PINELLAS	St. Petersburg-Clearwater International Airport (Future)	Under Construction: SR 690/118th Avenue to SR 686A/Roosevelt Boulevard Bypass north to entrance

Strategic Growth Component (For all Hubs and corridors unless otherwise noted)

- Must meet **AT LEAST ONE** of the following:
- Is the facility projected to meet SIS minimum activity levels within three years of being designated?
 - Is the facility determined by FDOT to be of compelling state interest, such as serving a unique marketing niche or potentially becoming the most strategic facility in a region that has no designated SIS facility?
- Must meet **ALL** of the following:
- Does the facility have a current master plan as well as a prioritized list of production ready projects?
 - Is the facility identified in a local government comprehensive plan, Comprehensive Economic Development Strategy (CEDS), Transit Development Plan, or equivalent?
 - Does the facility have partner and public consensus on viability of a new or significantly expanded facility?
 - Does the facility meet Community and Environment screening criteria?

SIS Commercial Service Airport Designation Criteria

- Size Criteria (must meet one of the following)
- $\geq 2.5\%$ of Florida total – annual passenger enplanements
 - $\geq 2.5\%$ of Florida total – annual freight and mail tonnage

SIS General Aviation Reliever Airport Designation Criteria (criteria as defined in s. 339.63 Florida Statute)

- Must meet **ALL** of the following:
- The airport it relieves must be designated as SIS or Strategic Growth
 - Handles at least 75,000 itinerant (nonlocal) operations per year
 - Has a runway length of at least 5,500 linear feet
 - Capable of handling aircraft weighing at least 60,000 pounds with a dual wheel configuration which is served by at least one precision instrument approach
 - Serves a cluster of aviation-dependent industries

General Aviation Reliever Airport has the same designation (SIS or Strategic Growth) as the Commercial Service Airport it relieves

SIS Spaceport Designation Criteria

Regularly scheduled civil, commercial, or military launches resulting in suborbital or orbital flights.

SIS Public Seaport Designation Criteria

- Size Criteria (must meet one of the following):
- $\geq 1\%$ of Florida total – annual freight volume measured in tons
 - $\geq 1\%$ of Florida total – annual container volume measured in twenty-foot equivalent units (TEUs)
 - $\geq 250,000$ annual home-port cruise ship passengers

SIS Interregional Passenger Terminal Designation Criteria

- Size Criteria
- $\geq 100,000$ annual interregional rail passengers
 - $\geq 100,000$ annual interregional bus passengers
- OR (must be co-located¹ with another interregional transit mode AND meet size criteria)
- Size Criteria
- $\geq 50,000$ annual interregional rail passengers
 - $\geq 50,000$ annual interregional bus passengers
 - $\geq 50,000$ annual interregional rail AND bus passengers
- ¹ For the purposes of designation, co-location is defined as multiple services sharing the same space or being located directly adjacent to one another.

SIS Urban Fixed Guideway Transit Terminal Designation Criteria

- All qualifying urban fixed guideway system terminals will be included as part of the corridor designation. Terminals will be treated as SIS hubs and associated with an intermodal connector if they meet one or more of the following criteria:
- Are located at or near the termini of the urban fixed guideway corridor
 - Serve¹ a SIS airport, seaport, or spaceport
 - Are integrated with other SIS passenger rail or bus systems providing connections to other regions or states
 - Are co-located with a major park-and-ride facility (≥ 500 spaces)

Strategic Growth does not apply to Urban Fixed Guideway Terminals

¹ For the purposes of designation, facilities are considered to serve a SIS airport, seaport, or spaceport if they are co-located or directly connected in close proximity to the SIS airport, seaport, or spaceport, meaning there are no additional stops or transfers, they are within short walking distance, or are connected by a short shuttle or people mover ride.

SIS Freight Rail Terminal Designation Criteria

- Size Criteria
- $\geq 5\%$ of Florida total – intermodal rail units per year

SIS Intermodal Logistics Center Designation Criteria

- Meets the definition of an ILC.
- AND
- Provides ability to accommodate and support, within a logistics chain that may span multiple modes and handling steps, domestic or international trade moving to or from a SIS seaport or airport.
- AND
- Is identified in a local comprehensive plan or local government development order as an intermodal logistics center or equivalent planning term.
- AND
- Meets minimum size thresholds for cargo throughput, consistent with existing SIS hub criteria for the type of intermodal movement primarily handled by the ILC (e.g., air cargo-to-truck tonnage – 2.5% of Florida total; waterborne container-to-truck or –rail TEUs - 1% of Florida total; intermodal rail terminal units - 5% of Florida total)

