, these newly recorded standing structures are considered National Register-ineligible, either individually or as a part of a district, under Criterion A, B, C, and D.

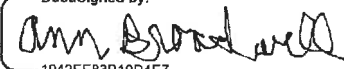

A visual assessment in the area within and adjacent to the project APE found that these areas comprised mainly of modest, Masonry Vernacular, single-family homes and commercial properties constructed in the late 1950s and 1960s. Most of the residential structures have sustained several alterations, most often including but not limited to replacement of windows, doors, roofs and enclosed carports and porches. Further, many have also sustained additions which further compromise a structure's history integrity. Most historic commercial properties within the APE have also sustained several alterations including new storefront windows, front façade alterations, additions and window and door replacements. This

*Cultural Resources Assessment Survey
I-95 @ Lantana Road

visual assessment did not indicate that there are any potential historic districts within the current project APE.

FDOT, District 4 will complete and submit a Section 106 Determination of Effects document regarding the National Register eligible First Federal Savings and Loan Building (8PB18601). I respectfully request your concurrence with the determinations in the enclosed report. If there are any questions, please feel free to contact me at (954) 777-4324 or Lynn Kelley at (954) 777-4334.

Re: Section 106 Evaluation and Determination of Effects
State Road (SR) 9/Interstate 95 (I-95) at Lantana Road PD&E Study, Palm Beach County
Financial Management Number: 413258-1-22-02/ETDM #: 14338

Dear Dr. Daggett,

The Florida Department of Transportation (FDOT), District Four, is conducting a Project Development and Environment (PD&E) Study that proposes improvements to State Road (SR 9)/Interstate 95 (I-95) (from MP 18.420 to MP 19.158) at Lantana Road (from High Ridge Road to Andrew Redding Road) Interchange. The PD&E Study is proposing improvements to the Lantana Road interchange. This project will evaluate the potential modification of existing entrance and exit ramps serving the Lantana Road interchange within the project limits. Widening and turn lane modifications will be evaluated along Lantana Road to facilitate the ramp modifications and improve the access and operation of the corridors upstream and downstream from the interchanges.

This assessment complies with Section 106 of the *National Historic Preservation Act (NHPA) of 1966* (Public Law 89-665, as amended), as implemented by 36 CFR 800 -- *Protection of Historic Properties* (incorporating amendments effective August 5, 2004); Stipulation VII of the *Programmatic Agreement among the Federal Highway Administration (FHWA), the Advisory Council on Historic Preservation (ACHP), the Florida Division of Historical Resources (FDHR), the State Historic Preservation Officer (SHPO), and the FDOT Regarding Implementation of the Federal-Aid Highway Program in Florida* (Section 106 Programmatic Agreement, effective March 2016, amended June 7, 2017); Section 102 of the *National Environmental Policy Act (NEPA) of 1969*, as amended (42 USC 4321 et seq.), as implemented by the regulations of the Council on Environmental Quality (CEQ) (40 CFR Parts 1500–1508); Section 4(f) of the *Department of Transportation Act of 1966*, as amended (49 USC 303 and 23 USC 138); the revised Chapter 267, *Florida Statutes (F.S.)*; and the standards embodied in the FDHR's *Cultural Resource Management Standards and Operational Manual* (February 2003), and Chapter 1A-46

*Section 106 Evaluation and Determination of Effects**SR 9/I-95 at Lantana Road PD&E Study**FM 413258-1-22-02/ETDM #: 14338**Page 2*

(Archaeological and Historical Report Standards and Guidelines), Florida Administrative Code. In addition, this report was prepared in conformity with standards set forth in Part 2, Chapter 8 *(Archaeological and Historical Resources)* of the *FDOT Project Development and Environment Manual* (effective January 14, 2019). All work also conforms to professional guidelines set forth in the *Secretary of Interior's Standards and Guidelines for Archaeology and Historic Preservation* (48 FR 44716, as amended and annotated).

A Cultural Resource Assessment Survey (CRAS) for the SR 9/I-95 at Lantana Road PD&E Study was undertaken by Janus Research in cooperation with GOAL Associates, Inc for FDOT, District Four. The CRAS resulted in the identification and evaluation of fifteen historic resources and no archaeological resources. On April 17, 2020, the SHPO concurred that two of the resources, the Seaboard Air Line Railroad (8PB12917) and the First Federal Savings and Loan Association (8PB18601) are eligible for listing in the National Register of Historic Places (National Register). The remaining 12 resources were determined ineligible for listing in the National Register.

The current letter provides the current project improvements at the Seaboard Air Line Railroad (8PB12917) and the First Federal Savings and Loan Association (8PB18601) and provides a finding of effect based on the Criteria of Adverse Effect.

Seaboard Air Line Railroad (8PB12917)

The segment of the Seaboard Air Line Railroad (Figure 1) within the APE runs in a north/south direction, passing beneath and extending for approximately 0.35 miles north and south of W Lantana Road. It consists of a set of standard gauge tracks on gravel ballast. The second set of tracks was added in recent years as a part of the Tri-Rail system managed by the South Florida Regional Transportation Agency (SFRTA). The rail line has experienced replacement of materials as part of typical maintenance of the resource, but it maintains the original alignment. Numerous sections of the railway have been determined eligible for the National Register by the Florida SHPO. The current segment of the railway was determined National Register-eligible under Criterion A in the categories of Transportation and Community Planning and Development.

As part of the proposed improvements with the Preferred Alternative, the existing Lantana Road bridge over the Seaboard Air Line Railroad corridor will be replaced. The proposed bridge replacement will preserve the existing envelope over the railroad corridor by ensuring that the bridge piers and abutments are placed outside of the railroad right of way. The Preferred Alternative also includes an underpass access road connecting the service roads providing access to the Costco Warehouse on the north side and the Solid Waste Authority Transfer Station on the south side underneath the new bridge over the railroad corridor. This new underpass access road will require 0.04 acres of right of way from the existing railroad corridor to accommodate the new roadway alignment (Figure 2).

The proposed improvements to the Seaboard Air Line Railroad will not impact the integrity of the resource as no historic material will be removed and the use of the resource will not be impacted. The railroad will remain a historic transportation corridor and will continue to convey its significance in the planning and development of communities. Therefore, based on the nature of

Section 106 Evaluation and Determination of Effects

SR 91-95 at Lantana Road PD&E Study

FM 413258-1-22-02/ETDM #: 14338

Page 3

the improvements, the Preferred Alternative will have no adverse effect to the Seaboard Air Line Railroad.

Figure 1: Current Conditions of Seaboard Air Line Railroad at the Lantana Road Overpass

Figure 2: Proposed Improvements at the Seaboard Air Line Railroad

*Section 106 Evaluation and Determination of Effects**SR 9/I-95 at Lantana Road PD&E Study**FM 413258-1-22-02/ETDM #: 14338**Page 4***First Federal Savings and Loan Association (8PB18601)**

The First Federal Savings and Loan Association (8DA18601) structure is located at 1300 W Lantana Road on the south side of W Lantana Road between N 13th Street and I-95 at 1300 W Lantana (Figure 3). This building was constructed in 1964 and has operated as a bank since its construction. Since 2009, it has operated as a Chase Bank branch. The building is of Mid-Century Modern style. It has a cross-shaped plan consisting of two stories and stuccoed concrete block walls. The second story projects from the north façade of the building. It has four flat roof extension on each corner of the building which are supported by two-story stuccoed columns and cover concrete pads that lead to the entrances on the north, southeast, and southwest. The overall site consists of the bank building and the asphalt parking lot which extends from W Lantana Road, south to the building, then south from the building to the adjacent motel parking lot. The lot also abuts the building on the east and west extending to adjacent parcels. Parking spaces are located to the north, south, and east of the building. The parking lot was expanded and altered circa 1975 with the addition of two rows of parking spaces and a large landscaped island in the south parking lot. In 1986, a drive-through canopy was placed on the west side of the building and resulted in the removal of some parking west side of the building. First Federal Savings and Loan Association (8PB18601) located at 1300 W Lantana Road was determined eligible for listing in the National Register under Criterion C in the category of Architecture as it is a unique example of Mid-Century Modern Architecture in the Lantana area with elements such as boxed windows, textured stucco, concrete canopies, and coffered flat roof extensions.

Figure 3: First Federal Savings and Loan Association (main façade), facing South

As part of the proposed improvements with the Preferred Alternative, the portion of Lantana Road adjacent to the First Federal Savings and Loan Association (8PB18601) located at 1300 W Lantana

FM 413258-1-22-02/ETDM #: 14338

Page 5

Road will be widened to accommodate three eastbound lanes, bicycle lanes, and a six-foot-wide sidewalk. The improvements will not require any right-of-way from the parcel at 1300 W Lantana Road (Figure 4). The roadway is currently modernized with signage, markings, lighting, curbing, and traffic lights. The eastbound lanes are currently 2 through-lanes with a right-turn lane closest to the resource at 1300 W Lantana Road with curbing and a sidewalk (Figure 5). The proposed improvements will not alter the setting of the First Federal Savings and Loan Association (8PB18601) to a degree at which it will no longer convey its significance. Based on the nature of the improvements, the Preferred Alternative will have no effect on the historic First Federal Savings and Loan Association (8PB18601).

SEABOARD AIR LINE RAILROAD

Facility Type: Railroad Corridor

Property Classification: Historic Site

Address and Coordinates:

Address: 1810 Lantana Rd, Lake Worth, FL, 33462, USA

Latitude: Longitude:

Description of Property:

The Seaboard Air line Railroad runs parallel to the interchange ramps on the west side. It consists of a set of standard gauge tracks on gravel ballast. The second set of tracks was added in recent years as a part of the Tri-Rail system managed by the South Florida Regional Transportation Agency (SFRTA). The rail line has experienced replacement of materials as part of typical maintenance of the resource, but it maintains the original alignment.

Numerous sections of the railway have been determined eligible for the National Register by the Florida SHPO. The current segment of the railway was determined National Register-eligible under Criterion A in the categories of Transportation and Community Planning and Development.

The Seaboard Air Line Railroad which is also known as the SFRTA Railroad Corridor has been identified by the office of Greenways and Trails as a potential multi-use trails opportunity. However, the railroad is currently active and there are no existing plans for trails along the railroad corridor.

Owner/Official with Jurisdiction: South Florida Regional Transportation Agency (SFRTA)

Recommended Outcome: *de minimis*

Yes No

- Was there coordination with the Official(s) with Jurisdiction to identify an opportunity for a *de minimis* finding?
- Was the OWJ informed by the District of FDOT s intent to pursue a *de minimis* approval option?
- Was the OWJ informed in writing that their concurrence with a no adverse effect finding to the activities, features or attributes which qualify the property for protection may result in FDOT making a *de minimis* approval under Section 4(f)?
- Did the OWJ concur that the proposed project, including any enhancement, mitigation and minimization of harm measures, will result in no adverse effects to the activities features or attributes of the property?

Basis on Which the Determination was Made

As part of the proposed improvements with the Preferred Alternative, the existing bridge over the SFRTA Railroad Corridor as well as the ramp bridges would be replaced. Both the proposed ramp and bridge replacement will preserve the existing envelope over the railroad corridor by ensuring that the bridge piers and abutments are placed outside of the railroad right of way and will not result in an adverse effect to this National Register eligible linear resource.

Also included as part of the proposed improvements is the provision of an underpass access road connecting the service roads providing access to the Costco Warehouse on the north side and the Solid Waste Authority Transfer Station on the south side underneath the new bridge over the railroad corridor. This new underpass access road will require 0.04 acres

of right of way from the existing railroad corridor to accommodate the new roadway alignment. However, this will not impact the integrity of the resource as no historic material will be removed and the use of the resource will not be impacted.

The railroad will remain a historic transportation corridor and will continue to convey its significance in the planning and development of communities. Therefore, based on the nature of the improvements, the Preferred Alternative will have no adverse effect to the Seaboard Air Line Railroad. Due to the proximity of the proposed improvement to the SFRTA Railroad Corridor, the impact of the project on this resource is determined to be "de minimis".

Public Involvement Activities:

Public Kick-Off Meeting

The Public Kick-off Meeting for the SR 9/I-95 at Lantana Road Project Development and Environment (PD&E) Study was held on Tuesday, May 14, 2019, from 5:30 p.m. to 7:30 p.m. The meeting was intended to introduce the project to the public and provide an opportunity to discuss the social, environmental, and economic impacts of potential improvements. Thirty-three people including 3 FDOT staff attended the meeting.

Alternatives Public Workshop

The Alternatives Public Workshop for the SR 9/I-95 at Lantana Road, Project Development and Environment (PD&E) Study was held on Wednesday, November 13, 2019, from 5:30 p.m. to 7:30 p.m. The purpose of this meeting was to provide an opportunity for the public to review the 3 preliminary Build Alternatives and the No-Action Alternative and provide feedback on their preferred improvement. The meeting was conducted as an open-house format, allowing the public to arrive at any time within the 2-hour meeting to review the display boards and discuss the project with the study team. 44 people attended the meeting including 19 FDOT and Consultant Team members. In general, the Attendees were in support of the project to provide the necessary mobility improvements and safety enhancements along Lantana Road.

Public Hearing

A Public Hearing is scheduled for August 25, 2020 in accordance with the project schedule. The meeting will begin as an open house followed by a formal presentation and a comment period.

OEM SME Concurrence Date: 06-23-2020

FIRST FEDERAL SAVINGS AND LOAN ASSOCIATION

Facility Type: Building

Property Classification: Historic Site

Address and Coordinates:

Address: 1300 W Lantana Rd, Lake Worth, FL, 33462, USA

Latitude: 26.58714 Longitude: -80.06596

Description of Property:

The First Federal Savings and Loan Association Building (now Chase Bank Building) located at 1300 W Lantana Road, Lantana, FL 33462. This building was constructed in 1964 and has operated as a bank since its construction. Since 2009, it has operated as a Chase Bank branch. The building is of Mid-Century Modern style. It has a cross-shaped plan consisting of two stories and stuccoed concrete block walls. The second story projects from the north facade of the building. It has four flat roof extension on each corner of the building which are supported by two-story stuccoed columns and cover concrete pads that lead to the entrances on the north, southeast, and southwest. The overall site consists of the bank building and the asphalt parking lot which extends from W Lantana Road, south to the building, then south from the building to the adjacent motel parking lot.

