Disclaimer

This report, including all map series, GIS map packages and files, is made available by the Florida Department of Transportation on an "as is," "as available" basis without warranties of any kind, expressed or implied. The user of this report and its contents assumes all responsibility and risk for the use of any. Under no circumstances, including negligence, shall the Florida Department of Transportation or its employees be liable for any direct, indirect, incidental, special, exemplary or consequential damages, or lost profits that result from the use, misuse or inability to use the report, map series, and map packages.

Introduction

Level of Service (LOS) is a quantitative stratification of the quality of service of a roadway into six letter grade levels, "A" through "F", with "A" being the best and "F" being the worst. LOS provides a planning and preliminary engineering technique to address quality of service. With the "A" through "F" LOS scheme, traffic professionals have a tool to explain to the general public and elected officials operating and design concepts of roadways. Users can refer to *2013 FDOT Quality/Level of Service Handbook* and *Highway Capacity Manual 2010* for further detail regarding roadway LOS grades and their meanings.

The purpose of this report is to document the existing and future projected daily LOS along major roadways in the five counties within Florida Department of Transportation District Four (FDOT D4): Broward, Palm Beach, Martin, St. Lucie, and Indian River. The 2014 existing and 2040 future LOS are derived for:

- Strategic Intermodal System (SIS) corridors - Florida's high priority network of transportation facilities important to the state's economy,
- State Highway System (SHS) corridors - roads under the jurisdiction of the Florida Department of Transportation, state-chartered expressway authorities, and other state agencies,
- Florida's Turnpike System - obtained from the Florida's Turnpike Enterprise (FTE), and
- Other major county and city roadways.

This report presents usage of LOS information and summarizes data, methodology, and references utilized to develop LOS and LOS maps of the five counties.

In addition to LOS, this report provides estimated annual average daily traffic (AADT) and number of lanes information of 2014 existing and 2040 future projected conditions along SIS, SHS, and major non-SHS facilities. Estimated year of LOS F is also provided along SHS and SIS facilities.

For 2014 existing conditions, this report covers 937 centerline miles of state roadways and an additional 1,600 centerline miles on local roadways - a 170% increase in coverage of the FDOT Annual LOS Reporting. For 2040 future conditions, the report covers 382 centerline miles of SIS roadways, and an additional 2,100 centerline miles on non-SIS state and local roadways, a 550% increase in coverage of the FDOT Annual LOS Reporting.

Volume I of the report consists of development and map series for Broward and Palm Beach Counties. Volume II of the report consists of those for Martin, St. Lucie and Indian River Counties.

The report is to be used for planning purpose only. Users can refer to *2014 FDOT Traffic Analysis Handbook* and *FHWA Traffic Analysis Toolbox* for appropriate analysis tools for their practices.

Methodology

Daily roadway LOS reported are primarily based on comparing traffic volumes with the daily service volume thresholds recommended in the 2012 Generalized Service Volume Tables in *2013 FDOT Quality/Level of Service Handbook*, shown in Appendix A.1.

2014 LOS is mostly developed by comparing recent traffic count data and regional planning model's base year model run results with the service volumes. For Broward and Palm Beach Counties, the regional planning model applied is Southeast Florida Regional Planning Model version 7 (SERPM 7). 2040 LOS information is largely based on comparing 2040 SERPM 7 results and traffic projections from recent Project Development and Environment (PD&E) studies with the service volume tables. Details of methodology applied for LOS development are presented in Appendix A.2. 2014 LOS of SHS and SIS facilities are consistent with the FDOT Annual Level-of-Service Reporting (the FL Report), shown in Appendix A.3. 2040 LOS of SIS facilities are consistent with the FL Report.

AADTs and number of lanes are obtained primarily from SERPM regional demand model network and model run results. The roadway number of lanes information primarily indicates two-way total number of through lanes of each roadway segment. 2014 AADTs and number of lanes along SHS and SIS roadways are consistent with the FL Report. 2014 AADTs and number of lanes along the remaining roadway segments are sourced from SERPM 7 base model. 2040 AADTs and number of lanes along SIS facilities are consistent with the FL Report. 2040 AADTs and number of lanes along other roadways are from SERPM 7 2040 model network and model run results.

