

# Navigating Florida's Transportation Future

*Through the Goals of the 2055 Florida Transportation Plan*

## Safety

**Safety is our True North.** We are targeting zero fatalities and serious injuries on our transportation system across the state.

## Movement of People & Freight

Congestion relief is a top priority, ensuring reliable, efficient travel for people and freight across all modes and enabling easy transfers between systems.

## Community & Natural Resources

Florida's transportation systems are vital to communities, shaping quality of life, access to jobs, healthcare, education, recreation, and our natural resources.

## Economic Competitiveness

Our transportation system links people to jobs, visitors to destinations, and businesses to suppliers and markets. Strategic investments and infrastructure maintenance are essential for Florida's competitiveness.

## Secure & Agile Transportation System

We will ensure bridges are safe, pavements are smooth, and ports and terminals function efficiently. Our system will be adaptable to incorporate new technologies, mitigate risks, and respond effectively to unforeseen emergencies.
