PRELIMINARY ENGINEERING REPORT

Florida Department of Transportation

District 1

SR 45 (US 41) at Bonita Beach Road Project Development and Environment (PD&E) Study

Lee County, Florida

Financial Management Number: 444321-1-22-01

ETDM Number: 6291

January 2025

The environmental review, consultation, and other actions required by applicable federal environmental laws for this project are being, or have been, carried out by the Florida Department of Transportation (FDOT) pursuant to 23 U.S.C. §327 and a Memorandum of Understanding dated May 26, 2022, and executed by Federal Highway Administration and FDOT.

PROFESSIONAL ENGINEER CERTIFICATION

PRELIMINARY ENGINEERING REPORT

Project: SR 45 (US 41) at Bonita Beach Road Project Development and Environment (PD&E) Study

ETDM Number: 6291

Financial Project ID: 444321-1-22-01

Federal Aid Project Number: D123-081-B

This preliminary engineering report contains engineering information that fulfills the purpose and need for the SR 45 (US 41) at Bonita Beach Road Project Development & Environment Study in Lee County, Florida. I acknowledge that the procedures and references used to develop the results contained in this report are standard to the professional practice of transportation engineering as applied through professional judgment and experience.

I hereby certify that I am a registered professional engineer in the State of Florida practicing with Kittelson & Associates, Inc., and that I have prepared or approved the evaluation, findings, opinions, conclusions or technical advice for this project.

This item has been digitally signed and sealed by *John R. Freeman, Jr., P.E., PTOE, RSP* on the date adjacent to the seal.

Printed copies of this document are not considered signed and sealed and the signature must be verified on any electronic copies.

1.0 PROJECT SUMMARY

Initiated in November 2019, this Project Development and Environment (PD&E) Study has been conducted to assess various intersection alternatives for State Road (SR) 45 (US 41) at Bonita Beach Road. This Preliminary Engineering Report (PER) documents the project's purpose and need, the alternatives developed, the process of selecting the preferred alternative, and presents the preliminary design analysis for the preferred alternative. SR 45 will be referred to as US 41 throughout the remainder of this report.

1.1 Project Description

The US 41 at Bonita Beach Road PD&E Study evaluated capacity, safety, and multi-modal improvements at the US 41 and Bonita Beach Road intersection, in the City of Bonita Springs, Lee County, Florida. The study area limits extend along US 41 from Foley Road to just south of the Imperial River bridge, a distance of approximately 0.9 miles. Additionally, the study area extends along Bonita Beach Road from Windsor Road to Spanish Wells Boulevard, a distance of approximately 0.8 miles.

US 41 is a north-south principal arterial roadway running parallel to Interstate 75 (I-75) and facilitates movement of regional and local traffic (including truck traffic) along Florida's west coast. Bonita Beach Road is an east-west minor arterial roadway providing a connection to I-75 and is one of two east-west connections between the Lee County mainland and coastal communities and barrier island tourist destinations and beaches to the west. US 41 is a state roadway maintained by the Florida Department of Transportation (FDOT) District 1, while Bonita Beach Road is maintained by Lee County. Both US 41 and Bonita Beach Road are designated as emergency evacuation routes.

US 41 within the project limits is a six-lane divided roadway with two 12' and one 11.5' travel lanes, a 22' raised median, dedicated turn lanes, 5' on-street bicycle lanes and 5' sidewalks on both sides of the roadway. Bonita Beach Road is a four-lane divided roadway with 12' travel lanes, a 22'-25' raised median, dedicated turn lanes, 5' sidewalks on both sides but no on-street bicycle facilities.

The US 41 at Bonita Beach Road intersection is currently a signalized intersection with two exclusive left turn lanes and an exclusive right turn lane in each approach. Aside from the main intersection, there is currently one other signalized intersection along US 41 at the Center of Bonita Springs entrance (Tuffy Auto/Advanced Auto Parts). There are three additional signalized intersections along Bonita Beach Road: at the Center of Bonita Springs, Arroyal Road, and Spanish Wells Boulevard.

The existing US 41 and Bonita Beach Road intersection has high-volume left turn movements, particularly eastbound to northbound and southbound to eastbound. To address these, the City of Bonita Springs initiated the "Network Enhancement Alignment Study – Quadrant Plan" in May

2017. As a result, a two-lane quadrant roadway connecting Bonita Beach Road at Windsor Road to US 41 at the Center of Bonita Springs is being designed and constructed by the City. This Northwest Quadrant Roadway is expected to be completed prior to the US 41 and Bonita Beach Road intersection improvements.

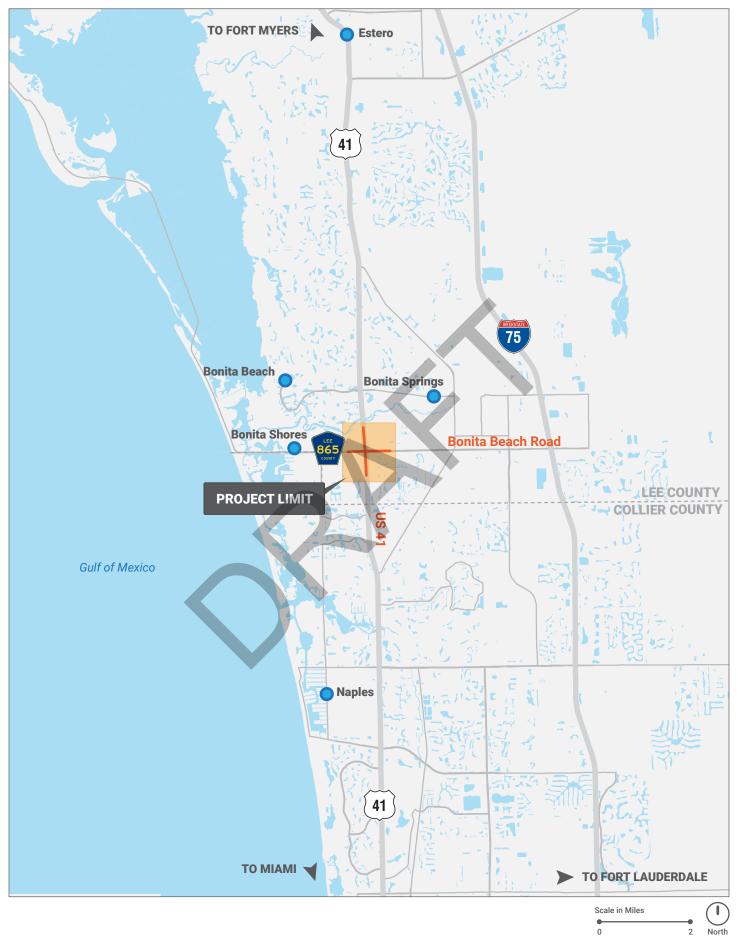

The proposed improvements will modify the signalized configuration of the US 41 and Bonita Beach Road intersection to be a partial displaced left turn (PDLT), with the northbound and southbound left turn movements to crossover and be located outside of the opposing traffic flow. This configuration will allow the northbound and southbound left turning movements to operate in the same signal phase or simultaneously as the northbound and southbound through movements. To accommodate the PDLT configuration and facilitate the relocation of northbound and southbound turning vehicles, two new signalized "crossover" intersections will be added along US 41 approximately 675' south and 460' north of Bonita Beach Road. The southbound and westbound right turn movements are proposed to have three lanes each, and the eastbound and westbound right turn movements are proposed to have two lanes each. The thru lanes along US 41 and Bonita Beach Road within the project limits are proposed to be 11' wide, as well as each of the turn lanes at modified intersections within the study area.

The preferred alternative is anticipated to impact 18 parcels and requires approximately 3.5 acres of right-of-way for the roadway impacts. Stormwater impacts associated with the preferred alternative is anticipated to impact an additional six parcels for approximately 4.9 acres, for a total anticipated right-of-way impact of 8.4 acres with two business relocations.

As noted above, a Northwest Quadrant Roadway is being designed/constructed by the City of Bonita Springs. As part of the PD&E study's proposed improvements, the US 41 and the Center of Bonita Springs intersection is proposed to be changed from a standard signalized intersection to a "thru-cut" intersection. A thru-cut intersection restricts through movements from the minor street, typically due to operational and/or geometric conditions. In this case, the west leg is being widened from two lanes to five lanes (four eastbound approach lanes and one westbound receiving lane) and the east leg is being widened from two lanes to four lanes (two westbound approach lanes and two eastbound receiving lanes). This creates skew issues for any east/west through movements and creates operational constraints that are alleviated by the thru-cut intersection configuration. Tying into the new east leg is a Northeast Quadrant Roadway proposed between US 41 and Arroyal Road, northeast of the US 41 and Bonita Beach Road intersection. This will be a new three-lane roadway, to be constructed as part of this project, having two lanes eastbound and one lane westbound.

Along US 41 in the northbound direction, a 6' sidewalk is proposed from Foley Road to Springs Plaza and a 12' shared-use path is proposed from Springs Plaza to just north of the Imperial River Boat Ramp. In the southbound direction, a 12' shared-use path is proposed from just north of the Imperial River Boat Ramp to Bonita Funeral Home and a 6' sidewalk is proposed from Bonita Funeral Home to Foley Road. Along both sides of Bonita Beach Road, the sidewalks will be widened to 12' shared-use paths from the Center of Bonita Springs to Arroyal Road. Signalized marked crosswalks will be maintained on every leg of the PDLT, including the channelized right turn lanes. Signalized marked crosswalks will also be provided on every leg of each signalized intersection along US 41 and Bonita Beach Road within the study area.

Construction for the project is currently unfunded but is noted in the 2031-2035 time band in the Lee County MPO LRTP. The project location is shown in **Figure 1** and the study area is shown in **Figure 2**.

1.2 Purpose & Need

The purpose of this project is to address the deficient operational capacity of the US 41 and Bonita Beach Road intersection to relieve existing congestion and accommodate projected transportation demand/capacity. The project's secondary goals are to 1) Enhance Safety; 2) Improve Modal Interrelationships; and 3) Enhance System Linkage through regional and local mobility. The need for these improvements is described in this section.

1.2.1 Transportation Demand/Capacity

The US 41 at Bonita Beach Road intersection experiences chronic congestion. As population and employment growth are expected to continue within this area of Lee County, the intersection's congestion is anticipated to increase. Based on 2019 traffic counts taken, the existing Annual Average Daily Traffic (AADT) ranges from 39,000 to 53,000 along US 41 and was 30,000 along Bonita Beach Road. New traffic counts were taken at the study intersections in 2022 to inform the opening and design year turning movement counts (TMCs). Based on future growth projections to a 2050 design year, the AADTs are forecast to range from 60,000 to 78,000 along US 41. The future 2050 AADT forecast along Bonita Beach Road is 39,000.

The US 41 at Bonita Beach Road intersection's existing (2019) mid-day traffic analysis shows that six of the 12 movements operate at Level of Service (LOS) of F, with one of those being overcapacity (volume-to-capacity >1.0). The intersection's existing (2019) PM traffic analysis shows that seven of the 12 movements operate at Level of Service (LOS) of F, with two of those being overcapacity. In the future 2050 condition, the no-build intersection operates at LOS F (target LOS is D) with an overall average vehicle delay less than 90 seconds. While there are a similar number of LOS F movements between the existing and future no-build, latent demand is expected to increase by nearly 30 percent. The future no-build intersection is serving approximately the same amount of traffic volume as the existing condition, but with the increased volumes there are more vehicles in the overall network not being served.

1.2.2 Safety

Crash records were obtained for both US 41 and Bonita Beach Road within the study area, as described below:

- US 41 from Foley Road (MP 0.540) to the Imperial River bridge (MP 1.482); and
- Bonita Beach Road from 400' west of Windsor Road to 450' east of Spanish Wells Boulevard.

Crash data was obtained for the most recent five-year period on record (2018 through 2022). The crash data was obtained from the University of Florida's Signal Four (S4) Analytics crash database for US 41 and Bonita Beach Road. The safety analysis was performed for the most recent five years of crash data (January 1, 2018 – December 31, 2022). Supplemental crash data from previous years

(2014 to 2017) and January 1, 2023 to June 30, 2023 were also analyzed to verify crash trends and patterns.

Figure 3 displays a summary of crash frequency by year along with the respective severities from 2014 to 2022 for the entire study area. There was an increase in crashes between 2014 and 2017, but there has been a decrease in crashes between 2017 and 2019 before an approximate 30 percent drop in crashes due to the COVID-19 pandemic in 2020. The number of crashes have stayed relatively constant in 2021 and 2022. There were 163 crashes per year on average between 2014 to 2017. However, there were 146 crashes per year on average in the study area between 2018 to 2022, not including 2020 (a 10 percent decrease). The fatal crash in 2019 involved a vehicle striking a pedestrian on US 41 just south of Bonita Beach Road, and the fatal crash in 2021 involved an angle crash at the intersection of US 41 at Foley Road/Shanna Lane.

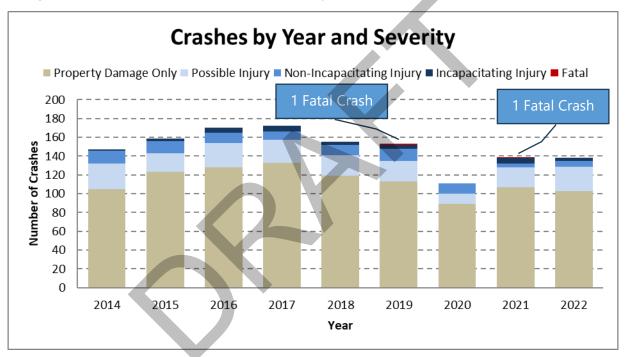

Figure 3: Crashes per Year (Entire Study Area)

Forty three percent of the total study area crashes were located within the intersection influence area of US 41 and Bonita Beach Road. **Figure 4** displays a summary of crash frequency by year along with the respective severities from 2018 to 2022 for the US 41 and Bonita Beach Road intersection. There was a total of 298 reported crashes during this period, 65 injury crashes (22 percent), and one fatal crash (in 2019). As displayed in **Figure 4**, there were an average of 60 crashes per year at the intersection.

Figure 5 displays the crashes at the intersection by type and severity for the five-year study period for the US 41 and Bonita Beach Road intersection. The highest crash type observed was rear end, comprising 59 percent of the total crashes. Sideswipe crashes (13 percent) and left turn (8 percent)

were the second and third highest crash types. These trends are consistent with the overall study area. The fatal crash in 2019 occurred when a vehicle struck a pedestrian crossing US 41.

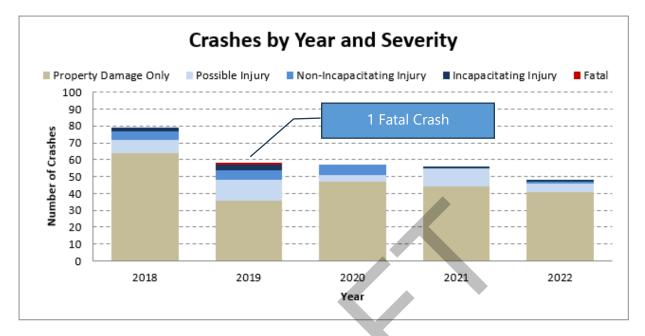

Figure 4: Crashes per Year (US 41 and Bonita Beach Road Intersection)

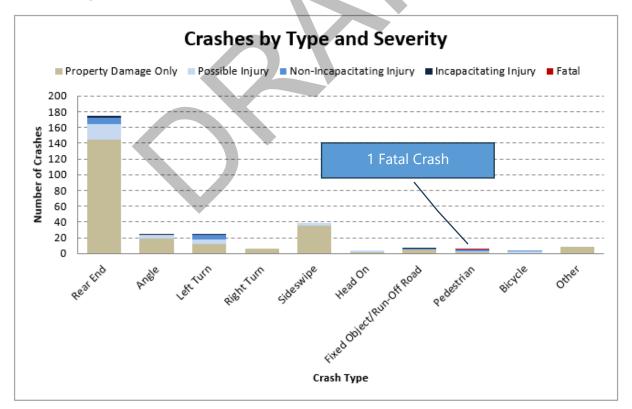

Figure 5: Crashes by Type and Severity (US 41 and Bonita Beach Road Intersection: 2018 to 2022)

A crash rate analysis was performed for the US 41 at Bonita Beach Road intersection for the years 2018 through 2022. The study intersection experienced higher than average Statewide crash rates in both 2018 and 2020 (safety ratios >1.25) and had crash rates nearing the Statewide averages in 2019, 2021, and 2022 (safety ratios ranging between 0.87 and 0.95). The study intersection experienced higher than average Districtwide crash rates in 2018 through 2020 (safety ratios ranging between 1.1 and 1.6), and had crash rates nearing the Districtwide averages in 2022 (safety ratios of 0.99 and 0.93, respectively).

US 41 and Bonita Beach Road are designated emergency evacuation routes for both the Florida Division of Emergency Management and Lee County. Providing parallel service to I-75, US 41 plays an important role in facilitating north-south traffic during incidences and emergency evacuation periods (particularly within southwest Florida). Bonita Beach Road also serves a critical role during emergency evacuation periods as it connects US 41 and I-75 (facilities of the state evacuation route network) and provides one of two connections for residents and tourists between the barrier islands/tourist destinations to the west and mainland of Lee County.

1.2.3 Modal Interrelationships

While sidewalks are present on both sides of US 41 and Bonita Beach Road, the only bicycle facilities present in the study area are 5' marked bicycle lanes along both sides of US 41. One LeeTran bus route (Route 600) operates along US 41 and Bonita Beach Road. In addition to the one bus route, LeeTran has partnered with Uber to provide ULTRA On-Demand Transit service in the Bonita Springs area. With LeeTran's ULTRA On-Demand Transit service, a deluxe mini-bus is available seven days a week from 7:00 AM to 6:00 PM. ULTRA On-Demand Transit allows riders to request a ride as needed, with curb to curb service.

Due to the presence of these facilities/services and the surrounding urban environment, heavy pedestrian and bicycle traffic exists in the area (as observed during field reviews conducted for the project).

The Office of Greenways and Trails (OGT) and the Lee County Metropolitan Planning Organization (MPO) have identified trail opportunities in the vicinity of the US 41 and Bonita Beach Road study intersection. The Coastal Loop Trail is a spur loop from the Southwest Coastal Regional Trail, which is part of the larger FDOT Shared-Use Nonmotorized (SUN) Trail Program. This is a planned loop trail that begins at the Southwest Coastal Regional Trail in Bonita Springs, travels along Bonita Beach Road to the barrier islands, then travels through Fort Myers Beach and southern Fort Myers before connecting back to the Southwest Coastal Regional Trail east of US 41 in Fort Myers. Through discussions with Lee County MPO, no future funding has been dedicated for Coastal Loop Trail improvements in the vicinity of the US 41 and Bonita Beach Road intersection as per the date of this report.

1.2.4 System Linkage

US 41 serves as a critical arterial in facilitating the north-south movement of regional and local traffic (including truck traffic) as it runs parallel to I-75 along Florida's west coast. US 41 is designated as a regional freight mobility corridor (Tier 1 Regional Freight Corridor) in the Lee County 2045 Long Range Transportation Plan.

Similarly, Bonita Beach Road serves as a major east-west local roadway within Lee County, linking US 41 and I-75 and providing access (as one of two connections) between the mainland of Lee County and coastal communities/tourist destinations to the west (i.e., barrier islands and beaches). Further, both US 41 and Bonita Beach Road are designated as emergency evacuation routes for both the Florida Division of Emergency Management and Lee County.

The City of Bonita Springs performed the Network Enhancement Alignment Study, also known as the "Quadrant Plan", in May 2017. The purpose of the Quadrant Plan is to develop an expanded roadway network between Bonita Beach Road with US 41 that improves the area's mobility, maintains a high-quality environment for the community, and minimizes impacts to the natural environment. The City is moving forward with design and construction for a northwest quadrant roadway.

1.2.5 *Planning Consistency*

The design phase was created under 444321-2, with \$2.801M SU funds and \$0.7M local funds for a total funding allocation of \$3.501M. The project's design funding is programmed in the TIP/STIP for FY2026. A \$5.5M earmark for the right-of-way phase is programmed for FY 2025 in the STIP. The LRTP will not need updating at this time unless project information changes. Planning consistency documentation is included in the Categorical Exclusion.

1.3 Commitments

To ensure the project will not adversely affect protected species and their habitats, the following commitments will be implemented:

- The most recent version of the USFWS Standard Protection Measures for the Eastern Indigo Snake will be utilized during construction.
- If the tri-colored bat is listed by the USFWS as Threatened or Endangered and the project may affect the species, FDOT commits to initiating consultation with the USFWS to determine the appropriate avoidance and minimization measures for protection of the newly listed species.
- If the monarch butterfly is listed by the USFWS as Threatened or Endangered and the project may affect the species, FDOT commits to initiating consultation with the USFWS to determine the appropriate avoidance and minimization measures for protection of the newly listed species.

- FDOT is committed to the construction of feasible and reasonable noise abatement measures, specifically noise barrier WB1 (CNE WB2), as identified in the Noise Study Report, contingent upon the following conditions:
 - Final recommendations on the construction of abatement measures are determined during the project's final design and through the public involvement process;
 - Detailed noise analyses during the final design process support the need, feasibility, and reasonableness of providing abatement;
 - Cost analysis indicates that the cost of the noise barrier(s) will not exceed the costreasonable criterion;
 - Community input supporting types, heights, and locations of the noise barrier(s) is provided to FDOT;
 - Safety and engineering aspects have been reviewed, and any conflicts or issues resolved.

1.4 Alternatives Analysis Summary

1.4.1 No-Build Alternative

The No-Build Alternative assumes that no modifications or improvements will be implemented for the US 41 and Bonita Beach Road intersection. The No-Build Alternative's primary advantages are it does not require any capital or expenditure of local, state, or federal transportation funds, and it results in no impacts to the social, natural, cultural, or physical environment. The No-Build Alternative's primary disadvantage is it will not address the Purpose and Need for this project.

Advantages of the No-Build Alternative include:

- No right-of-way acquisition or business impacts/displacements;
- No design, right-of-way, or construction costs;
- No inconvenience to the traveling public and property owners during construction;
- No impacts to utilities and drainage structures; and
- No impacts to the natural, social, cultural, or physical environment.

Disadvantages of the No-Build Alternative include:

- It is not consistent with local government plans, the Lee County MPO LRTP, or TIP;
- It does not address the project's Purpose and Need to include:
 - o It does not improve levels of service or address traffic congestion;
 - o Safety is not improved, and the number of crashes is projected to increase;
 - o It does not improve multi-modal mobility; and
 - It does not provide the system linkage necessary to improve north-south or eastwest travel by the public.

The No-Build Alternative will not meet the Purpose and Need for this project.

1.4.2 Prior Grade Separated Alternative

During the preliminary alternatives analysis efforts in 2020, a single point diamond interchange (SPDI) was one of two alternatives being considered (along with the PDLT). The SPDI alternative assumes the northbound and southbound through lanes on US 41 are elevated over Bonita Beach Road. Turning movements for US 41 and Bonita Beach Road occur at a single intersection underneath the US 41 overpass. To allow access to local businesses, through movements on the US 41 ramps were allowed. The US 41 overpass begins between the two access points for Springs Plaza on the south side of Bonita Beach Road and ends north of the Crown Lake Boulevard intersection to the north. Access to any minor streets along the US 41 ramps are maintained as intersections with the US 41 ramps only.

The SPDI alternative was reviewed as part of the Stage 1 Intersection Control Evaluation. During this evaluation, a new development was approved with their primary access to US 41 occurring at the Center of Bonita Springs signalized intersection via the northwest quadrant roadway. The overpass' ramps would tie-in to US 41 north of this location and convert the Center of Bonita Springs intersection into a right-in/right-out configuration. With this new development needing full access to US 41 at the Center of Bonita Springs, the SPDI alternative was removed from consideration and an enhanced at-grade traffic signal was reviewed (as discussed in the next section).

1.4.3 Intersection Alternatives

Two intersection alternatives were developed to support the US 41 at Bonita Beach Road purpose and need:

- Alternative A Enhanced Traffic Signal (**Figure 6**)
 - Widens US 41 to eight lanes from Foley Road to the southern end of the Imperial River bridge.
 - Provides additional turn lane improvements to the existing signalized intersection.
- Alternative B Partial Displaced Left Turn (Figure 7)
 - Northbound and southbound left turn movements are relocated to the outside of the opposing flow of traffic, allowing the northbound and southbound left turning movements to operate in the same signal phase as the northbound and southbound through movements.
 - Two new signalized "crossover" intersections are proposed along US 41 approximately 675' south and 460' north of Bonita Beach Road to allow left turning vehicles to cross to the other side of the opposing flow.
 - The southbound and eastbound left turn movements are proposed to have three lanes each.

• The eastbound and westbound right turn movements are proposed to have two lanes each.

The intersection alternatives were developed using design provisions from the FDOT Design Manual (FDM). Each of the proposed intersection alternatives were applied along US 41 from Sta. 221+19 to Sta. 271+81 and along Bonita Beach Road from Sta. 254+57 to Sta. 300+33.