This report also includes SHS and SIS year of LOS F information developed based on 2014 AADT, 2040 AADT, and 2014 roadway daily LOS E volume threshold. Year of LOS F indicates the year when a roadway is expected to reach LOS E or worse if no roadway improvements are completed beyond 2014. This information helps identifying needs of further investigation and providing information important for funding allocation process. While it is desirable to have state roadway segments with LOS of D or better (see Appendix B.1), local agencies may adopt a lower LOS grade as "acceptable". State roads are often designed to maintain a LOS D or better; however, the roadways are considered "failing" when the volumes or projected volumes are greater than the LOS E service volume threshold. Therefore, the year of LOS F is determined based on comparing AADT interpolation between 2014 and 2040 with LOS E service volume thresholds. For roadways with 2014 AADT greater than LOS E volumes, year of LOS F is indicated as "2014". For roadways with 2040 AADT less than LOS E volumes, year of LOS F is shown as ">2040".

Map Series

One major product of this effort is a collection of map series shown at the end of this report. This chapter provides general instructions and sample applications of the LOS maps.

General Instruction

Volume I report contains three sets of maps:

1. LOS Maps
    a. Level of Service – Broward 2014
    b. Level of Service – Broward 2040
    c. Level of Service – Palm Beach 2014
    d. Level of Service – Palm Beach 2040
2. AADT and Number of Lanes Maps
    a. AADT and Number of Lanes– Broward 2014
    b. AADT and Number of Lanes– Broward 2040
    c. AADT and Number of Lanes– Palm Beach 2014
    d. AADT and Number of Lanes– Palm Beach 2040
3. SHS and SIS Facility Year of LOS F Maps
    a. SHS and SIS Facility Year of LOS F– Broward
    b. SHS and SIS Facility Year of LOS F– Palm Beach

Map series start with index maps showing subsequent map insets of the county. Users can refer to page numbers shown on index maps for corresponding enlarged maps. LOS and number of lanes are color coded, while AADTs (shown in hundreds) and year of LOS F information are expressed in numeric labels.

Sample Applications

The map series can be used for different purposes such as deficiency identification and needs assessment. Potential applications of the report include:

- For Long-Range Transportation Plans (LRTPs), roadway needs assessment is a critical step that identifies potential existing and future deficiencies and needs along roadway infrastructures. Once deficiencies and acceptable operating conditions are identified, needs can be identified.
- For city and county planning agencies, the report provides key information, such as roadway AADT, LOS, and year of LOS F, to support refining standards and strategies of Comprehensive Plan's Transportation Element.
- For state and local agencies, items such as LOS and roadway year of LOS F help to identify and prioritize projects and funding allocation. They also helps to select roadway for further investigation.
- Site impact analysis and review should be completed based on the methodologies established in the *2014 FDOT Transportation Site Impact Handbook* together with the

local and state requirements. Note that many site impact analyses require peak hour or peak period conditions assessment which are not provided in this report.

The maps are intended for planning purposes only. Detailed operational analyses maybe required based on study needs. The LOS maps show existing and future average daily conditions rather than peak hours or peak period conditions. In general, peak hour or peak period operating conditions are expected to be worse than daily operating conditions. It is recommended that users also consult with both state and local agencies for their current adopted LOS standards. Appendix B.2 presents a memorandum completed in 2012 about different adopted LOS grades by local agencies in D4. Appendix B.3 presents general agreed area types in FDOT D4.

GIS Map Packages

The other major product of this effort is a collection of GIS (produced using ArcGIS 10.3) map packages available for download. The map packages include map templates, data sources, defined legends, labels, symbology, and queries. This chapter provides instructions and reference for technical users of the map packages.

General Instruction

Similar to map series, the report contains three sets of map packages:

4. LOS
    a. Level of Service – Broward 2014
    b. Level of Service – Broward 2040
    c. Level of Service – Palm Beach 2014
    d. Level of Service – Palm Beach 2040
5. AADT and Number of Lanes
    a. AADT and Number of Lanes– Broward 2014
    b. AADT and Number of Lanes– Broward 2040
    c. AADT and Number of Lanes– Palm Beach 2014
    d. AADT and Number of Lanes– Palm Beach 2040
6. SHS and SIS Facility Year of LOS F
    a. SHS and SIS Facility Year of LOS F– Broward
    b. SHS and SIS Facility Year of LOS F– Palm Beach

Generally, each map package includes GIS shapefiles and layers of map labels, map series data, basefiles, and map insets. Map labels are text label such as roadway names and roadway IDs. Map series data contains primary data sources, such as the FL Report, regional demand model existing and future loaded networks. Basefiles includes background data such as county boundaries, basemap, airports, and waterbodies. Map insets are enlarged map areas where roadway densities are high and information cannot be shown clearly with regular map scale.

