

SIS Cost Feasible Plan 2035-2050 2024 Edition

Purpose of SIS Cost Feasible Plan

The 2050 Strategic Intermodal System (SIS) Cost Feasible Plan (CFP) represents a phased plan for capacity improvements to the SIS, utilizing forecasted revenues, guided by objectives set forth in the Florida Transportation Plan (FTP). The main purpose of the CFP is to efficiently plan for and fund future capacity improvements. The plan illustrates projects on the SIS that are considered financially feasible during years 11 through 25 of the SIS Funding Strategy, based on current revenue forecasts. Projects in this plan could potentially move forward into the SIS 2nd Five-Year Plan as funds become available or back out into the SIS 2050 Multimodal Unfunded Needs Plan given changes in priorities or shortfalls in projected revenue. The CFP is typically updated every three to five years as new revenue forecasts become available.

The 2050 SIS CFP represents an update of the 2045 SIS CFP and complies with the statutory requirement that calls for a long-range cost feasible plan.

Methodology and Process

The development of the CFP is completed in the following steps:

- 1. Development of revenue forecast.
- Identification of district project priorities.
- 3. Development of draft CFP by Central Office Systems Implementation Office.
- 4. Review and comment by district and local partners.
- 5. Update based on district and partner comments.
- 6. Review of final draft by Executive Management.
- 7. Approval of CFP by FDOT Executive Board.
- Publishing of CFP.

CFP Project Selection

The costs of selected projects are balanced against available district and state managed revenues/funds to ensure that each project is "cost feasible." Priorities assigned by the districts and statewide ranking system are also considered as part of the project selection process. As part of this process, several iterations of the plan are developed for district review and approval by FDOT leadership.

As part of this effort, the Districts provided project information that was supplemented by additional statewide analysis. These projects then served as the base pool of potential CFP projects.

When considering each project for inclusion in the CFP, the following questions were asked:

- Is the project of statewide importance?
- Does the project support statewide SIS goals?
- Does the project contribute to the expansion of major roadway trade and tourism corridors?
 Florida's continued long-term economic viability depends on reliable freight and passenger mobility through its major gateways.
- Does the project contribute to the completion of corridor? SIS routes should provide a continuous corridor with similar capacity and operational characteristics.
- Does the project contribute to the overall connectivity of the SIS? SIS routes are interconnected to form a statewide system that enhances mobility.

Florida Transportation Plan (FTP)

The FTP is the single overarching statewide plan guiding Florida's transportation future. Updated every five years, the FTP represents a collaborative effort between state, regional, and local transportation partners from both the public and private sector. The FTP consists of the following elements:

- Vision Element provides a long-term view of major trends, uncertainties, opportunities, and desired outcomes shaping the future of Florida's transportation system.
- Policy Element describes how the Department will accomplish the vision and goals and defines strategies that will guide transportation partners statewide over the next 25 years.
- **Performance Element** evaluates how the state's transportation system performs on key measures of safety, asset condition, and mobility.
- Implementation Element details the short-term actions, roles, and processes which will implement the FTP over the next five years. Additionally, this element details how FDOT will track progress towards accomplishing the vision and goals.

The Systems Implementation Office (SIO) utilizes FTP goals as a guide to identify SIS policies, select projects, measure performance, and implement project development in accordance with short and long-range plans.

FTP Goals and Objectives

As mentioned previously, the FTP contains the goals and objectives the Department works to achieve. The SIS CFP plays a direct role in meeting the following goals and objectives:

Invest in transportation systems to support a globally competitive economy.

Florida's economic competitiveness is closely related to the state's ability to provide connectivity and mobility for both people and freight. Transportation investments are a key contributor to statewide economic growth and diversification over the next 50 years.

Make transportation decisions to support and enhance livable communities.

Cities, suburbs, small towns and rural areas, and open space all appeal to different groups of Floridians. Although transportation alone cannot make a community livable, effective transportation planning and investment can support the viability of these desired community types.