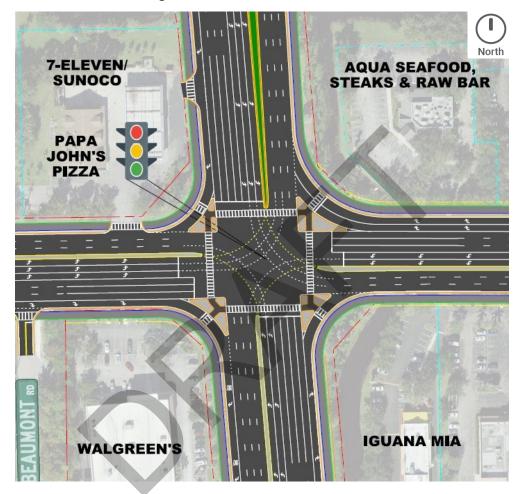

Figure 6: Alternative A – Enhanced Traffic Signal

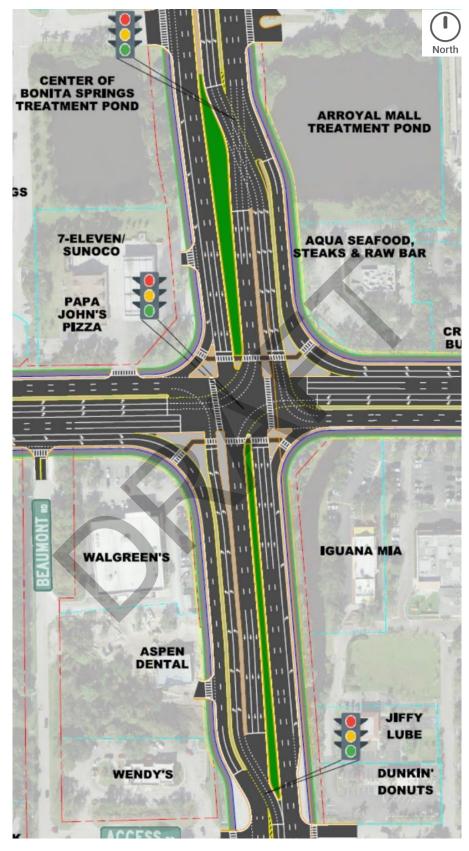

Figure 7: Alternative B – Partial Displaced Left Turn

1.4.4 Other US 41 Improvements (Outside of Main Intersection)

1.4.4.1 Alternative A – Enhanced Traffic Signal

For Alternative A, US 41 is proposed to be modified based on the following:

- Adding a fourth travel lane in each direction and reducing the lane widths to 11':
 - Additional northbound travel lane will start just north of Foley Road (Sta. 223+50) and end at the driveway for the Imperial River Boat Ramp (Sta. 270+00).
 - The additional southbound travel lane will start at Sta. 265+00 (halfway between the Imperial River Boat Ramp driveway (Sta. 270+00) and the US 41/Center of Bonita Springs intersection (Sta. 260+00)) and end at the Foley Road intersection (Sta. 222+75).
- A 12' shared-use path is proposed on both sides of US 41 in lieu of the on-street bicycle facilities:
 - In the northbound direction from Springs Plaza (Sta. 232+50) to just north of the Imperial River Boat Ramp (Sta. 271+00).
 - In the southbound direction from just north of the Imperial River Boat Ramp (Sta. 271+00) to Bonita Funeral Home (Sta. 231+00).
- A 7' on-street buffered bicycle lane is proposed on the south end of the corridor:
 - In the northbound direction from Foley Road (Sta. 222+75) to just north of Springs Plaza (Sta. 234+50).
 - In the southbound direction from Bonita Funeral Home (Sta. 231+00) to Foley Road (Sta. 222+75).
- A 6' sidewalk is proposed on the south end of the corridor:
 - In the northbound direction from Foley Road (Sta. 222+75) to Springs Plaza (Sta. 232+50).
 - In the southbound direction from Bonita Funeral Home (Sta. 231+00) to Foley Road (Sta. 222+75).

A graphic depiction of the widening and shared-use path configuration for Alternative A is shown in **Figure 8** below. The buffered bicycle lanes and sidewalks configuration is only present for approximately 1,000' on the south end of the corridor thus was not considered part of the "typical" section. The total estimated cost for this alternative is \$38,130,000. Further details of this cost are provided in **Table 28**.

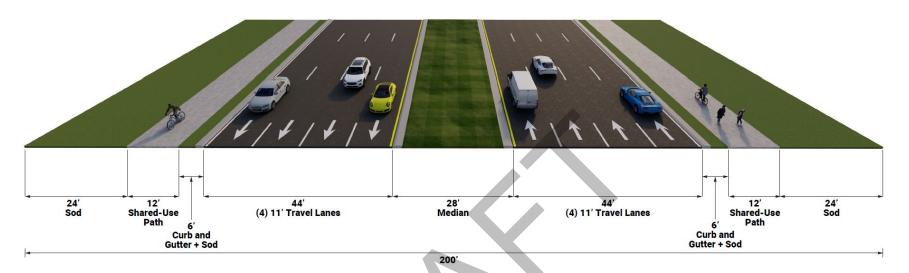

Figure 8: Alternative A US 41 Roadway Features

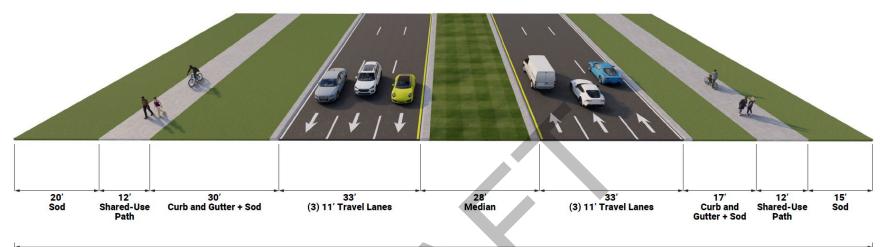

1.4.4.2 <u>Alternative B – Partial Displaced Left Turn</u>

For Alternative B, the northbound and southbound left turn movements will be relocated outside of the opposing flow of traffic. This configuration will allow the northbound and southbound left turning movements to operate in the same signal phase as the northbound and southbound through movements. To accommodate the Alternative B configuration and facilitate the relocation of northbound and southbound turning vehicles, two new signalized "crossover" intersections will be added along US 41 approximately 675' south and 460' north of Bonita Beach Road (as shown in **Figure 7**). The following features detail the improvements proposed as part of the new "crossover" intersections:

- Between Foley Road (Sta. 222+75) and southern "crossover" intersection (Sta. 239+00):
 - Three 11' northbound and southbound through lanes.
- Between southern "crossover" intersection (Sta. 239+00) and US 41 and Bonita Beach Road intersection (Sta. 246+00) (described from right side to left side across US 41 and shown in **Figure 9**):
 - Exclusive 11' northbound right turn lane.
 - Three 11' northbound and southbound through lanes.
 - Dual 11' northbound exclusive left turn lanes positioned outside of the southbound through lanes.
 - Dual 11' eastbound to southbound exclusive right turn lanes positioned outside of the northbound left turn lanes.
- Between US 41/Bonita Beach Road intersection (Sta. 246+00) and northern "crossover" intersection (Sta. 251+00) and (described from right side to left side across US 41):
 - Dual 11' westbound to northbound exclusive right turn lanes positioned outside of the southbound left turn lanes.
 - Triple 11' southbound exclusive left turn lanes positioned outside of the northbound through lanes.
 - Three 11' northbound and southbound through lanes.
 - Exclusive 11' southbound right turn lane.
- Between northern "crossover" intersection (Sta. 251+00) and US 41/Center of Bonita Springs intersection (Sta. 260+00):
 - Four 11' northbound through lanes.
 - Three 11' southbound through lanes.
- Between US 41 and Center of Bonita Springs intersection (Sta. 260+00) and the Imperial River Boat Ramp (Sta. 266+50):
 - Four 11' northbound through lanes (outside lane drops at the Imperial River Boat Ramp).

- Three 11' southbound through lanes (a fourth "auxiliary" lane begins at Sta. 265+00 that drops into the triple southbound left turn lanes).
- A 12' shared-use path is proposed on both sides of US 41 in lieu of the on-street bicycle facilities:
 - In the northbound direction from Springs Plaza (Sta. 232+50) to just north of the Imperial River Boat Ramp (Sta. 271+00).
 - In the southbound direction from just north of the Imperial River Boat Ramp (Sta. 271+00) to just south of Access Road (Sta. 237+00).
- A 7' on-street buffered bicycle lane is proposed on the south end of the corridor:
 - In the northbound direction from Foley Road (Sta. 222+75) to just north of Springs Plaza (Sta. 234+50).
 - In the southbound direction from just south of Access Road (Sta. 237+00) to Foley Road (Sta. 222+75).
- A 6' sidewalk is proposed on the south end of the corridor:
 - In the northbound direction from Foley Road (Sta. 222+75) to Springs Plaza (Sta. 232+50).
 - In the southbound direction from just south of Access Road (Sta. 237+00) to Foley Road (Sta. 222+75).

The total estimated cost for this alternative is \$45,950,000. Further details of this cost are provided in **Table 28**.

200'

Figure 9: Alternative B US 41 Roadway Features

1.5 Description of Preferred Alternative

1.5.1 Preferred Intersection Control Alternative

The project's purpose is to address the deficient operational capacity of the US 41 and Bonita Beach Road intersection to relieve existing congestion and accommodate projected future traffic demand. The project's secondary goals are to 1) Enhance regional and local mobility; 2) Enhance safety conditions; and 3) Improve multi-modal access.

Alternatives A (Enhanced Traffic Signal) and B (PDLT) were presented at the Alternatives Public Workshop conducted virtually on Monday April 3 and in-person on Tuesday April 4, 2023. Following the workshop, feedback was gathered from members of the public for both alternatives. The majority of public comments received expressed support for Alternative B, PDLT. Alternative B was favored as it does not add through lanes along US 41, was viewed as being more operationally efficient, and provided better pedestrian and bicyclist safety. These alternatives were also presented to the Lee County MPO on June 16, 2023 and the public support for the PDLT alternative was documented with the MPO Board.

Discussions were held with FDOT District 1 after the Alternatives Public Workshop and it was determined Alternative B – PDLT best aligns with the project's purpose and need and was selected as the preferred alternative. The following bullets summarize how the PDLT recommendation meets the primary and secondary purpose and need goals noted above:

- Transportation Demand/Capacity
 - In the 2050 future build condition, the average network delay for vehicles traveling through the PDLT would be approximately 50 percent less than the No-Build Alternative.
 - The estimated number of vehicles served by the PDLT in 2050 would be approximately 20 percent higher than the No-Build Alternative.
 - The PDLT is anticipated to improve average vehicle delay by over 45 seconds in both the 2050 mid-day and PM peak hours when compared to the No-Build Alternative at the main US 41 at Bonita Beach Road intersection only.
- Safety
 - Using the predictive safety analysis methods provided in the FDOT Safety Performance for Intersection Control Evaluation (SPICE) Tool, the PDLT intersection is predicted to decrease total and fatal/injury crashes by over 10 percent vs the No-Build Alternative over the 20-year life cycle from 2030 to 2050.
 - Increase the volume of residents and tourists from coastal communities that can be evacuated during an emergency event by improving operations at the intersection of two major evacuation routes.
 - Enhance access to facilities of the state evacuation route network.

- Improve response times (due to enhanced access) to emergency events and incidences.
- Modal Interrelationships
 - Sidewalks in the study area are proposed to be widened to 12' shared-use paths along both sides of US 41 and Bonita Beach Road.
 - These shared-use paths will improve pedestrian/bicycle access and circulation by modifying/limiting opportunities for conflicts between automobiles and pedestrians/bicyclists.
 - The 12' shared-use path improvements proposed as part of the PDLT would help further enhance the future vision of the Coastal Loop Trail in the study area.
 - Additional median and concrete traffic separators are included in the PDLT concept to provide pedestrian refuge areas and better facilitate non-motorist crossings.
 - The PDLT will also enhance the performance and reliability of transit service operating along US 41 and Bonita Beach Road by reducing delays at the intersection.
- System Linkage
 - Improve the viability of US 41 as a regional alternative facility to I-75 by reducing travel delay.
 - Enhance east-west access between two primary north-south transportation corridors (US 41 and I-75) as well as between the mainland of Lee County and coastal communities/tourist destinations to the west.
 - Enhance freight mobility and access within the area as US 41 is designated as regional freight mobility corridor (Tier 1 Regional Freight Corridor) in the Lee County 2045 Long Range Transportation Plan.
 - The proposed PDLT improvements will support local system linkage planning efforts by providing a Northeast Quadrant Roadway connecting US 41 to Arroyal Road. It will also widen the US 41 and Northeast Quadrant Roadway intersection's west approach to meet the intersection's future traffic demands.

The preferred alternative concept plans can be found in **Appendix G**.

1.5.2 Preferred Alternative Features

The following highlights the key improvement elements within the US 41 at Bonita Beach Road intersection area for Alternative B:

1.5.2.1 <u>US 41</u>

The proposed roadway/intersection improvements discussed in **Section 1.4.1** and **1.4.4.2** were brought forward as part of the preferred alternative design. Outside of the main US 41 and Bonita

Beach Road intersection and "crossover" locations, additional intersection improvements are included as part of the preferred alternative:

- Signalization and turn lane improvements at the intersection of US 41 and Foley Road (Sta. 222+75).
- Modified "thru-cut" signalized intersection at US 41 and Center of Bonita Springs (Sta. 260+00) as shown in **Figure 10**:
 - A thru-cut intersection restricts through movements from the minor street typically due to operational and/or geometric conditions. In this case, the west leg is being widened from two lanes to five lanes (four eastbound approach lanes and one westbound receiving lane) and the east leg is being widened from two lanes to four lanes (two westbound approach lanes and two eastbound receiving lanes).
 - Dual southbound left turn lanes are also proposed in the new thru-cut configuration.

Figure 10: US 41/Center of Bonita Springs "Thru-Cut" Intersection

1.5.2.2 Bonita Beach Road

The following roadway improvements are proposed along Bonita Beach Road as part of the preferred alternative:

- Three 11' travel lanes in each direction from the Center of Bonita Springs (Sta. 266+50) to Arroyal Road (Sta. 286+25). The third eastbound through lane drops at the Spanish Wells Boulevard signal.
- Widening the sidewalk to be a 12' shared-use path on both sides from the Center of Bonita Springs (Sta. 266+50) to Arroyal Road (Sta. 286+25).

At intersections along Bonita Beach Road, the following features are included as part of the preferred alternative:

- Bonita Beach Road at Center of Bonita Springs (Sta. 266+50):
 - Develop a third 11' eastbound travel lane departing intersection.
- Bonita Beach Road at Arroyal Road (Sta. 286+25):
 - One additional 11' eastbound through lane (will be a shared through/right configuration).
 - Develop a third 11' westbound travel lane departing intersection.
 - The southbound approach will be modified to include two southbound left turn lanes and one southbound shared through/right turn lane.

1.5.2.3 Quadrant Roadway System

A new Northwest Quadrant Roadway from Bonita Beach Road at Windsor Road (Bonita Beach Road Sta. 260+00) to US 41 at the Center of Bonita Springs (US 41 Sta. 260+00) will be constructed by the City of Bonita Springs before the preferred alternative is planned to be constructed at the US 41 and Bonita Beach Road intersection. The following features describe the Northwest Quadrant Roadway improvements as shown in **Figure 11**:

- Intersection of Bonita Beach Road and Windsor Road (Bonita Beach Road Sta. 260+00):
 - An eastbound displaced left turn to the Northwest Quadrant Roadway with a new crossover intersection just west of Windsor Road.
 - The southbound approach from Windsor Road will be widened to two lanes.
 - An exclusive westbound right turn lane will be added.
- Along Windsor Road:
 - Two southbound lanes and one northbound lane.
 - 6' sidewalk on the west side and 12' shared-use path on the east side of the roadway.
- Along New Roadway between Windsor Road and the Northwest Corner of the Center of Bonita Springs Shopping Plaza:
 - One 11' travel lane in each direction.

- 4' paved shoulders in each direction.
- 6' sidewalk on the west side and 12' shared-use path on the east side of the roadway.

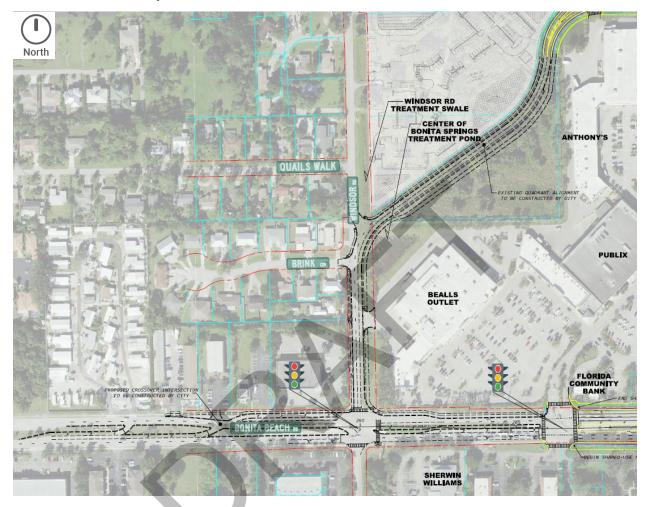

Figure 11: Northwest Quadrant Roadway – Proposed City Alignment

The City's Northwest Quadrant Roadway design concept ties in at the existing US 41/Center of Bonita Springs intersection and is not making any improvements to this intersection. In the future condition, this intersection will not have enough capacity to accommodate the forecasted traffic demand, necessitating additional turn lane improvements on the intersection's west leg. As part of the preferred alternative, the City built Northwest Quadrant Roadway would be modified from the northwest corner of the Center of Bonita Springs Shopping Plaza to US 41. These changes are described below and shown in **Figure 12**:

- Northwest Corner of the Center of Bonita Springs Shopping Plaza to US 41:
 - Roadway is widened to develop a center median with varying width.
 - One 11' travel lane in each direction.
 - 6' sidewalk on the north side of the roadway.

- 12' shared-use path on the south side of the roadway.
- New 11' westbound left turn lane into Center of Bonita Springs behind the Old Time Pottery building.
- West Leg at US 41 Intersection:
 - One 11' eastbound right turn lane.
 - Three 11' eastbound left turn lanes.
 - One 11' westbound receiving lane.

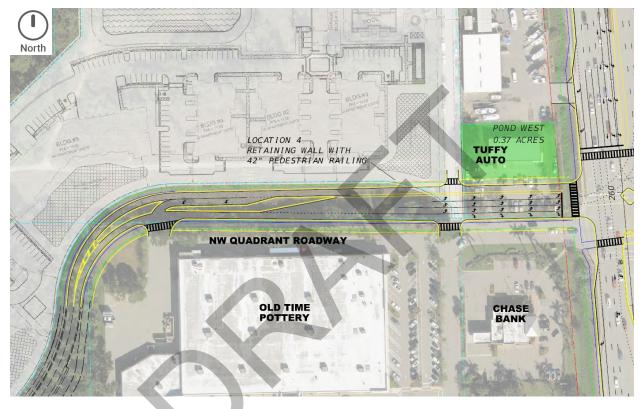

Figure 12: Northwest Quadrant Roadway – West Leg at US 41

Tying into the US 41 intersection's east leg is the Northeast Quadrant Roadway proposed between US 41 and Arroyal Road, intersecting at Arroyal Road and Carolina Street. The Northeast Quadrant Roadway will be built as part of this project. This will be a new three-lane roadway with two lanes eastbound and one lane westbound, as shown in **Figure 13**. The lane configuration at the US 41 intersection is discussed below:

- One 11' westbound left turn lane.
- One 11' westbound right turn lane.
- Two 11' eastbound receiving lanes.

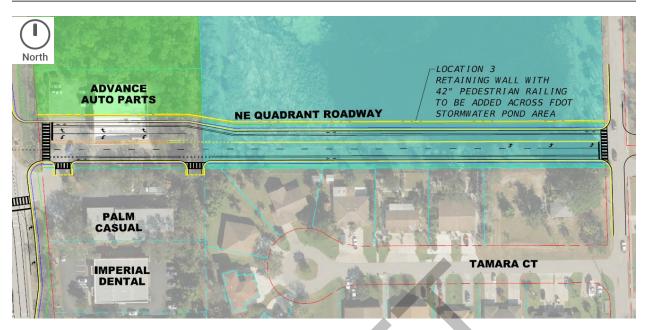

Figure 13: Northeast Quadrant Roadway – East Leg at US 41

1.5.3 Cost Estimates

The total estimated project cost, as shown in **Table 1**, displays the total construction cost, the wetland mitigation cost, the anticipated right-of-way cost, the design cost (funding set aside in the FDOT Work Program), and the CEI cost (calculated as 10 percent of the total construction cost) for the PDLT. For details of the right-of-way costs see **Table 30**. All estimates are based on 2024 dollars. Right-of-way acquisition is partially funded with a \$5.5M earmark programmed for FY 2025, but construction is not currently programmed.

| Cost Element | Cost |
|---------------------------|---------------------|
| Total Construction Cost | \$35,310,000 |
| Wetland Mitigation Cost | \$300,000 |
| ROW Cost | \$22,100,000 |
| Design Cost | \$3,500,000 |
| CEI Cost | \$3,530,000 |
| <u>Total Project Cost</u> | <u>\$64,740,000</u> |

Table 1: US 41 at Bonita Beach Road Total Project Cost Estimates

1.6 List of Technical Documents

The following is a list of technical documents prepared for the SR 45 (US 41) at Bonita Beach Road PD&E Study:

• Comments and Coordination Report – July 2024

- Conceptual Stage Relocation Plan January 2024
- Cultural Resources Assessment Survey (CRAS) January 2024
- U.S. Department of Agriculture Farmland Conversion Impact Rating Form November 2023
- Geotechnical Technical Memorandum July 2020
- Level 1 Contamination Screening Evaluation Report (Mainline) February 2024
- Level 1 Contamination Screening Evaluation Report (Ponds) February 2024
- Location Hydraulics Report February 2024
- Natural Resources Evaluation July 2024
- Noise Study Report January 2024
- Pond Siting Report February 2024
- Project Traffic Analysis Report February 2024
- Public Involvement Plan February 2020
- Utility Assessment Package January 2024
- Water Quality Impact Evaluation Checklist February 2024

2.0 EXISTING CONDITIONS

The purpose of the existing conditions analysis is to inform future improvement efforts by gaining an understanding of how the corridor performs today. The topics addressed in the existing conditions analysis include existing roadway conditions, typical sections, right-of-way, traffic operations, safety, and environmental information, among others.

2.1 Previous Planning Studies

As noted in Section 1.2.4, the City of Bonita Springs performed the Network Enhancement Alignment Study, also known as the "Quadrant Plan", in May 2017. The purpose of the Quadrant Plan is to develop an expanded roadway network between Bonita Beach Road with US 41 improving the area's mobility, maintains a high-quality community environment, and minimizes impacts to the natural environment. The City explored potential new guadrant roadway alignments in each of the four intersection guadrants (northwest, northeast, southeast, and southwest. The culmination of the Network Enhanced Alignment Study "Quadrant Plan" was presented to the Bonita Springs City Council, in a Workshop setting, on March 15, 2017. This Workshop helped provide City Council with the direction needed to address the Quadrant Plan at the regularly scheduled Council meeting of March 15, 2017, that followed the Workshop. In conclusion, the City adopted the Quadrant Plan Maps, as a *Planning Tool*. At the City Attorney's direction, the City Council was provided an approach, which afforded them more flexibility to take advantage of the plan, and to work in tandem with the concurrent aspects of their Land Use and Transportation Planning elements. As of the date of this report, the City is moving forward with design and construction for the northwest guadrant roadway. Also, refer to Section 2.4.1: Social **Environment** for information regarding ongoing developments within the project study area.

Outside of the project's immediate study area, FDOT District 1 is conducting a PD&E Study along Old 41 (CR 887) from US 41/Tamiami Trail in Collier County to Bonita Beach Road in Lee County (FPIDs: 435110-1 and 435347-1). Old 41 splits from US 41 approximately 2.3 miles south of the US 41/Bonita Beach Road study intersection and parallels US 41 to the east. The Old 41/Bonita Beach Road intersection is approximately 1.65 miles to the east of the study intersection.