While information in map labels, basefiles, and map insets are rather straight forward, it is necessary to explain specific data fields in map series data. Table 1 below summarizes data layers and fields applied for each map series, by facility type.

Table 1. GIS Data Fields and Layers for LOS Map Series

Facility	Map Series	Field Name		Layer Name	
		2014	2040	2014	2040
SIS	LOS	LOS	LOS2040	SHSLOS2014	SIS only
	AADT	LOSAADT	LOSFADT	SHSLOS2014	SIS only
	Number of Lanes	LOSLN	NumLanes	SHSLOS2014	SIS only
	Year of LOS F	Failing_Ye		SHSLOS2014	
SHS (Non-SIS)	LOS	LOS	FinalLOS40	SHSLOS2014	SERPM2040
	AADT	LOSAADT	FinalVOL40	SHSLOS2014	SERPM2040
	Number of Lanes	LOSLN	LANESALL	SHSLOS2014	SERPM2040
	Year of LOS F	Failing_Ye		SHSLOS2014	
Others	LOS	LOS2014	FinalLOS40	SERPM2014	SERPM2040
	AADT	VOL_ALL	FinalVOL40	SERPM2014	SERPM2040
	Number of Lanes	LANESALL	LANESALL	SERPM2014	SERPM2040

Layer "SHSLOS2014" and Layer "SIS only" are referring to the same shapefile of "SHSLOS2014.shp" which primarily consists of the FL Report data for D4, shown in Appendix A.2. Definitions of most key data fields of the shapefile can be found in Appendix A.2. The field of "2040LN" is 2040 planned number of through lanes of SIS facility, including the Florida's Turnpike.

Layer "SERPM2014" is referring to the shapefile of "AANET00A2-2014.shp" which is the loaded network of SERPM 7 Analyst version base year model with 2014 traffic counts. Major non-SHS roadway links are grouped into segments. The segmentation of these roadways primarily follows roadway grids/intersections. LOS maps show information by at segment level. Users can refer to *SERPM 7.061 model document* released at FSUTMS online for definition of data fields.

Layer "SERPM2040" is linked to the shapefile of "AANET00A2-2040.shp" which is the loaded network of SERPM 7 Analyst 2040 results. Selected traffic projections from PD&E studies during the most recent 5 years are applied. Users can refer to *SERPM 7.061 model document* for definition of other data fields.

SERIES INFORMATION

Level of Service (LOS) is a quantitative stratification of the quality of service of a roadway into six letter grade levels, "A" through "F", with "A" being the best and "F" being the worst. LOS provides a planning and preliminary engineering technique to address multimodal service inside the roadway environment (essentially inside the roadway right-of-way). Capacity conceptually relates to the maximum number of vehicles or persons that can pass a point on a roadway in a given amount of time under prevailing conditions. With the "A" through "F" LOS scheme, traffic engineers are much better able to explain to the general public and elected officials operating and design concepts of roadways. Level of Service is calculated based on a number of different variables, including (but not limited to) number of lanes, traffic volume, speed limit, frequency and spacing of signalized intersections and median type.

For more information, visit http://www.dot.state.fl.us/planning/systems/programs/sm/los/default.shtm

Notes:
1. The data presented in this map series is accurate up to date of production.
2. The maps are intended for planning purposes only.
3. The 2014 LOS reported along State Highway System (SHS) facilities are consistent with the FDOT Annual LOS Reporting.
4. The 2014 LOS reported along the non-SHS facilities are derived from the adopted and refined travel demand models.

Data Source:
1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.

SERIES INFORMATION

Level of Service (LOS) is a quantitative stratification of the quality of service of a roadway into six letter grade levels, "A" through "F", with "A" being the best and "F" being the worst. LOS provides a planning and preliminary engineering technique to address multimodal service inside the roadway environment (essentially inside the roadway right-of-way). Capacity conceptually relates to the maximum number of vehicles or persons that can pass a point on a roadway in a given amount of time under prevailing conditions. With the "A" through "F" LOS scheme, traffic engineers are much better able to explain to the general public and elected officials operating and design concepts of roadways. Level of Service is calculated based on a number of different variables, including (but not limited to) number of lanes, traffic volume, speed limit, frequency and spacing of signalized intersections and median type.