The lot also abuts the building on the east and west extending to adjacent parcels. Parking spaces are located to the north, south, and east of the building. The parking lot was expanded and altered circa 1975 with the addition of two rows of parking spaces and a large landscaped island in the south parking lot. In 1986, a drive-through canopy was placed on the west side of the building and resulted in the removal of some parking west side of the building.

First Federal Savings and Loan Association located at 1300 W Lantana Road was determined eligible for listing in the National Register under Criterion C in the category of Architecture as it is a unique example of Mid-Century Modern Architecture in the Lantana area with elements such as boxed windows, textured stucco, concrete canopies, and coffered flat roof extensions.

Owner/Official with Jurisdiction: WASHINGTON MUTUAL BANK

Recommended Outcome: Not Applicable

Rationale:

As part of the proposed improvements with the Preferred Alternative, the portion of Lantana Road adjacent to the First Federal Savings and Loan Association located at 1300 W Lantana Road will be widened to accommodate three eastbound lanes, bicycle lanes, and a six-foot-wide sidewalk. The improvements will not require any right-of-way from the parcel at 1300 W Lantana Road, Lantana, FL 33462. The roadway is currently modernized with signage, markings, lighting, curbing, and traffic lights. The eastbound lanes are currently 2 through-lanes with a right-turn lane closest to the resource at 1300 W Lantana Road with curbing and a sidewalk.

The proposed improvements will not alter the setting of the First Federal Savings and Loan Association to a degree at which it will no longer convey its significance. Based on the nature of the improvements, the Preferred Alternative will have no effect on the historic First Federal Savings and Loan Association.

Cultural Resource Assessment Survey
SR 9/I-95 at Lantana Road
Financial Management #: 413258-1-22-01
Palm Beach County, Florida

Attention: Adrienne Daggett

Dear Dr. Daggett;

This Cultural Resource Assessment Survey (CRAS) for the State Road 9 (SR-9)/Interstate 95 (I-95) Project Development and Environment (PD&E) Study was undertaken for the Florida Department of Transportation (FDOT), District 4. The objective of this survey was to identify cultural resources within the project area of potential effect (APE) and assess their eligibility for listing in the National Register of Historic Places (National Register) according to criteria set forth in 36 Code of Federal Regulations (CFR) Section 60.4. This CRAS addresses Efficient Transportation Decision Making (ETDM) agency comments requiring a comprehensive survey of the project area documenting all cultural resources and assessing their National Register eligibility.

The PD&E Study is proposing improvements to the Lantana Road interchange. This project will evaluate the potential modification of existing entrance and exit ramps serving the Lantana Road interchange within the project limits. Widening and turn lane modifications will be evaluated along Lantana Road to facilitate the ramp modifications and improve the access and operation of the corridors upstream and downstream from the interchanges.

This assessment complies with Section 106 of the *National Historic Preservation Act (NHPA)* of 1966 (Public Law 89-665, as amended), as implemented by 36 CFR 800 -- *Protection of Historic Properties* (incorporating amendments effective August 5, 2004); Stipulation VII of the *Programmatic Agreement among the Federal Highway Administration (FHWA), the Advisory Council on Historic Preservation (ACHP), the Florida Division of Historical Resources (FDHR), the State Historic Preservation Officer (SHPO), and the FDOT Regarding Implementation of the Federal-Aid Highway Program in Florida* (Section 106 Programmatic Agreement, effective March 2016, amended June 7, 2017); Section 102 of the *National Environmental Policy Act (NEPA)* of 1969, as amended (42 USC 4321 et seq.), as implemented by the regulations of the Council on Environmental Quality (CEQ) (40 CFR Parts 1500-

2020 MAR 29 A 9:53
HISTORIC PRESERVATION

*Cultural Resources Assessment Survey
I-95 @ Lantana Road
FM 413258.1*

1508); Section 4(f) of the *Department of Transportation Act of 1966*, as amended (49 USC 303 and 23 USC 138); the revised Chapter 267, *Florida Statutes (F.S.)*; and the standards embodied in the FDHR's *Cultural Resource Management Standards and Operational Manual* (February 2003), and Chapter 1A-46 (*Archaeological and Historical Report Standards and Guidelines*), *Florida Administrative Code*. In addition, this report was prepared in conformity with standards set forth in Part 2, Chapter 8 (*Archaeological and Historical Resources*) of the FDOT *Project Development and Environment Manual* (effective June 14, 2017). All work also conforms to professional guidelines set forth in the *Secretary of Interior's Standards and Guidelines for Archaeology and Historic Preservation* (48 FR 44716, as amended and annotated).

No newly or previously recorded archaeological resources were identified within the archaeological APE during the current survey. The pedestrian survey confirmed the modified nature and low archeological potential of the archaeological APE. No subsurface testing was conducted due to the presence of hardscape, landscaping, ditches, berms, and buried utilities. The historic resources survey resulted in the identification of a total of fifteen historic resources. Of the fifteen resources, one is previously recorded and fourteen are newly recorded. The previously recorded resource has been determined National Register-eligible outside of the current project APE: Seaboard Air Line Railroad (8PB12917) within the current project APE. The segment of this resource, within the project APE was recorded in 2010 but was not evaluated by the SHPO. Therefore, an updated FMSF form was completed for this resource. The current survey considers the segment of the Seaboard Air Line Railroad (8PD12917) within the current project APE to be National Register-eligible under Criterion A in the categories of Transportation and Community Planning and Development. The fourteen newly recorded resources (8PB18592-8PB18605) are standing structures. Of those, thirteen are Masonry Vernacular style buildings and one is Mid-Century Modern. Only one of the fourteen newly recorded resources is considered to be National Register-eligible: First Federal Savings and Loan Association (Chase Bank) (8PB18601) at 1300 W Lantana Road. This building is a well-intact example of Mid-Century Modern architecture. It is a rare example of this style of architecture within the Lantana area, in which there are few well-intact Mid-Century Modern style structures. Due to its high integrity and significance as a rare example of this style of architecture in the area, the First Federal Savings and Loan Association (Chase Bank) (8PB18601) at 1300 W Lantana Road is considered eligible for listing in the National Register under Criterion C in the area of Architecture.

The remaining thirteen newly recorded standing structures (8PB18592-8PB18600, 8PB18602-8PB18605) do not possess sufficient significant historic associations to meet National Register criteria for listing individually. These resources are Masonry Vernacular in style, a common style across South Florida. In addition, each of these resources exhibit moderate or extensive exterior alterations which affect their historic integrity. Therefore, these newly recorded standing structures are considered National Register-ineligible, either individually or as a part of a district, under Criterion A, B, C, and D.

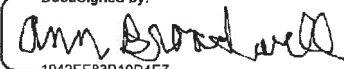

A visual assessment in the area within and adjacent to the project APE found that these areas comprised mainly of modest, Masonry Vernacular, single-family homes and commercial properties constructed in the late 1950s and 1960s. Most of the residential structures have sustained several alterations, most often including but not limited to replacement of windows, doors, roofs and enclosed carports and porches. Further, many have also sustained additions which further compromise a structure's history integrity. Most historic commercial properties within the APE have also sustained several alterations including new storefront windows, front façade alterations, additions and window and door replacements. This

*Cultural Resources Assessment Survey
I-95 @ Lantana Road
FM 413258.1*

visual assessment did not indicate that there are any potential historic districts within the current project APE.

FDOT, District 4 will complete and submit a Section 106 Determination of Effects document regarding the National Register eligible First Federal Savings and Loan Building (8PB18601). I respectfully request your concurrence with the determinations in the enclosed report. If there are any questions, please feel free to contact me at (954) 777-4324 or Lynn Kelley at (954) 777-4334.

Sole Source Aquifer Concurrence Letter

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 4
ATLANTA FEDERAL CENTER
61 FORSYTH STREET, SW
ATLANTA, GEORGIA 30303-3104

Ms. Vandana Nagole, P.E.
Project Manager
Florida Department of Transportation, District 4
3400 West Commercial Boulevard
Fort Lauderdale, FL 33309

Subject: Sole Source Aquifer Review/Concurrence for SR 9/I-95 at Lantana Road, ETDM #: 14338.

Dear Ms. Nagole:

The U.S. Environmental Protection Agency, Region 4 received the Florida Department of Transportation's (FDOT) request on December 8, 2020 to review the above referenced project pursuant to Section 1424(e) of the Safe Drinking Water Act (SDWA), 42 U.S.C. § 300h-3. The objective of the EPA's review is to determine if the project lies within the boundaries, including recharge and streamflow source zones, of an EPA designated Sole Source Aquifer (SSA), and to determine if the project poses potential adverse health or environmental impacts. A SSA is the sole or principal water source for a designated area.

SR 9/I-95 at Lantana Road project (Project) has been determined to lie inside the designated boundaries of the Biscayne Sole Source Aquifer and based on the information provided, may cause a significant impact to the aquifer system when the Project's bridge foundations are installed and/or construction dewatering is undertaken. However, with proper implementation of best management practices (BMPs), these potential impacts can be adequately reduced or properly mitigated. To that effect, when installing bridge foundations, the FDOT must adhere to the list of BMPs provided as items 1 and 2 below. The dewatering operation BMPs are listed in item 3 below:

1. FDOT Design Manual Chapter 320 Stormwater Pollution Prevention Plan (SWPPP)
2. FDOT Standard Specification for Road and Bridge Construction,
 - a. Section 6 – Control of Materials
 - b. Section 104 – Prevention, Control, And Abatement of Erosion and Water Pollution
 - c. Section 455 – Structures Foundations
3. U.S. Bureau of Reclamation Engineering Geology Field Manual – Chapter 20 Water Control.
<https://www.usbr.gov/tsc/techreferences/mands/geologyfieldmanual-vol2/Chapter20.pdf>

Furthermore, all debris from any demolition of the existing structures must be properly contained and removed from the site prior to construction of the new structure. If applicable, all county flood plain management plans and public notification processes must be followed. During construction, it is the EPA's understanding and expectation that those responsible for the project will strictly adhere to all Federal, State, and local government permits, ordinances, planning designs, construction codes,

operation, maintenance, and engineering requirements, and any contaminant mitigation recommendations outlined by federal and state agency reviews. All best management practices for erosion and sedimentation control must also be followed and State and local environmental offices must be contacted to address proper drainage and storm water designs. Additionally, the project manager should contact State and local environmental officials to obtain a copy of any local Wellhead Protection Plans. The following website provides information regarding the Florida Department of Environmental Protection's Source Water Assessment and Protection Program.

<http://www.dep.state.fl.us/swapp/Default.htm>

The EPA finds that, if the conditions outlined above are adhered to, this Project should have no significant impact to the aquifer system. Please note that this "no significant impact" finding has been determined based on compliance with the requirements outlined above and, on the information provided. Further, this finding only relates to Section 1424(e) of the SDWA, 42 U.S.C. § 300h-3. If there are any significant changes to the project, the EPA Region 4 office should be notified for further review. Other regulatory groups within the EPA responsible for administering other programs may, at their own discretion and under separate cover, provide additional comments.

Thank you for your concern with the environmental impacts of this project. If you have any questions, please contact Mr. Khurram Rafi at 404-562-9283 or Rafi.Khurram@epa.gov or Mr. Larry Cole at 404-562-9474 or Cole.Larry@epa.gov.

Sincerely,

Joel Coffman

(Florida Department of Transportation)
GODFREY LAMPTEY (Virtually)
(Consultant)
CESAR MARTINEZ (Virtually)
(Florida Department of Transportation)

ALSO PRESENT:

CHARESSE CHESTER (Virtually)

MS. CHESTER: Good evening, everyone.

1 Thank you for joining us for the State Road
2 9/I-95 at Lantana Road Project Development and
3 Environment Study open house hearing. At this
4 time we will have the Florida Department of
5 Transportation Project Manager, Vandana Nagole.

6 MS. NAGOLE: Good evening and welcome to
7 the open house for the Florida Department of
8 Transportation District 4 Public Hearing for
9 the State Road 9/I-95 at Lantana Road Project
10 Development and Environment Studies.

11 My name is Vandana Nagole. The FDOT
12 Project Manager for this PD&E Study. The open
13 house is intended to provide the information on
14 the project including project alternatives,
15 impacts, costs and schedule. During the
16 upcoming Public Hearing presentation you will
17 also hear of former presentations summarizing
18 and explaining much of the information you will
19 see during this open house. Please submit any
20 comments or questions you may have at any point
21 during the open house by simply clicking on the
22 comment pane on the control panel.

23 Opportunities for questions would be provided
24 at various intervals during this open house.

25 Please use the raise hand feature to ask a

1 question and un-mute yourselves once you're
2 called upon. The FDOT and the consultant
3 project team here with me tonight will be happy
4 to respond to your comments and questions. All
5 comments and questions will be incorporated
6 into the Public Hearing records.

7 The next page, please.

8 This board affirms FDOT's compliance with
9 various non-discrimination laws and
10 regulations, including Title VI of the Civil
11 Rights Act of 1964. Public participation is
12 solicited without regards to race, color,
13 national origin, age, sex, religion, disability
14 or family status. Persons wishing to express
15 concerns about Title VI may do so by contacting
16 the Title VI coordinators shown on this board.

17 Next slide, please.

18 The environmental review, consultation,
19 and other actions required by applicable
20 federal environmental laws for this project are
21 being, or have been, carried out by the Florida
22 Department of Transportation (FDOT) pursuant to
23 23 U.S.C 327 and a Memorandum of Understanding
24 dated December 14, 2016 and executed by the
25 Federal Highway Administration (FHWA) and FDOT.