2.2 Existing Roadway Conditions

2.2.1 Roadway Characteristics

Within the study intersection's area, US 41 and Bonita Beach Road are the primary roadways. US 41 is a six-lane divided, urban principal arterial roadway, while Bonita Beach Road is a four-lane divided urban minor arterial. Existing roadway characteristics for US 41 and Bonita Beach Road are summarized in **Table 2**. An initial field review was conducted on March 4, 2020, and supplemental field reviews have been conducted since 2020, to verify the summarized characteristics.

| | US 41 & Bonita Beach Road Intersection Area Roadway Segments | | | | |
|------------------------------|--|---|--|--|--|
| Characteristic | US 41 – Foley Road to South of Imperial River Bridge | Bonita Beach Road – Windsor Road to Spanish Wells Boulevard | | | |
| Segment Length (mi.) | 0.90 | 0.78 | | | |
| Functional Classification | Urban Principal Arterial – Other | Urban Minor Arterial | | | |
| Maintaining Jurisdiction | FDOT | Lee County | | | |
| Speed Limit | 50 mph | 45 mph | | | |
| Lane Width | 12 feet/11.5 feet ¹ | 12 feet | | | |
| Paved Shoulder Width | None | None | | | |
| Median | 22 feet with Type E curb | 22 to 25 feet with Type E curb | | | |
| Outside Curb and Gutter | Туре F | Туре F | | | |
| Sidewalks | Sidewalk on both sides of roadway | Sidewalk on both sides of roadway | | | |
| Bike Lanes | 5 feet | None | | | |
| Segment Street Lighting | Lighting present | Lighting present | | | |

Table 2: Existing Roadway Characteristics Summary

¹ US 41 has two 12-foot travel lanes and one 11.5-foot travel lane in each direction

US 41, from Foley Road (Sta. 222+75) to 475 feet south of the Imperial River bridge (Sta. 270+00) includes the following roadway characteristics. A cross section of these characteristics located at Sta. 237+00 is shown in **Figure 14**:

- 22' median with Type E curb and gutter;
- Three travel lanes in each direction (two 12' lanes and one 11' lane);
- 5' bicycle lanes in each direction outside of the travel lanes;
- Right turn lanes are present in both directions for much of this roadway segment;
- Type F curb and gutter outside of the bicycle lanes;
- Curb inlets with spacing generally between 130' and 300'.
- Varies 3' to 4' grass strip between the back of curb and sidewalk;
- 5' sidewalk on both sides of the road; and
- Varies 28' to 40' landscape area between the back of sidewalk and right-of-way line.

The roadway characteristics of Bonita Beach Road from Windsor Road (Sta. 260+00) to Spanish Wells Boulevard (Sta. 300+33) vary because it is within the US 41 intersection influence area,

including elements such as turn lanes and varying median widths. To illustrate the existing conditions along Bonita Beach Road, three cross sections along the roadway are provided. The existing cross sections along Bonita Beach Road 41 include the following roadway characteristics:

From Windsor Road (Sta. 260+00) to US 41 (Sta. 277+00) (Figure 15) -

- 7' traffic separator;
- Two eastbound and three westbound 12' travel lanes;
- Two 12' eastbound left turn lanes;
- One 12' eastbound right turn lane;
- Type F curb and gutter outside of the travel lanes with curb inlets;
- Varies 2' to 3' grass strip between the back of curb and sidewalk;
- 5' sidewalk on both sides of the road; and
- Varies 10' to 15' landscape area between the back of sidewalk and right-of-way line.

From US 41 (Sta. 277+00) to Arroyal Road (Sta. 286+30) (Figure 16) -

- 7' traffic separator;
- Two 12' eastbound travel lanes;
- Two 12' westbound travel lanes;
- Two 12' westbound left turn lanes;
- One 12' westbound right turn lane;
- Type F curb and gutter outside of the travel lanes with curb inlets;
- Varies 0' to 4' grass strip between the back of curb and sidewalk;
- 5' sidewalk on both sides of the road; and
- Varies 6' to 14' landscape area between the back of sidewalk and right-of-way line.

From Arroyal Road (Sta. 286+30) to Spanish Wells Boulevard (Sta. 300+33) (Figure 17) -

- 22' median with Type E curb and gutter;
- Two 12' travel lanes in each direction;
- Type F curb and gutter outside of the travel lanes with curb inlets;
- Varies 2' to 28' grass strip between the back of curb and sidewalk;
- 5' sidewalk on both sides of the road; and
- Varies 0' to 28' landscape area between the back of sidewalk and right-of-way line.

As noted previously, the City is moving forward with design and construction for the northwest quadrant roadway. As this roadway is anticipated to be an existing condition prior to the construction of this project, two typical sections along the northwest quadrant roadway are provided in **Figure 18** and **Figure 19**, and include the following roadway characteristics:

From Sta. 206+80.95 to Sta. 207+25.48 (Figure 18) -

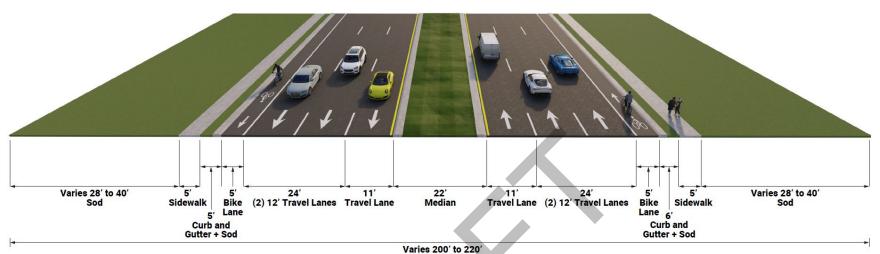

• Two 11' travel lanes in each direction with no median;

- Type F curb and gutter outside of the travel lanes;
- 6' sidewalk on west/north side of the road with no grass strip between the back of curb and sidewalk;
- 10' shared-use path on east/south side of the road with varying 6'-8' grass strip between the back of curb and path; and
- Varies 1' to 6' grass area between the back of sidewalk/path and right-of-way line.

From Sta. 207+25.48 to Sta. 213.51.14 (Figure 19) -

- Two 11' travel lanes in each direction with no median;
- Type F curb and gutter on the west/north side of the roadway;
- 5' paved shoulder on the east/south side of the roadway;
- 6' sidewalk on west/north side of the road with 4' grass strip between the back of curb and sidewalk;
- 10' shared-use path on east/south side of the road with varying 5'-16.5' swale between the back of curb and path; and
- Varies 1' to 6' grass area between the back of sidewalk/path and right-of-way line.

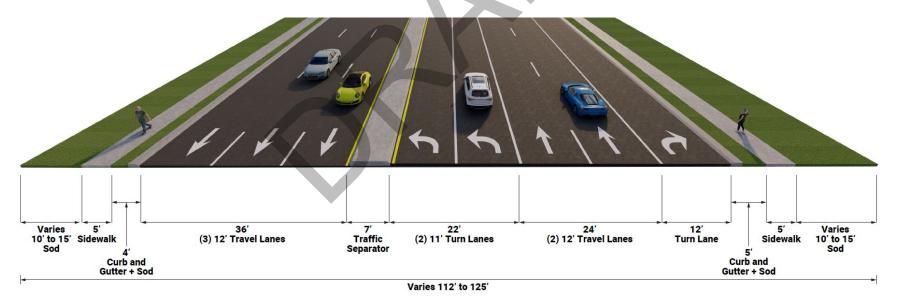

Figure 15: Bonita Beach Road – Existing Cross Section at Sta. 275+00

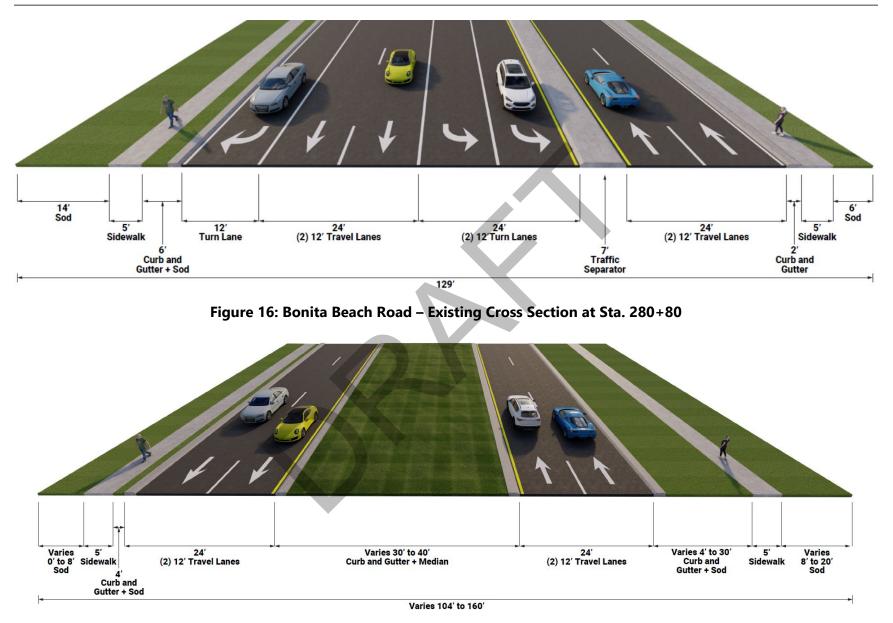

Figure 17: Bonita Beach Road – Existing Cross Section at Sta. 291+50

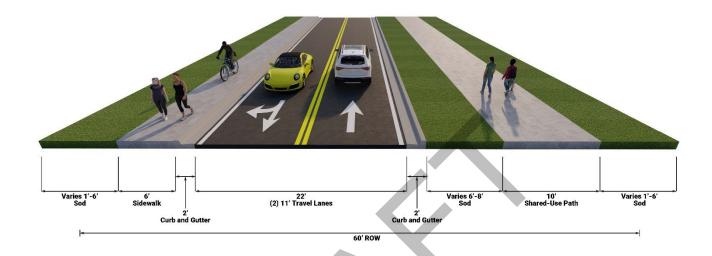

Figure 18: NW Quadrant Road – Typical Section from Sta. 206+80.95 to Sta. 207+25.48

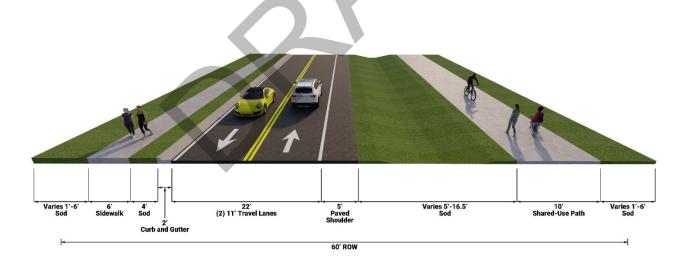

Figure 19: NW Quadrant Road – Typical Section from Sta. 207+25.48 to Sta. 213+51.14

2.2.2 Roadway Functional & Context Classification

Within the study area, US 41 is a six-lane divided, urban principal arterial – other roadway. Bonita Beach Road is a four-lane divided, urban minor arterial roadway. The context classification for US 41 between Woods Edge Parkway and Riverview Entrance/Bay Land Shopping Center is C3C – Suburban Commercial based on a review by FDOT District 1 on May 27, 2020. The C3C – Suburban Commercial context classification is recommended based on the distinguishing characteristics, future land use, and primary measures. The area along the corridor is zoned for general commercial, not changing from the existing land use, with large building footprints, and large parking lots within large blocks. Moreover, the intersection density along the corridor is less than 100 per square mile, with blocks over 660 feet in length. Bonita Beach Road is a local road within the project limits and therefore does not have an assigned context classification.

Both US 41 and Bonita Beach Road are designated as emergency evacuation routes for both the Florida Division of Emergency Management and Lee County. Additionally, US 41 is designated as regional freight mobility corridor (Tier 1 Regional Freight Corridor) in the Lee County 2045 Long Range Transportation Plan.

2.2.3 Access Management Classification

The existing access management classification for US 41 is an Access Class 5 (Restrictive) facility (based on FDOT's Roadway Characteristics Inventory (RCI)) with a 50 mph posted speed limit. Per Table 201.4.2 of the FDM, the access management spacing criteria are as follows:

- Connection Spacing: 440 feet for >45 mph
- Directional Median Opening Spacing: 660 feet
- Signal Spacing: 2,640 feet for >45 mph

The US 41 and Center of Bonita Springs signalized intersection is approximately 1,300 feet north of the US 41 and Bonita Beach Road signalized intersection. This does not meet median opening spacing criteria. All other US 41 median openings meet spacing criteria. Regarding driveways, the connection criteria is 440 feet for this Class 5 >45 mph roadway. All US 41 driveways south of Bonita Beach Road meet this criteria. North of Bonita Beach Road, in the northbound direction there are two locations where single driveways into private property are approximately 250 feet to 350 feet from public streets. There is one location on US 41 southbound at the 7-Eleven/Sunoco gas station on US 41 and Bonita Beach Road intersection's northwest corner having two US 41 driveways to the same property approximately 100 feet apart. These do not meet the connection criteria.

While Bonita Beach Road is a local roadway, the existing access management classification also most closely resembles an Access Class 5 (Restrictive) facility.

2.2.4 Right-of-Way

Parcel information and property lines were obtained from the local property appraiser. Right-of-Way information was obtained from a combination of the following as-built plans along US 41:

- FID 195736-1-52-01: Six-lane widening of US 41 from Woods Edge Parkway to north of Bonita Beach Road completed in 2002; and
- FID 195737-1-52-01: Six-lane widening of US 41 from north of Bonita Beach Road to Pelican Landing Parkway completed in 2005.

For the segments of Bonita Beach Road, right-of-way information was obtained from final design plans for the Bonita Beach Road six-lane widening from Windsor Road to Old 41 Road (Lee County Project No. 4152) in 2013.

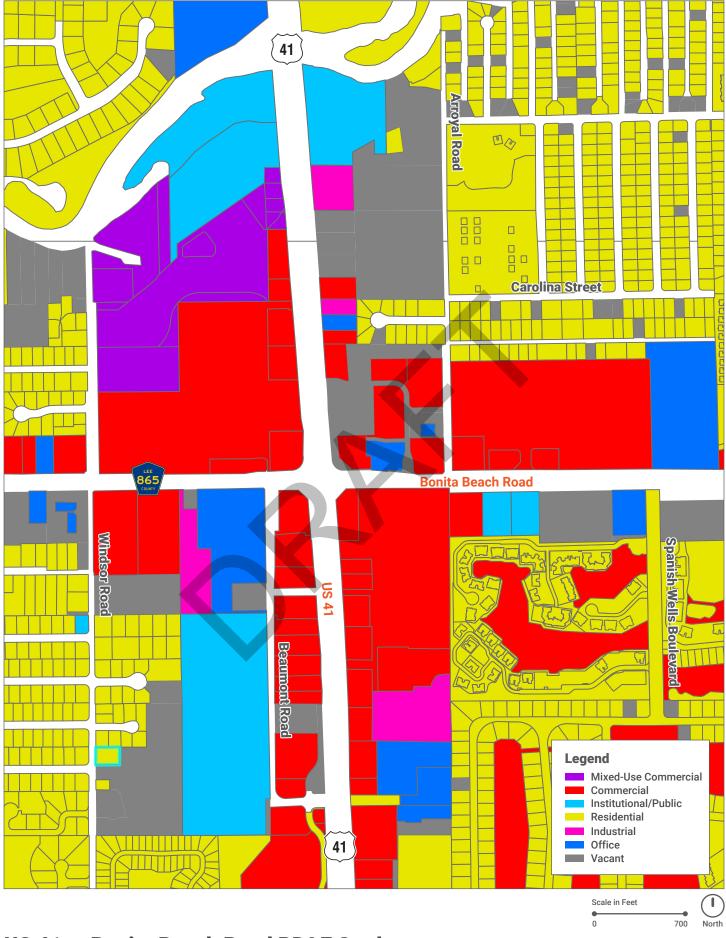

The right-of-way along US 41 varies from 200' south of Bonita Beach Road up to 220' north of Bonita Beach Road. The right-of-way along Bonita Beach Road varies between 105' and 160'. **Table 3** provides a detailed overview of the existing right-of-way present along US 41 and Bonita Beach Road in the study area.

| From | То | Stationing | Length (Miles) | ROW Width (Feet) | |
|------------------------------------|--|----------------------|-------------------|---------------------|--|
| | | US 41 | | | |
| Foley Road | 475' North of Bonita Beach Road | 222+75 to 251+00 | 0.54 | 200 | |
| 475' North of Bonita Beach Road | 230' South of Imperial River bridge | 251+00 to 270+00 | 0.36 | Varies 210 to 220 | |
| | Bonita Beach Road | | | | |
| Windsor Road | 560' West of US 41 | 260+53.4 to 271+25.4 | 0.20 | Varies 112 to 125 | |
| 560' West of US 41 | 50' West of Arroyal Road | 271+25.4 to 285+85 | 0.28 | Varies 104 to 145 | |
| 50' West of Arroyal Road | Spanish Wells Boulevard | 285+85 to 301+00 | 0.29 | 160 | |

Table 3: Existing Right-of-Way Summary

2.2.5 Adjacent Land Use

Adjacent land use was obtained from readily available Lee County GIS databases. The existing land adjacent to US 41 are primarily commercial. Along Bonita Beach Road, the western end has a mix of commercial, office, and industrial whereas the eastern end has more public land uses. Some specific adjacent land uses include the Center of Bonita Springs retail development (northwest corner of study intersection), United States Postal Service (USPS), and the City of Bonita Springs City Hall. **Figure 20** displays the existing land use map.

US 41 at Bonita Beach Road PD&E Study

Figure 20 | Existing Land Use

FPID 444321-1-22-01

2.2.6 Pavement Type & Condition

Within the project limits, the asphalt pavement condition of US 41 was rated by FDOT in 2023. The ride is rated between 0 to 10, used to evaluate the smoothness of the pavement condition. For speed limits greater than or equal to 50 miles per hour, a ride rating of 6.4 or less is considered deficient. The ride score for the northbound direction was 7.4 and the southbound direction was 7.2. The five-year projected ride score (for 2028) is 7 for the northbound direction and 6.8 for the southbound direction. US 41 was last repaved in the mid-2000's when the roadway was widened from four to six lanes.

The cracking is rated between 0 to 10, used to indicate the pavement cracking condition. Any crack rating of 6.4 or less is considered deficient pavement. The cracking score along US 41 for 2023 within the project limits was rated as 9 in both directions. The five-year projected cracking score (for 2028) is 6.5 for both directions.

The overall condition index (OCI) for the segments of Bonita Beach Road, within the project limits, was obtained from Lee County. The OCI is a numerical index between 0 and 100, used to indicate the general condition of a pavement section. The OCI from Windsor Road to Spanish Wells Boulevard ranged from a low of 71.87 to a high of 83.78 collected in June 2023 by Lee County. Bonita Beach Road in the study area was last repaved in the mid-2000's as part of the same project that widened US 41 to six lanes.

During final design, pavement coring should be completed along existing corridor sections to determine the existing pavement section's structural integrity, pavement section depths, and base design resilient modulus.

2.2.7 Existing Design & Posted Speeds

The existing design and posted speeds along US 41 and Bonita Beach Road are shown below:

- US 41
 - Foley Road (Sta. 222+75) to 475 feet south of the Imperial River bridge (Sta. 270+00) – 45 mph design / 50 mph posted; and
- Bonita Beach Road
 - Windsor Road (Sta. 259+91) to Spanish Wells Boulevard (Sta. 301+00) 45 mph design / 45 mph posted.

The existing design speed along US 41 was verified by the as-built plans of the six-lane widening along US 41 completed in 2005 (FDOT FID 195737-1-52-01). The existing design speed was verified for the Bonita Beach Road corridor by the design plans for Lee County Project No. 4152. The existing posted speeds were verified by field review observations.

2.2.8 Horizontal Alignment

An existing roadway alignment was provided by the City of Bonita Springs for use within this study. The existing alignment along US 41 and Bonita Beach Road consists of a combination of tangential sections and horizontal curves. Information for the tangential sections can be seen in **Table 4**. Information for the curved sections can be seen in **Table 5**.

| Begin STA | End STA | Length (FT) | Bearing | Deflection Angle | |
|-------------------|-----------|-------------|-------------|------------------|--|
| | - | US 41 | | | |
| 220+00 | 229+48.18 | 948.18 | N2°36′20″W | 01°19′18″ | |
| 243+25.35 | 270+00 | 2,674.65 | N4°54′03″W | 3°37′00″ | |
| Bonita Beach Road | | | | | |
| 267+48.55 | 281+91.34 | 1,442.79 | N88°45′42″E | 0°02′44″ | |
| 293+77.75 | 316+47.18 | 2,269.42 | N88°09′31″E | 0°33′26″ | |

Table 4: Horizontal Alignment Tangential Sections

Table 5: Horizontal Alignment Curved Sections

| PC STA | PI STA | PT STA | Length (FT) | Radius (FT) | | |
|-----------|-------------------|-----------|-------------|-------------|--|--|
| | US 41 | | | | | |
| 229+48.18 | 236+36.86 | 243+25.35 | 1,377.17 | 34,377.47 | | |
| | Bonita Beach Road | | | | | |
| 258+99.13 | 260+83.20 | 262+67.20 | 368.07 | 7,816.50 | | |
| 262+67.20 | 265+07.92 | 267+48.55 | 481.35 | 9,963.50 | | |
| 281+91.34 | 284+60.02 | 287+28.57 | 537.23 | 9,943.50 | | |
| 287+28.57 | 290+53.27 | 293+77.75 | 649.18 | 10,056.50 | | |

2.2.9 Vertical Alignment

As-built plans for the US 41 six-lane widening from Woods Edge Parkway to Pelican Landing Parkway (FID 195736-1-52-01 and 195737-1-52-01) were reviewed. It was determined the existing grade elevation is approximately 14.7' at the US 41 and Foley Road intersection (Sta. 222+75). The elevation gradually increases and decreases along US 41, with grade changes staying within 0.20 percent and the elevation averaging approximately 14.5' to the Park Drive driveway, south of the Imperial River Bridge (Sta. 270+00). North of Park Drive, as US 41 approaches the Imperial River, the elevation begins increasing and reaches a height of approximately 16.5' at the start of the Imperial River Bridge. There is one 328 foot (100 meter) vertical curve present along US 41 as it approaches the Imperial River bridge. This vertical curve begins with an elevation of approximately 11.7 feet (3.6 meters) at Sta. 267+37 and ends with an elevation of approximately 14.7 feet (4.5

meters) at Sta. 270+65, for a total elevation change of 3 feet (0.9 meters). Other grade changes fell within the allowable 0.70 percent for 45 mph roadways as detailed in Table 210.10.2 of the FDM. This indicates the alignment of US 41 through the study area is flat.

Final design plans for the Bonita Beach Road six-lane widening from Windsor Road to Old 41 Road (Lee County Project No. 4152) were reviewed. From Project No. 4152, completed in 2012, it can be determined the existing grade elevation is approximately 14.5' at the Bonita Beach Road and Windsor Road intersection (Sta. 259+91). The elevation gradually increases and decreases along Bonita Beach Road, with the elevation averaging approximately 14.5' until the Arroyal Road intersection (Sta. 286+20). East of Arroyal Road, the elevation gradually begins increasing and reaches a height of approximately 18.5' at the Spanish Wells Boulevard intersection (Sta. 301+00). No vertical curves were present along the existing alignment as grade changes fell within the allowable 0.70 percent for 45 mph roadways as detailed in Table 210.10.2 of the FDM. This indicates the alignment of Bonita Beach Road through the study area is flat.

Elevations for the US 41 alignment through the Bonita Beach Road intersection area (Sta. 245+00 to 247+40) are included in both the FID 195736-1-52-01 and Project No. 4152 plans. The existing grade elevation along US 41 through the Bonita Beach Road intersection ranged from 14' to 14.5'.

2.2.10 Multi-Modal Facilities

Pedestrian accommodations, bicycle/trail facilities, and transit facilities were reviewed within the project limits. These facilities are summarized below and in **Figure 21**.

2.2.10.1 Pedestrian Facilities

Within the project limits there are 5' sidewalks on both sides of US 41 and Bonita Beach Road.

Standard marked crosswalks, in various conditions, are present at the stop-controlled intersections along both US 41 and Bonita Beach Road. Standard marked crosswalks are present at all legs of the signalized intersection of US 41 and Bonita Beach Road. Standard marked crosswalks are also present at the following signalized intersections within the project limits:

- US 41 and Center of Bonita Springs all legs
- Bonita Beach Road and Center of Bonita Springs north, west, and south legs
- Bonita Beach Road and Arroyal Road all legs
- Bonita Beach Road and Spanish Wells Boulevard all legs

2.2.10.2 Bicycle Facilities

The only bicycle facilities present in the study area are 5' marked bicycle lanes along both sides of US 41. There are no on-road bicycle facilities along Bonita Beach Road.

2.2.10.3 Transit Facilities

One LeeTran bus route (Route 600) operates along Bonita Beach Road (east of US 41) and US 41 (south of the intersection at Bonita Beach Road). Route 600 operates between Coconut Point on Coconut Road and Creekside Transfer Center along Immokalee Road. Route 600 primarily serves the City of Bonita Springs traversing along US 41, Old 41, Bonita Beach Road, and Immokalee Road. Route 600 is the only fixed route that provides service to Collier County as well as the Creekside Transfer Center. Route 600 operates with one-hour headways from approximately 5:45 AM to 8:25 PM on weekdays and Saturday and from 7:25 AM to 5:15 PM on Sunday.

Four bus stops exist for this route within the project limits on the east and south legs of US 41 and Bonita Beach Road, respectively. The eastbound bus stop (stop ID 12146) by Bonita Springs City Hall includes a concrete pad, trash can, and shelter. The westbound bus stop (stop ID 12145) adjacent to Bonita Beach Balloon Bar & Grill and the eastbound bus stop (stop ID 12144) by Springs Plaza include a sign post adjacent to the sidewalk. The southbound bus stop along US 41 (stop ID 11847) by Wendy's includes a sign post adjacent to the sidewalk.