For more information, visit http://www.dot.state.fl.us/planning/systems/programs/sm/los/default.shtm

Notes:
1. The data presented in this map series is accurate up to date of production.
2. The maps are intended for planning purposes only.
3. The 2040 LOS reported along the Strategic Intermodal System (SIS) facilities are consistent with the FDOT Annual LOS Reporting.
4. The 2040 LOS reported along the non-SIS facilities are derived from the adopted and refined travel demand models.

Data Source:
1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.

BROWARD COUNTY

2040 DAILY LEVEL OF SERVICE (LOS)

2014 DAILY LEVEL OF SERVICE: INDEX MAP

SERIES INFORMATION

Level of Service (LOS) is a quantitative stratification of the quality of service of a roadway into six letter grade levels, "A" through "F", with "A" being the best and "F" being the worst. LOS provides a planning and preliminary engineering technique to address multimodal service inside the roadway environment (essentially inside the roadway right-of-way). Capacity conceptually relates to the maximum number of vehicles or persons that can pass a point on a roadway in a given amount of time under prevailing conditions. With the "A" through "F" LOS scheme, traffic engineers are much better able to explain to the general public and elected officials operating and design concepts of roadways. Level of Service is calculated based on a number of different variables, including (but not limited to) number of lanes, traffic volume, speed limit, frequency and spacing of signalized intersections and median type.

For more information, visit http://www.dot.state.fl.us/planning/systems/programs/sm/los/default.shtm

Notes:
1. The data presented in this map series is accurate up to date of production.
2. The maps are intended for planning purposes only.
3. The 2014 LOS reported along State Highway System (SHS) facilities are consistent with the FDOT Annual LOS Reporting.
4. The 2014 LOS reported along the non-SHS facilities are derived from the adopted and refined travel demand models.

Data Source:
1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.

2040 DAILY LEVEL OF SERVICE: INDEX MAP

SERIES INFORMATION

Level of Service (LOS) is a quantitative stratification of the quality of service of a roadway into six letter grade levels, "A" through "F", with "A" being the best and "F" being the worst. LOS provides a planning and preliminary engineering technique to address multimodal service inside the roadway environment (essentially inside the roadway right-of-way). Capacity conceptually relates to the maximum number of vehicles or persons that can pass a point on a roadway in a given amount of time under prevailing conditions. With the "A" through "F" LOS scheme, traffic engineers are much better able to explain to the general public and elected officials operating and design concepts of roadways. Level of Service is calculated based on a number of different variables, including (but not limited to) number of lanes, traffic volume, speed limit, frequency and spacing of signalized intersections and median type.

For more information, visit http://www.dot.state.fl.us/planning/systems/programs/sm/los/default.shtm

Notes:
1. The data presented in this map series is accurate up to date of production.
2. The maps are intended for planning purposes only.
3. The 2040 LOS reported along the Strategic Intermodal System (SIS) facilities are consistent with the FDOT Annual LOS Reporting.
4. The 2040 LOS reported along the non-SIS facilities are derived from the adopted and refined travel demand models.

Data Source:
1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.

2014 AADT AND NUMBER OF LANES: INDEX MAP

SERIES INFORMATION

Annual Average Daily Traffic (AADT) measures how busy a roadway is. AADT is defined as total traffic volume of a roadway for a year divided by 365. Number of lanes in the maps indicates total number of through lanes on both directions of a roadway segment. For one-way street segments, number of lanes indicates total number of through lanes of the street segment.

Note:
1. The data presented in this map series is accurate up to date of production.
2. The maps are intended for planning purposes only.
3. All AADT are expressed in thousands.
4. The 2014 AADT reported along state roadways are consistent with the FDOT Annual LOS Reporting
5. The 2014 AADT reported along the non-state roadways are derived from the adopted and refined travel demand models.
6. The number of lanes depicted are as currently existing in 2014.

Data Source:
1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.