1 Next slide, please.

2 This board provides an illustration of
3 FDOT's Transportation Development process which
4 starts with planning and ends with a
5 maintenance of constructed projects. We are
6 currently at the Project Development and
7 Environmental (PD&E) study for this study. A
8 PD&E is the formal process that develops and
9 compares alternatives to determine a preferred
10 action that meets project needs, while
11 minimizing impacts to the social, natural, and
12 physical environments. Engaging the public by
13 sharing and receiving information is a key
14 component of this process and required by the
15 National Environmental Policy Act (NEPA).

16 Next slide, please.

17 About the study. In evaluate interchange
18 alternatives at the State Road 9/I-95 at
19 Lantana Road interchange to improve traffic
20 operations reduce congestion and safety through
21 the 2045 design here. Evaluate the project to
22 meet FDOT Strategic Intermodal System standards
23 and requirements. Consider a complete streets
24 design approach with multi-modal accommodations
25 that is pedestrian, bicycle and transit.

1 Access and enviromental impacts of the
2 project -- coordinated with existing and
3 ongoing projects developments and planning
4 efforts. Keep the public involved and engage
5 throughout the study. The purpose of the study
6 is to improve interchange traffic operations
7 and enhance safety, accommodate user
8 traffic demand at the interchange, improve
9 by -- connectivity, improve freight access and
10 mobility, enhance the emergency evacuation.

11 This project is located in the Town of
12 Lantana in Palm Beach County. Along Lantana
13 Road, the project extends from High Ridge Road
14 to Andrew Redding Road. The area marked by the
15 red dotted line shows the limits of the
16 project.

17 The purpose of this study is to improve
18 the local and regional transportation network
19 while also providing enhanced multimodal
20 interrelationships at the I-95/Lantana Road
21 interchange.

22 The primary need for this project is to
23 reduce congestion and traffic spill back onto
24 I-95, improve safety and increase capacity to
25 accommodate future traffic demand. I will now

1 turn it over to Godfrey Lamptey, the Consultant
2 Project Manager to walk you through the rest of
3 the open house exhibit. Thank you.

4 MR. LAMPTEY: Thank you, Vandana. My name
5 is Godfrey Lamptey and I'm the Consultant
6 Project Manager for this project. Now as part
7 of the PD&E study we evaluated several
8 alternatives to meet the purpose and need for
9 the project. These alternatives were developed
10 with input from the general public, local
11 government as well as the environmental
12 agencies. The alternatives considered for this
13 study included No-Action Alternative and three
14 Build Alternatives. Now, this board shows the
15 No-Action Alternative maintains the existing
16 facility as-is and serves as a baseline for
17 comparison with the build alternatives. The
18 main advantage of the No-Action Alternative is
19 that it requires no expenditure of public
20 funds. In addition, there will be direct or
21 indirect impact to the environment. The main
22 disadvantage of the No-Action Alternative is
23 that it does not alleviate the congestion,
24 operational, safety and mobility issues
25 currently experienced at the interchange. Now,

1 if we do not do any improvement, these
2 conditions will continue to get worse. As
3 such, the No-Action Alternative does not
4 satisfy the purpose and need for this project.

5 This board shows the build alternative 1
6 developed from the PD&E study. Now, this Build
7 Alternative 1 maintains the exiting Tight Urban
8 Diamond Interchange configuration at the
9 interchange with the following improvements:

10 Number one, widen Lantana Road to provide three
11 lanes in each direction from High Ridge Road to
12 Andrew Redding Road. Number two, provide
13 triple right-turn lanes and dual left-turn
14 lanes for the I-95 northbound and southbound
15 off-ramps. Number three, provide dual
16 eastbound and westbound right-turn lanes onto
17 I-95 southbound and northbound on-ramps,
18 respectively. Number four, provide dual
19 eastbound and westbound left-turn lanes from
20 Lantana Road to the I-95 southbound and
21 northbound on-ramps, respectfully. Number
22 five, provide exclusive southbound and
23 northbound right-turn lanes along the High
24 Ridge Road intersection. Number six, provide 6
25 feet sidewalks and 7 feet buffered bicycle

1 lanes along Lantana Road in both directions.
2 Now, Build Alternative 1 provides better
3 mobility along Lantana Road and the interchange
4 ramps compared to the No-Action Alternative.
5 It is also the least expensive of the three
6 Build Alternatives. However, Build Alternative
7 1 does not completely alleviate the congestion
8 at the ramp terminal where procedural queues
9 extended onto the I-95 main line.

10 This board shows Build Alternative 2
11 developed for this PD&E study. Build
12 Alternative 2 reconfigures the existing Tight
13 Urban Diamond Interchange into a Diverging
14 Diamond Interchange or DDI. Now the DDI is a
15 new innovation interchange that requires
16 drivers to briefly cross over to the left, or
17 opposite side of the road at carefully designed
18 crossover intersections. Drivers then travel
19 for a short distance, then cross back to the
20 traditional or right side of the road to
21 continue along Lantana Road. Now, the main
22 advantage of the DDI is that it provides the
23 highest level of mobility and safety among the
24 three build alternatives to consider without
25 any traffic spill back onto the I-95 mainline.

1 Now, Build Alternative 2 also requires
2 replacement of the existing Lantana Road bridge
3 over I-95 and the railroad. This allows for
4 the provision of the Underpass Service Road
5 that connects Sunset Road and the Solid Waste
6 Authority service road. This new Underpass
7 Service Road addresses the mobility and safety
8 concerns at the Sunset Road and High Ridge Road
9 intersections. Other improvements along
10 Lantana Road and the I-95 ramp terminals are
11 similar to that of the Build Alternative 1.

12 Now, the major disadvantage of Build
13 Alternative 2 is that it is the most expensive
14 of the three Build Alternatives. However, due
15 to its superior operational and safety benefit
16 it has the highest benefit-cost ratio making it
17 the most cost-effective alternative.

18 This board shows the Build Alternative 3
19 developed for this PD&E study. Now this Build
20 Alternative reconfigures the existing Tight
21 Urban Diamond Interchange into a Single Point
22 Urban Interchange or SPUI configuration. Now,
23 the SPUI concept consolidates the two
24 intersections of a Tight Urban Diamond
25 Interchange into one single intersection. This

1 allows left-turning traffic from both
2 directions of the intersecting roadways to turn
3 simultaneously without crossing the path of the
4 opposing left-turns. Now, the proposed
5 improvement along Lantana Road and the I-95
6 ramps under Build Alternative 3 are similar to
7 that of Build Alternative 1. In addition, also
8 to similar to Build Alternative 2, this
9 alternative also requires replacement of the
10 existing Lantana Road bridge over I-95 and the
11 railroad. This allows for the provision of
12 Underpass Service Road to address the mobility
13 and safety concerns at the Sunset Road and High
14 Ridge Road intersections. Now, Build
15 Alternative 3 provides better traffic
16 operations and safety when compared to the
17 No-Action Alternative and the Build Alternative
18 1. However, the major disadvantages of Build
19 Alternative 3 is that the cost of the
20 alternative is disproportionate compared to the
21 operational and safety benefits it provides.
22 While Build Alternative 3 provides better
23 operational and safety improvements over Build
24 Alternative 1, it provides less benefits when
25 compared to Build Alternative 2 although the

1 cost is similar to that of Build Alternative 2.

2 Now, this board shows the existing and
3 proposed active management changes along
4 Lantana Road as proposed by this PD&E study.
5 Now, the Sunset Road intersection was
6 identified as one of the safety concerns along
7 this project corridor. Currently, this
8 intersection is used by motorist who access
9 both the Costco Warehouse as well as the Solid
10 Waste Authority transfer station. What we are
11 proposing is that the directional median
12 opening at Sunset Road intersection. Now, this
13 eliminates the existing eastbound left-turn to
14 the Costco Warehouse. As well as the
15 northbound left-turn from the Solid Waste
16 Authority to minimize conflict. However, the
17 westbound right-turn to the Costco Warehouse as
18 well as the westbound left-turn to the Solid
19 Waste Authority will be maintained. We are
20 also proposing an Underpass Service Road
21 underneath the new Lantana Road bridge over the
22 railroad. That will connect Sunset Road and
23 the service road adjacent to the Solid Waste
24 Authority. This Underpass Service Road
25 provides several benefits for this section of

1 Lantana Road including the following: Number
2 one, it allows drivers to access the Costco
3 Warehouse using the Underpass Service Road
4 while minimizing traffic along High Ridge Road.
5 Number two, it eliminates the weaving maneuvers
6 from drivers exiting the Costco to make a
7 u-turn at the High Ridge Road intersection in
8 order to continue to I-95. Number three, it
9 eliminates the need for trucks from the Solid
10 Waste Authority to cross six lanes of traffic
11 in order to go westbound on Lantana Road. All
12 these movements come safely accommodated using
13 the Underpass Service Road. At this juncture I
14 will pause to see if we have any comments on
15 the Build Alternative as well as the active
16 management presented so far.

17 Do we have any questions, Charesse?

18 MS. CHESTER: Yes. Our first question is
19 a two part question. I am the owner of Lantana
20 Self Storage. If this moves forward, will my
21 tenants have the ability to turn into the
22 facility off of Lantana Road during
23 construction? The question was clarified will
24 the tenants still have access to the property
25 at Lantana Road into the facility during and

1 after construction?

2 MR. LAMPTEY: Yes. The response to that
3 is basically during construction we'll make
4 sure that we maintain access to all businesses
5 along Lantana Road and after construction also
6 based on the concepts that we have the access
7 to the Lantana Self Storage is maintained.

8 MS. CHESTER: That question was from Craig
9 Stern. Our next question is from Johnny Utah.
10 Are you placing lights under the new Underpass
11 Service Road?

12 MR. LAMPTEY: Yes. Lighting will be
13 provided underneath the new Underpass Service
14 Road.

15 MS. CHESTER: That concludes our questions
16 at this moment.

17 MR. LAMPTEY: Thank you, Charesse. So
18 continuing with the exhibit for the open house
19 session this board basically compares the
20 traffic operations for the No-Action
21 Alternative as well as three Build Alternatives
22 during the 2025 design year. Now, the traffic
23 operations for the different alternatives were
24 evaluated using the level of service criteria.
25 The level of service criteria is based

1 on vehicle delay and its designation on a scale
2 from A to F with A being the best and F being
3 the worst. Now the FDOT level of service
4 packet for the 2045 design year is level of --
5 now I showed on this board and that the
6 No-Action Alternative most of the intersection
7 including the wrong terminal were experienced
8 congested conditions. That it will operate at
9 level of service E or F.

10 Under Build Alternative 1 traffic
11 operations improved significantly over the
12 No-Action Alternative with most of the
13 intersection operating at level of service B or
14 better. However, at this alternative does not
15 address all the queued spill backs onto the
16 I-95 main line. Build Alternative 2 provides
17 the highest level of mobility among the three
18 Build Alternatives with both ramps appraised at
19 level C. In addition, this alternative also
20 does not resolve in traffic spill back onto the
21 I-95 main line. Now, Build Alternative 3
22 provides better traffic operational improvement
23 compared to Build Alternative 1, but less than
24 that on Build Alternative 2. Most of the
25 intersections will also operate at level C or

1 better with no spill back onto the I-95 main
2 line.

3 Now, this board shows the existing and
4 projected safety benefits for this alternative
5 and the consideration. Now, on the left side
6 of this board it shows the existing and safety
7 conditions. Now, as I mentioned earlier the
8 High Ridge Road and Sunset Road intersection
9 account for 50 percent of the crashes along
10 Lantana Road. Now, the right side of the board
11 shows the future safety conditions for the 2045
12 design year. Now, if no improvements are made
13 as proposed under the No-Action Alternative,
14 the total crashes within the study area will
15 increase by 28 percent. Now, the proposed
16 improvement considered as part of the three
17 Build Alternatives will actually provide
18 enhancement in terms of safety and crash
19 reduction of varying degrees. Now, Build
20 Alternative 1 and 3 will result in 15 percent
21 crash reduction, while Build Alternative 2
22 provides the greatest crash reduction of 36
23 percent. This board shows the alternative
24 evaluation matrix in order to compare the
25 various alternatives considered and these PD&E

1 studies. From a traffic operating and safety
2 perspective Build Alternative 2 outperforms the
3 No-Action Alternative as well as those
4 alternatives 1 and 3 with superior traffic
5 operations, mobility, safety, and multimodal
6 accommodations. Now, with regards to
7 engineering and construction, Build Alternative
8 1 requires the least impact to the existing
9 traffic during construction followed by Build
10 Alternative 2 and then Build Alternative 3,
11 which requires the most extensive maintenance
12 of traffic due to the replacement of the
13 existing bridge within the same footprint. All
14 three Build Alternatives provide 7 feet
15 buffered bicycle lanes and 6 feet sidewalks
16 which improves overall safety for pedestrians
17 and bicyclists compared to the No-Action
18 Alternative. In terms of environmental
19 impacts, all three build alternatives have
20 similar minimal impacts. The main difference
21 between the build alternatives is related to
22 right of way. Build Alternative 1 and 3 would
23 result in impact in nine commercial properties
24 while Build Alternative 2 would impact six
25 commercial properties. In addition, Build

1 Alternatives 1 and 3 may require one potential
2 business relocation. From a cost perspective
3 Build Alternative 1 has the lowest estimated
4 construction cost of \$18.4 million followed by
5 Build Alternative 3 with \$30.7 million and
6 Build Alternative 2 with the highest estimated
7 construction cost of \$32.7 million. Although
8 Build Alternative 2 has the highest estimated
9 construction cost, it provides the highest
10 benefit-cost ratio. That is the most
11 cost-effective alternative due to the
12 significantly higher mobility and safety
13 improvements. Based on the results of this
14 evaluation, along with the input received from
15 the public, Build Alternative 2, with the
16 diverging diamond interchange configuration was
17 the highest ranked alternative and consequently
18 chosen as the Preferred Alternative. Now, this
19 board shows the preferred alternative for this
20 project. I will now show you a video of how
21 the diverging diamond interchange works.