LeeTran has partnered with Uber to provide ULTRA On-Demand Transit service in the Bonita Springs area. LeeTran's ULTRA On-Demand Transit service is a deluxe mini-bus available seven days a week from 7:00 AM to 6:00 PM. ULTRA On-Demand Transit allows riders to request a ride as needed, with curb-to-curb service. With creating this service, LeeTran has discontinued service on Route 150 and the bus stop with shelter near the US 41 and Bonita Beach Road northwest corner is no longer in use.

Per LeeTran, Route 600 has an annual ridership of 75,473. The transit route and stops, along with the ULTRA service area, are presented in **Figure 21** and the supporting transit data is documented in **Appendix A**.

2.2.11 Intersections

The *SR 45 (US 41) at Bonita Beach Road Project Traffic Analysis Report (PTAR)* study area extends along US 41 between the Woods Edge Parkway and the Center of Bonita Springs (north) intersections, approximately 1.1 miles. In the east-west direction, the PTAR's study area extends along Bonita Beach Road between the Vanderbilt Drive/Luke Street and Spanish Wells Boulevard intersections, approximately 1.3 miles. The PTAR's study area was selected in order to show the potential diversion from all four proposed quadrant roadways.

Sixteen intersections in the study area were analyzed for existing conditions. The existing lane configurations for each intersection are shown in **Figure 22**. Of the study intersections, the following seven are signalized:

- US 41 and Woods Edge Parkway;
- US 41 and Bonita Beach Road;

- US 41 and Center of Bonita Springs;
- Bonita Beach Road and Vanderbilt Drive/Luke Street;
- Bonita Beach Road and Center of Bonita Springs;
- Bonita Beach Road and Arroyal Road; and
- Bonita Beach Road and Spanish Wells Boulevard.

The existing conditions operations analysis for these signalized intersections is shown in Table 7.

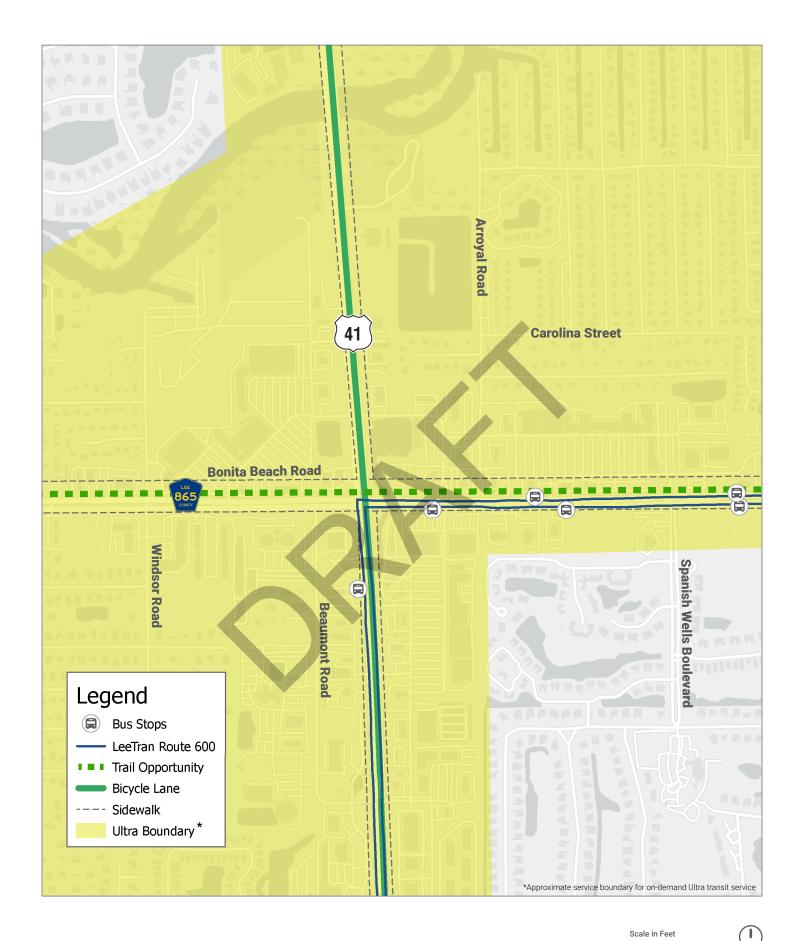

The remaining nine are two-way stop controlled (TWSC) intersections. A field review was conducted to verify the intersection geometrics.

2.2.12 Physical or Operational Restrictions

Approximately 500 feet south of the Bonita Beach Road intersection, a double 8-ft X 4-ft concrete box culvert crosses under US 41. There is metal pedestrian railing on top of the culvert's headwalls beside the existing sidewalk. Approximately 0.60 miles north of the US 41 & Bonita Beach Road study intersection (MP 1.482) is the Imperial River. A bridge spanning the Imperial River begins approximately ¹/₂ mile north of the study intersection.

Approximately 200 feet east of the Bonita Beach Road intersection, a single 10-ft X 7-ft concrete box culvert crosses under Bonita Beach Road. The culvert's headwalls are guardrail protected. Part of the westbound lanes guardrail is at the back of curb.

No other physical or operational restrictions are present in the study area along US 41 or Bonita Beach Road.

2.2.13 Traffic Data

Existing April 2019 and August 2019 traffic volumes were collected, including weekday 72-hour segment classification counts and individual intersection turning movement counts. The existing 72-hour segment classification counts were used to determine existing D and T₂₄ factors and existing Annual Average Daily Traffic (AADT) volumes. Updated 72-hour volume counts and turning movement counts were collected in April 2022.

The existing 2019 AADT values and T₂₄ factors along the study corridor are presented in **Table 6**. T₂₄ factors were developed by reviewing the historical data at the FDOT count site locations. The review of the trucks showed a relatively steady trend over the nine-year period (between 2009 to 2017). Therefore, the historical average of T₂₄ factors was selected as the recommended T₂₄ factor for each segment. The DHT percentage is equal to half of the daily truck traffic as per the FDOT *Project Traffic Forecasting Handbook* (2019). Using the collected traffic volumes, existing traffic factors were calculated for the individual peak hour and are summarized in **Table 6**. A seasonal factor of 0.97 was used for the April 16, 2019 turning movement counts and a seasonal factor of 1.04 was used for the August 28, 2019 turning movement counts

A mid-day peak hour was chosen between 12 PM to 1 PM, as opposed to an AM peak hour, as the traffic on the study roadways increases through the morning hours and then plateaus for approximately six hours in the afternoon and evening.

Existing peak hour volumes are provided in **Figure 23**. Directional Design Hour Volumes (DDHVs) were not calculated for the existing condition and pedestrian/bicycle counts can be found in the project's PTAR appendix. No transit data was collected for this project.

| Roadway | AADT | К | Mid-Day D | PM D | T ₂₄ Factors | DHT |
|--------------------------------------|--------|------|-----------|------|----------------------------|-----|
| US 41, North of Bonita Beach Road | 53,000 | 0.11 | 50.2 | 57.4 | 2.6 | 1.3 |
| US 41, South of Bonita Beach Road | 39,000 | 0.11 | 50.9 | 59.5 | 3.2 | 1.6 |
| Bonita Beach Road, East of US 41 | 30,000 | 0.11 | 50.8 | 60.4 | 6.0 | 3.0 |
| Bonita Beach Road, West of US 41 | 30,000 | 0.11 | 52.3 | 53.5 | 3.6 | 1.8 |

2.2.14 Study Area Operational Conditions

2.2.14.1 Existing 2019 Peak Hour Intersection Operations

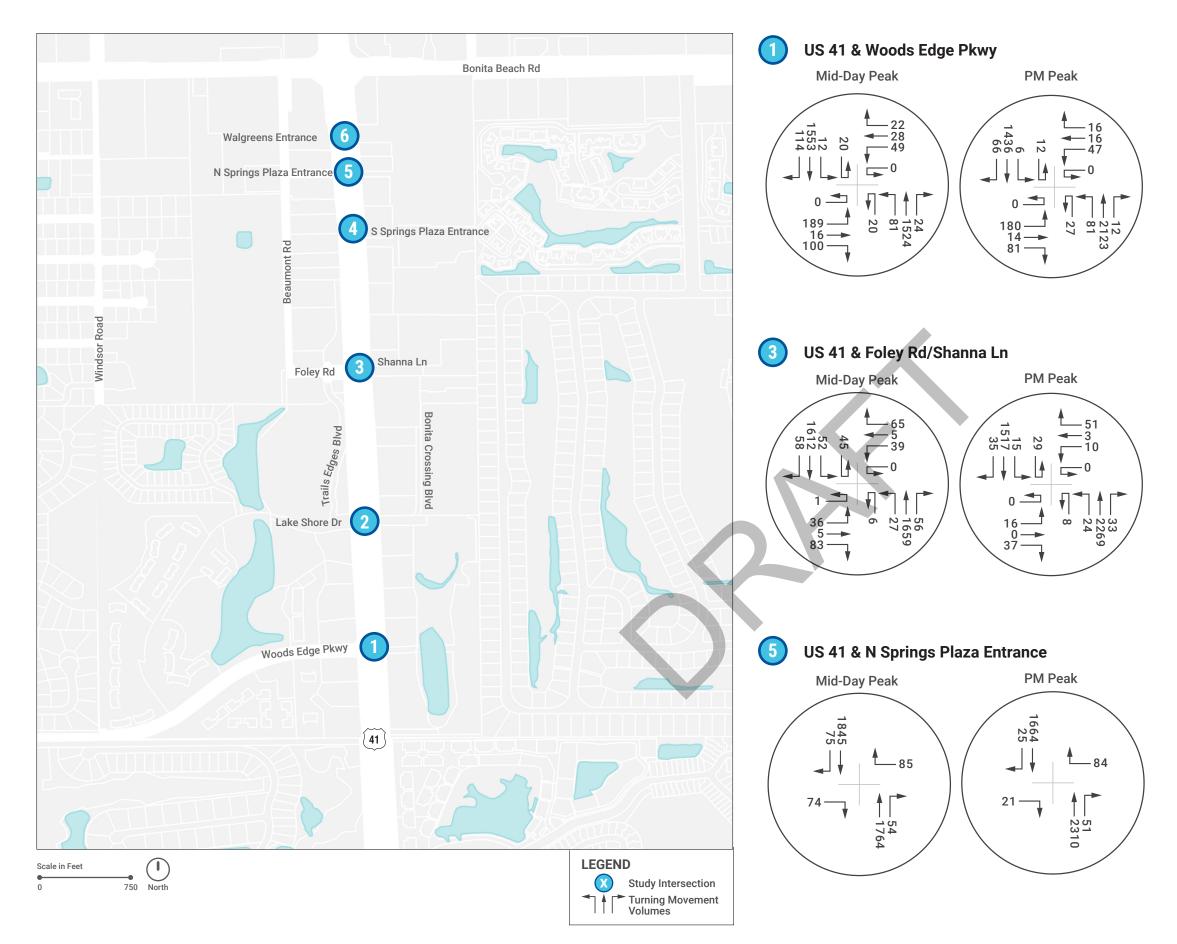

Existing intersection level-of-service (LOS) analyses were conducted using the *Highway Capacity Manual 6th Edition* (HCM6) methodologies as implemented by Synchro 11. **Figure 23** summarizes the existing mid-day and PM peak hour intersection turning movement volumes and **Table 7** summarizes the existing intersection volume-to-capacity (v/c) ratio for each movement at the study intersections. For the purposes of this analysis, existing roadway geometry and signal timings parameters were maintained. The following through and turning movements do not meet the LOS D target and/or have intersection turning movements with a v/c ratio greater than 1.0:

- US 41 & Woods Edge Parkway
 - Northbound left-turn movement in the mid-day peak period
- US 41 & South Springs Plaza Entrance
 - Westbound right-turn movement in the PM peak period
 - Southbound left-turn movement in the mid-day and PM peak periods
- US 41 & North Springs Plaza Entrance
 - Westbound right-turn movement in the PM peak period
- US 41 & Bonita Beach Road
 - Overall intersection during mid-day and PM peak periods
 - Eastbound left-turn and through movements in the mid-day and PM peak periods, and right-turn movement in the PM peak period
 - Westbound all movements in the mid-day and PM peak periods
 - Northbound all movements in the mid-day peak period, and left-turn and through movements in the PM peak period
 - Southbound left-turn movement in the mid-day and PM peak periods, and through movement in the mid-day peak period
- US 41 & Center of Bonita Springs North
 - Eastbound left-turn and right-turn movements in the mid-day and PM peak periods
 - Westbound left-turn and right-turn movements in the mid-day and PM peak periods
- Bonita Beach Road & Center of Bonita Springs
 - Eastbound left-turn movement in the PM peak period
 - Westbound left-turn movement in the PM peak period
 - Northbound all movements in the mid-day and PM peak periods
 - Southbound left-turn and right-turn movements in the mid-day and PM peak periods

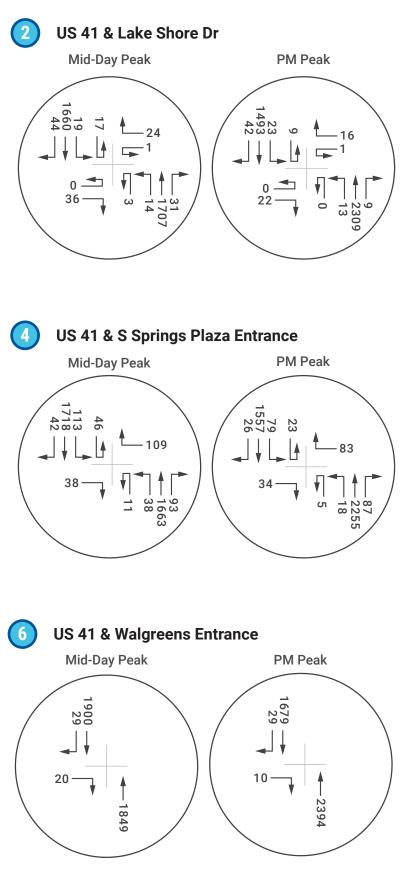

- Bonita Beach Road & Arroyal Road
 - Northbound left-turn and right-turn movements in the mid-day and PM peak 0 periods
 - o Southbound all movements in the mid-day and PM peak periods

The Synchro output results for the intersection operations can be found in the project's PTAR.

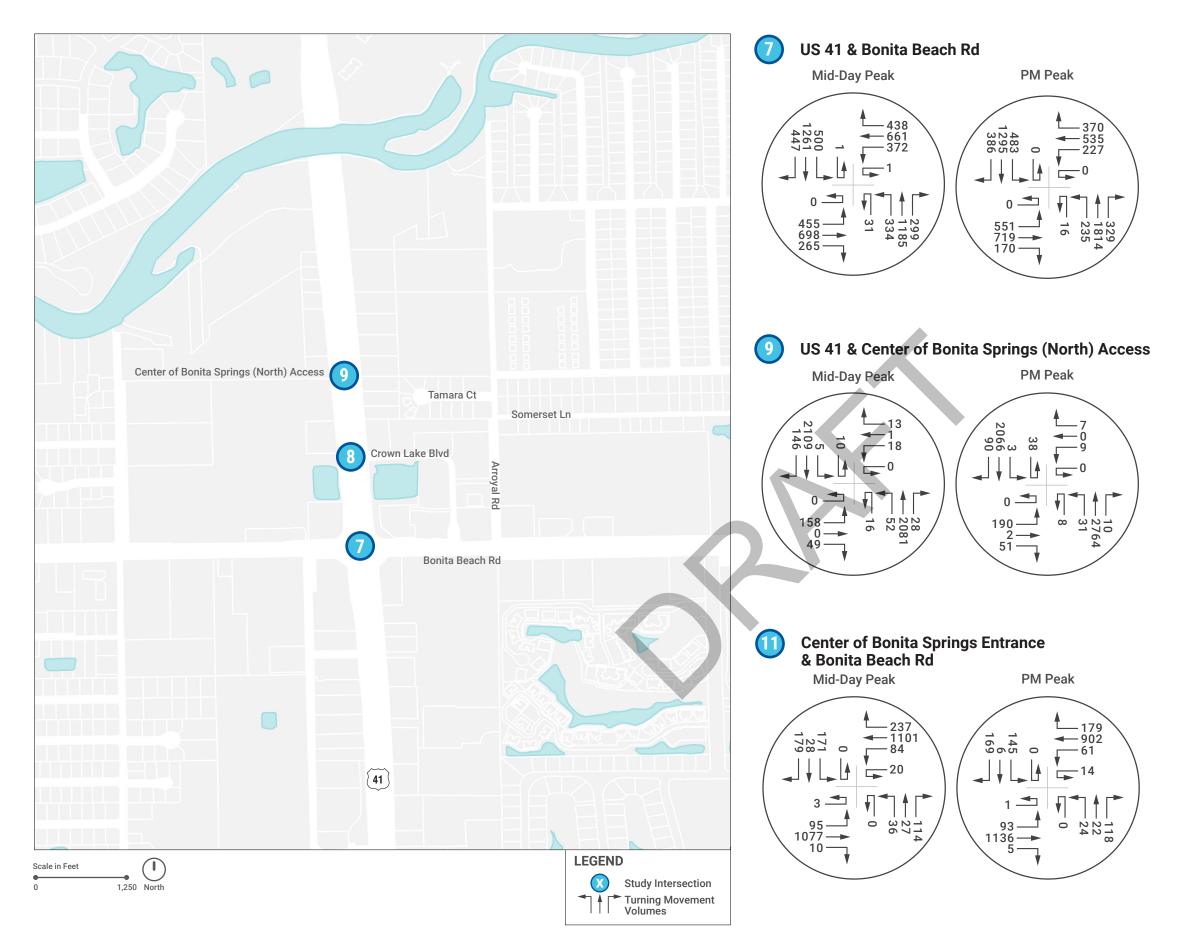

| Intersection | MD Peak Delay (s) & LOS | PM Peak Delay (s) & LOS | |
|---|----------------------------|----------------------------|--|
| US 41 & Woods Edge Pkwy. | 22.9 C | 23.0 C | |
| US 41 & Bonita Beach Rd. | 83.0 F | 80.1 F | |
| US 41 & Center of Bonita Springs (North) Access | 63.1 E | 11.3 B | |
| Vanderbilt Dr./Luke St. & Bonita Beach Rd. | 25.4 C | 22.3 C | |
| Center of Bonita Springs & Bonita Beach Rd. | 37.9 D | 31.8 C | |
| Arroyal Rd. & Bonita Beach Rd. | 21.5 C | 11.2 B | |

2.2.14.2 Existing 2019 Peak Hour Segment Operations

Roadway segment operations conditions for Bonita Beach Road and US 41 were analyzed based upon the *HCM6 Urban Street Segments* Methodology. The base free flow speed (BFFS) was calculated using the methodology described within Chapter 18 from the HCM. The BFFS was then compared to the roadway segment speed outputs from Synchro 11 to determine the segment LOS during both peak hours. The following roadway segments do not meet the LOS target:

- US 41 from Woods Edge Parkway to Bonita Beach Road
 - Northbound in the PM peak period
- US 41 from Bonita Beach Road to Center of Bonita Springs North
 - Southbound in the mid-day and PM peak periods
 - Northbound in the PM peak period
- Bonita Beach Road from Center of Bonita Springs to US 41
 - Eastbound and westbound in the mid-day and PM peak periods
- Bonita Beach Road from US 41 to Arroyal Road
 - Westbound in the mid-day and PM peak periods

These lower levels-of-service are likely due to the relatively short length of segments between signalized intersections and relatively high control delay of the adjacent signalized intersections. Therefore, the intersection operating conditions are a better indicator of adjacent segment operations. The Synchro output results for the segment operations can be found in the project's PTAR.

2.2.15 Managed Lanes

There are no managed lanes within the project limits.

2.2.16 Crash Data

Crash records were obtained for both US 41 and Bonita Beach Road within the study area, as described below:

- US 41 from Foley Road (MP 0.540) to the Imperial River bridge (MP 1.482);
- Bonita Beach Road from 400' west of Windsor Road to 450' east of Spanish Wells Boulevard; and
- Bonita Beach Road at Vanderbilt Drive.

Crash data was obtained for the most recent five-year period on record (2018 through 2022). The crash data was obtained from the University of Florida's Signal Four (S4) Analytics crash database for US 41 and Bonita Beach Road. The safety analysis was performed for the most recent five years of crash data (January 1, 2018 – December 31, 2022). Supplemental crash data from previous years (2014 to 2017) and January 1, 2023 to June 30, 2023 were also analyzed to verify crash trends and

patterns. This is consistent with the approved methodology for this study and with guidance from the 2023 FDOT Safety Crash Data Guidance published by the State Safety Office¹.

This section summarizes the study area crash statistics. A detailed review of fatal crashes and pedestrian/bicycle safety is also discussed in this section. A more detailed summary of the 2018 to 2022 crash data and supplemental 2023 crash data sets are also provided in **Appendix B**. It is important to note that the 2020 crash data may have been impacted by the COVID-19 pandemic and caution should be used in drawing conclusions using the 2020 data.

2.2.16.1 Study Area Crash Statistics

Figure 24 displays a summary of crash frequency by year along with the respective severities from 2014 to 2022. As displayed in **Figure 24**, there was an increase in crashes between 2014 and 2017, but there has been a decrease in crashes between 2017 and 2019 before an approximate 30 percent drop in crashes due to the COVID-19 pandemic in 2020. The number of crashes have stayed relatively constant in 2021 and 2022. There were 166 crashes per year on average between 2014 to 2017. However, there were 146 crashes per year on average in the study area between 2018 to 2022, not including 2020 (a 12 percent decrease).

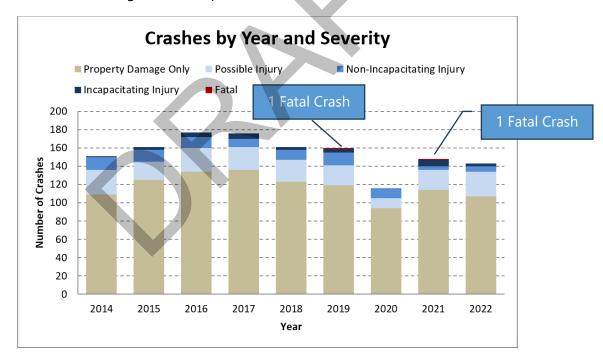

Figure 24: Crashes per Year (Entire Study Area)

¹ State Safety Office, Florida Department of Transportation. (04/17/2023). Safety Crash Data Guidance. <u>https://fdotwww.blob.core.windows.net/sitefinity/docs/default-source/safety/11a-safetyengineering/crash-</u> <u>data/25998 crash-data-process v18.pdf?sfvrsn=b50e9f4e 2</u>

Within the study area for the most-recent five years (2018 to 2022) there was a total of 728 reported crashes during this period, with 171 crashes resulting in 255 injuries and two crashes resulting in two fatalities (one in 2019 and one in 2021).

Figure 25 displays the crashes within the study area by type and severity for the most-recent fiveyear study period (2018 to 2022). The highest crash type observed was rear end, comprising 52 percent of the total crashes. Sideswipe (12 percent) and left turn crashes (12 percent) were the second and third highest crash types. The fatal crash in 2019 involved a vehicle striking a pedestrian and the fatal crash in 2021 involved an angle crash at the intersection of US 41 at Foley Road/Shanna Lane.

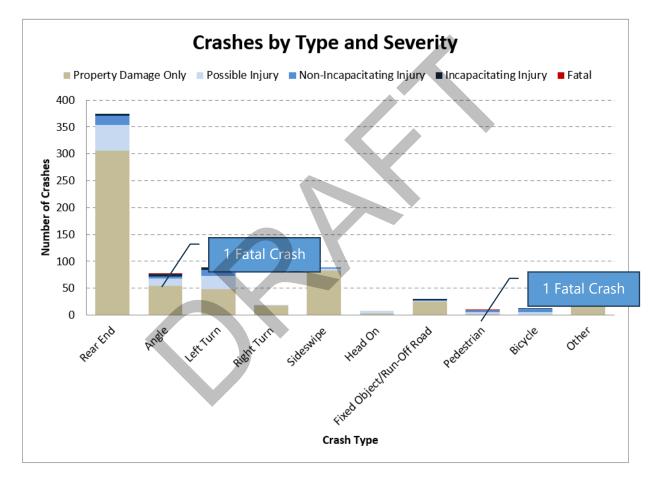

Figure 25: Crashes by Type and Severity (Study Area: 2018 to 2022)

Other crash statistics to note include the following:

- Crashes occurring during non-daylight hours accounted for 21 percent of the crashes.
- Ninety-one percent of crashes occurred during dry roadway conditions.
- Crashes involving alcohol and/or drugs accounted for three percent of the crashes.
- The highest crash hours of the day were observed in the afternoon between 12 PM and 6 PM (58 percent of crashes occurred during this time period).

• The highest crash month was March (14 percent) and most crashes occurred during week days (78 percent).

2.2.16.2 US 41 at Bonita Beach Road Crash Statistics

Crashes were analyzed for the intersection influence area of US 41 and Bonita Beach Road as described below:

- 805' south of Bonita Beach Road to 720' north of Bonita Beach Road; and
- 830' west of US 41 to 570' east of US 41.