Make transportation decisions to promote responsible

As Florida grows and develops an important priority must be to ensure Florida's environment is sustainable for future generations. Transportation planning must be integrated with land use, water, and natural resource planning and management to support statewide goals for protecting critical habitats, lands, and waters.

Provide a safe and secure transportation system for all users.

Safety is the number one priority for the Department and factors into all planning and operational improvements undertaken by FDOT. FDOT and its partners have established a vision of a fatality-free transportation system. FDOT's highest commitment to its customers is to build, maintain, operate, and manage a transportation system that significantly reduces the risk of a crash, fatality, or serious injury.

Make transportation decisions to promote responsible environmental stewardship.

As Florida grows and develops an important priority must be to ensure Florida's environment is sustainable for future generations. Transportation planning must be integrated with land use, water, and natural resource planning and management to support statewide goals for protecting critical habitats, lands, and waters.

Strategic Intermodal System (SIS)

The Strategic Intermodal System (SIS), established in 2003, is a statewide network of high priority transportation facilities most critical for statewide and interregional travel. The SIS includes the state's largest and most significant commercial service airports, spaceports, deep-water seaports, freight rail terminals, passenger rail, intercity bus terminals, rail corridors, waterways, and highways.

As of 2023, designated SIS facilities included 18 commercial service airports and three general aviation reliever airports, 12 deep-water seaports, 2,431 miles of rail corridors, 1,079 miles of waterways, 15 passenger terminals, eight rail freight terminals, two spaceports, and nearly 4,700 miles of highways, corridors, connectors, and Military Access Facilities. These hubs, corridors, and connectors are the fundamental structure which satisfies the transportation needs of the public, supports the movement of freight, and provides transportation links to external markets.

2022 SIS Policy Plan Update

"FDOT is required by Florida Statutes to produce a Strategic Intermodal System Plan consistent with the FTP at least once every five years. While the FTP addresses the whole of the state's transportation system, regardless of ownership, the SIS Policy Plan addresses only SIS designated facilities. Recognizing the interdependence of these two plans, FDOT updated the FTP and the SIS Policy Plan together beginning in 2014. In conjunction with the FTP update, FDOT has worked with the steering committee, an additional advisory group, partners, and the public to update the SIS Policy Plan. The FTP provides guidance for other state, regional, and local plans, including the SIS Policy Plan. The integrated update process ensures that FTP implementation focuses first and foremost on the transportation facilities most critical for connecting Florida's regions and connecting Florida to other states and nations.

The SIS Policy Plan establishes the policy framework for designation, identification, project prioritization, and planning and collaboration for the SIS. The plan describes objectives, cross-cutting policy areas, focus areas, and strategies to guide FDOT and transportation partners statewide in accomplishing the vision and goals of the SIS. The update of the SIS Policy Plan is a primary emphasis of FTP implementation and aligns with the current FTP Policy Element. The SIS Policy Plan includes three objectives to guide future SIS plans and investments over the next five years:

Economic Development: Provide transportation systems to support statewide and regional economic development.

Intermodal Connectivity: Expand transportation choices and integrate modes for interregional and regional trips

Interregional Connectivity: Ensure the efficiency and reliability of multimodal transportation connectivity among Florida's regions and between Florida and other states and countries.

The partner and public involvement process of the 2022 SIS Policy Plan update informed the three cross-cutting policy areas that guided the focus of the SIS Policy Plan development process.

Redefine Capacity: To meet current and future needs, the focus of SIS investments must expand from traditional capacity projects to a full range of solutions for improving mobility, reliability, and connectivity.

Increase Flexibility: The rapid pace of change in Florida's economy and the emerging technology and mobility solutions available to meet the needs of residents, visitors, and businesses suggest the need for greater flexibility moving forward.

Clarify Interregional Connectivity: As Florida continues to grow and change, so too do the needs of its multiple regions. During the plan update process, local governments, and other partners highlighted the need for greater clarity in the definition of interregional connectivity.