22 (Whereupon, a video is being
23 played and goes as follows:)

24 VIDEO: The Divergent Diamond Interchange
25 or DDI is one type of innovative interchange.

1 But DDI is an interchange with two signalized
2 intersections. Between these two intersections
3 traffic crosses over to the left side of the
4 roadway. This design allows vehicles to turn
5 onto and off freeway ramps without stopping or
6 crossing opposing lanes of traffic. DDI's are
7 designed to accommodate all roadway users,
8 including larger vehicles such as school buses,
9 emergency vehicles and trucks. As well as
10 pedestrians and cyclists. Let's take a closer
11 look at how a DDI works for motorists.
12 Motorists turn right from the arterial onto a
13 freeway ramp just like a conventional diamond
14 interchange. To turn left or continue straight
15 however, motorist follow lane markings and
16 traffic signals to cross to the left side of
17 the arterial. Motorists can then turn left
18 onto the freeway ramp or cross back over to the
19 right side of the arterial to continue straight
20 through the interchange. From an exit ramp
21 motorists turn right like at a conventional
22 diamond interchange. When turning left from an
23 exit ramp however, motorists stay on the left
24 side of the arterial and travel through the
25 intersection before returning to the right side

1 of the arterial. Pedestrians and cyclists can
2 also navigate a DDI. Pedestrians use mark
3 crosswalks to safely cross the interchange.
4 Cyclists have the choice to either navigate the
5 interchange using crosswalks and pedestrian
6 paths or if they're more comfortable, cyclists
7 can also follow the same paths as vehicles.
8 There are several benefits of a DDI design,
9 such as: improve safety. DDI's reduce the
10 number of points where vehicles may cross paths
11 which decreases the potential for crashes.
12 Increase deficiency the crossover intersections
13 at DDI operate with fewer traffic signal phases
14 which allows the interchange to handle a
15 greater volume of traffic and operate with less
16 delay than conventional diamond interchanges.
17 Easier access to the freeway. The design of
18 DDI's allows all traffic both left turns and
19 right turns to enter and exit the freeway
20 without crossing opposing traffic. For more
21 information Diverging Diamond Interchanges,
22 please visit the Federal Highway Administration
23 website www.safety.fhwa.dot.gov.

24 (Whereupon, the video finished
25 playing and the meeting

1 continued as follows:)

2 MR. LAMPTEY: Moving on with the exhibits
3 for the open house session. This board
4 basically shows the environmental impact for
5 the preferred alternative. Now, based on the
6 environmental evaluation, minimal impacts are
7 anticipated to the social and economic issues,
8 physical environment as well as the natural
9 resources. The preferred alternative will
10 result in potential right of way impact to six
11 commercial properties resulting in the loss of
12 24 parking spaces at the Lantana Shopping
13 Center. However, no business relocation is
14 anticipated. Two potential contamination sites
15 are located adjacent to the project corridor.
16 These will be monitored during design and
17 construction. Now, based on the noise
18 evaluation prepared as part of PD&E Study no
19 new noise walls are recommended for this
20 project since they do not meet the FDOT cost
21 per benefit and receiver criteria. There are
22 no impacts of wetlands. However, there may be
23 minimal impacts to gopher tortoise burrows
24 identified in the project study area. These
25 will be permitted and relocated during the

1 design and construction. No impact anticipated
2 to cultural resources for this PD&E Study.

3 This board basically shows the schedule
4 for this PD&E Study. The study began in
5 February of 2019. We had a Public Kick-Off
6 Meeting in May of 2019 followed by the
7 alternative public workshop in November of
8 2019. We are now having our virtual Public
9 Hearing today and the in-person Public Hearing
10 will be held tomorrow at the Lantana branch
11 library. The next step is incorporate your
12 input into this Public Hearing into our
13 decision making process and to finalize the
14 PD&E document. The final PD&E document will be
15 sent to the FDOT office of Environmental
16 Management for review and approval. The final
17 approval in the form of a location and design
18 concept acceptance is anticipated for Spring of
19 2021. Now, the final design phase on this
20 project is on schedule to begin in 2021 with
21 right of way acquisition anticipated to begin
22 in 2022. The construction phrase is currently
23 unfunded.

24 At this juncture I will now open it up for
25 any questions or comments on the display boards

1 currently presented as the open house session.

2 Charesse, do we have any additional
3 questions?

4 MS. CHESTER: Yes, we have a comment and a
5 question. The comment comes from Nathan Mayer.
6 I'm with SWA, the Solid Waste Authority. I'm
7 concerned about SWA trucks pulling out of our
8 facility trying to turn left to get to Lantana
9 Road to get to I-95. Increase traffic using
10 the service road to get to Costco is the
11 concern. We also have a question from Shad
12 DiMaria. Are these slides available to
13 download or can the Powerpoint be emailed?

14 MR. LAMPTEY: Let me respond first to the
15 first question concerning the Solid Waste
16 Authority. Basically, as I mentioned with the
17 Underpass Service Road what's going to happen
18 is that the trash from the Solid Waste
19 Authority currently they make, if you want to
20 go westbound on Lantana Road, you have to make
21 a left if you're coming out of the Solid Waste
22 Authority and that is very dangerous movement
23 because they have to cross six lanes of
24 traffic. Now, in order to alleviate that
25 safety concern what we are proposing is to have

1 them go underneath the underpass access road
2 and then they will actually make a right turn,
3 you know, using the Costco exit as it is right
4 now. This is something that we have actually
5 looked at the traffic volumes for this movement
6 and we do not anticipate an issue with the
7 volume that we are seeing currently for this
8 movement. The main reason being that the peak
9 hours for the Costco as well as the Solid Waste
10 Authority occurs at different times, so we do
11 not anticipate major issues in terms of the
12 traffic impact at this location. For the
13 second question concerning the slides. All the
14 slides are actually available currently on the
15 project website that you can download. We
16 would also make available the video for today
17 once it's completed so you can also download
18 that from the project website as well.

19 Do we have any other questions from any of
20 the attendees?

21 MS. CHESTER: Yes. We have a raised hand.
22 Mr. Balsara, you are now un-muted. Please
23 un-mute yourself and say your name and address
24 for the record. We recognized you, Mr.
25 Balsara. Your hand is no longer raised. Go

1 ahead. You are un-muted, share your comment or
2 question. Go ahead, please share your comment
3 or question. You are un-muted. Ah, I see we
4 have a question in the chat box. We'll give
5 him just another second. Do you want to share
6 your question or comment, Mr -- we can't
7 identify the first name. We'll go right into
8 the question, the typed question and it's also
9 from Shad DiMaria. Will the construction enter
10 onto High Ridge Road?

11 MR. LAMPTEY: To respond to that question
12 basically, we have what we are proposing at the
13 High Ridge Road intersection is to improve that
14 intersection in order to enhance the safety and
15 mobility at that intersection. What we're
16 doing is just to the north and the south
17 approximately maybe about 500 feet on each side
18 of Lantana Road you're going to have some
19 construction within High Ridge Road in that
20 area. Basically, that is to provide exclusive
21 southbound as well as northbound left-hand
22 lanes and exclusive northbound as well as the
23 southbound right-turn lane as the High Ridge
24 Road intersection.

25 MS. CHESTER: Part two of his next

1 question, Ms. Shad. Will the intersection at
2 Lantana Road and High Ridge Road be closed for
3 any period of time?

4 MR. LAMPTEY: As part of the design phase
5 we will be looking at the temporary traffic
6 control. That is the maintenance of traffic to
7 make sure that whatever improvement that we're
8 doing, we do not completely close these
9 roadways. That is to say, we do not anticipate
10 that we're going to have to close or shut down
11 High Ridge Road in order to be able to do this
12 improvement. What is going to happen is we
13 look at update periods where we can actually
14 maybe close one lane and leave the other lane
15 operational and that is what we normally do as
16 part of these projects. The response to your
17 question is, we are not going to completely
18 close High Ridge Road, but there may be times
19 during the update period where we would have to
20 basically shut down maybe one lane while the
21 other lane is operational.

22 Next question.

23 MS. CHESTER: At this time we are going to
24 hold all additional questions. We see the
25 questions that have been typed in the pane and

1 we also see the raised hand of Mr. Craig Stern
2 and Jackson Hurst. Please allow us to begin
3 the official Public Hearing and we will give
4 you an opportunity to pose that question once
5 we've gone through this presentation. We will
6 start the presentation now.

7 Good evening everyone and thank you for
8 joining us for the State Road 9/I-95 at Lantana
9 Road Project Development and Environment Study
10 Public Hearing. At this time we will start
11 with our Florida Department of Transportation
12 Project Manager and that is Cesar Martinez.

13 We thank you so much for your patience.
14 We will be starting in just a moment.

15 MR. MARTINEZ: Good evening. The Florida
16 Department of Transportation will like to
17 welcome you to the public meeting for the State
18 Road I-95 and Lantana Road interchange project
19 development and environmental PD&E Study. My
20 name is Cesar Martinez. I'm the District
21 Project Development Engineer for the Florida
22 Department of Transportation. This public
23 meeting is for Financial Management Project
24 Number 413258-1-22-02. The environmental study
25 has been conducted by FDOT District 4 in

1 compliance with all applicable federal and
2 environmental laws and pursuant to 23 U.S.C.
3 section 327 and implementing a Memorandum of
4 Understanding between FDOT and the Federal
5 Highway Administration signed on December 14th,
6 2016. The Office of Environmental Management
7 in Tallahassee is the approving authority. The
8 proposed improvement for I-95 and Lantana Road
9 interchange includes reconfiguring the existing
10 interchange into a diversion diamond
11 interchange. This new configuration will
12 enhance traffic operations and safety. This
13 hearing is being held to provide you with the
14 opportunity to comment on this project. Here
15 with me tonight are representatives of the FDOT
16 and the consultant project team. At this time
17 we would like to recognize any federal, state,
18 county or city officials who may be present
19 here today. Are there any officials who would
20 like to be recognized? Please raise your hand
21 or submit your name in the chat box. Charesse,
22 do we have any public officials tonight?

23 MS. CHESTER: Not at this time, Cesar.

24 MR. MARTINEZ: Thank you. We now will
25 begin the presentation.

1 (Whereupon, a video presentation
2 is being played and goes as
3 follows:)

4
5 VIDEO: Before we start the presentation,
6 I will share a few items to help you
7 participate in this hearing. On your computer
8 or device screen, you should see something that
9 looks like the image in the upper-right corner.
10 To listen to the hearing, your computer or
11 device speakers are selected by default. If
12 you prefer to listen by phone, select
13 "Telephone" in the audio pane of the control
14 panel and dial-in using the information
15 displayed.

16 For those who dialed into the hearing on a
17 telephone line, the presentation slides are
18 available for download on the project website
19 at www.fdot.gov/projects/95lantana for
20 reference.

21 All attendees will be placed in listen
22 only mode throughout the meeting. Comments and
23 questions can be typed in the questions pane or
24 you can be called on to speak by clicking the
25 raise hand button. We will collect these and

1 provide responses at a later date.

2 If you happen to experience technical
3 issues during the hearing, please type the
4 issue in the question pane on the control panel
5 to report it. Staff will do their best to
6 assist you. This hearing is being recorded and
7 will be available after the hearing.

8 The purpose of this Public Hearing is to
9 share information with the general public about
10 the proposed improvement; the conceptual
11 design; all alternatives under study; and the
12 potential beneficial and adverse social,
13 economic, and environmental impacts upon the
14 community. The Public Hearing also serves as an
15 official forum providing an opportunity for
16 members of the public to express their opinions
17 and concerns regarding the project.

18 There are three primary components to this
19 Public Hearing. First, the Open House which
20 occurred prior to this presentation where you
21 were invited to view the project displays,
22 speak with the project team, and provide your
23 comments. Second, this presentation which will
24 explain the project purpose and need, study
25 alternatives, potential impacts both beneficial

1 and adverse and proposed methods to mitigate
2 adverse project impacts. Third, a formal
3 comment period following this presentation
4 where you will have the opportunity to provide
5 oral statements or you may continue to provide
6 your comments in writing.

7 The Florida Department of Transportation
8 is required to comply with various
9 non-discrimination laws and regulations,
10 including Title VI of the Civil Rights Act of
11 1964. Public participation is solicited
12 without regard to race, color, national origin,
13 age, sex, religion, disability or family
14 status. Persons wishing to express concerns
15 about Title VI may do so by contacting either
16 the Florida Department of Transportation,
17 District Four Title VI Coordinator or the
18 Florida Department of Transportation Statewide
19 Title VI Coordinator. The contact information
20 for these officials are shown on the screen as
21 well as in the hearing notifications and on the
22 project website at
23 www.fdot.gov/projects/95lantana.

24 This Public Hearing was advertised
25 consistent with the federal and state

1 requirements shown on this slide.

2 This environmental study has been
3 conducted by FDOT District Four in compliance
4 with all applicable federal environmental laws
5 and pursuant to 23 U.S.C. Section 327 and the
6 implementing memorandum of understanding
7 between FDOT and Federal Highway Administration
8 (FHWA) signed on December 14, 2016. The FDOT
9 Office of Environmental Management in
10 Tallahassee is the approving authority.

11 This project proposes improvements to the
12 State Road 9/I-95 at Lantana Road Interchange
13 in the Town of Lantana, Palm Beach County. The
14 project limits along State Road 9/I-95 extend
15 from north of Hypoluxo Road to South of 6th
16 Avenue South Along Lantana Road, the project
17 limits are from High Ridge Road to Andrew
18 Redding Road. This hearing is being held to
19 provide you with the opportunity to comment on
20 this project.