Forty one percent of the total study area crashes were located within the intersection influence area of US 41 and Bonita Beach Road. **Figure 26** displays a summary of crash frequency by year along with the respective severities from 2018 to 2022 for the US 41 and Bonita Beach Road intersection. There was a total of 298 reported crashes during this period, 65 injury crashes (22 percent), and one fatal crash (in 2019). As displayed in **Figure 26**, there were an average of 60 crashes per year at the intersection.

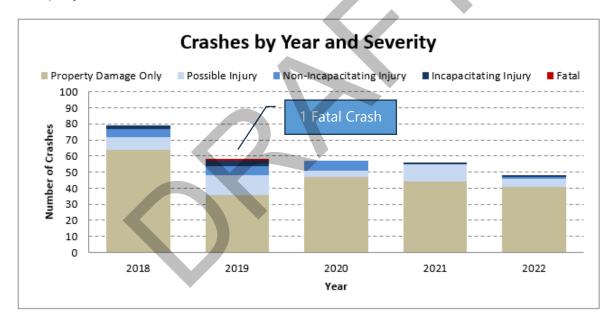

Figure 27 displays the crashes at the intersection by type and severity for the five-year study period for the US 41 and Bonita Beach Road intersection. The highest crash type observed was rear end, comprising 59 percent of the total crashes. Sideswipe crashes (13 percent) and left turn (8 percent) were the second and third highest crash types. These trends are consistent with the overall study area. The fatal crash in 2019 occurred when a vehicle struck a pedestrian crossing US 41 just south of Bonita Beach Road.

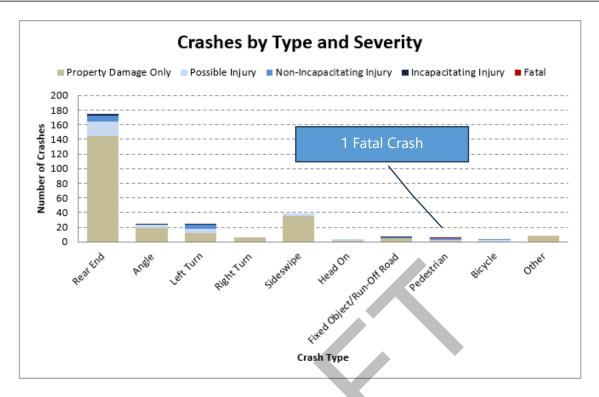

Figure 27: Crashes by Type and Severity (US 41 and Bonita Beach Road Intersection: 2018 to 2022)

2.2.16.3 US 41 South of Bonita Beach Road Crash Statistics

Crashes were analyzed for segment south of the intersection of US 41 and Bonita Beach Road from Foley Road (MP 0.540) to 805 feet south of Bonita Beach Road (MP 0.833), a distance of 1,550 feet.

Thirteen percent of the total study area crashes were located along US 41 south of Bonita Beach Road. **Figure 28** displays a summary of crash frequency by year along with the respective severities from 2018 to 2022. There was a total of 89 reported crashes during this period, 26 (29 percent) resulted in injury and one resulted in a fatality. A majority (55 percent) of the crashes within this segment were at the intersection of US 41 and Foley Road.

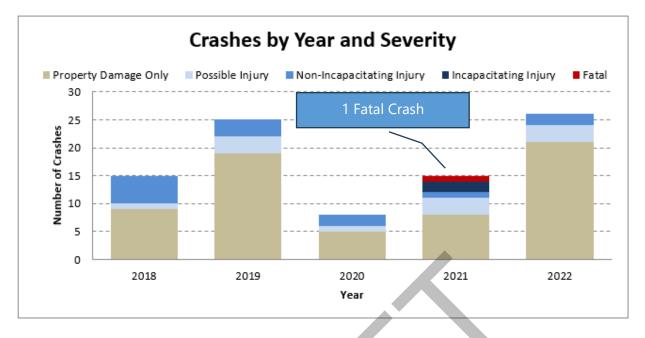

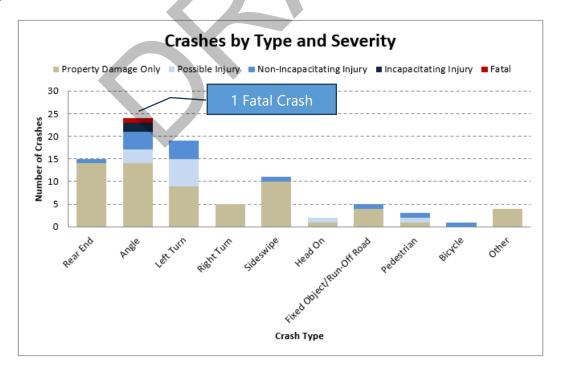

Figure 28: Crashes per Year (US 41 South of Bonita Beach Road)

Figure 29 displays the crashes along the segment by type and severity for the five-year study period. The highest crash type observed was angle, comprising 27 percent of the total crashes. Left turn (21 percent) and rear end crashes (17 percent) were the second and third highest crash types. The fatal crash in 2021 was an angle crash which occurred at the intersection of US 41 and Foley Road.

2.2.16.4 US 41 North of Bonita Beach Road Crash Statistics

Crashes were analyzed for the segment north of the intersection of US 41 and Bonita Beach Road from 720' north of Bonita Beach Road (MP 1.126) to the Imperial River bridge (MP 1.482), a distance of 1,880'.

Ten percent of the total study area crashes were located along US 41 north of Bonita Beach Road. **Figure 30** displays a summary of crash frequency by year along with the respective severities from 2018 to 2022. There was a total of 74 reported crashes during this period, 18 (24 percent) resulted in injury and there were no reported fatal crashes. Forty-five of the 74 total crashes (61 percent) along US 41 north of Bonita Beach Road were located at the signalized intersection of US 41 and the Center of Bonita Springs.

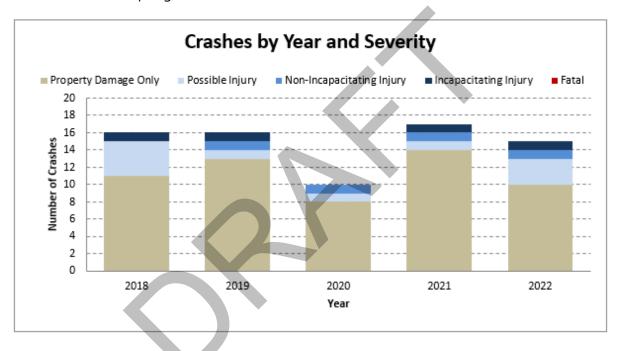

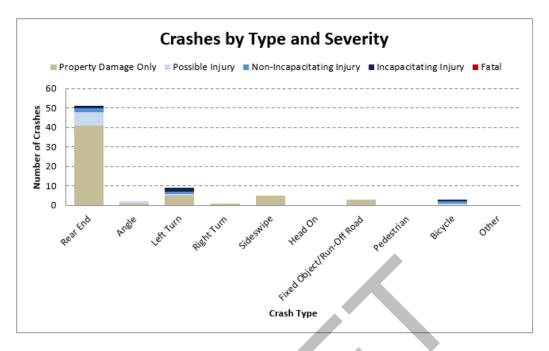

Figure 30: Crashes per Year (US 41 North of Bonita Beach Road)

Figure 31 displays the crashes along the segment by type and severity for the five-year study period. The highest crash type observed was rear end, comprising 69 percent of the total crashes. Left turn (12 percent) and sideswipe crashes (7 percent) were the second and third highest crash types. These trends are consistent with the overall study area.

2.2.16.5 Bonita Beach Road West of US 41 Crash Statistics

Crashes were analyzed for segment west of US 41 and Bonita Beach Road from 400' west of Windsor Road to 830' west of the intersection, a distance of 1,300'.

Fourteen percent of the total study area crashes were located along Bonita Beach Road west of US 41. **Figure 32** displays a summary of crash frequency by year along with the respective severities from 2018 to 2022. There was a total of 95 reported crashes during this period, 26 (27 percent) resulted in injury and there were no reported fatal crashes. Forty-six of the 95 total crashes along Bonita Beach Road west of US 41 (48 percent) were located at the signalized intersection of Bonita Beach Road and the Center of Bonita Springs.

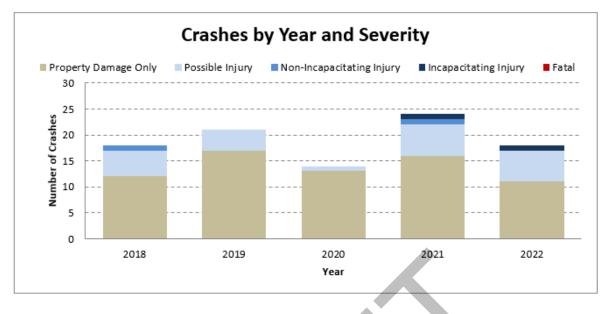

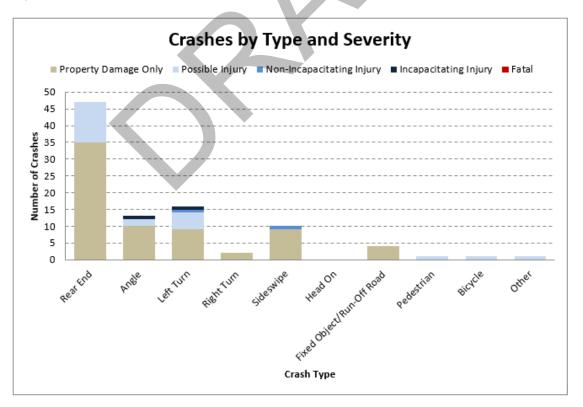

Figure 32: Crashes per Year (Bonita Beach Road West of US 41)

Figure 33 displays the crashes along the segment by type and severity for the five-year study period. The highest crash type observed was rear end, comprising 50 percent of the total crashes. Left turn crashes (17 percent) and angle crashes (13 percent) were the second and third highest crash types.

2.2.16.6 Bonita Beach Road East of US 41 Crash Statistics

Crashes were analyzed for segment east of US 41 and Bonita Beach Road from 570' east of US 41 to 450' east of Spanish Wells Boulevard, a distance of 2,300'.

Twenty percent of the total study area crashes were located east of the intersection of US 41 and Bonita Beach Road. **Figure 34** displays a summary of crash frequency by year along with the respective severities from 2018 to 2022. There was a total of 140 reported crashes during this period, 28 (20 percent) resulted in at least one injury. Seventy-eight of the 140 total crashes along Bonita Beach Road east of US 41 (56 percent) were located at the signalized intersection of Bonita Beach Road and Arroyal Road.

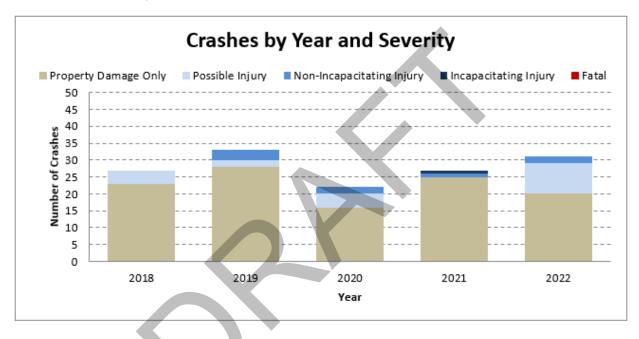

Figure 34: Crashes per Year (Bonita Beach Road East of US 41)

Figure 35 displays the crashes along the segment by type and severity for the five-year study period. The highest crash type observed was rear end, comprising 48 percent of the total crashes. Sideswipe (16 percent) and left turn crashes (12 percent) were the second and third highest crash types.

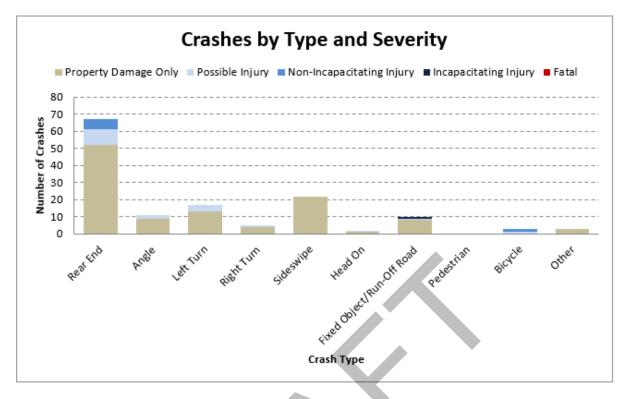

Figure 35: Crashes by Type and Severity (Bonita Beach Road East of US 41: 2018 to 2022)

2.2.16.7 Bonita Beach Road at Vanderbilt Drive Crash Statistics

Crashes were analyzed for the intersection of Bonita Beach Road and Vanderbilt Drive (from 400' west of the center of the intersection to 525' east of the center of the intersection, a distance of 925'). There was a total of 32 reported crashes during this period, six (19 percent) resulted in at least one injury (including one incapacitating injury crash in 2021). **Figure 36** displays the crashes along the segment by year and severity for the five-year study period.

Figure 37 displays the crashes at the intersection by type and severity for the five-year study period. The highest crash type observed was rear end, comprising 64 percent of the total crashes. Angle (12 percent) and left turn crashes (9 percent) were the second and third highest crash types.

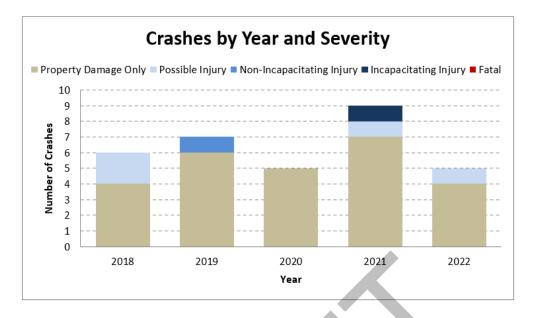

Figure 36: Crashes by Year and Severity (Bonita Beach Road and Vanderbilt Drive: 2018 to 2022)

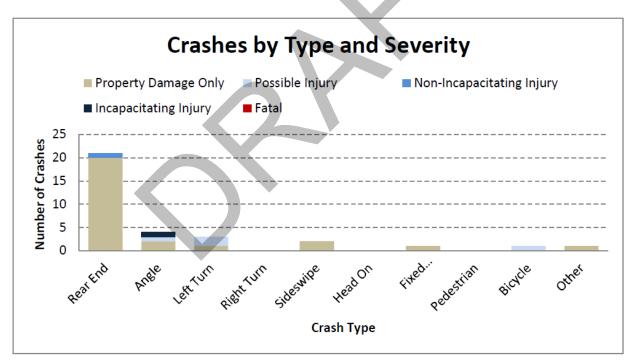

Figure 37: Crashes by Year and Severity (Bonita Beach Road and Vanderbilt Drive: 2018 to 2022)

2.2.16.8 Safety Ratio Evaluation

A crash rate analysis was performed for the main intersection of US 41 and Bonita Beach Road using the crash data from **Section 2.2.16.2** for the years 2018 through 2022.

Actual Crash rates for intersections is calculated from the total number of crashes in a year, Daily Entering Vehicles (DEV), and the length of the segment (assumed to be 1 for intersections) based on the equation below:

Actual Crash Rate = (Number of crashes per year x 1,000,000) / (365 x DEV x segment length (assumed to be 1))

Traffic data, such as functional classification and AADTs, were obtained from the FDOT Florida Traffic Online (FTO) website and the Lee County Traffic Count Database. The traffic data utilized for the crash rate analysis is provided in **Appendix B**. The calculated actual crash rates were compared to the critical crash rate to find the safety ratio for the US 41 and Bonita Beach Road intersection. The critical crash rate is calculated using the statewide or districtwide average crash rates for similar facilities/intersections based on the equation below:

Critical Crash Rate = Average Crash Rate + (K Factor x SQRT {Average Crash Rate / Vehicle Exposure}) + (0.5 / Vehicle Exposure)²

Where Vehicle Exposure for Segments = (ADT x 365 x Segment Length) / 1,000,000 Vehicle Exposure for Intersections = (DEV x 365) / 1,000,000

Safety Ratio = Actual Crash Rate / Critical Crash Rate

The intersection type and Statewide/Districtwide average crash rates for the study intersection are summarized in **Table 8**. **Table 9** and **Table 10** provide a Statewide and Districtwide crash rate and safety ratio summary for the US 41 at Bonita Beach Road intersection. The study intersection experienced higher than average Statewide crash rates in both 2018 and 2020 (safety ratios > 1.25), and had crash rates nearing the Statewide averages in 2019, 2021, and 2022 (safety ratios ranging between 0.87 and 0.95). The study intersection experienced higher than average Districtwide crash rates in 2018 through 2020 (safety ratios ranging between 1.1 and 1.6), and had crash rates nearing the Districtwide averages in 2022 (safety ratios of 0.99 and 0.93, respectively).

The detailed crash rate analysis for each of the segments and intersections can be found in **Appendix B**.

² Critical Crash Rate Equation (4-11) derived from the Highway Safety Manual (HSM) in Chapter 4, Page 4-44. American Association of State Highway Transportation Officials (AASHTO). (2010). *The Highway Safety Manual*

2.2.16.9 Review of Fatal Crashes

As noted above, two fatal crashes occurred in the US 41/Bonita Beach Road study area between 2018 and 2022 resulting in two fatalities. The following section describes the fatal crashes in more detail:

• Crash Number 88223264

The fatal crash occurred on November 16, 2019 at 8:31 PM on US 41 south of Bonita Beach Road. The crash involved a vehicle and a pedestrian on dry road surface during dark – lighted conditions. The pedestrian was attempting to cross the southbound lanes of US 41 when struck by a vehicle, resulting in one fatality.

• Crash Number 24691655

The fatal crash occurred on October 26, 2021 at 8:09 AM at the intersection of US 41 at Foley Road/Shanna Lane. The angle crash involved two vehicles and a truck on dry road surface during daylight conditions. The vehicle was traveling eastbound and leaving the

minor street of Foley Road/Shanna Lane when struck by a truck. The crash resulted in one fatality.

2.2.16.10 Pedestrian and Bicycle Crash Review

There were 6 pedestrian crashes and 4 bicycle crashes during the most-recent five-year study period at the intersection of US 41 and Bonita Beach Road. Eight crashes resulted in injury and there was one reported fatality. Crashes by location are summarized below:

- One bicycle crash occurred at the intersection of Bonita Beach Road and Beaumont Road. This crash resulted in injury.
- One bicycle crash and one pedestrian crash occurred along US 41 (approximately 800 feet south of the intersection of US 41 and Bonita Beach Road). The pedestrian crash did not result in injury and the bicycle crash did result in injury.
- One pedestrian crash occurred along US 41 (approximately 725 feet south of the intersection of US 41 and Bonita Beach Road). The crash did result in injury.
- One pedestrian crash occurred along US 41 (approximately 300 feet south of the intersection of US 41 and Bonita Beach Road). The crash resulted in a fatality.
- Three pedestrian crashes and two bicycle crashes occurred at the intersection of US 41 and Bonita Beach Road. All five crashes resulted in injury.

Additionally, there were three bicycle crashes during 2023 (between January 1, 2023 to June 30, 2023).

- Two bicycle crashes occurred at the intersection of Bonita Beach Road and Beaumont Road. One crash resulted in injury and one crash did not result in injury.
- One bicycle crash occurred along US 41 (approximately 660 feet south of the intersection of US 41 and Bonita Beach Road). The crash did result in injury.

2.2.16.11 2023 Fatal and Serious Injury Crash Statistics

Fatal and serious injury crash data was analyzed from January 1, 2023 to June 30, 2023 for the study area. There were no reported crashes during this period resulting in an incapacitating injury or fatality.

2.2.16.12 <u>Contributing Factors</u>

After reviewing the crash data and crash locations, several patterns emerged to help identify contributing causes of crashes in the study area.

Rear End Crashes

Fifty-two (52) percent of crashes along the study corridor were rear end crashes. Approximately three quarters of the rear end crashes occurred at the signalized intersections, which is indicative of congestion.

Sideswipe Crashes

Sideswipe crashes accounted for the second highest crash type (12 percent) within the study area. Over two thirds of the sideswipe crashes occurred at the signalized intersections. The most likely contributing cause for sideswipe crashes at signalized intersections is drivers not adequately prepositioning to make turning movements.

<u>Left Turn Crashes</u>

Left turn crashes accounted for the third highest crash type (12 percent) within the study area. Just over half of the left turn crashes occurred at the signalized intersections and the other left turn crashes occurred at the unsignalized full or bi-directional median openings. The most likely contributing cause is the re-occurring congestion in the study area and drivers making left turn movements with less than desirable gaps in opposing traffic.

Midday and PM Peak Hour Crashes

In addition to crash types, the time of crashes was also reviewed. It was noted that there are increases in the number of crashes during the Midday and PM peak hours. Twenty-nine (29) percent of crashes occurred between 11 AM to 2 PM and 24 percent of crashes occurred from 3 PM to 6 PM, suggesting Midday and PM congestion is contributing to crashes during peak travel times.

2.2.17 Railroad Crossings

There are no railroad crossings in the project study area.

2.2.18 Drainage

The study area is located in the Estero Bay Watershed within the jurisdiction of the South Florida Water Management District (SFWMD). The project is just south of the Imperial River, Waterbody ID (WBID) 3258EB – Imperial River (Marine Segment), which is an Outstanding Florida Water (OFW) and the ultimate outfall for the project. There is a Total Maximum Daily Load (TMDL) for Dissolved Oxygen (DO) and Total Nitrogen (TN) for the Imperial River meaning nutrient loading analysis will be required. US 41 and Bonita Beach Road both collect stormwater runoff in curb and gutter along the roadways before conveying the runoff via closed storm sewer systems to permitted stormwater treatment facilities within the study limits. The surrounding commercial developments at the US 41 and Bonita Beach Road intersection also have their own stormwater treatment

facilities that treat onsite runoff before discharging offsite. Many of these permitted facilities discharge to the canal along the east side of US 41 conveying the runoff to the Imperial River.

2.2.18.1 Drainage Basins

There are currently four existing drainage basins within the project limits. Existing basin limits were determined by reviewing permitted plans and available LIDAR data to identify the most probable drainage patterns and outfall locations. **Figure 38** shows the study area's four existing drainage basins. The sections below describe the basin limits and characteristics.

Windsor Road/Northwest Quadrant Basin

The Windsor Road Swale Basin and Northwest Quadrant Roadway Basin begins at the study area's western limit along Bonita Beach Road, approximately 1,100 feet west of Windsor Road, and continues east towards the US 41 intersection. The basin includes the proposed Northwest Quadrant Roadway, which is currently being designed by others. Runoff from Bonita Beach Road is collected in curb and gutter inlets and conveyed to the Windsor Road swale before discharging to the Imperial River. The swale is permitted under Permit No. 36-03971-P. This basin is considered an open basin.

<u>Basin West</u>

Basin West encompasses the area along Bonita Beach Road between the limits of the Windsor Road Swale Basin and the US 41 intersection. Bonita Beach Road runoff is collected in curb and gutter inlets and conveyed to a ditch heading south along Beaumont Road conveying stormwater south to the ditch system crossing underneath US 41 and Bonita Beach Road eventually flowing to the Arroyal Mall Pond. This basin is considered an open basin and the ultimate outfall is the Imperial River.

<u>Basin East</u>

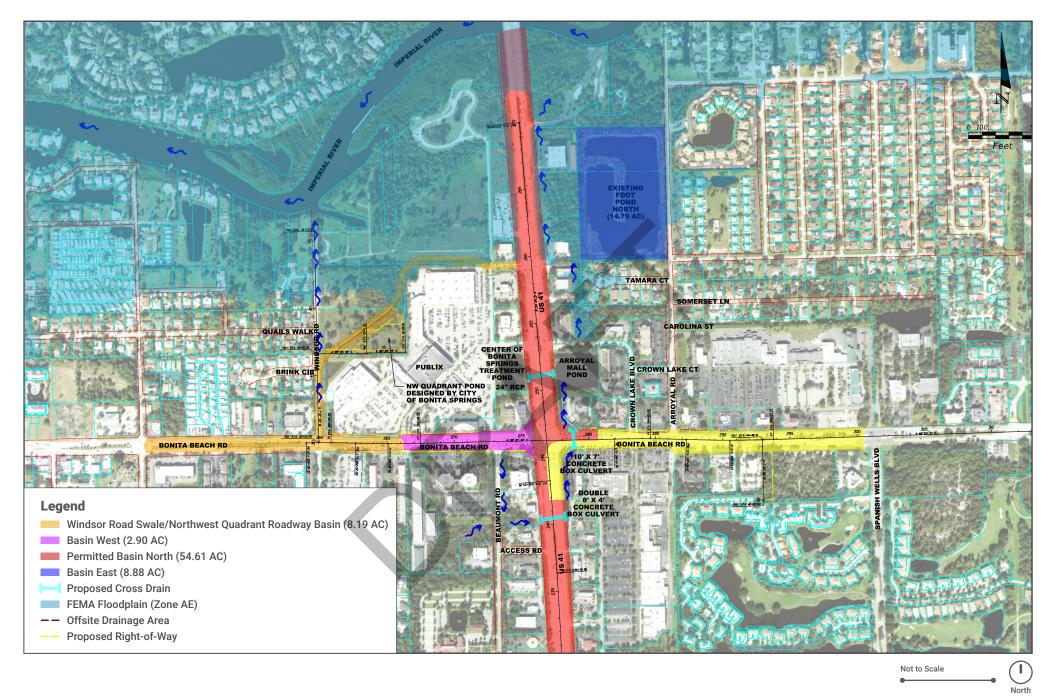

Basin East begins at the US 41 and Bonita Beach Road intersection and continues east to Spanish Wells Boulevard. Stormwater runoff from Bonita Beach Road and a portion of the intersection is collected within curb and gutter inlets and discharged directly to the concrete box culvert underneath Bonita Beach Road, which conveys the canal north to the Arroyal Mall Pond. This basin is considered an open basin with the Arroyal Mall Pond ultimately outfalling to the Imperial River via an outfall ditch to the north.