Policy Plan Focus

The plan identified focus areas to strategically address all aspects of these cross-cutting policy changes. Each focus area has associated designation, planning, and collaboration strategies that enable the SIS to fully support the FTP goals and SIS objectives while addressing the needs identified during the partner and public involvement process. The five (5) policy plan focus areas are as follows:

- **Safety** Demonstrate the SIS program's contribution to eliminating fatalities and serious injuries on Florida's transportation system.
- Resilience Reduce vulnerabilities of SIS infrastructure to risks including extreme weather, sea-level rise, coastal and inland flooding, wildfires, and extreme heat.
- **Technology and innovation** Prepare the SIS for emerging technologies such as automated, connected, electric, and shared vehicles.
- **(f) Urban mobility and connectivity** Address the impact of congestion in both major and developing urban areas on the efficiency and reliability of the SIS for interregional travel, especially in areas where there are limited options for adding capacity to SIS corridors or limited modal alternatives to SIS highways.
- Rural mobility and connectivity Support rural revitalization and economic development and facilitate emergency evacuation and response, while supporting environmental stewardship goals and community visions.

SIS Designation

Section 339.63, Florida Statutes, (F.S.) provides a list of the facility types to be designated as SIS facilities. Upon its creation, the SIS was intended to include only the transportation facilities that meet a strategic and essential state interest. By limiting the system to only those facilities that are most critical, improvement projects are anticipated to have a greater impact statewide. The initial SIS included all facilities that met the criteria recommended by the SIS Steering Committee, with the subject criteria being reviewed annually. Three SIS system-wide data and designation reviews have been conducted and published since the SIS was created. The most recent review was completed in 2020, which analyzed SIS data and facility designations.

SIS Eligibility

Section 339.1, F.S. requires that revenue from the State Transportation Trust Fund be set aside for SIS projects. Only certain types of projects are eligible for SIS funding. After preservation, maintenance, and safety are addressed, the remaining funds are used for SIS capacity improvement projects.

Many of the restrictions on SIS funding are guided by the definition of a "capacity project" for each mode. The Funding Eligibility lists the types of projects that can and cannot use SIS funding.

SIS Planning Process and Funding Strategy

The SIS planning process is based on policy guidance that was developed for the Florida Intrastate Highway System (FIHS) during the 1990's. This process provides the framework for planning, programming, and implementing transportation projects. It shows the progression of a project from policy and planning to implementation. The process also ensures that the limited transportation funds are invested in the most effective manner.

The SIS planning process is based on an approach of rational planning and systematic decision-making. Development of the SIS Policy Plan leads to the preparation of the SIS Multimodal Unfunded Needs Plan, which includes a wide variety of capacity projects. From this plan, the SIS CFP is developed, and the further components of the SIS Funding Strategy.

The SIS Funding Strategy includes three inter-related sequential documents that identify potential SIS capacity improvement projects in various stages of development. All the projects identified within the SIS Funding Strategy are considered financially feasible for implementation within the next 25 years. It is a combined document composed of the Adopted and Tentative SIS Work Program, the 2nd Five-Year Plan, and CFP. A discussion of each of the FDOT SIS plans followed on the next page.

Adopted and Tentative SIS Work Program

The Adopted Work Program (1st Five-Year Plan) is the focus of the entire FDOT planning process. By statute, the Department cannot undertake any project prior to its inclusion in the Adopted Work Program. The program represents a financially feasible planning document which consists of all FDOT projects for the current fiscal year and the following four years. Approximately 75% of the discretionary funding in the Adopted Work Program is targeted towards SIS capacity projects, which include a wide range of transportation projects impacting all transportation modes throughout the state.