21 This graphic represents the project
22 development and delivery process for
23 transportation projects prepared by FDOT. The
24 process begins with a planning study and ends
25 with a constructed project. The FDOT project

1 development process is a comprehensive process
2 involving planning, project development and
3 environment, design, right of way, and
4 construction phases. This study is the Project
5 Development and Environment (PD&E) Study phase.

6 The Project Development and Environment,
7 or PD&E, Study is a process developed by the
8 Florida Department of Transportation or the
9 FDOT to evaluate the social, environmental,
10 economic, and engineering impacts associated
11 with a proposed transportation improvement. In
12 addition to complying with the National
13 Environmental Policy Act or NEPA of 1969, the
14 objectives of a PD&E Study are to support
15 decisions concerning if, where, and what should
16 be built to address the identified
17 transportation needs.

18 We are currently at the Public Hearing
19 stage of the PD&E process. Before this
20 hearing, the public was invited to attend the
21 Public Kick-Off meeting on May 14, 2019 and the
22 Alternatives Public Workshop on November 13,
23 2019. Comments from the public from the first
24 two meetings were considered in the design of
25 the alternatives on display today. The Public

1 Hearing is the final opportunity during the
2 PD&E process for the public to provide comments
3 about the study.

4 The State Road 9/I-95 at Lantana Road
5 interchange improvements is identified in the
6 2045 Long Range Transportation Plan as well as
7 the current 5-year Transportation Improvement
8 Program or TIP, for fiscal year 2021 to 2025
9 adopted by the Palm Beach Transportation
10 Planning Agency or TPA.

11 The purpose of this study is to improve
12 the local and regional transportation network
13 while also providing enhanced multimodal
14 interrelationships at the State Road 9/I-95 at
15 Lantana Road interchange. The primary need for
16 this project is to reduce congestion and
17 traffic spill back onto I-95, improve safety,
18 and increase capacity to accommodate future
19 traffic demand. Secondary considerations for
20 the purpose and need of the project include,
21 modal interrelationship, freight access and
22 mobility, and emergency evacuation.

23 During the PD&E Study, several
24 alternatives were developed to meet the purpose
25 and need for the project. The Alternatives

1 were developed with input obtained throughout
2 the study process from the general public,
3 local government and environmental agencies.
4 The alternatives considered for this study
5 included the No-Action Alternative and three
6 build alternatives. All the build alternatives
7 incorporate Transportation System Management
8 and Operations or TSM&O improvements. These
9 improvements utilize Intelligent Transportation
10 Systems, or ITS, strategies to optimize the
11 performance of an existing facility. For this
12 project, TSM&O strategies include incident
13 management closed-circuit television cameras,
14 Wrong Way Detection Technology, Vehicle
15 Detection System and Dynamic Message Signs on
16 Lantana Road east and west of I-95.

17 The No-Action or No Project Alternative
18 maintains the existing facility as-is and
19 serves as a baseline for comparison with the
20 build alternatives. The advantages of the
21 No-Action Alternative are that it requires no
22 expenditure of public funds for design, right
23 of way acquisition, construction, or utility
24 relocation. In addition, there would be no
25 direct or indirect impacts to the environment

1 or sociocultural impacts from the project. The
2 disadvantages of the No-Action Alternative are
3 that it does not alleviate the congestion,
4 operational, safety, and mobility issues
5 currently experienced at the interchange during
6 the peak hours. If no improvements are made,
7 these conditions will continue to deteriorate.
8 Consequently, the No-Action Alternative does
9 not satisfy the purpose and need for this
10 project.

11 Build Alternative 1 maintains the existing
12 Tight Urban Diamond Interchange configuration
13 at the interchange with the following
14 improvements:

15 Widen Lantana Road and bridge over I-95 to
16 provide 3 lanes in each direction from High
17 Ridge Road to Andrew Redding Road.

18 Provide triple right-turn lanes and dual
19 left-turn lanes for the State Road 9/I-95
20 northbound and southbound off-ramps.

21 Provide dual eastbound and westbound
22 right-turn lanes onto I-95 southbound and
23 northbound on-ramps, respectively.

24 Provide dual eastbound and westbound
25 left-turn lanes from Lantana Road to the I-95

1 southbound and northbound on-ramps,
2 respectively.

3 Provide exclusive southbound and
4 northbound right-turn lane along High Ridge
5 Road.

6 Provide 6 feet sidewalks and 7 feet
7 buffered bicycle lanes along Lantana Road in
8 both directions.

9 Build Alternative 1 provides better
10 mobility along Lantana Road and the interchange
11 ramps compared to the No-Action Alternative and
12 is the least expensive of the three Build
13 Alternatives. However, Build Alternative 1
14 does not completely alleviate congestion at the
15 ramp terminal. In addition, the Alternative
16 will result in right-of-way impacts to 9
17 commercial properties.

18 Build Alternative 2 reconfigures the
19 existing Tight Urban Diamond Interchange into a
20 Diverging Diamond Interchange or DDI. The
21 Diverging Diamond concept requires drivers to
22 briefly cross to the left, or opposite side of
23 the road at carefully designed crossover
24 intersections. Drivers travel for a short
25 distance, then cross back to the traditional or

1 right side of the road. This unconventional
2 design allows movements for the left and
3 right-turns to and from the I-95 ramps onto
4 Lantana Road without crossing the path of
5 opposing traffic.

6 Build Alternative 2 requires replacement
7 of the existing single Lantana Road bridge over
8 I-95 and the South Florida railroad corridor
9 with separate bridges to accommodate the new
10 DDI configuration. In addition, it provides an
11 underpass road that connects Sunset Road and
12 the existing Solid Waste Authority service road
13 underneath the reconstructed Lantana Road
14 Bridge over the railroad. Other improvements
15 along Lantana Road and the I-95 ramp terminals
16 are similar to Build Alternative 1.

17 The major advantages of Build Alternative
18 2 are that it provides the highest level of
19 mobility and safety, reducing congestion along
20 Lantana road as well as traffic spill back onto
21 the I-95 mainline. In addition, the
22 replacement of the existing Lantana Road Bridge
23 over I-95 allows for an underpass access road
24 that addresses safety concerns at the Sunset
25 road and High Ridge road intersections. In

1 addition, the DDI configuration provides
2 opportunities for landscape and other esthetic
3 treatments along Lantana Road.

4 The main disadvantage of Build Alternative
5 2 is that it is the most expensive of the three
6 alternatives. However, its superior
7 operational and safety benefit results in the
8 highest benefit-cost ratio making it the most
9 cost-effective alternative. Build Alternative
10 2 would also result in right of way impacts to
11 6 commercial properties.

12 Build Alternative 3 reconfigures the
13 existing Tight Diamond Interchange into a
14 Single Point Urban Interchange or SPUI
15 configuration. The SPUI concept consolidates
16 the two intersections of a Tight Urban Diamond
17 Interchange into one single intersection. This
18 allows left-turning traffic from both
19 directions of the intersecting roadways to turn
20 simultaneously without crossing the path of the
21 opposing left-turns.

22 The proposed improvements along Lantana
23 Road and the I-95 ramps under Build Alternative
24 3 are similar to Build Alternative 1. Like
25 Build Alternative 2, this alternative also

1 requires replacement of the existing single
2 Lantana Road bridge over I-95 and the South
3 Florida railroad corridor with separate bridges
4 to accommodate the new SPUI interchange
5 configuration. It also provides an underpass
6 road that connects Sunset Road and the existing
7 Solid Waste Authority service road underneath
8 the reconstructed Lantana Road Bridge over the
9 railroad.

10 Build Alternative 3 provides better
11 operations and safety compared to the No-Action
12 Alternative and Build Alternative 1. In
13 addition, the new Lantana Road Bridge over I-95
14 provides adequate clearance to accommodate the
15 underpass access road which provides enhanced
16 mobility and safety at the Sunset Road and High
17 Ridge Road intersections.

18 One of the major disadvantages of Build
19 Alternative 3 is that cost of the alternative
20 is disproportionate compared to the operational
21 and safety benefits it provides. While Build
22 Alternative 3 provides better operational and
23 safety improvements over Build Alternative 1,
24 it provides less benefits compared to Build
25 Alternative 2. In addition, Build Alternative

1 3 will impact 9 commercial properties.

2 Evaluation of transportation projects to
3 select the most desirable alternative is based
4 on a wide range of criteria that reflect the
5 concerns of all the key stakeholders. Examples
6 of these criteria include traffic operations
7 and safety, environmental impacts, drainage and
8 utility impacts multimodal considerations,
9 construction costs and right of way impacts and
10 costs.

11 An alternatives evaluation matrix was
12 developed to compare the alternatives across
13 the range of issues affected by the project.

14 From an engineering perspective, Build
15 Alternative 2 outperforms the No-Action
16 Alternatives as well as Build Alternatives 1
17 and 3 with superior traffic operations,
18 mobility, safety, and multimodal
19 accommodations. With regards to ease of
20 construction, Build Alternative 1 requires the
21 least impacts to existing traffic during
22 construction followed by Build Alternative 2
23 and then Build Alternative 3, which requires
24 the most extensive maintenance of traffic
25 during construction due to replacement of the

1 existing bridge within the same footprint. All
2 three Build Alternatives provide 7 feet
3 buffered bicycle lanes and improved overall
4 safety for pedestrians and bicyclists compared
5 to the No-Action Alternative.

6 In terms of environmental impacts, all
7 three build alternatives have very similar
8 minimal impacts. The main difference between
9 the build alternatives is related to right of
10 way impacts. Build Alternatives 1 and 3 would
11 impact 9 commercial properties while Build
12 Alternative 2 would impact 6 properties. In
13 addition, Build Alternatives 1 and 3 may
14 require 1 potential business relocation.

15 Cost estimates were also prepared for all
16 three build alternatives. Build Alternative 1
17 has the lowest estimated construction cost of
18 \$18.4 Million followed by Build Alternative 3
19 with \$30.7 Million and Build Alternative 2 with
20 the highest estimated construction cost of
21 \$32.7 Million. Although Build Alternative 2
22 has the highest estimated construction cost, it
23 provides the highest benefit-cost ratio i.e.
24 the most cost-effective alternative due to the
25 significantly higher mobility and safety

1 improvements.

2 Based on the results of this evaluation,
3 along with the input received from the public,
4 Build Alternative 2, with the diverging diamond
5 interchange configuration was the highest
6 ranked and consequently chosen as the Preferred
7 Alternative.

8 The following video shows the operations
9 of a Diverging Diamond Interchange.

10 (Whereupon, the video finished
11 playing and the meeting
12 continued as follows:)

13
14 (Whereupon, a video is being
15 played and goes as follows:)

16
17 VIDEO: The Divergent Diamond Interchange,
18 or DDI, is one type of innovative interchange.
19 But DDI is an interchange with two signalized
20 intersections. Between these two intersections
21 traffic crosses over to the left side of the
22 roadway. This design allows vehicles to turn
23 onto and off freeway ramps without stopping or
24 crossing opposing lanes of traffic. DDI's are
25 designed to accommodate all roadway users,

1 including larger vehicles such as school buses,
2 emergency vehicles, and trucks. As well as
3 pedestrians and cyclists. Let's take a closer
4 look at how a DDI works for motorists.
5 Motorists turn right from the arterial onto a
6 freeway ramp just like a conventional diamond
7 interchange. To turn left or continue straight
8 however, motorists follow lane markings and
9 traffic signals to cross to the left side of
10 the arterial. Motorists can then turn left
11 onto the freeway ramp or cross back over to the
12 right side of the arterial to continue straight
13 through the interchange. From an exit ramp
14 motorists turn right like at a conventional
15 diamond interchange. When turning left from an
16 exit ramp however, motorists stay on the left
17 side of the arterial and travel through the
18 intersection before returning to the right side
19 of the arterial. Pedestrians and cyclists can
20 also navigate a DDI. Pedestrians use marked
21 crosswalks to safely cross the interchange.
22 Cyclists have the choice to either navigate the
23 interchange using crosswalks and pedestrian
24 paths or if they're more comfortable, cyclists
25 can also follow the same paths as vehicles.

1 There are several benefits of a DDI design,
2 such as: improve safety. DDI's reduce the
3 number of points where vehicles may cross paths
4 which decreases the potential for crashes.

5 Increase deficiency: The crossover
6 intersections at DDI operate with fewer traffic
7 signal faces which allows the interchange to
8 handle a greater volume of traffic and operate
9 with less delay then conventional diamond
10 interchanges. Easier access to the freeway.

11 The design of DDI's allows all traffic both
12 left turns and right turns to enter and exit
13 the freeway without crossing opposing traffic.

14 For more information Diverging Diamond
15 Interchanges, please visit the Federal Highway
16 Administration website www.safety.fhwa.dot.

17 (Whereupon, the video finished
18 playing and the meeting
19 continued as follows:)

21 (Whereupon, the presentation
22 video continues to be played and
23 goes as follows:)

24 VIDEO: Two access modifications are
25 proposed to improve mobility and enhance safety

1 along the project corridor: The existing
2 eastbound and northbound left-turn movements at
3 Sunset Road will be eliminated. In addition,
4 an underpass service road will be provided
5 underneath the reconstructed Lantana Road
6 bridge over the South Florida Railroad
7 Corridor. These proposed access management
8 modifications will alter existing travel
9 patterns between I-95 and High Ridge Road as
10 follows:

11 From Costco Wholesale to I-95: Motorists
12 traveling from Costco Wholesale to I-95
13 currently use two travel options. The first is
14 to exit Costco along High Ridge Road and
15 turn-left at the Lantana Road intersection.
16 The second option is to exit Costco along
17 Lantana Road, weave through 3 lanes of traffic,
18 and make a U-turn at High Ridge Road. This
19 traffic weaving pattern has been identified as
20 one of the safety concerns at this location.
21 The proposed improvement maintains the left
22 turn at High Ridge Road onto Lantana Road but
23 restricts the U-turn at High Ridge Road.
24 Motorist traveling from Costco to I-95 can use
25 the proposed underpass service road and loop

1 underneath the Lantana Road bridge to the
2 intersection of Lantana Road and the Solid
3 Waste Authority service road and then proceed
4 to make a right-turn onto eastbound Lantana
5 Road towards the I-95 ramps.

