Lost in Lanes: A Non-Technical Guide to Transportation Demand Modeling Adventures

June 12, 2024 | 11:00 a.m. - 12:30 p.m.

MS Teams Webinar [Recording](#)

Travel Demand Models are a common method for forecasting traffic flows on the transportation system using current travel behavior to predict future travel patterns. To many, they are complicated and surrounded with a bit of mystery, but they do not have to be. Models can be a valuable source of information into long range planning, traffic impact analysis, and project development. Join us on June 12 as a panel shares their expertise and insights into practical applications of travel demand models.