Basin North

Basin North is currently permitted under SFWMD Permit No. 36-02988-P. This permit is for the surface water management system for a 3.10-mile segment of US 41 from CR 887 (Old US 41 Road) to north of Bonita Beach Road. Treatment and attenuation are provided in a permitted FDOT pond (Pond North) located east of US 41 just south of the Imperial River. Stormwater runoff from US 41 is collected within curb and gutter inlets and conveyed to the pond via a closed stormsewer system. This basin is considered an open basin with Pond North ultimately discharging to the Imperial River.

2.2.18.2 Floodplains

The Federal Emergency Management Agency (FEMA) flood insurance rate map (FIRM) for Lee County (Map No. 12071C0658G) dated November 17, 2022 indicates that portions of the study area are within Zone AE floodplains (Flood El. 10.0 feet NAVD and El. 9.00 feet NAVD). The floodplain area within the study limits is tidally influenced and will not require compensation for impacts anticipated from the proposed study per coordination with SFWMD. The Imperial River is considered a regulatory FEMA floodway; however, the proposed improvements considered for this study will not impact the roadway or bridge at the Imperial River. Additional information regarding floodplains will be documented in the Location Hydraulics Report prepared for this study. Initial coordination with the City of Bonita Springs indicated a flooding concern at the homes and road systems west of Beaumont Road and upstream of the double 8' x 4' concrete box culvert (CBC) under US 41. The flooding issues are outside the project study limits and will be further verified during final design. This has been documented in the Location Hydraulics Report. **Figure 39** shows the FEMA FIRM for the study area.

2.2.18.3 Permits

US 41/SR 45 Permit (36-02988-P): This permit is for the surface water management system for a 3.10-mile segment of US 41 from north of SR 887 to Old 41 Road. The north basin of the permitted project is within the limits of this study. Treatment and attenuation are provided in a permitted FDOT pond (Pond North) located east of US 41 just south of the Imperial River. Pond North discharges to a swale adjacent to US 41, outfalling to the Imperial River.

Spring Plaza East Permit (36-00317-S): This permit is for the water management system serving the residential and commercial land along the southwest corner of US 41 and Bonita Beach Road. Treatment is provided within a series of swales and dry treatment ponds prior to discharging into the canal running along US 41 at the southeast corner of the US 41 and Bonita Beach Road intersection.

Walgreens/Bonita Springs Permit (36-02746-S): This permit is for the treatment of the Walgreens property at the southwest corner of the intersection. Treatment is provided by a dry retention swale at the southwest corner of the property, discharging to a large ditch leading to the canal flowing underneath US 41 via a concrete box culvert and then north towards the Imperial River.

Center of Bonita Springs (36-00718-S): This permit is for the surface water management of the commercial development at the northwest corner of US 41 and Bonita Beach Road. Treatment is provided for the site by a wet detention pond on the east side of the property, discharging under US 41 to the Arroyal Mall Pond, as well as a dry retention pond at the northwest side of the property which discharges to the Windsor Road treatment swale.

Arroyal Mall (36-00863-S): This permit is for the commercial site at the northeast corner of the US 41 and Bonita Beach Road. The pond adjacent to US 41 at the west side of the property provides treatment and attenuation for onsite runoff as well as accepting and routing runoff from regional drainage areas totaling approximately 393.5 acres. The areas routed through the pond are listed below and are conveyed to the pond through outfall pipes and by the canal that runs through the study area:

- Onsite Area 18.1 acres
- Permit No. 36-00317-S Springs Plaza 24.8 acres
- Permit No. 36-00718-S Center of Bonita Springs 32.0 acres
- Permit No. GP 87-20 Bonita Beach Boulevard 18.6 acres
- Permit No. 36-00854-S Woods Edge DRI 119.5 acres
- Undeveloped off-site area 180.5 acres.

The pond discharges north through a weir into a ditch system that leads to the Imperial River.

Windsor Road (36-03971-P): This permit is for the treatment swale that runs along Windsor Road. Stormwater runoff is collected via sheet flow and closed storm sewer systems and discharged into a series of swales. There is a control structure at the north end of Windsor Road which outfalls into the Imperial River.

Angler's Paradise (36-07247-P): This permit is for the Angler's Paradise surface water management system located north of the west quadrant roadway. Stormwater runoff is collected and conveyed to both dry and wet pretreatment systems prior to discharging into a wet detention system via control structure. The system will provide treatment and attenuation for the development prior to outfalling into the Imperial River.

2.2.18.4 Cross Drains

There are three existing drainage crossings within the study limits. A double 8' x 4' CBC is located underneath US 41 south of Bonita Beach Road which conveys a drainage ditch from the west side of US 41 to the canal along the east side of US 41. A single 10' x 7' CBC is located underneath Bonita Beach Road east of US 41 conveying the canal north to the Arroyal Mall Pond. A 24" outfall pipe crosses underneath US 41 from the Center of Bonita Springs treatment pond into the Arroyal Mall Pond. The cross drains are summarized in **Table 11** and shown on the concept plans in **Appendix G**.

| Structure No. | Station | Description | Remarks |
|---------------|---------|--------------------|-----------------|
| CD-1 | 240+40 | Double 8' x 4' CBC | US 41 |
| CD-2 | 278+80 | 10′ x 7′ CBC | Bonita Beach Rd |
| CD-3 | 251+00 | Single 24" RCP | US 41 |

Table 11: Summary of Cross Drains

2.2.19 Lighting

Roadway lighting exists along US 41 starting at the Collier County line and extending beyond the Imperial River Bridge. The lighting is on both sides of US 41 with 400-watt high pressure sodium luminaires and on 40' aluminum poles with decorative light fixtures. The lighting spacing is approximately 150'. This decorative street lighting is maintained by the City of Bonita Springs.

The same lighting is provided on Bonita Beach Road at the signalized intersections with the Center of Bonita Springs, Arroyal Road, and Spanish Wells Boulevard. This lighting is located on the south side of Bonita Beach Road with two luminaires located on each side of the intersection. Decorative street lighting is also present on both sides of Bonita Beach Road in the study area and is maintained by the City of Bonita Springs.

2.2.20 Utilities

Nine Utility Agency/Owners (UAO) have been identified within the project area through the Sunshine 811 Design Ticket and utility coordination efforts. **Table 12** identifies the UAO's contacted and a general description of their facilities located on the project. Additional information regarding the existing utilities and anticipated impacts can be found in the 444321-1-22-01 Utility Assessment Package, currently in development.

The utility providers listed in **Table 12** were initially contacted on March 31, 2020. The utility providers were contacted again in September/October 2023 with the proposed improvements and were requested to identify any easements and the location of their existing/planned utilities within the project area.

| Utility Company | Utility Contact | Facility | Description |

2.2.21 Soils and Geotechnical Data

The following Lee County Geology information was paraphrased from the Florida Geological Survey, Open-File Report 80, 2001 and other geologic references. A Geotechnical Technical Memorandum has been prepared and is located in the project files.

The near surface geologic deposits and formations from youngest to oldest in Lee County include Holocene Sediment (Qh), Undifferentiated sediments (Qu), Shelly sediments (TQsu), the Tamiami Formation (Tt), the Peace River Formation (Thp), and the Arcadia Formation (Tha). The Holocene sediments generally occur near the coastline and with river flood plains and include quartz sands, carbonate sand and muds with organics. The Undifferentiated sediments are siliciclastics that are light gray, tan, brown to black, unconsolidated to poorly consolidated, clean to clayey silty, unfossiliferous, variably organic-bearing sands to blue green to olive green, poorly to moderately consolidated, sandy, silty clays. The shelly sediments are variably calcareous and fossiliferous quartz sands to well indurated, sandy, fossiliferous limestones with clayey sands and sandy clays present.

The Tamiami Formation is a poorly defined lithostratigraphic unit containing a wide range of mixed carbonate-siliciclastic lithologies. The lithologies include: 1) light gray to tan, unconsolidated, fine to coarse grained, fossiliferous sand; 2) light gray to green, poorly consolidated, fossiliferous sandy clay to clayey sand; 3) light gray, poorly consolidated, very fine to medium grained, calcareous, fossiliferous sand; 4) white to light gray, poorly consolidated, sandy, fossiliferous limestone; and 5) white to light gray, moderately to well indurated, sandy, fossiliferous limestone. The Tamiami Formation has from highly permeable to impermeable lithologies that form a complex aquifer and primarily outcrops in most of eastern Lee County and can reach thicknesses of greater than 100 feet.

The Peace River Formation is primarily found near sea level elevation and is approximately 50 to 150 feet thick under the county. The Peace River Formation is composed of interbedded sands, clays and carbonates. The sands are generally light gray to olive gray, poorly consolidated, clayey, variably dolomitic, very fine to medium grained and phosphatic. The clays are yellowish gray to olive gray, poorly to moderately consolidated sandy, silty, phosphatic and dolomitic. The carbonates are light gray to yellowish gray, poorly to well indurated, variably sandy and clayey, and phosphatic. The carbonates often include opaline chert.

The Arcadia Formation is predominantly a carbonate unit with variable siliciclastic components and is found about 150 to 200 feet bls in Lee County. Arcadia Formation is composed of yellowish gray to light olive gray to light brown, micro to finely crystalline, variably sandy, clayey and phosphatic, fossiliferous limestones and dolostones. Thin beds of sand and clay are common. The sands are yellowish gray, very fine to medium grained, poorly to moderately indurated, clayey, dolomitic and phosphatic. The clays are yellowish gray to light olive gray, poorly to moderately indurated, sandy, silty, phosphatic and dolomitic.

Based upon the USDA-NRCS Soil Survey for Lee County, sandy soils are reported along the majority of the project corridor to depths of 80 inches below the natural ground surface. Isolated areas along the southern portion of US 41 within the project corridor is anticipated to contain shallow organic and clayey soils as well as shallow bedrock/caprock.

Information regarding the soils and groundwater conditions for the soil mapping units was obtained from the Lee County Soil Survey published by USDA-NRCS and the Web Soil Survey shown in **Figure 40** and is presented in **Table 13**.

In general, the reported sandy soils are suitable for supporting proposed roadway embankments after proper subgrade preparation and removal of unsuitable materials. Areas along the project corridor where shallow groundwater conditions, organic soils, shallow clay soils, or shallow bedrock/caprock may impact the project are detailed below.

2.2.21.1 Shallow Groundwater

The Seasonal High Groundwater Table (SHGWT) for the soil units presented above is reported to range from at or above the predevelopment natural grade to a depth of 5 feet below the predevelopment natural grade within the project limits. For the majority of the project corridor, the SHGWT is reported to be within 1.5 feet of the predevelopment natural grades.

Roadway base to groundwater clearance will need to be evaluated to ensure minimum separation between the base and the SHGWT is maintained or to determine if additional measures are required (i.e., blackbase, underdrains, etc.). In areas where the existing SHGWT is above grade, the SHWGT will have to be established by the project biologist utilizing biological indicators. Additionally, drainage design will need to consider the impact of shallow groundwater levels.

2.2.21.2 Near Surface Clayey Soils

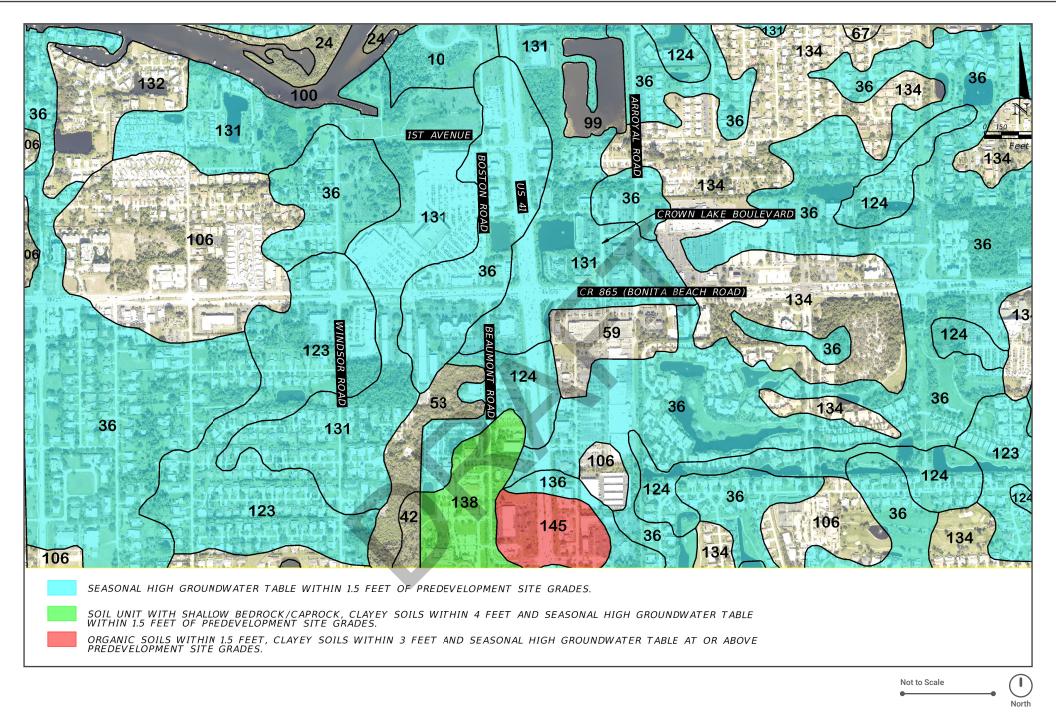

The following soil mapping units noted plastic/clayey soils (A-2-4/A-4/A-6/A-7-6) at reported depths within 18 to 45 inches of natural grades within the project corridor:

- Wabasso Sand, Limestone Substratum Urban Land Complex (Unit 138)
- Gator Muck, Ponded Urban Land Complex (Unit 145)

Plastic soils have limitations related to base clearance and are also poorly drained. Separation between plastic clayey soils and the roadway pavement sections should be in accordance with FDOT Standard Plans, Indices 120-001 and 120-002. As the project progresses beyond the PD&E stage, additional geotechnical services should be performed to determine the impact these materials will have to the proposed design.

| Table 13: Lee County USDA NRCS Soil Survey Information |
|--|
|--|

| Map No. | Soil Name | Hydrologic Soil Group | Depth to High Water Table (ft)* | Typical Soil Types (Profile from Ground Surface to Depth of Approximately 80") | | |
|------------|---|--------------------------|---------------------------------------|--|--|--|
| 10 | Pompano Fine Sand | A/D | 0.3-1.5 | Fine Sand | | |
| 36 | Immokalee Sand | B/D | 0.5-1.5 | Sand | | |

FPID 444321-1-22-01

Figure 40 | USDA Soils Surveys

2.2.21.3 Organic Soils

According to the USDA, an organic soil mapping unit is reported on the southern end of the project corridor. The following soil mapping unit noted organic/muck (A-8) soils from the predevelopment natural ground surface to $1\frac{1}{2}$ feet below the ground surface within the project limits:

• Gator Muck, Ponded – Urban Land Complex (Unit 145)

Organic/muck (A-8) soil should be removed in accordance with FDOT Standard Plans, Index 120-002 and replaced with backfill in accordance with Index 120-001. As the project progresses beyond the PD&E phase, delineation of the locations identified by the USDA Soil Survey as potentially containing organic soils will be required to determine the impact of the organic soils on the proposed design. Additional geotechnical services should be performed to identify the vertical and horizontal limits of the organic soils within the project limits.

2.2.21.4 Shallow Bedrock/Caprock

The following soil unit, according to the USDA, noted shallow bedrock/caprock within the project corridor from depths ranging from 3¹/₂ to 4¹/₂ feet or greater below natural grades.

• Wabasso Sand, Limestone Substratum – Urban Land Complex (Unit 138)

The project corridor is in an area known for shallow limestone deposits, also known as caprock or bedrock. The limestone substrata vary in depth generally from about 7 to 10 feet below the natural ground surface and can be over 10 feet in thickness. Therefore, caprock shall be anticipated at varying depths below the ground surface throughout much of the project corridor.

Extremely hard intermittent layers of limestone and dolomitic rock may make excavating the substrata difficult. The caprock can impact excavations for stormwater management areas, utility relocations and stormwater conveyance systems. In addition, limestone is porous and will be difficult to dewater.

The Geotechnical Technical Memorandum concluded saying "In general, the existing subsurface soils appear capable of supporting the construction of the proposed roadway improvements subject to the above geotechnical considerations and after proper subgrade preparation."

2.2.22 Aesthetics Features

The project area primarily consists of commercial, retail, or office uses along both US 41 and Bonita Beach Road including two shopping centers in the northwest and southeast quadrants of the intersection. Residential land uses sit behind the commercial activities. Given the heavy commercial character of each corridor and aesthetic character of the intersection, minimal involvement regarding aesthetic effects is anticipated. The project is anticipated to impact the existing landscaping and decorative lighting within FDOT's right of way. Currently there is extensive landscaping including royal palms and shrubbery beds within all four quadrants on the intersection of US 41 and Bonita Beach Road, as well as palm trees and shrubbery within US 41's existing medians.

2.2.23 Traffic Signs

There are no major overhead traffic signs located along US 41 or Bonita Beach Road within the project limits.

2.2.24 Noise Walls and Perimeter Walls

No noise walls or perimeter walls are located along US 41 or Bonita Beach Road within the project limits.

2.2.25 Intelligent Transportation Systems (ITS)/Transportation System Management and Operations (TSM&O) Features

There are existing ITS/TSM&O features located along US 41 and Bonita Beach Road within the project limits including traffic cameras at the four quadrants of the US 41 and Bonita Beach Road intersection. There is buried fiber optic cable along both US 41 and Bonita Beach Road and the signalized intersections noted in **Section 2.2.11** are coordinated using Econolite ASC/3 controllers.

2.3 Bridges and Structures

There are two existing concrete box culverts within the project limits, one underneath US 41 and another underneath Bonita Beach Road, both serving the same canal system. The existing concrete box culvert underneath US 41 south of Bonita Beach Road is a 175' long 8'x4' double barrel located at approximately Station 240+50 (approximately 570' south of Bonita Beach Road). The existing concrete box culvert underneath Bonita Beach Road east of US 41 is a 129.5' long 10'x7' single barrel located at approximately Station 279+00 (approximately 120' east of US 41).

2.4 Existing Environmental Features

2.4.1 Social Environment

The existing and future land uses abutting the US 41 and Bonita Beach Road intersection are primarily commercial/retail/office with shopping centers in the northwest and southeast quadrants. The major vacant land parcels in the northwest quadrant have recently started construction of a mixed-use development called Angler's Paradise, containing up to 260 residential units, 30,000 SF of retail and office, and 160 hotel rooms. Residential uses are located behind the commercial/retail/office uses. One other Residential Planned Development, Windsor GBM, is located east of Windsor Road south of Bonita Beach Road. The 4.66 acre site has been approved for up to 19 single family residential units.

Within the project study area is the Bonita Springs City Hall beside the US Post Office on Bonita Beach Road. In the intersection's southwest quadrant is the St. Leo Catholic Church on Beaumont Road which is also where the Knights of Columbus meet. The Lee County Sheriff's Office South District office is located in the Springs Shopping Center. At the study area's northern end are two public recreational areas along the southern shore of the Imperial River. West of US 41 is the Bonita Springs River Park with hiking trails and picnic areas. East of US 41 is Lee County's Imperial River Boat Ramp. These community features are shown **Figure 41**.

Based on the U.S. Census Bureau 2018-2022 American Community Survey 5-Year Estimates, there are approximately 2,500 households with a population of 4,800 residents identified within the study area. Approximately 64 percent of households are single family dwelling units while approximately 36 percent are multifamily units. The median income is approximately \$71,500 with just under 6 percent of the households below poverty level. Minority population comprises approximately 9 percent of the total population in the study area.

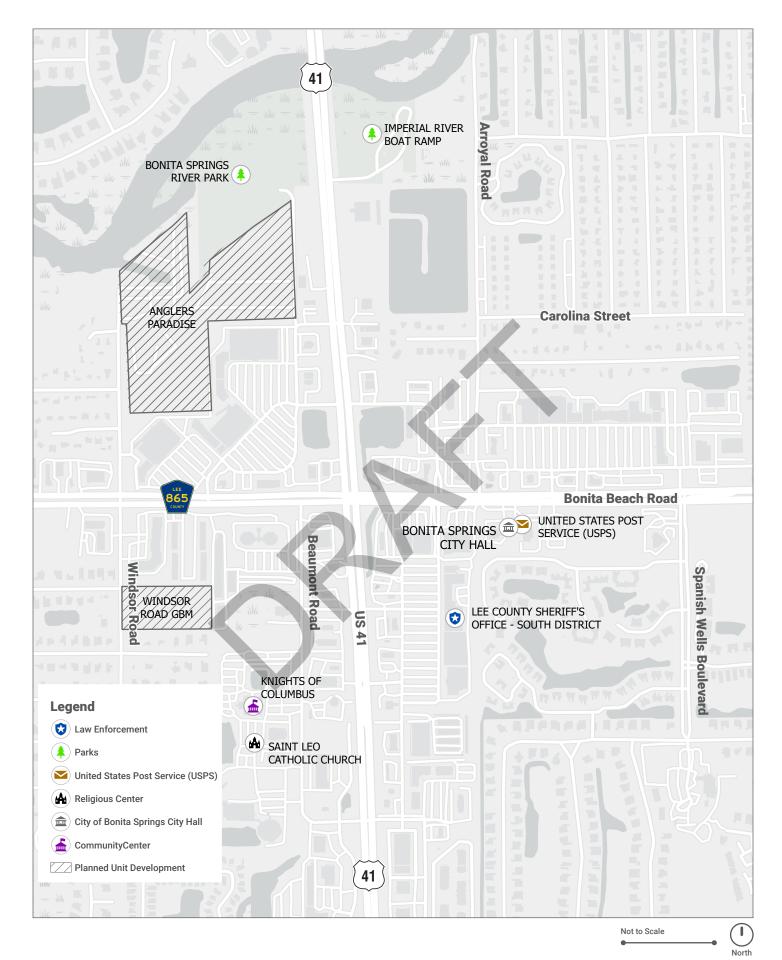

Figure 41 | Community Map

FPID 444321-1-22-01

2.4.2 Natural Environment

The Natural Resources Evaluation Report has been completed for this project and existing conditions are summarized below from this report and field studies.

2.4.2.1 Potentially Occurring Listed Species

A total of 35 protected species have the potential to occur in the US 41 and Bonita Beach Road study area, according to the information obtained during the preliminary data collection. These include the 12 avian, six mammal, four reptile, one insect and 12 plant species shown in **Appendix C**. Ecologists determined a species' potential occurrence in the study area based on its habitat preferences and distributions, existing site conditions, historical data, and field survey results. The potential of occurrence was rated as no, low, moderate, high, or observed. Protected species occurrences within the study area are shown on **Figure 42**.

2.4.2.2 <u>Federally Listed Species and Designated Critical Habitat</u>

The study area is located within or partially within the USFWS Consultation Area (CA) of the Florida bonneted bat. A full acoustic survey and roost survey were conducted in October 2023 to determine Florida bonneted bat activity within the study corridor. The survey methodology was submitted and approved by the USFWS prior to the commencement of the surveys (NRE Appendix D). A supplemental survey methodology was developed based on the need to adjust proposed detector locations due to ongoing construction activities and access. This amended survey methodology was submitted and approved by USFWS (NRE Appendix D). The acoustic survey was conducted from October 4 through October 10, 2023. The results of the survey determined no Florida bonneted bats in the study area. The survey report has been added in NRE Appendix G.

The study area is also located within or partially within the CA of the Florida scrub-jay. While the study area is not within the USFWS Florida panther CA, according to IPaC and ECOS, the project site is within the panther's range. The study area also falls within one wood stork Core Foraging Area (CFA), which include suitable foraging areas important to the reproductive success of known wood stork nesting colonies. The existing habitats in the study area may also support other federally protected species, including the eastern indigo snake, tricolored bat (a candidate species), and monarch butterfly (a candidate species). According to the FNAI and USFWS, two (2) federally protected plants have the potential to occur within the study area: 1. The beautiful pawpaw; and 2. The aboriginal prickly-apple.

There is no Critical Habitat within or abutting the project corridor.

Figure 42 | Protected Species and Habitat Map

FPID 444321-1-22-01

2.4.2.3 <u>State Listed Species</u>

The Florida Fish and Wildlife Conservation Commission (FWC) maintains the list of animals designated as federally endangered, federally threatened, state threatened, or species of special concern. The FWC has developed a comprehensive management plan and species action plans for the state's 59 state-listed species (FWC 2016, 2020). For this project, the following state listed species were identified: Big Cypress Fox Squirrel, Florida Burrowing Owl, Florida Pine Snake, Florida Sandhill Crane, Gopher Tortoise, Least Tern, and Imperiled Wading Birds.