6 From Eastbound Lantana Road to Costco
7 Wholesale: In the existing conditions,
8 motorists traveling along eastbound Lantana
9 Road can make an eastbound left-turn at the
10 median opening at Sunset Road to Costco. This
11 movement was also identified as a safety
12 concern due to the difficulty in judging
13 correctly adequate gaps for the downhill
14 traffic stream to make the left turn maneuver
15 at this intersection. With the proposed
16 improvements, motorists along eastbound Lantana
17 Road would make a right-turn onto the Solid
18 Waste Authority service road, make a loop
19 underneath the Lantana Road bridge, and connect
20 to Sunset Road which provides access to Costco.

21 From the Solid Waste Authority to
22 Westbound Lantana Road: Under the existing
23 conditions, motorists from the Solid Waste
24 Authority can make a left turn at the median
25 opening at the Sunset Road intersection by

1 crossing over three eastbound lanes and three
2 westbound lanes to access westbound Lantana
3 Road. This movement is typically used by heavy
4 slow vehicles which must cross 6 lanes of
5 traffic and has been identified as a safety
6 concern. The proposed access modification
7 eliminates this movement. Motorists would be
8 required to travel east along the proposed
9 service road, make the loop underneath the
10 Lantana Road bridge, and connect to westbound
11 Lantana Road via a right-turn movement from the
12 Costco exit.

13 Right of way will be required from
14 businesses along the project corridor in order
15 to construct the Preferred Alternative. On the
16 west side of I-95 right of way will be required
17 from the Lantana Self Storage, Costco Wholesale
18 and the South Florida Railroad Corridor. The
19 right of way required from these commercial
20 properties would not result in relocation.

21 East of I-95, right of way will be
22 required from the Wells Fargo Bank, the Lantana
23 Shopping Center, the Medical Offices and the
24 Bureau of Government Reviews parcel. The right
25 of way acquisition at the Wells Fargo Bank will

1 require the realignment of the ATM drive-thru
2 lane. At the Lantana Shopping Center, 24
3 parking spaces will be lost to accommodate the
4 proposed improvements along Lantana Road.

5 This project is not anticipated to cause
6 any relocation of families or businesses. All
7 right of way acquisitions will be conducted in
8 accordance with Florida Statutes 339.09 and the
9 Federal Uniform Relocation Assistance and Real
10 Property Acquisition Policies Act of 1970,
11 commonly known as the Uniform Act. FDOT right
12 of way specialists who are supervising this
13 program are available and will be happy to
14 answer your questions.

15 The PD&E Study also evaluated the social
16 and economic, cultural, natural and physical
17 environmental effects associated with the
18 preferred build alternative being considered
19 for this project.

20 The project has no involvement with the
21 following resources: Farmland Resources,
22 Wetlands and Other Surface Waters, Essential
23 Fish Habitat Floodplains, Sole Source Aquifer,
24 Aquatic Preserves, Outstanding Florida Waters,
25 Wild and Scenic Rivers, Coastal Barrier

1 Resources and Navigation.

2 No significant impacts are anticipated to
3 social and economic conditions, protected
4 species and habitats, water quality and
5 quantity, highway noise, contamination,
6 utilities and railroads, construction, section
7 4(f) resources, historic and archaeological
8 sites.

9 The proposed improvements will have
10 positive socio-economic impacts on the study
11 area as it improves mobility, safety and
12 relieves congestion. No impacts to community
13 features and services are anticipated. However,
14 minimal impacts to existing businesses
15 including loss of 24 parking spaces at Lantana
16 Shopping Center are anticipated.

17 Section 4(f) was enacted in 1966 as part
18 of the Department of Transportation Act. It
19 states that for federally funded projects "It
20 is the policy of the United States Government
21 that special effort be made to preserve the
22 natural beauty of the countryside, public park
23 and recreation lands, wildlife and waterfowl
24 refuges, and historic sites".

25 Two historic sites are located within the

1 project study area: The South Florida Rail
2 Corridor and the First Federal Savings and Loan
3 Association Building (Chase Bank), which was
4 determined to be eligible for listing in the
5 National Register due to the age and
6 architecture of the building.

7 FDOT will ensure that the proposed
8 interchange improvements provides a clear
9 envelope over the South Florida Rail Corridor
10 when placing bridge piers in order to
11 accommodate future planned improvements along
12 the railroad corridor. In addition, no impacts
13 are anticipated to the Chase Bank building.

14 Potential effects to Federal and state
15 listed, or protected species were assessed.
16 The study found no evidence of occurrence of
17 Federal or State Listed species within the
18 project limits except for the Gopher Tortoise.
19 It was determined that the project may affect,
20 but is not likely to adversely affect, the
21 Gopher Tortoise and the Eastern Indigo Snake.

22 To minimize adverse effects to gopher
23 tortoises, FDOT commits to perform an
24 environmental survey prior to the start of
25 construction. The survey will be conducted

1 within the existing and proposed right of way,
2 dry swales, and area underneath the proposed
3 underpass service road. Any gopher tortoises
4 located within 25 feet of proposed construction
5 will be relocated.

6 The FDOT will also adhere to the most
7 recent version of the U.S. Fish and Wildlife
8 Service's "Standard Protection Measures for the
9 Eastern Indigo Snake" during construction to
10 prevent adverse impacts to this species.

11 Potentially contaminated sites in the
12 vicinity of the project corridor were
13 identified and evaluated to determine if
14 impacts would occur as a result of the proposed
15 improvements. There are 5 medium risk
16 contamination sites identified in proximity to
17 the project study area. A level 2 contamination
18 assessment will be performed during the final
19 design phase.

20 Traffic noise was analyzed in accordance
21 with the FDOT PD&E Manual, Part 2, Chapter 18
22 and Title 23 Code of Federal Regulations Part
23 772 Procedures for Abatement of Highway Traffic
24 Noise and Construction Noise. Worst-case
25 traffic noise levels were predicted for the

1 preferred alternative. Traffic noise impacts
2 were predicted to occur at 6 residences within
3 Lake Osborne Estate and the Playground at the
4 Sunshine Park Academy located adjacent to the
5 project corridor.

6 FDOT requires that all impacted receptors
7 be analyzed to see if they would benefit from
8 noise abatement measures such as noise
9 barriers. Based on the locations of these
10 impacted receptors, noise walls were evaluated
11 at 2 locations:

12 The north side of Lantana Road between
13 Lake Osborne Drive and High Ridge Road; and the
14 northeast corner of Lantana Road and High Ridge
15 Road intersection.

16 For the noise barrier to be considered
17 reasonable, it must reduce noise levels by at
18 least 7 decibels at one or more impacted
19 receptor sites and the estimated construction
20 cost cannot exceed the FDOT's reasonable cost
21 criteria of \$42,000 per benefited receptor
22 site. Based on the noise evaluation,
23 additional noise barriers were not recommended
24 because they did not meet the FDOT's reasonable
25 cost criteria per benefited site. The noise

1 analysis will be reevaluated during the final
2 design phase of the project.

3 The Environmental Documents detailing the
4 review of all resources analyzed have been
5 available for Public Review since November 24,
6 2020 and will continue to be on display for 14
7 days after the Public Hearing at the Lantana
8 Road Branch Library located at 4020 Lantana
9 Road, Lake Worth, Florida 33462 and at the Town
10 of Lantana Town Hall located at 500 Greynolds
11 Circle, Lantana, Florida 33462 until December
12 30, 2020. The documents are also available for
13 review on the project website
14 www.fdot.gov/projects/95lantana.

15 The next step is to incorporate your input
16 on this public hearing into our decision-making
17 process. After the comment period closes and
18 your input has been considered, a decision will
19 be made regarding the preferred alternative.
20 The Final PD&E document will be sent to the
21 FDOT Office of Environmental Management which,
22 based on the Memorandum of Understanding signed
23 with Federal Highway Administration on December
24 14, 2016 has approval authority on this project
25 granting Location And Design Concept

1 Acceptance.

2 The final design phase is estimated to
3 begin in 2021 with right of way acquisition
4 anticipated to begin in 2022. The construction
5 phase is currently unfunded.

6 There have been various opportunities for
7 the public to provide input on this project.
8 Several public meetings have been held, dating
9 from May 2019 until tonight. We welcome your
10 oral or written comments that will help us make
11 this important decision. Each method of
12 submitting a comment carries equal weight.

13 Written comments received or postmarked no
14 later than 14 days following the date of this
15 public hearing, December 30, 2020, will become
16 a part of the public record for this hearing.

17 All written comments should be mailed to
18 the address shown on the slide. Comments may
19 also be emailed to Vandana Nagole, the FDOT
20 Project

21 Manager or submitted via the project
22 website. This project has and will continue to
23 comply with all applicable state and federal
24 rules and regulations.

25 This concludes our presentation. We now

1 offer you the opportunity to make a statement.

2

3 (Whereupon, the video finished
4 playing and the meeting
5 continued as follows:)

6 MS. CHESTER: If you would like to make a
7 statement, please raise your hand.

8 MR. MARTINEZ: Anyone deciding to make a
9 written statement or present written views
10 regarding the location, conceptional design or
11 social economical or environment effects of the
12 improvement will now have the opportunity to do
13 so. Written statements may be present in lieu
14 of or in addition to oral statements. All
15 written materials received at this Public
16 Hearing and at the Florida Department of
17 Transportation District office located at 3400
18 West Commercial Boulevard, Fort Lauderdale,
19 Florida postmarked no later than December 30,
20 2020 will become part of the public record for
21 this hearing. All the comments should be
22 addressed to Vandana Nagole. Comments may also
23 be emailed to vandana.nagole@dot.state.fl.us or
24 submitted in the question box during this
25 hearing. Comments submitted via the question

1 box will be included as part of the public
2 record for this hearing, unless otherwise
3 noted. Question box comments will not be read
4 into the hearing. We will now call upon those
5 who have their hands raised in the order they
6 were raised. When your name is called, please
7 un-mute yourself and state your name and
8 address before making your comment. If you
9 represent a organization, municipality or
10 other public body, please provide that
11 information as well. We ask that you limit
12 your input to 3 minutes. When you have 10
13 seconds remaining, you will hear a series of
14 chimes. When you hear these chimes please wrap
15 up your comment. If you have additional
16 comments, you may continue after other people
17 have had the opportunity to do so.

18 Does anyone else desire to speak? If so,
19 raise your hand.

20 MS. CHESTER: At this time we would like
21 to recognize Town of Lantana Manager, Deborah
22 Manzo. Thank you for joining the Public
23 Hearing this evening. We have a raised hand,
24 Craig Stern. You have been un-muted. Please
25 state your name and address for the record.

1 MR. STERN: My name is Craig Stern. I am
2 the owner of Lantana Self Storage at 1930 West
3 Lantana Road, Lake Worth, Florida. My question
4 is during and after construction will I still
5 have a turning lane into my property off of
6 Lantana Road? That's my question.

7 MS. CHESTER: Thank you very much. At
8 this time we have un-muted Jackson Hurst.
9 Please state your name and address for the
10 record.

11 MR. HURST: My name is Jackson Hurst. I
12 live at 4216 Cornell Crossing, Kennesaw,
13 Georgia 30144. I highly applaud and support
14 FDOT's for an alternative for the I-95 Lantana
15 Road PD&E Study, which is the Diversion Diamond
16 Interchange. This alternative will help
17 improve safety and it will also greatly improve
18 business access. Especially for people turning
19 into and leaving Costco and the Costco gas
20 station along with Lantana Self Storage and the
21 medical offices to the east of I-95. I also
22 love how there will be a dedicated service road
23 for people to enter and exit Costco without
24 having to turn across three lanes of traffic
25 and potentially cause a side swipe collision.

1 MS. CHESTER: Thank you, Mr. Hurst.

2 Are there any other questions or comments?

3 Please raise your hand.

4 Once again, are there any questions or
5 comments? Please raise your hand.

6 MR. MARTINEZ: The verbatim transcript of
7 this oral proceedings together with all written
8 material received as part of the hearing record
9 and all studies displayed and informational
10 material provided at the hearing will be made
11 as part of the project decision making process
12 and will be available at the district office
13 for full length review upon request.

14 Thank you for attending this Public
15 Hearing and for providing your input into this
16 project. It is now 6:40 p.m. I hereby
17 officially close the Public Hearing for the
18 State Road 9/I-95 Lantana Road Interchange
19 Public Development and Environment Study.

20 Thank you again and have a good night.

21
22 (This concludes the FDOT Public
23 Hearing at 6:41 p.m.)

TRANSCRIPT CERTIFICATE

STATE OF FLORIDA)
COUNTY OF PALM BEACH)

I, ONEIDA DEL TORO, Reporter, certify that
I was authorized to and did virtually
report the foregoing proceedings and that the
transcript is a true and complete record of my
notes.

DATED this 1st day of January, 2021.

ONEIDA DEL TORO, REPORTER
Notary Public - State of Florida
Commission No.: GG 956417
Expires: February 22, 2024

PUBLIC HEARING CERTIFICATION

SR-9/I-95 @ LANTANA ROAD

Project Development and Environment (PD&E) Study

from

Palm Beach County, Florida

Financial Management No.: 413258-1-22-01

I certify that a public hearing was conducted on 12/16/2020, beginning at 05:30 PM for the above project. A transcript was made and the document attached is a full, true, and complete transcript of what was said at the hearing.