SIS 2nd Five-Year Plan

Projects that are scheduled to be funded in the five years following the Tentative SIS Work Program (year 6 through year 10) is considered part of the SIS 2nd Five-Year Plan. The plan is developed during the FDOT project development cycle, in the same manner as the SIS Work Program (1st Five). Upon the commencement of the annual FDOT project development cycle, the first year of the previous SIS 2nd Five-Year Plan becomes the new fifth year of the Tentative SIS Work Program, and the new 10th year is developed from projects in the SIS Cost Feasible Plan

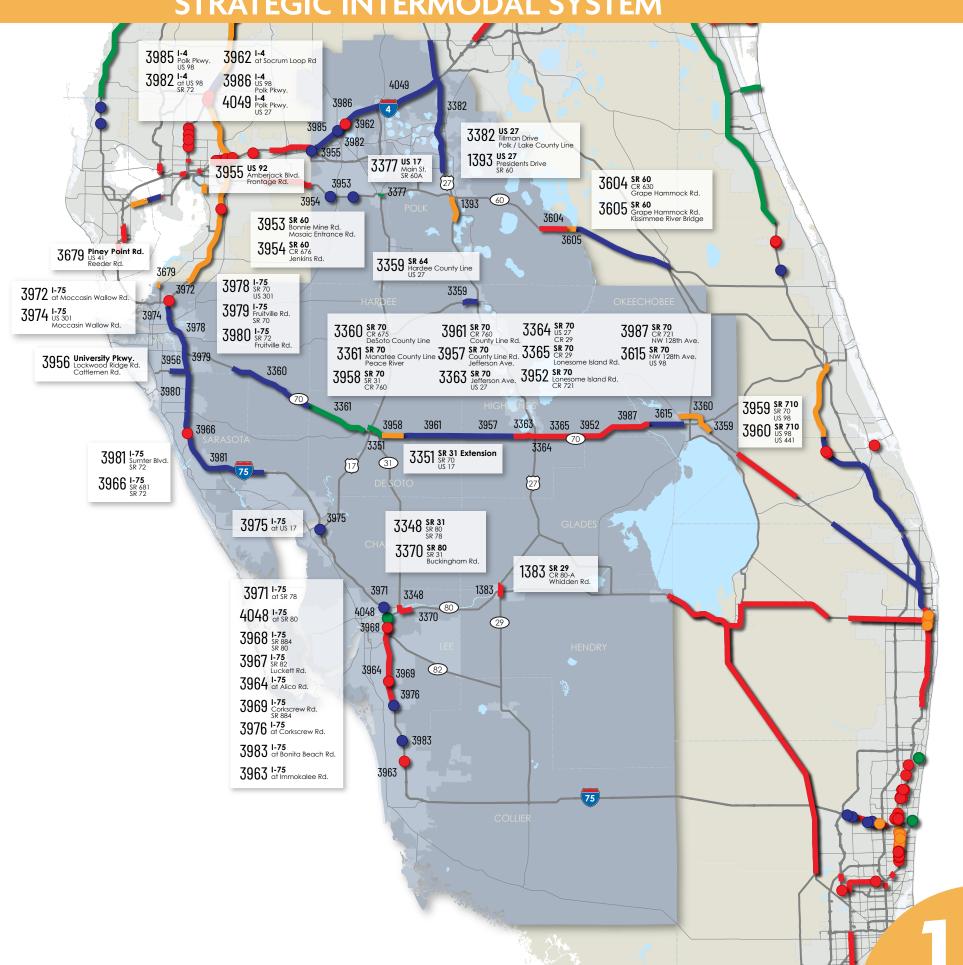

SIS Cost Feasible Plan

As previously stated, the SIS Cost Feasible Plan illustrates projects on the SIS that are considered financially feasible during years 11 through 25 of the SIS Funding Strategy, based on current revenue forecasts. Projects in this plan could potentially move forward into the SIS 2nd Five-Year Plan as funds become available or back out into the SIS 2050 Multimodal Unfunded Needs Plan given changes in priorities or shortfalls in projected revenue. The CFP is typically updated every three to five years as new revenue forecasts become available.

This update of the SIS CFP does not provide specific projects for modes other than highways (aviation, spaceports, seaport, rail, and transit). Funding for these modes, however, is listed in the SIS CFP under the designation of "modal reserves". Modal reserves are identified funding amounts assigned to the modes during the SIS CFP planning period. The reserves are available for each mode for specific projects that will be identified and selected in the future.