Ten state protected plant species have the potential to occur in Lee County. State threatened plant species include the pinewoods bluestem, many-flowered grass-pink, nodding pinweed, Florida beargrass, and giant orchid. Endangered plants with potential to occur in Lee County include sand-dune spurge, pine pinweed, Small's flax, celestial lily, and scrub stylisma.

2.4.2.4 Other Protected Species or Habitats

For this project, the following other protected species or habitats were identified: Bald Eagle and Florida Black Bear.

2.4.2.5 Aquatic Preserves and Outstanding Florida Waters

The Imperial River, a tributary of Estero Bay (a designated Aquatic Preserve) is located adjacent to the northern boundary of the study area. Estero Bay tributaries are designated OFWs. Special protection is given to OFWs under 62-302.700, F.A.C. The project, including the proposed stormwater management system, will be developed to meet the design and performance criteria established in the SFWMD Environmental Resource Permit Applicant's Handbook Volumes I and II for the treatment and attenuation of discharges to OFWs. Best management practices will also be utilized during project activities to prevent impacts (primarily siltation) to proximate estuarine habitats.

2.4.2.6 <u>Wetlands and Other Surface Waters</u>

A wetland evaluation was performed for the study area. The wetland evaluation relied on literature reviews and field surveys to identify the location, extent, and functional value of wetlands in the study area; the potential direct, indirect, or cumulative effects of the project's actions to those wetlands; and available mitigation options to satisfy permit requirements from regulatory agencies. This wetland evaluation was performed in accordance with the Presidential Executive Order (EO) 11990 ("Protection of Wetlands"); U.S. Department of Transportation Order 5560.1A ("Preservation of Nation's Wetlands"); Federal Highway Administration Technical Advisory T6640.8A regarding the preparation of environmental documents; and the Wetlands and Other Surface Waters chapter of the FDOT's PD&E Manual.

 Table 14 and Figure 43 provides details identifying each wetland and surface water including number, Florida Land Use, Cover and Forms Classification System (FLUCFCS) and National

Wetlands Inventory (NWI) classification, and a brief description. FLUCFCS classifications are based on the results of the data analysis and field reviews of the study area. NWI classifications were not altered and are based on the listed classification of the nearest NWI wetland system as applicable.

| Surface Water ID | FLUCFCS Classification | NWI Classification | Description |
|---------------------|---------------------------|------------------------------------|---|
| WL 1 | 630 | PFO4/1A | Wetland Forested Mixed |
| WL 2 | 617 | PFO3/2C | Mixed Wetland Hardwoods |
| WL 3 | 612/625 | PSS4A, PFO4A, PSS1/EM1R, E2SS3N | Mangrove Swamps/Hyric Pine Flatwoods |
| WL 4 | 612 | E2SS3N, E2EM1P | Mangrove Swamps |
| SW 1 | 510 | N/A | Streams and Waterways |
| SW 2 | 510 | N/A | Streams and Waterways |
| SW 3 | 510 | PUBHx | Streams and Waterways |
| SW 4 | 510 | N/A | Streams and Waterways |
| SW 5 | 530 | PUBHx | Reservoirs |
| SW 6 | 530 | PUBHx | Reservoirs |
| SW 7 | 510 | N/A | Streams and Waterways |
| SW 8 | 510 | N/A | Streams and Waterways |
| SW 9 | 530 | N/A | Reservoirs |
| SW 10 | 510 | N/A | Streams and Waterways |

FPID 444321-1-22-01

2.4.3 Physical Environment

2.4.3.1 <u>Cultural Resources</u>

A Cultural Resource Assessment Survey (CRAS) has been conducted to locate and identify any archaeological sites and historic resources within the project area of potential effect (APE) and to assess their significance in terms of eligibility for listing in the National Register of Historic Places (NRHP).

Archaeological background research and a review of the Florida Master Site File (FMSF) indicated that no archaeological sites are recorded within or adjacent to the APE but five sites are recorded within one mile. These consisted of various types of mounds, only one of which has been evaluated by the State Historic Preservation Officer (SHPO). A review of relevant site locational information for environmentally similar areas within Lee County and the surrounding region indicated that the APE was considered to have a low to moderate potential for archaeological sites although the ETDM report 6291 indicated a minimal impact to cultural resources. As a result of field investigation, including the excavation of 35 shovel tests, no archaeological sites were discovered.

Historic background research, including a review of the FMSF and the NRHP databases, indicated that two historic resources (8LL01426 and 8LL02543) were previously recorded within the APE. However, the FMSF notes both buildings no longer exist. A review of relevant historic United States Geological Survey (USGS) quadrangle maps, historic aerial photographs, and the Lee County property appraiser's website data revealed the potential for four new historic resources 45 years of age or older (constructed in 1978 or earlier) within the APE (Caldwell 2023). These include three buildings (8LL02984, 8LL02985, and 8LL02986), constructed between ca. 1945 and 1975, and one linear resource (8LL02987) being an unnamed drainage ditch. Background research did not reveal any historic associations with significant persons and/or events. Thus, these historic resources do not appear eligible for listing in the NRHP, either individually or as a part of a historic district.

2.4.3.2 <u>Contamination</u>

A Level I Contamination Screening Evaluation Report (CSER) was prepared to support this project. Fifteen Low rated locations, four Medium rated locations (Map ID 3, Map ID 5, Map ID 6, and Map ID 8), and one High rated location (Map ID 7) were identified in the study area. The following summarizes the four Medium/High rated locations:

- Map ID 3 Medium Risk 7-Eleven Store #34806, 28175 South Tamiami Trail, Bonita Springs, FL 33923.
 - Petroleum tanks with five listed discharges by the Florida Department of Environmental Protection (FDEP). Active retail gas station.
- Map ID 5 Medium Risk Spring Fresh Dry Cleaners, 8951 Bonita Beach Road, Suite 21D, Bonita Springs, FL 33923

- Former dry cleaning facility from the 1980s to the 1990s. Entered FDEP Voluntary Cleanup Program and their Remedial Action Plan (RAP) was approved in June 1999.
 RAP activities ceased in March 2004. Remains on FDEP's contamination site listing.
- o Currently Smilecreator of Bonita dentist office.
- Map ID 6 Medium Risk Martinizing Dry Cleaning, 3525 Bonita Beach Road, Bonita Springs, FL 34134.
 - Active dry cleaning facility with no previous contamination reports in FDEP database.
- Map ID 8 Medium Risk 7-Eleven Store #40327/Apex Station, 27990 Tamiami Trail, Bonita Springs, FL 34134.
 - Petroleum tanks with three listed discharges by FDEP. Active retail gas station.
- Map ID 7 High Risk BP Bonita-Oleum Corp., 9021 Bonita Beach Road, Bonita Springs, FL 33923.
 - Petroleum tanks (removed 1994). 1995 Site Closure Report indicated 400 tons of contaminated soil removed from site for treatment. 2017 measured groundwater flows toward Bonita Beach Road. Currently site for Fifth Third Bank.

Contamination screening of the proposed pond sites show there are two low risk sites, one medium risk site and one high risk site. The following summarizes the four Medium/High rated locations:

- Pond West Medium Risk There are two nearby facilities identified as potential contamination sources. Tuffy Tire & Auto Service Center, 27790 South Tamiami Trail, Bonita Springs, FL 34134 and Bonita Boat Center, 27760 South Tamiami Trail, Bonita Springs, FL 34134
 - The Tuffy site is active and contains one aboveground storage tank and seven within-the-ground hydraulic lifts. There are no noted issues with this site.
 - The Bonita Boat site is an operational marine/boat dealer and service/repair center.
 No FDEP OCULUS regulatory files were found regarding this site.
- **Pond East (Alternative 1) High Risk –** This is the same site as Map ID 7 listed above.

Figure 44 shows the locations of the potential contamination sites from the Level 1 CSER.

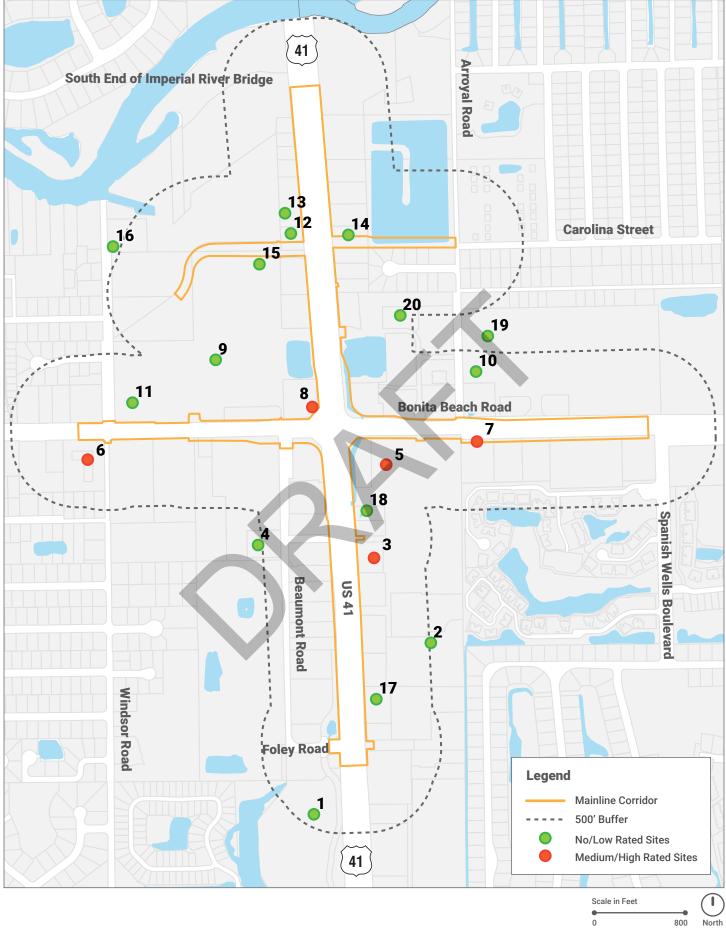

Figure 44 | Potential Contamination Sites from Level 1 CSER

FPID 444321-1-22-01

2.4.3.3 Noise Impacts

A Noise Study Report has been conducted for the project. Existing noise levels are measured in the project corridor to confirm if traffic is the primary source of noise. These field measurements are also required to verify the accuracy of the Traffic Noise Model (TNM) before it can be used to predict noise levels. Three 10-minute measurements were taken on September 6, 2023, using an Extech Instruments Model 407780 Type 2 Integrating Sound Level Meter. The sound level meter, calibrated at 114.0 dB(A) with an Extech Instruments Model 407766 calibrator, was adjusted to the A-weighted frequency scale, which approximates the frequency sensitivity of the human ear. Traffic data, including vehicle volumes, speeds by type, and meteorological conditions, were recorded during each measurement session.

Noise sensitive land uses within the study area fall under Noise Abatement Criteria (NAC) B, C, and E. NAC B land uses are residential which generally do not front either US 41 or Bonita Beach Road. The NAC C land uses within the study corridor pertain to exterior use areas associated with the Learning City Pre-School, Noah's Ark Academy, and the future Angler's Paradise pool deck. The Shiknay's Bonita Funeral Home was considered an NAC D site because this type of site is similar to a church but does not have a readily defined area of frequent exterior use. The NAC E land uses include several commercial properties with outdoor uses ranging from open-air dining, benches, and a swimming pool. The remainder of the corridor is NAC G undeveloped land.

Using 2019 traffic volumes, noise levels were predicted for 57 noise sensitive sites representing 42 residences (NAC B), four SLU NAC C receptors, and 11 SLU NAC E receptors. Only one site, the Noah's Ark Academy on Bonita Beach Road has a predicted 2019 predicted noise level at 69.5 dB(A) above the NAC impact criterion of 66.0 dB(A).

3.0 FUTURE CONDITIONS

This section summarizes the traffic forecasting and future no-build traffic evaluation for the US 41 and Bonita Beach Road intersection. The future build traffic evaluation is discussed in **Section 5.4.3**. For more information, please see the project's PTAR.

3.1 Traffic Forecasting

As part of the intersection's original analysis, a Traffic Analysis Methodology detailing the data and assumptions used to develop the 2045 design year and 2025 opening year volumes was approved by FDOT in May 2020. During the course of the analysis, two external factors were introduced into the study which caused a reconsideration of the alternatives. The addition of the Angler's Paradise development and the programming of the funds to construct a quadrant road in the intersections northwest quadrant caused grade separated alternatives to be no longer be viable. Thus, the Traffic Analysis Methodology assumptions and analysis of the volumes diverted to the northwest and northeast quadrant roadway network had to be revised. The methodology to generate volumes on the quadrant roadways was reviewed and approved by FDOT District 1 in November 2021 and is described in the revised Traffic Analysis Methodology starting on page 19.. These volumes were updated using the same methodologies using turning movement splits from 2022 to determine the updated volumes for the 2030 opening year and 2050 design year. The final revised Traffic Analysis Methodology (October 2023) is located in the *PTAR's Appendix A* and the Type 2 Categorical Exclusion project files.

FDOT District 1 developed a validated subarea model for this project by using the District 1 Regional Planning Model (v1.0.6) (D1RPM 1.0.6). This subarea model included the 2010 validation year and a 2040 horizon year. The subarea model validation was summarized within the FDOT District 1 prepared *Travel Demand Forecasting Subarea/Corridor Validation Tech Memo for the SR* 45 (US 41) at Bonita Beach Road PD&E Study, dated October 2019 (located in the Type 2 Categorical Exclusion project files). In April 2022, FDOT District 1 reevaluated the model projections using the updated D1RPM 2.0 and found "the 2045 AADT volumes remain applicable, and could potentially be used to represent 2050 volumes" (Kyle Purvis email dated April 7, 2022, located in the appendix of the final revised Traffic Analysis Methodology (October 2023), which is located in the *PTAR's Appendix A* and the Type 2 Categorical Exclusion project files).

Opening and design year volumes were developed for the US 41 and Bonita Beach Road intersection consistent with the approved traffic analysis methodology. Volumes were developed using the travel demand model outputs and compared to historical and projected growth rates (FTI Database for historical counts; BEBR projections for projected growth) for reasonableness. Future volumes were developed for the 2030 (Opening Year) and 2050 (Design Year), as shown in **Table 15**.

| Road | Segment | 2010 Historic | 2019 Existing | 2030 Opening Year | 2050 Design Year |
|----------------------|-------------------------------|---------------|------------------|----------------------|---------------------|
| US 41 | South of Bonita Beach Road | 33,789 | 39,000 | 44,000 | 60,000 |
| US 41 | North of Bonita Beach Road | 47,000 | 53,000 | 59,000 | 78,000 |
| Bonita Beach Road | West of US 41 | 23,053 | 30,000 | 32,000 | 39,000 |
| Bonita Beach Road | East of US 41 | 28,000 | 30,000 | 32,000 | 39,000 |

 Table 15: Roadway Segment AADTs

3.2 Future No-Build Evaluation

The No-Build scenario was analyzed, assuming the new roadway network in the intersection's northwest quadrant diverting some volume from the US 41 and Bonita Beach Road intersection. As part of this roadway network's completion, the Bonita Beach Road and Windsor Road intersection is expected to be modified to include an eastbound approach displaced left-turn. No changes are being made at the US 41 and Center of Bonita Springs (North) Access intersection to facilitate the quadrant road's movement. The Northwest Quadrant Roadway included in the future No-Build scenario is shown in **Figure 45**.

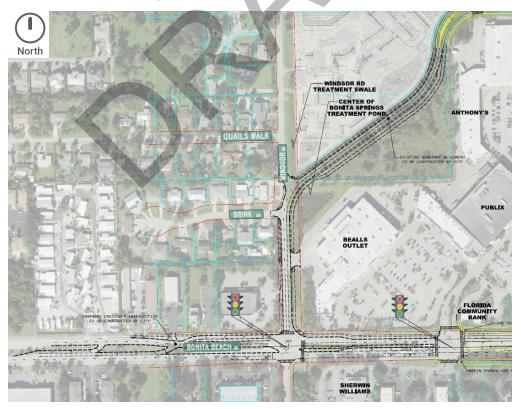

Figure 45: Northwest Quadrant Roadway – Proposed City Alignment

The future intersection turning movement volumes were analyzed using VISSIM. For the purposes of this analysis, the existing US 41 at Bonita Beach Road intersection lane configurations and signal cycle lengths were maintained, although signal timing splits were optimized with the no-build volumes. Network Measures of Effectiveness (MOEs) for the no-build analysis are shown in **Table 16**.

The performance measures of effectiveness for the intersections include the average delay for each movement and the average and maximum queue length. The average delay at each of the signalized intersections in the no-build scenario is summarized in **Table 17**. Detailed analysis results are included in the project's PTAR.

| Measure of Effectiveness | Opening Y | Opening Year (2030) | | Design Year (2050) | |
|--|-----------|---------------------|---------|--------------------|--|
| | MD Peak | PM Peak | MD Peak | PM Peak | |
| Average Delay (s) | 269.0 | 346.1 | 367.1 | 426.9 | |
| Average Speed (mph) | 11.2 | 9.3 | 8.8 | 7.8 | |
| Total Delay (hr) | 1017.8 | 1309.0 | 1419.3 | 1628.6 | |
| Active Vehicles (at end of peak hour) | 1,618 | 1,912 | 1,865 | 2,070 | |
| Vehicles Arrived (during peak hour) | 12,011 | 11,701 | 12,062 | 11,666 | |
| Total peak hour vehicles (Active + Arrived) | 13,629 | 13,613 | 13,927 | 13,736 | |
| Latent Demand (at end of peak hour) | 863.6 | 836.8 | 3868.4 | 4310.7 | |
| Latent Demand as Percentage of Total Volume | 6% | 6% | 28% | 31% | |
| Latent Delay (hr) | 248.2 | 312.5 | 1825.5 | 2173.0 | |
| Latent Delay as Percentage of Total Delay | 24% | 24% | 129% | 133% | |
| Travel Time (s): Northbound US 41 | 453.8 | 717.6 | 792.2 | 805.8 | |
| Travel Time (s): Southbound US 41 | 449.7 | 379.5 | 480.5 | 370.3 | |
| Travel Time (s): Northbound Left-Turn | 652.3 | 830.6 | 980.2 | 911.6 | |
| Travel Time (s): Southbound Left-Turn | 406.4 | 472.1 | 409.9 | 460.4 | |
| Travel Time (s): Eastbound Left-Turn | 327.6 | 675.3 | 415.0 | 788.3 | |

3.3 Future Land Use & Context Classification

The future land uses are generally consistent with the existing land uses (discussed in **Sections 2.2.5** and **2.4.1**). The study area's future land use categories include commercial, residential, industrial, mixed-use/planned development, public, and recreational land uses. The larger vacant parcels in the study area's northwest quadrant are being developed into a mixed-use development called Angler's Paradise which will contain up to 260 residential units, 30,000 square feet of retail and office and 160 hotel rooms. One other Residential Planned Development, Windsor GBM, is located east of Windsor Road south of Bonita Beach Road. The 4.66 acre site has been approved for up to 19 single family residential units. **Figure 46** displays the future land use map.

The context classification for US 41 between Woods Edge Parkway and Riverview Entrance/Bay Land Shopping Center is C3C – Suburban Commercial, and is not anticipated to change in the future.

FPID 444321-1-22-01

4.0 PROJECT DESIGN CONTROLS & CRITERIA

4.1 Design Controls

4.1.1 Roadway Design Controls

With US 41 being a State maintained roadway, the 2023 FDOT Design Manual (FDM) is the controlling design guide for roadway components. The roadway design control list used for this study is listed in **Table 18**.

| Design Control | US 41 | Bonita Beach Road | Source |
|--|--|---|--|
| Design Vehicle | WB-62FL | WB-62FL | Set by FDOT |
| Functional Class | Urban Principal Arterial – Other | Urban Minor Arterial | Set by FDOT |
| Context Classification | C3C | N/A | Set by FDOT |
| Proposed Access Management Classification | 5 | N/A | Set by FDOT |
| Design/Posted/Target Speed | Design: 45 mph Posted: 45 mph Target: 45 mph | Design: 45 mph Posted: 45 mph Target: N/A | Set by FDOT (US 41) Set by Study (Bonita Beach Road) |

| LOS Target | LOS D | N/A | Set by FDOT |
| Pedestrian and Bicycle Requirements | Facilities to be provided at intersection | Facilities to be provided at intersection | FDM Chapters 222, 223, and 224 |
| Physical Constraints | None | None | N/A |
| Environmental Constraints | None | None | N/A |
| Type of Stormwater Management Facilities | Closed | Closed | Match Existing |

Table 18: Design Control List

4.1.2 Stormwater Design Controls

The design of the project's stormwater management facilities is governed by the rules set forth by the SFWMD and FDOT. Wet detention ponds, dry retention ponds, and swale systems will provide for water quality improvements as well as project runoff water quantity attenuation. Refer to the sections below for the project's pond facilities configuration criterion used.

- Pond Configuration:
 - Wet Detention Ponds: The water's flow path from the inlets to the pond's outlet of the must be maximized to promote good mixing with no dead spots, minimize short circuiting, and maximize pollutant removal efficiency and mixing.
 - Area 0.5 acre minimum
 - Width 100 feet minimum for linear areas in excess of 200 feet length
 - Littoral Zone The littoral zone shall be a portion of the wet retention/detention bodies shallower than 6 feet as measured from below the control elevation. The minimum area shall be the lesser of 20 percent of the wet retention/detention area or 2.5 percent of the total of the retention/detention area plus the basin contributing areas.
 - Littoral Zone Alternatives:
 - An additional 50% of the appropriate permanent pool volume.
 - Pre-treatment of stormwater prior to the stormwater entering the wet detention pond. The level of pretreatment must be at least that required for retention, underdrain, exfiltration or swale systems.
 - Pond Depth Maximum pond depth of 12 feet and a mean depth (pond volume divided by the pond area at the control elevation) between 2 and 8 feet.
 - Side Slopes The pond must be designed so that the average pond side slope measured between the control elevation and two feet below the control elevation is no steeper than 1V:4H.
- Retention Ponds and Linear Swales: The effectiveness of retention facilities is controlled by two key factors: the construction procedures for the facility and the overall sequence of the site construction.
 - Initially construct the retention basin to rough grade by under-excavating the basin bottom and sides by approximately 12 inches.
 - After the drainage area contributing to the retention basin has been fully stabilized, the interior side slopes and basin bottom should be excavated to final design specifications.
 - Once the retention basin has been excavated to final grade, the entire basin bottom should be deep raked and loosened for optimal infiltration.
 - The retention basin should be stabilized with pervious material or permanent vegetative cover.

 In areas where weathered limestone/cap rock is present, construction precautions shall be taken in excavating through this material and will require nonconventional construction techniques and specialized equipment. Limestone/cap rock is porous and will be difficult to dewater.

4.2 Design Criteria

4.2.1 Roadway Design Criteria

During the alternatives analysis stage, the 2024 FDM was utilized for the design of both the Enhanced Traffic Signal and the Partial Displaced Left Turn alternatives. In FDM 212.1.1, a Displaced Left Turn is identified as an alternative intersection and notes that guidance on its design should reference the informational guide published by the Federal Highway Administration (FHWA). Based on this criterion, design elements for the Partial Displaced Left Turn alternative were developed following guidance from the 2014 FHWA Displaced Left Turn Intersection Informational Guide.

The current roadway and intersection design criteria used for this study are listed in **Table 19** through **Table 23**. This design criterion is subject to change and only the most current design criteria should be used for the final design phase.

4.2.2 Stormwater Design Criteria

Water treatment and attenuation requirements will comply with the guidelines as defined in Chapter 62-330 of the Florida Administrative Code (F.A.C.) and the Statewide Environmental Resource Permit Manual (SWERP).

4.2.2.1 SFWMD Criteria

- Water Quality:
 - Wet Detention Ponds: Treatment will be provided for the greater of one inch (1") of runoff over the drainage area or two and a half inches (2.5") of runoff from the net new impervious area (excluding water bodies). An additional 50% water quality treatment will be required for projects discharging to Outstanding Florida Waters (OFWs).
 - An orifice should be set at the control elevation and sized to drawdown a maximum of one-half of the required treatment volume within 24 hours.
 - Retention Ponds and Linear Swales:
 - Off-line Systems: retention will be provided for the greater of one-half inch (0.5") of runoff over the drainage area or one and a quarter inches (1.25") of runoff from the impervious area (excluding waterbodies).
 - On-line Systems: retention of an additional one-half inch (0.5") of runoff from the drainage area over the volume specified for off-line systems.
 - The entire treatment volume is to be infiltrated within 72 hours after a storm event.
 - Geometry The pond will include a 15-foot minimum maintenance berm width (per FDOT), minimum 1:4 (V:H) side slopes, and a minimum 1-foot freeboard between the inside maintenance berm elevation and the Design High Water (DHW) stage.

• Water Quantity:

 For open basins, SFWMD requires that the post-development peak discharge shall be at or below pre-development peak discharge for the 25-year/72-hour and mean annual storms.