Cesar Martinez

VANDANA NAGOLE

GODFREY LAMPTEY

CESAR MARTINEZ

PUBLIC SPEAKERS:

GRAIG STERN

CHARLES WRIGHT

1 P R O C E E D I N G S

2 VIDEO: The purpose of this public hearing
3 is to share information with the general public
4 about the proposed improvement; the conceptual
5 design; all alternatives under study; and the
6 potential beneficial and adverse social,
7 economic, and environmental impacts upon the
8 community. The public hearing also serves as an
9 official forum providing an opportunity for
10 members of the public to express their opinions
11 and concerns regarding the project.

12 There are three primary components to this
13 public hearing. First, the Open House which
14 occurred prior to this presentation where you
15 were invited to view the project displays,
16 speak with the project team, and provide your
17 comments. Second, this presentation which will
18 explain the project purpose and need, study
19 alternatives, potential impacts - both
20 beneficial and adverse - and proposed methods
21 to mitigate adverse project impacts; and Third,
22 a formal comment period following this
23 presentation where you will have the
24 opportunity to provide oral statements, or you
25 may continue to provide your comments in

1 writing.

2 The Florida Department of Transportation
3 is required to comply with various
4 non-discrimination laws and regulations,
5 including Title VI of the Civil Rights Act of
6 1964. Public participation is solicited without
7 regard to race, color, national origin, age,
8 sex, religion, disability or family status.

9 Persons wishing to express concerns about
10 Title VI may do so by contacting either the
11 Florida Department of Transportation, District
12 Four Title VI Coordinator or the Florida
13 Department of Transportation Statewide Title VI
14 Coordinator. The contact information for these
15 officials are shown on the screen as well as in
16 the hearing notifications and on the project
17 website at www.fdot.gov/projects/95lantana.

18 This public hearing was advertised
19 consistent with the federal and state
20 requirements shown on this slide.

21 This environmental study has been
22 conducted by FDOT District Four in compliance
23 with all applicable federal environmental laws
24 and pursuant to 23 U.S.C. Section 327 and the
25 implementing memorandum of understanding

1 between FDOT and Federal Highway Administration
2 (FHWA) signed on December 14, 2016; the FDOT
3 Office of Environmental Management in
4 Tallahassee is the approving authority.

5 This project proposes improvements to the
6 State Road 9/I-95 at Lantana Road Interchange
7 in the Town of Lantana, Palm Beach County. The
8 project limits along State Road 9/I-95 extend
9 from north of Hypoluxo Road to South of 6th
10 Avenue S. Along Lantana Road, the project
11 limits are from High Ridge Road to Andrew
12 Redding Road. This hearing is being held to
13 provide you with the opportunity to comment on
14 this project.

15 This graphic represents the project
16 development and delivery process for
17 transportation projects prepared by FDOT. The
18 process begins with a planning study and ends
19 with a constructed project. The FDOT project
20 development process is a comprehensive process
21 involving planning, project development and
22 environment, design, right of way, and
23 construction phases. This study is the Project
24 Development and Environment PD&E Study phase.

25

1 The Project Development and Environment or
2 PD&E Study is a process developed by the
3 Florida Department of Transportation or the
4 FDOT to evaluate the social, environmental,
5 economic, and engineering impacts associated
6 with a proposed transportation improvement. In
7 addition to complying with the National
8 Environmental Policy Act or NEPA of 1969, the
9 objectives of a PD&E Study are to support
10 decisions concerning if, where, and what should
11 be built to address the identified
12 transportation needs.

13 We are currently at the Public Hearing
14 stage of the PD&E process. Before this hearing,
15 the public was invited to attend the Public
16 Kick-Off Meeting on May 14, 2019 and the
17 Alternatives Public Workshop on November 13,
18 2019. Comments from the public from the first
19 two meetings were considered in the design of
20 the alternatives on display today. The public
21 hearing is the final opportunity during the
22 PD&E process for the public to provide comments
23 about the study.

24 The State Road 9/I-95 at Lantana Road
25 interchange improvements is identified in 2045

1 Long Range Transportation Plan as well as the
2 current 5-year Transportation Improvement
3 Program or TIP for fiscal year 2021 to 2025
4 adopted by the Palm Beach Transportation
5 Planning Agency or TPA.

6 The purpose of this study is to improve
7 the local and regional transportation network
8 while also providing enhanced multimodal
9 interrelationships at the State Road 9/I-95 at
10 Lantana Road interchange. The primary need for
11 this project is to reduce congestion and
12 traffic spillback onto I-95, improve safety,
13 and increase capacity to accommodate future
14 traffic demand. Secondary considerations for
15 the purpose and need of the project include,
16 modal interrelationship, freight access and
17 mobility, and emergency evacuation.

18 During the PD&E Study, several
19 alternatives were developed to meet the purpose
20 and need for the project. The Alternatives were
21 developed with input obtained throughout the
22 study process from the general public, local
23 government and environmental agencies. The
24 alternatives considered for this study included
25 the No-Action Alternative and three Build

1 Alternatives. All the build alternatives
2 incorporate Transportation System Management
3 and Operations or TSM&O improvements. These
4 improvements utilize Intelligent Transportation
5 Systems or ITS strategies to optimize the
6 performance of an existing facility. For this
7 project, TSM&O strategies include Incident
8 management closed-circuit television cameras,
9 Wrong Way Detection Technology, Vehicle
10 Detection System and Dynamic Message Signs on
11 Lantana Road east and west of I-95.

12 The No-Action or No Project Alternative
13 maintains the existing facility as-is and
14 serves as a baseline for comparison with the
15 build alternatives.

16 The advantages of the No-Action
17 Alternative are that it requires no expenditure
18 of public funds for design, right of way
19 acquisition, construction or utility
20 relocation. In addition, there would be no
21 direct or indirect impacts to the environment
22 or sociocultural impacts from the project.

23 The disadvantages of the No-Action
24 Alternative are that it does not alleviate the
25 congestion, operational, safety and mobility

1 issues currently experienced at the Interchange
2 during the peak hours. If no improvements are
3 made, these conditions will continue to
4 deteriorate. Consequently, the No-Action
5 Alternative does not satisfy the purpose and
6 need for this project.

7 Build Alternative 1 maintains the existing
8 Tight Urban Diamond Interchange configuration
9 at the interchange with the following
10 improvements:

11 Widen Lantana Road and bridge over I-95 to
12 provide 3 lanes in each direction from High
13 Ridge Road to Andrew Redding Road.

14 Provide triple right-turn lanes and dual
15 left-turn lanes for the State Road 9/I-95
16 northbound and southbound off-ramps.

17 Provide dual eastbound and westbound
18 right-turn lanes onto I-95 southbound and
19 northbound on-ramps, respectively.

20 Provide dual eastbound and westbound
21 left-turn lanes from Lantana Road to the I-95
22 southbound and northbound on-ramps,
23 respectively.

24 Provide exclusive southbound and
25 northbound right-turn lane along High Ridge

1 Road.

2 Provide 6 feet sidewalks and 7 feet
3 buffered bicycle lanes along Lantana Road in
4 both directions.

5 Build Alternative 1 provides better
6 mobility along Lantana Road and the interchange
7 ramps compared to the No-Action Alternative and
8 is the least expensive of the three Build
9 Alternatives. However, Build Alternative 1 does
10 not completely alleviate congestion at the ramp
11 terminal. In addition, the Alternative will
12 result in right-of-way impacts to 9 commercial
13 properties.

14 Build Alternative 2 reconfigures the
15 existing Tight Urban Diamond Interchange into a
16 Diverging Diamond Interchange or DDI. The
17 diverging diamond concept requires drivers to
18 briefly cross to the left, or opposite side of
19 the road at carefully designed crossover
20 intersections. Drivers travel for a short
21 distance, then cross back to the traditional or
22 right side of the road. This unconventional
23 design allows movements for the left and
24 right-turns to and from the I-95 ramps onto
25 Lantana Road without crossing the path of

1 opposing traffic.

2 Build Alternative 2 requires replacement
3 of the existing single Lantana Road bridge over
4 I-95 and the South Florida railroad Corridor
5 with separate bridges to accommodate the new
6 DDI configuration. In addition, it provides an
7 underpass road that connects Sunset Road and
8 the existing Solid Waste Authority service road
9 underneath the reconstructed Lantana Road
10 Bridge over the railroad. Other improvements
11 along Lantana Road and the I-95 ramp terminals
12 are similar to Build Alternative 1.

13 The major advantages of Build Alternative
14 2 are that it provides the highest level of
15 mobility and safety, reducing congestion along
16 Lantana road as well as traffic spillback onto
17 the I-95 mainline. In addition, the replacement
18 of the existing Lantana Road Bridge over I-95
19 allows for an underpass access road that
20 addresses safety concerns at the Sunset road
21 and High Ridge road intersections. In addition,
22 the DDI configuration provides opportunities
23 for landscape and other aesthetic treatments
24 along Lantana Road.

25 The main disadvantage of Build Alternative

1 2 is that it is the most expensive of the three
2 alternatives. However, its superior operational
3 and safety benefit results in the highest
4 benefit-cost ratio making it the most
5 cost-effective alternative. Build Alternative 2
6 would also result in right of way impacts to 6
7 commercial properties.

8 Build Alternative 3 reconfigures the
9 existing Tight Diamond Interchange into a
10 Single Point Urban Interchange or SPUI
11 configuration. The SPUI concept consolidates
12 the two intersections of a Tight Urban Diamond
13 Interchange into one single intersection. This
14 allows left-turning traffic from both
15 directions of the intersecting roadways to turn
16 simultaneously without crossing the path of the
17 opposing left-turns.

18 The proposed improvements along Lantana
19 Road and the I-95 ramps under Build Alternative
20 3 are similar to Build Alternative 1. Like
21 Build Alternative 2, this alternative also
22 requires replacement of the existing single
23 Lantana Road bridge over I-95 and the South
24 Florida railroad Corridor with separate bridges
25 to accommodate the new SPUI interchange

1 configuration. It also provides an underpass
2 road that connects Sunset Road and the existing
3 Solid Waste Authority service road underneath
4 the reconstructed Lantana Road Bridge over the
5 railroad.

6 Build Alternative 3 provides better
7 operations and safety compared to the No-Action
8 Alternative and Build Alternative 1. In
9 addition, the new Lantana Road Bridge over I-95
10 provides adequate clearance to accommodate the
11 underpass access road which provides enhanced
12 mobility and safety at the Sunset Road and High
13 Ridge Road intersections.

14 One of the major disadvantages of Build
15 Alternative 3 is that cost of the alternative
16 disproportionately compares to the operational
17 and safety benefits it provides. While Build
18 Alternative 3 provides better operational and
19 safety improvements over Build Alternative 1,
20 it provides less benefits compared to Build
21 Alternative 3. In addition, Build Alternative 3
22 will impact 9 commercial properties.

23 Evaluation of transportation projects to
24 select the most desirable alternative is based
25 on a wide range of criteria that reflect the

1 concerns of all the key stakeholders. Examples
2 of these criteria include traffic operations
3 and safety, environmental impacts, drainage and
4 utility impacts, multimodal considerations,
5 construction costs and right of way impacts and
6 costs.

7 An alternatives evaluation matrix was
8 developed to compare the alternatives across
9 the range of issues affected by the project.

10 From an engineering perspective, Build
11 Alternative 2 outperforms the No-Action
12 Alternatives as well as Build Alternatives 1
13 and 3 with superior traffic operations,
14 mobility, safety, and multimodal
15 accommodations. With regards to ease of
16 construction, Build Alternative 1 requires the
17 least impacts to existing traffic during
18 construction followed by Build Alternatives 2
19 and then Build Alternative 3 which requires the
20 most extensive maintenance of traffic during
21 construction due to replacement of the existing
22 bridge replacement within the same footprint.
23 All three Build Alternatives provide 7 feet
24 buffered bicycle lanes and improved overall
25 safety for pedestrians and bicyclists compared

1 to the No-Action Alternative.

2 In terms of environmental impacts, all
3 three build alternatives have very similar
4 minimal impacts. The main difference between
5 the build alternatives is related to right of
6 way impacts. Build Alternatives 1 and 3 would
7 impact 9 commercial properties while Build
8 Alternative 2 would impact 6 properties. In
9 addition, Build Alternatives 1 and 3 may
10 require 1 potential business relocation.

11 Cost estimates were also prepared for all
12 three build alternatives. Build Alternative 1
13 has the lowest estimated construction cost of
14 \$18.4 Million followed by Build Alternative 3
15 with \$30.7 Million and Build Alternative 3 with
16 the highest estimated construction cost of
17 \$32.7 Million. Although Build Alternative has
18 the highest estimated construction cost, it
19 provides the highest benefit-cost ratio i.e.
20 most cost-effective alternative due to the
21 significantly higher mobility and safety
22 improvements.

23 Based on the results of this evaluation,
24 along with the input received from the public,
25 Build Alternative 2, with the Diverging Diamond

1 Interchange configuration, was the highest
2 ranked and consequently chosen as the Preferred
3 Alternative.

4 The following video shows the operations
5 of a Diverging Diamond Interchange.

6 (Thereupon, the next video was played)

7 VIDEO: Two access modifications are
8 proposed to improve mobility and enhance safety
9 along the project corridor: The existing
10 eastbound and northbound left-turn movements at
11 Sunset Road will be eliminated. In addition, an
12 underpass service road will be provided
13 underneath the reconstructed Lantana Road
14 bridge over the South Florida Railroad
15 Corridor. These proposed access management
16 modifications will alter existing travel
17 patterns between I-95 and High Ridge Road as
18 follows:

19 From Costco Wholesale to I-95: Motorists
20 traveling from Costco Wholesale to I-95
21 currently use two travel options. The first is
22 to exit Costco along High Ridge Road and
23 turn-left at the Lantana Road intersection. The
24 second option is to exit Costco along Lantana
25 Road, weave through 3 lanes of traffic, and

1 make a U-turn at High Ridge Road. This traffic
2 weaving pattern has been identified as one of
3 the safety concerns at this location. The
4 proposed improvement maintains the left turn at
5 High Ridge Road onto Lantana Road but restricts
6 the U-turn at High Ridge Road. Motorist
7 travelling from Costco to I-95 can use the
8 proposed underpass service road and loop
9 underneath the Lantana Road bridge to the
10 intersection of Lantana Road and the Solid
11 Waste Authority service road and then proceed
12 to make a right-turn onto eastbound Lantana
13 Road towards the I-95 ramps.