SIS Highway Corridor Designation Criteria

To be designated a SIS Highway Corridor, a facility must be:

- An interstate or high capacity tolled facility

OR

- A limited access facility (access level 1) with a SIS facility or limited access facility (access level 1) at each end¹

OR

- An NHS facility that connects to an urbanized area outside of Florida that is not already served by a SIS facility

OR

- A controlled access facility (access level 2 or 3) connecting two or more urbanized areas with a SIS facility at each end²

OR

- A corridor connecting one or more urbanized areas with or through a Rural Area of Opportunity (RAO) and having an AADT of at least 6,000 or an AADTT of at least 1,000 with a SIS facility at each end²

There is no Strategic Growth component for highway corridors

¹ If a limited access facility serves as the primary emergency evacuation route of statewide significance, it may be designated even if it is not connected to another SIS or limited access facility at one end.

² In an area where multiple parallel facilities are connecting to the same urbanized areas or contiguous urbanized areas, only the facility/facilities that meet(s) Criteria 1-3 will be designated. If none of the parallel facilities meet Criteria 1-3, the facility meeting criteria 4 or 5 with the highest AADT will be designated.

SIS Rail Corridor Designation Criteria

SIS Rail Corridor

- Mainline rail corridor that is operated by a Class I or Class II railroad with two or more average daily trains.

Strategic Growth Rail Corridor

- Rail corridor operated by a Class III carrier maintained to FRA Track Class III or better with two or more average daily trains¹.

OR

- Rail corridor determined by FDOT to be of compelling state interest, such as creating a significant economic development opportunity

¹ Exception is SFRC (TriRail) which provides trackage rights to CSX for freight movements.

SIS Waterway Corridor Designation Criteria

Must meet one of the following:

Coastal Shipping Lanes¹ and Intracoastal Waterway

- Designated intracoastal waterway or coastal shipping lane handling international waterborne trade.

Inland Deep Draft Waterway – authorized depth greater than or equal to 14 feet

- ≥ 5% of Florida Total – annual total waterway freight tonnage

Inland Shallow Draft Waterway – authorized depth less than 14 feet

- ≥ 5% of Florida Total – annual domestic waterway freight tonnage

¹ For the purposes of designation, Coastal Shipping Lanes are federally designated Marine Highway Routes identified by the United States Maritime Administration.

Urban Fixed Guideway Corridor Designation Criteria

Urban fixed guideway transit corridors connecting multiple urbanized area counties and serving as a regionally significant facility within a region.

Hub to Corridor Connector Designation Criteria

- Connects to the nearest or most appropriate SIS corridor to facilitate interregional, interstate, or international trips?
- Meets the following conditions where possible:
 - Ability to accommodate significant flows of interregional, interstate, or international trips to/from a hub?
 - Ability to provide high-speed, high-capacity, limited access service?
 - Ability to provide the most direct access?
 - Ability to provide two-way directional movement?
 - Meets Community and Environmental Screening criteria established for SIS facilities?
- It is assumed that a single hub is associated with a single intermodal connector. However, more than one connector to a single hub can be designated if any of the following conditions are met:
 - Hub meets both freight and passenger thresholds, and freight and passenger handling facilities have discrete access points at different locations?
 - Hub has multiple terminals or terminal areas with discrete access points?
 - Existing interregional flows of people or goods are divided significantly among more than one mode or more than one major geographic flow?
 - Separating passenger and freight connections improves overall mobility to/from the hub?
 - Allowing multiple options provides needed redundancy and resiliency?

Hub to Hub Connector Designation Criteria

Intermodal Freight Drayage Route

- Route provides direct connection from one SIS hub to another SIS hub?
- Route's primary purpose is to move freight from one SIS hub to another SIS hub via public access facilities?

Intermodal Passenger Transfer Facility

- Route provides exclusive-use service with no intermediate stops?
- Majority of trips on route are for interregional or interstate passengers?

Military Access Facility Designation Criteria

Must meet one of the following:

- Designate as "Military Access Facilities" Strategic Highway Network (STRAHNET) roads and Strategic Rail Corridor Network (STRACNET) rail lines serving main entrance(s) of U.S. Department of Defense military installations with at least 4% of Florida total military and civilian personnel.
- Designate as "Military Access Facilities" primary roads and rail lines serving main entrance(s) of military installations designated as the Governor's Continuity of Government site(s).