2040 AADT AND NUMBER OF LANES: INDEX MAP

SERIES INFORMATION

Annual Average Daily Traffic (AADT) measures how busy a roadway is. AADT is defined as total traffic volume of a roadway for a year divided by 365. Number of lanes in the maps indicates total number of through lanes on both directions of a roadway segment. For one-way street segments, number of lanes indicates total number of through lanes of the street segment.

Note:
1. The data presented in this map series is accurate up to date of production.
2. The maps are intended for planning purposes only.
3. All AADT are expressed in thousands.
4. The 2040 AADT reported along SIS facilities are consistent with the FDOT Annual LOS Reporting
5. The 2040 AADT along the non-SIS facilities are derived from the adopted and refined travel demand models. Some of the reported AADT are obtained from the approved Project Development and Environmental (PD&E) studies completed within the last five years.

Data Source:
1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.

SERIES INFORMATION

Annual Average Daily Traffic (AADT) measures how busy a roadway is. AADT is defined as total traffic volume of a roadway for a year divided by 365. Number of lanes in the maps indicates total number of through lanes on both directions of a roadway segment. For one-way street segments, number of lanes indicates total number of through lanes of the street segment.

Note:
1. The data presented in this map series is accurate up to date of production.
2. The maps are intended for planning purposes only.
3. All AADT are expressed in thousands.
4. The 2014 AADT reported along state roadways are consistent with the FDOT Annual LOS Reporting
5. The 2014 AADT reported along the non-state roadways are derived from the adopted and refined travel demand models.
6. The number of lanes depicted are as currently existing in 2014.

Data Source:
1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.

SERIES INFORMATION

Annual Average Daily Traffic (AADT) measures how busy a roadway is. AADT is defined as total traffic volume of a roadway for a year divided by 365. Number of lanes in the maps indicates total number of through lanes on both directions of a roadway segment. For one-way street segments, number of lanes indicates total number of through lanes of the street segment.

Note:
1. The data presented in this map series is accurate up to date of production.
2. The maps are intended for planning purposes only.
3. All AADT are expressed in thousands.
4. The 2040 AADT reported along SIS facilities are consistent with the FDOT Annual LOS Reporting
5. The 2040 AADT along the non-SIS facilities are derived from the adopted and refined travel demand models. Some of the reported AADT are obtained from the approved Project Development and Environmental (PD&E) studies completed within the last five years.

Data Source:
1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.

SHS & SIS FACILITY YEAR OF LOS F: INDEX MAP

SERIES INFORMATION

SHS and SIS facility year of LOS F indicates the year when a state roadway is expected to reach LOS F if no roadway improvements are completed beyond 2014. This information helps identifying needs of further investigation and providing information important for funding allocation process. The year of LOS F is determined based on comparing AADT interpolation between 2014 and 2040 with LOS E service volume thresholds under 2014 conditions.

Notes:
1. The maps are intended for planning purposes only.
2. This data is accurate up to date of production.
3. For roadways with 2014 AADT greater than or equal to LOS E volumes, year of LOS F is indicated as “2014”.
4. For roadways with 2040 AADT less than LOS E volumes, year of LOS F is shown as “>2040”.

Data Source:
1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.

SHS & SIS FACILITY YEAR OF LOS F: INDEX MAP

SERIES INFORMATION

SHS and SIS facility year of LOS F indicates the year when a state roadway is expected to reach LOS F if no roadway improvements are completed beyond 2014. This information helps identifying needs of further investigation and providing information important for funding allocation process. The year of LOS F is determined based on comparing AADT interpolation between 2014 and 2040 with LOS E service volume thresholds under 2014 conditions.

Notes:

1. The maps are intended for planning purposes only.
2. This data is accurate up to date of production.
3. For roadways with 2014 AADT greater than or equal to LOS E volumes, year of LOS F is indicated as ñ2014ò
4. For roadways with 2040 AADT less than LOS E volumes, year of LOS F is shown as ñ>2040ò

Data Source:

1. FDOT Annual LOS reporting, July 2015.
2. Southeast Florida Regional Planning Model 7 - Analyst version, April 2016.
3. Treasure Coast Regional Planning Model 4 - Analyst version, April 2016.
4. Selected PD&E studies as completed for or by FDOT D4 staff, within the last 5 years.
5. Base map is developed and maintained by the FDOT Transportation Statistics (TranStat) Office.