14 From Eastbound Lantana Road to Costco
15 Wholesale: In the existing conditions,
16 motorists traveling along eastbound Lantana
17 Road can make an eastbound left-turn at the
18 median opening at Sunset Road to Costco. This
19 movement was also identified as a safety
20 concern due to the difficulty in judging
21 correctly adequate gaps for the downhill
22 traffic stream to make the left turn maneuver
23 at this intersection. With the proposed
24 improvements, motorists along eastbound Lantana
25 Road would make a right-turn onto the Solid

1 Waste Authority service road, make a loop
2 underneath the Lantana Road bridge, and connect
3 to Sunset Road which provides access to Costco.

4 From SWA to Westbound Lantana Road: Under
5 the existing conditions, motorists from the
6 Solid Waste Authority can make a left turn at
7 the median opening at the Sunset Road
8 intersection by crossing over three eastbound
9 lanes and three westbound lanes to access
10 westbound Lantana Road. This movement is
11 typically used by heavy slow vehicles which
12 must cross 6 lanes of traffic and has been
13 identified as a safety concern. The proposed
14 access modification eliminates this movement.
15 Motorists would be required to travel east
16 along the proposed service road, make the loop
17 underneath the Lantana Road bridge, and connect
18 to westbound Lantana Road via a right-turn
19 movement from the Costco exit.

20 Right of way will be required from
21 businesses along the project corridor in order
22 to construct the Preferred Alternative. On the
23 west side of I-95, right of way will be
24 required from the Lantana Self Storage, Costco
25 Wholesale and the South Florida Railroad

1 Corridor. The right of way required from these
2 commercial properties would not result in
3 relocation.

4 East of I-95, right of way will be
5 required from the Wells Fargo Bank, the Lantana
6 Shopping Center, the Medical Offices and the
7 Bureau of Government Reviews parcel. The right
8 of way acquisition at the Wells Fargo Bank will
9 require the realignment of the ATM drive-thru
10 lane. At the Lantana Shopping Center, 24
11 parking spaces will be lost to accommodate the
12 proposed improvements along Lantana Road.

13 This project is not anticipated to cause
14 any relocation of families or businesses. All
15 right of way acquisitions will be conducted in
16 accordance with Florida Statutes 339.09 and the
17 Federal Uniform Relocation Assistance and Real
18 Property Acquisition Policies Act of 1970,
19 commonly known as the Uniform Act. FDOT right
20 of way specialists who are supervising this
21 program are available and will be happy to
22 answer your questions.

23 The PD&E Study also evaluated the social
24 and economic, cultural, natural and physical
25 environmental effects associated with the

1 preferred build alternative being considered
2 for this project.

3 The project has no involvement with the
4 following resources: Farmland Resources,
5 Wetlands and Other Surface Waters, Essential
6 Fish Habitat, Floodplains, Sole Source Aquifer,
7 Aquatic Preserves, Outstanding Florida Waters,
8 Wild and Scenic Rivers, Coastal Barrier
9 Resources and Navigation.

10 No significant impacts are anticipated to
11 social and economic conditions, protected
12 species and habitats, water quality and
13 quantity, highway noise, contamination,
14 utilities and railroads, construction, section
15 4(f) resources, historic and archaeological
16 sites.

17 The proposed improvements will have
18 positive socio-economic impacts on the study
19 area as it improves mobility, safety and
20 relieves congestion. No impacts to community
21 features and services are anticipated. However,
22 minimal impacts to existing businesses
23 including loss of 24 parking spaces at Lantana
24 Shopping Center are anticipated.

25 Section 4(f) was enacted in 1966 as part

1 of the Department of Transportation Act. It
2 states that for federally funded projects "It
3 is the policy of the United States Government
4 that special effort be made to preserve the
5 natural beauty of the countryside, public park
6 and recreation lands, wildlife and waterfowl
7 refuges, and historic sites".

8 Two historic sites are located within the
9 project study area: The South Florida Rail
10 Corridor and the First Federal Savings and Loan
11 Association Building (Chase Bank), which was
12 determined to be eligible for listing in the
13 National Register due to the age and
14 architecture of the building.

15 FDOT will ensure that the proposed
16 interchange improvements provides a clear
17 envelope over the South Florida Rail Corridor
18 when placing bridge piers in order to
19 accommodate future planned improvements along
20 the railroad corridor. In addition, no impacts
21 are anticipated to the Chase Bank building.

22 Potential effects to Federal and state
23 listed, or protected species were assessed. The
24 study found no evidence of occurrence of
25 Federal or State listed species within the

1 project limits except for the Gopher Tortoise.
2 It was determined that the project may affect,
3 but is not likely to adversely affect, the
4 Gopher Tortoise and the Eastern Indigo Snake.

5 To minimize adverse effects to gopher
6 tortoises, FDOT commits to perform an
7 environmental survey prior to the start of
8 construction. The survey will be conducted
9 within the existing and proposed right of way,
10 dry swales, and area underneath the proposed
11 underpass service road. Any gopher tortoises
12 located within 25 feet of proposed construction
13 will be relocated.

14 The FDOT will also adhere to the most
15 recent version of the U.S. Fish and Wildlife
16 Service's "Standard Protection Measures for the
17 Eastern Indigo Snake" during construction to
18 prevent adverse impacts to this species.

19 Potentially contaminated sites in the
20 vicinity of the project corridor were
21 identified and evaluated to determine if
22 impacts would occur as a result of the proposed
23 improvements. There are 5 medium risk
24 contamination sites identified in proximity to
25 the project study area. A level 2 contamination

1 assessment will be performed during the final
2 design phase.

3 Traffic noise was analyzed in accordance
4 with the FDOT PD&E Manual, Part 2, Chapter 18
5 and Title 23 Code of Federal Regulations Part
6 772, Procedures for Abatement of Highway
7 Traffic Noise and Construction Noise.
8 Worst-case traffic noise levels were predicted
9 for the preferred alternative. Traffic noise
10 impacts were predicted to occur at 6 residences
11 within Lake Osborne Estate and the Playground
12 at the Sunshine Park Academy located adjacent
13 to the project corridor.

14 FDOT requires that all impacted receptors
15 be analyzed to see if they would benefit from
16 noise abatement measures such as noise
17 barriers. Based on the locations of these
18 impacted receptors, noise walls were evaluated
19 at 2 locations:

20 North side of Lantana Road between Lake
21 Osborne Drive and High Ridge Road Northeast
22 Corner of Lantana Road and High Ridge Road
23 intersection.

24 For the noise barrier to be considered
25 reasonable, it must reduce noise levels by at

1 least 7 dB(A) at one or more impacted receptor
2 sites and the estimated construction cost
3 cannot exceed the FDOT's reasonable cost
4 criteria of \$42,000 per benefited receptor
5 site. Based on the noise evaluation, additional
6 noise barriers were not recommended because
7 they did not meet the FDOT's reasonable cost
8 criteria per benefited site. The noise analysis
9 will be reevaluated during the final design
10 phase of the project.

11 The Environmental Documents detailing the
12 review of all resources analyzed have been
13 available for Public Review since November 24,
14 2020 and will continue to be on display for 14
15 days after the Public Hearing at the Lantana
16 Road Branch Library located at 4020 Lantana
17 Road, Lake Worth, Florida 33462 and at the Town
18 of Lantana Town Hall located at 500 Greynolds
19 Circle, Lantana, Florida 33462 until December
20 30, 2020. The documents are also available for
21 review on the project website
22 www.fdot.gov/projects/95lantana.

23 The next step is to incorporate your input
24 on this public hearing into our decision-making
25 process. After the comment period closes and

1 your input has been considered, a decision will
2 be made regarding the preferred alternative.
3 The Final PD&E document will be sent to the
4 FDOT Office of Environmental Management which,
5 based on the Memorandum of Understanding signed
6 with Federal Highway Administration on December
7 14, 2016 has approval authority on this project
8 granting Location And Design Concept
9 Acceptance.

10 The final design phase is estimated to
11 begin in 2021 with right of way acquisition
12 anticipated to begin in 2022. The construction
13 phase is currently unfunded.

14 There have been various opportunities for
15 the public to provide input on this project.
16 Several public meetings have been held, dating
17 from May 2019 until tonight. We welcome your
18 oral or written comments that will help us make
19 this important decision. Each method of
20 submitting a comment carries equal weight.

21 Written comments received or postmarked no
22 later than 14 days following the date of this
23 public hearing, December 30, 2020, will become
24 a part of the public record for this hearing.

25 All written comments should be mailed to

1 the address shown on the slide. Comments may
2 also be emailed to Vandana Nagole, the FDOT
3 Project Manager or submitted via the project
4 website. This project has and will continue to
5 comply with all applicable state and federal
6 rules and regulations.

7 This concludes our presentation. We now
8 offer you the opportunity to make a statement.
9 (Thereupon, the video was concluded and the
10 proceedings continued as follows)

11 MR. MARTINEZ: Anyone desiring to make a
12 statement -- social, economic, and
13 environmental, you will now have the
14 opportunity to do so. If you have obtained a
15 speaker card please give it to a member of the
16 team. If you have not received a speaker card
17 and wish to speak please raise your hand so you
18 can receive a card to fill out. Written
19 statements may be presented in lieu of or in
20 addition to oral statements.

21 All written material received at this
22 public hearing, and at the Florida Department
23 of Transportation District Four Office located
24 at 3400 West Commercial Boulevard in Fort
25 Lauderdale, Florida postmarked no later than

1 December 30, 2020 will become part of the
2 public record for this meeting. All written
3 comments should be addressed to Vandana Nagole.
4 Comments may be also emailed to
5 vandana.nagole@dot.state.fl.us.

6 We will now call up those who have turned
7 in speaker cards. When your name is called
8 please come to the microphone and state your
9 name and address. If you represent an
10 organization, municipality, or other public
11 body, please provide that information as well.
12 We ask that you limit your input to three
13 minutes. If you have additional comments you
14 may continue after other people have had an
15 opportunity to comment. Did we receive any
16 cards? Mr. Craig Stern. Please state your
17 name and address.

18 MR. STERN: My name is Craig Stern. I
19 live in Lantana. The address is 1930 Lantana
20 Road, Lake Worth, Florida 33462.

21 MR. MARTINEZ: Go ahead.

22 MR. STERN: My question is, first I'd like
23 to thank everyone, I did get my questions
24 answered, but I wanted to have it on record
25 just to make sure, and my questions were during

1 and after construction will I still have a
2 turning lane into my facility off of Lantana
3 Road, not, Lantana, and I was told that I would
4 have both, during construction and after
5 construction, still have my turning lane. And
6 I just wanted to make sure that still is the
7 answer, even though everyone here has confirmed
8 that would be the case.

9 MR. MARTINEZ: All right, thank you. Mr.
10 Charles Wright.

11 MR. WRIGHT: Yes, my name is Charles
12 Wright. I'm a dentist at 1280 West Lantana
13 Road in the Medical Offices. And I'm sorry I
14 didn't get here, couldn't get here earlier to
15 possibly have some questions answered. My
16 concern, and question, is are we going to lose
17 any parking spaces, number one, in, in any
18 scenario. And number two, will we lose the
19 sidewalk and the trees in front of our offices.

20 I've been in that office complex for forty
21 two years, and we, except during COVID, which
22 is obviously a unique situation, we have
23 chronically had parking issues, where people
24 would have to just cruise around the parking
25 lot, or we've even had patients disgusted and

1 said I couldn't find a parking space so I went
2 home. If you take away our parking you may as
3 well just roll up the sidewalks and let us go
4 home. It will damage our business just
5 irreparably.

6 And the other concern is if we lose those
7 trees, over the years people fly up and down
8 Lantana Road, and over the years we've had
9 multiple instances where people crash into
10 those trees, which actually prevents further
11 damage to, you know, anyone that might be
12 parking in that parking area, so I'm concerned
13 if we lose, that we could potentially lose
14 those trees. I want to find out what the
15 status would be on that.

16 MR. MARTINEZ: Okay, thank you for your
17 question. Does anyone else decide to speak, if
18 so state your name and address, and complete a
19 speaker card after you have given your
20 statement to the public record.

21 All right, the verbatim transcript of this
22 proceeding, together with all written material
23 received as part of the hearing record, and all
24 studies, displays, and informational material
25 provided at the hearing, will be made a part of

1 the public decision making process, and will be
2 available at the district office for public
3 review upon request. Thank you, for attending
4 this public hearing, and for providing your
5 input into this project. It is now 6:35 p.m.
6 I hereby officially close this public hearing
7 for the State Road 9 I-95 and Lantana Road
8 Interchange Project Development and Environment
9 Study. Thank you again, and have a good night.

10 (Thereupon, the hearing concluded.)

CERTIFICATE OF NOTARY PUBLIC

I, NATHANIEL TORO, the officer before whom
The foregoing proceedings were taken, do hereby
certify that any witness(es) in the foregoing
proceedings, prior to testifying, were duly sworn;
that the proceedings were recorded by me and
thereafter reduced to typewriting by a qualified
transcriptionist; that said digital audio recording
of said proceedings are a true and accurate record
to the best of my knowledge, skills, and ability;
that I am neither counsel for, related to, nor
employed by any of the parties to the action in
which this was taken; and, further, that I am not a
relative or employee of any counsel or attorney
employed by the parties hereto, nor financially or
otherwise interested in the outcome of this action.