5.0 ALTERNATIVES ANALYSIS

5.1 No-Build (No-Action) Alternative

The No-Build Alternative assumes that no modifications or improvements will be implemented for the US 41 and Bonita Beach Road intersection. The No-Build Alternative's primary advantages are it does not require any capital or expenditure of local, state, or federal transportation funds, and it results in no impacts to the social, natural, cultural, or physical environment.

The No-Build Alternative's primary disadvantage is it will not address the Purpose and Need for this project. As was shown in **Table 15**, significant traffic volume growth is expected on US 41 and Bonita Beach Road by the 2050 design year. US 41 combined with I-75 handles most of north-south regional trips in southern Lee County. Bonita Beach Road is one of two routes serving the barrier islands to the west. There are few alternative routes to accommodate the traffic increase resulting in increased congestion on both US 41 and Bonita Beach Road. **Table 17** shows that by 2050 in the PM peak hour, all study area intersections will be operating at either LOS E or F. As the traffic volume increases without capacity improvements, it can be expected the number of crashes will increase. Further, the increased intersection delay will negatively impact emergency response times.

The No-Build Alternative will remain under consideration throughout the study process.

5.1.1 Advantages of the No-Build (No-Action) Alternative

Advantages of the No-Build Alternative include:

- No right-of-way acquisition or business impacts/displacements;
- No design, right-of-way, or construction costs;
- No inconvenience to the traveling public and property owners during construction;
- No impacts to utilities and drainage structures; and
- No impacts to the natural, social, cultural, or physical environment.

5.1.2 Disadvantages of the No-Build (No-Action) Alternative

Disadvantages of the No-Build Alternative include:

- It is not consistent with local government plans, the Lee County MPO LRTP, or TIP;
- It does not address the project's Purpose and Need to include:
 - o It does not improve levels of service or address traffic congestion;
 - o Safety is not improved, and the number of crashes is projected to increase;
 - o It does not improve multi-modal mobility; and
 - It does not provide the system linkage necessary to improve north-south or eastwest travel by the public.

The No-Build Alternative will not meet the Purpose and Need for this project.

5.2 Transportation Systems Management and Operations (TSM&O) Alternative

TSM&O alternatives involve improvements designed to maximize the utilization and efficiency of the existing intersection through improved system and demand management. TSM&O options at a traffic signal generally include signal timing improvements, access management at adjacent intersections/median openings, transit improvements, and other low impact improvements such as the implementation of Intelligent Transportation System (ITS) components. The additional capacity needed to meet the 2050 design year projected volumes at the US 41 and Bonita Beach Road intersection and resultant LOS standards cannot be provided solely through implementing TSM&O improvements. TSM&O improvements by themselves cannot address the study intersection's long-term safety needs. However, intersection improvement TSM&O strategies, such as coordinated signal timings, are included as part of the Build Alternatives. In conclusion, the TSM&O alternative alone does not meet the capacity and safety needs for the project but will be considered as part of the Build Alternatives.

5.3 Multimodal Alternatives

A singular multimodal alternative would address the Model Interrelationships portion of the project's Purpose and Need, but would not address the Transportation Demand/Capacity, Safety, or System Linkage purpose and need elements. Multimodal alternatives (pedestrian, bicycle, and transit facilities) were included for each of the Build Alternatives to help satisfy the Purpose and Need's Modal Interrelationships portion. Improvements such as wider sidewalks and shared-use paths are proposed with the Build Alternatives. Existing transit stops will be relocated and upgraded where necessary in coordination with LeeTran.

5.4 Build Alternatives

5.4.1 Initial Grade Separated Alternative

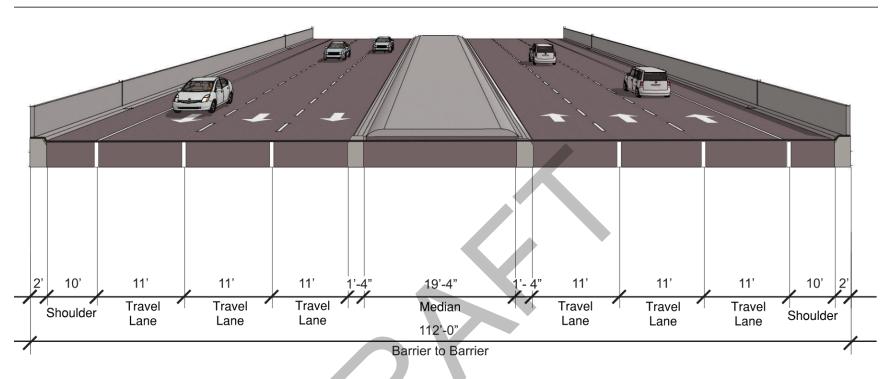

A Single Point Diamond Interchange (SPDI) alternative was initially evaluated during the preliminary alternatives analysis efforts in 2020 and is shown in **Figure 47**. The SPDI alternative assumes the northbound and southbound through lanes on US 41 are elevated over Bonita Beach Road, as shown in **Figure 48**.

Turning movements for US 41 and Bonita Beach Road occur at a single intersection underneath the US 41 overpass. To allow access to local businesses, northbound and southbound through movements on the US 41 ramps were allowed, as shown in **Figure 49** and **Figure 50**.

The US 41 overpass begins between the two access points for Springs Plaza on the south side of Bonita Beach Road and ends north of the Crown Lake Boulevard intersection to the north. The access points where the US 41 overpass ramps begin and end are located approximately 1,200 feet from the US 41 and Bonita Beach Road intersection. Access to any minor streets along the US 41 ramps are maintained as right-in/right-out intersections with the US 41 ramps only.

Figure 47: Single Point Diamond Interchange Alternative

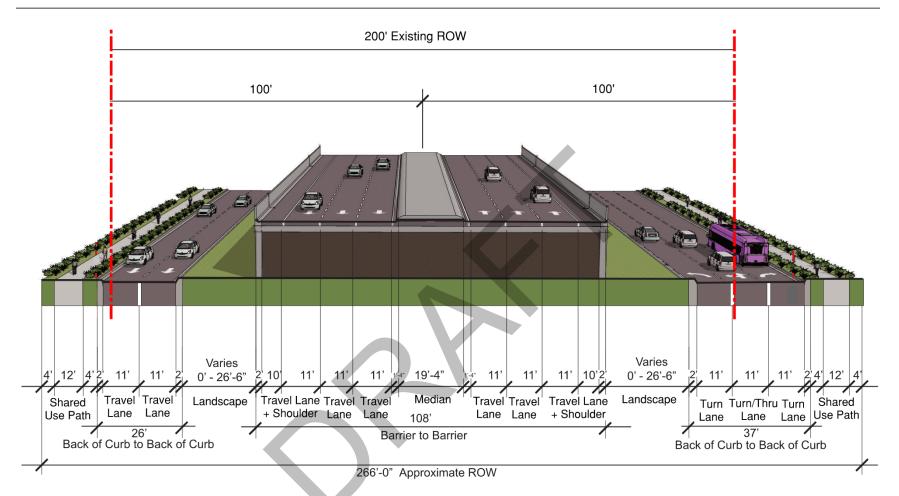

Figure 49: SPDI – US 41 South of Bonita Beach Road

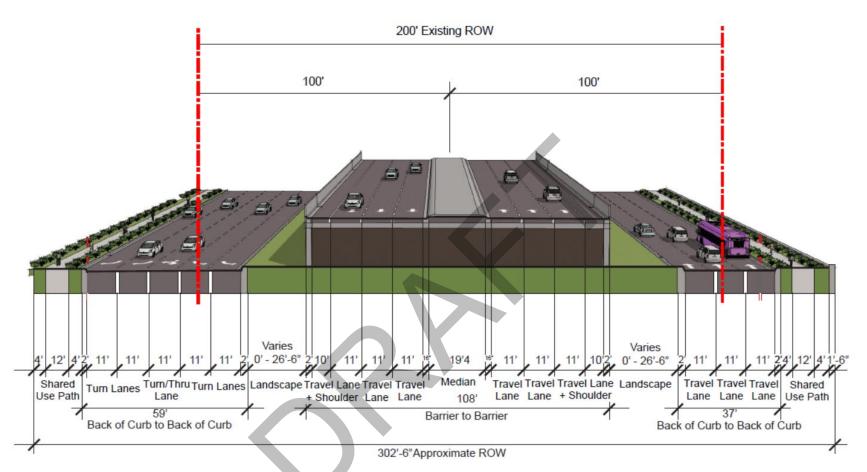

Figure 50: SPDI – US 41 North of Bonita Beach Road

During this evaluation, a new development called Angler's Paradise was approved by the City of Bonita Springs. The new development's primary access to US 41 is proposed to occur at the Center of Bonita Springs signalized intersection via a new proposed Northwest Quadrant Roadway. Based on the SPDI's initial concept, the overpass' ramps would tie-in to US 41 north of this location and convert the Center of Bonita Springs intersection into a right-in/right-out configuration. As this is the primary access for the new development, it was determined that full access to US 41 at the Center of Bonita Springs would need to be maintained. Additionally, the new development is planned where the initial Northwest Quadrant Roadway's proposed alignment was located. **Figure 51** shows the new development's conceptual site plan and the SPDI alternative's proposed configurations presented. Based on the new development's access considerations, the SPDI alternative was removed from consideration.

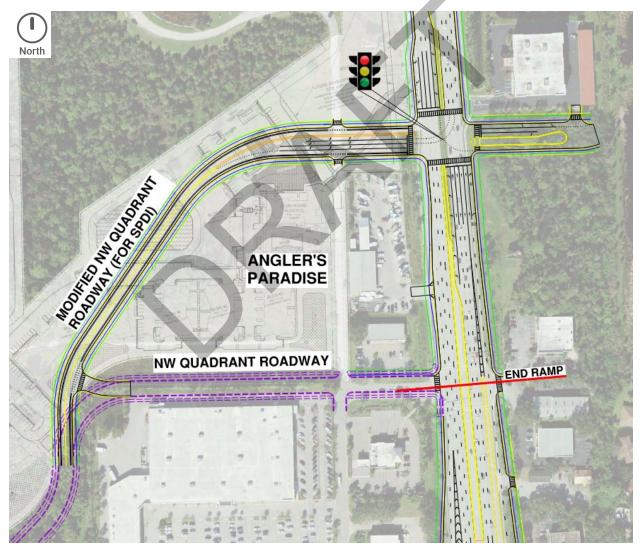

Figure 51: New Development and SPDI Configuration

5.4.2 At-Grade Intersection Alternatives

Two at-grade intersection alternatives were developed to support US 41 at Bonita Beach Road's Purpose and Need:

- Alternative A Enhanced Traffic Signal (Figure 52)
 - Widens US 41 to eight lanes from Foley Road to the Imperial River bridge's southern end.
 - Provides additional turn lane improvements to the existing signalized intersection.
- Alternative B Partial Displaced Left Turn (PDLT) (Figure 53)
 - Northbound and southbound left turn movements are relocated to the outside of the opposing traffic flow, allowing these turning movements to operate in the same signal phase as the northbound and southbound through movements.
 - Two new signalized "crossover" intersections are proposed along US 41 approximately 675' south and 460' north of Bonita Beach Road to allow left turning vehicles to cross to the opposing flow's other side.
 - The southbound and eastbound left turn movements are proposed to have three lanes each.
 - The eastbound and westbound right turn movements are proposed to have two lanes each and be located outside the northbound and southbound left turns.

The intersection alternatives were developed using design provisions from the FDM. Each of the proposed intersection alternatives were applied along US 41 from Sta. 221+19 to Sta. 271+81 and along Bonita Beach Road from Sta. 254+57 to Sta. 300+33, where they then tied into existing conditions. The conceptual layouts showing the alternatives' layout and stationing are provided in **Appendix D**.

As part of both Alternative A and B, Bonita Beach Road is planned to be widened from a four-lane typical section to a six-lane typical section from Sta. 267+00 to Sta. 286+00 (eastbound will extend the three lanes to Sta. 300+33). At the intersection of Bonita Beach Road with US 41, a third eastbound left turn lane will be added and a second right turn lane will be added in both the eastbound and westbound directions. Turn lane improvements are also proposed at the existing signalized intersections of the Center of Bonita Springs driveway and Arroyal Road with Bonita Beach Road.

A new Northwest Quadrant Roadway from Bonita Beach Road (east-west Sta. 259+91) to US 41 (north-south Sta. 260+00) will be constructed by the City of Bonita Springs. As it is currently under design and will be constructed in a few years, the Northwest Quadrant Roadway's presence was included in both alternatives. Also included in both alternatives is a new northeast quadrant roadway from US 41 to Arroyal Road tying into the new Northwest Quadrant Roadway and US

41 signal. Additional ancillary improvements are proposed for both Alternative A and Alternative B:

- Signalization and turn lane additions at the US 41 and Foley Road intersection.
- Access management refinements along US 41.

These improvements are discussed in more detail in **Section 7.0**.

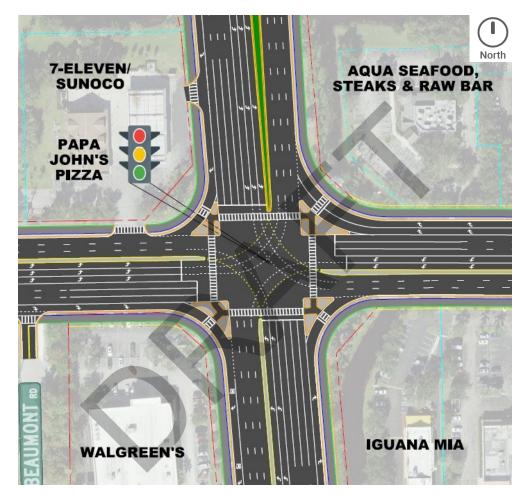

Figure 52: Alternative A – Enhanced Traffic Signal

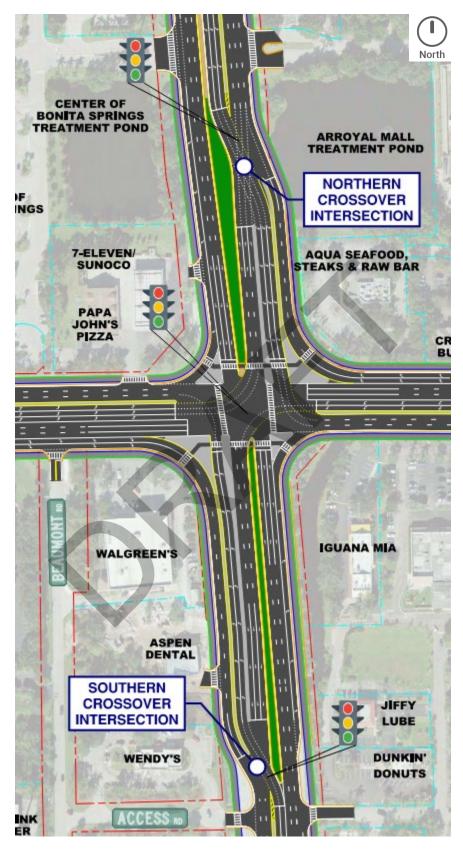

Figure 53: Alternative B – Partial Displaced Left Turn

5.4.2.1 <u>Alternative A – Enhanced Traffic Signal</u>

For Alternative A, US 41 is proposed to be modified based on the following:

- Adding a fourth travel lane in each direction and reducing the travel lane widths to 11':
 - Additional northbound travel lane will start just north of Foley Road (Sta. 223+50) and end at the Imperial River Boat Ramp driveway (Sta. 270+00).
 - The additional southbound travel lane will start at Sta. 265+00 (halfway between the Imperial River Boat Ramp driveway (Sta. 270+00) and the US 41/Center of Bonita Springs intersection (Sta. 260+00)) and end at the Foley Road intersection (Sta. 222+75).
- A 12' shared-use path is proposed on both sides of US 41 in lieu of the on-street bicycle facilities:
 - In the northbound direction from Springs Plaza (Sta. 232+50) to just north of the Imperial River Boat Ramp driveway (Sta. 271+00).
 - In the southbound direction from just north of the Imperial River Boat Ramp driveway (Sta. 271+00) to Bonita Funeral Home (Sta. 231+00).
- A 7' on-street buffered bicycle lane and a 6' sidewalk is proposed on the corridor's south end:
 - In the northbound direction from Foley Road (Sta. 222+75) to just north of Springs Plaza, 200' north of the start of the shared-use path.
 - In the southbound direction from Bonita Funeral Home (Sta. 231+00) to Foley Road (Sta. 222+75).

The Bonita Beach Road improvements include:

- The west approach improvements would be:
 - A third eastbound to northbound left turn lane.
 - An additional through lane to make three through lanes in both directions.
- The east approach improvements would be:
 - A second westbound to northbound right turn lane.
 - An additional through lane to make three through lanes in both directions.
- A 12' shared-use path is proposed on both sides of Bonita Beach Road in lieu of the onstreet bicycle facilities:
 - Extends from the Center of Bonita Springs signal to the Arroyal Road signal.

Graphic depictions of the roadway features on US 41 for Alternative A is shown from **Figure 54** to **Figure 58** below.

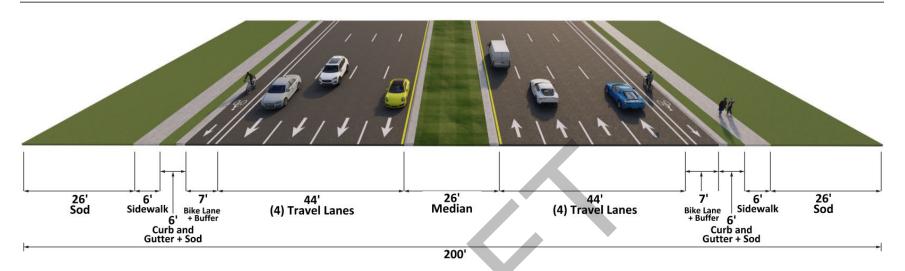

Figure 54: Alternative A – US 41 from Foley Road to Bonita Funeral Home/Springs Plaza

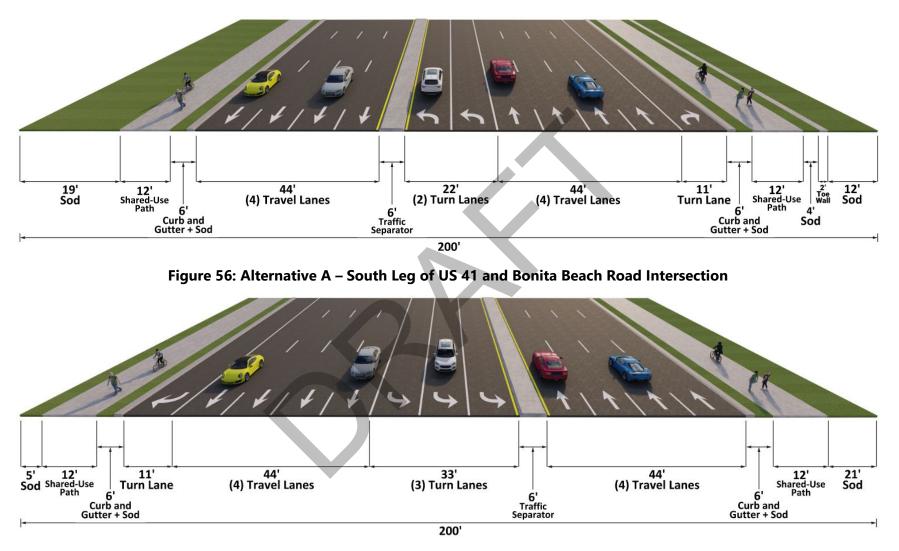

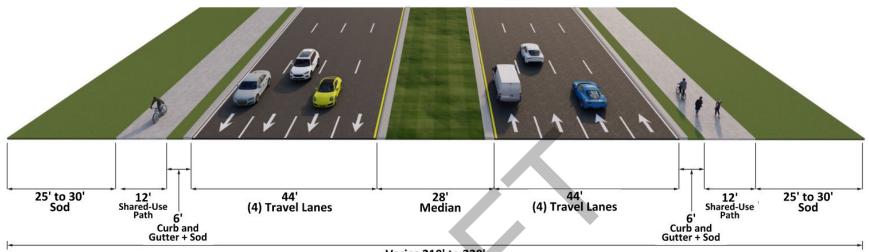

Figure 57: Alternative A – North Leg of US 41 and Bonita Beach Road Intersection

Varies 210' to 220'

Figure 58: Alternative A – US 41 between Center of Bonita Springs and Imperial River Boat Ramp

5.4.2.2 <u>Alternative B – Partial Displaced Left Turn</u>

For Alternative B, the northbound and southbound left turn movements will use "crossover" intersections to be relocated outside of the opposing flow of traffic. This configuration will allow the northbound and southbound left turning movements to operate in the same signal phase as the northbound and southbound through movements. To accommodate the Alternative B configuration and facilitate the northbound and southbound turning vehicles relocation, two new signalized "crossover" intersections will be added along US 41 approximately 675' south and 460' north of Bonita Beach Road (as shown in **Figure 53**). The following details the lane configurations proposed along US 41 as part of Alternative B:

- Between Foley Road (Sta. 222+75) and Southern "Crossover" Intersection (Sta. 239+00) Figure 59 and Figure 60:
 - Three 11' northbound and southbound through lanes.
- Between Southern "Crossover" Intersection (Sta. 239+00) and US 41 and Bonita Beach Road Intersection (Sta. 246+00) (described from right side to left side across US 41) – Figure 61:
 - Exclusive 11' northbound right turn lane.
 - Three 11' northbound and southbound through lanes in each travel direction.
 - Dual 11' northbound exclusive left turn lanes positioned outside of the southbound through lanes.
 - Dual 11' eastbound to southbound exclusive right turn lanes positioned outside of the northbound left turn lanes.
- Between US 41/Bonita Beach Road Intersection (Sta. 246+00) and Northern "Crossover" Intersection (Sta. 251+00) and (described from right side to left side across US 41) – Figure

62:

- Dual 11' westbound to northbound exclusive right turn lanes positioned outside of the southbound left turn lanes.
- Triple 11' southbound exclusive left turn lanes positioned outside of the northbound through lanes.
- Three 11' northbound and southbound through lanes in each travel direction.
- Exclusive 11' southbound right turn lane.
- Between Northern "Crossover" Intersection (Sta. 251+00) and US 41/Center of Bonita Springs intersection (Sta. 260+00):
 - Four 11' northbound through lanes.
 - Three 11' southbound through lanes.
- Between US 41/Center of Bonita Springs Intersection (Sta. 260+00) and Imperial River Boat Ramp Driveway (Sta. 266+50):

- Four 11' northbound through lanes (outside lane drops at the Imperial River Boat Ramp).
- Four 11' wide southbound travel lanes, as shown in **Figure 63**. These travel lanes are comprised of the following:
 - Three southbound through lanes; and
 - A fourth "auxiliary" lane begins at Sta. 265+00 that drops into the triple southbound left turn lanes.

The following pedestrian/bicycle facilities are proposed as part of Alternative B:

- A 12' shared-use path is proposed on both sides of US 41 in lieu of the on-street bicycle facilities:
 - In the northbound direction from Springs Plaza (Sta. 232+50) to just north of the Imperial River Boat Ramp (Sta. 271+00).
 - In the southbound direction from just north of the Imperial River Boat Ramp (Sta. 271+00) to just south of Access Road (Sta. 237+00).
- A 7' on-street buffered bicycle lane and a 6' sidewalk is proposed on the corridor's south end – Figure 59:
 - In the northbound direction from Foley Road (Sta. 222+75) to just north of Springs Plaza, 200' north of the start of the shared-use path.
 - In the southbound direction from just south of Access Road (Sta. 237+00) to Foley Road (Sta. 222+75).

The Bonita Beach Road improvements include:

- The west approach improvements would be:
 - A third eastbound to northbound left turn lane.
 - An additional through lane to make three through lanes in both directions.
- The east approach improvements would be:
 - A second westbound to northbound right turn lane.
 - An additional through lane to make three through lanes in both directions.
- A 12' shared-use path is proposed on both sides of Bonita Beach Road in lieu of the onstreet bicycle facilities:
 - Extends from the Center of Bonita Springs signal to the Arroyal Road signal.

Graphic depictions of the roadway features on US 41 for Alternative B are shown from **Figure 59** to **Figure 63** below.

5.4.3 Build Alternatives Operational Analysis

While both Build alternatives reduce delays and improve operations at the US 41 and Bonita Beach Road intersection, Alternative B – PDLT provides a more consistent operational improvement than Alternative A or the No-Build Alternative. This section details the comparative operational performance of the two intersection alternatives to the No-Build Alternative within the VISSIM roadway "network", consisting of US 41, Bonita Beach Road, and the proposed Northwest/Northeast Quadrant Roads.

5.4.3.1 Network Operations

Both Build alternatives result in a network operational improvement over the No-Build Alternative, as shown in **Table 24**. Alternative B reduces the average delay and total delay within the network by 40 to 62 percent. Alternative A reduces the average delay and total delay within the network by 28 to 52 percent. Both Build alternatives also increase the total number of peak hour vehicles able to be served in the network from 1,000 up to 3,000 vehicles in the opening year (2030) and from 650 up to 3,100 vehicles in the design year (2050). This indicates that the No-Build Alternative is not able to process as much demand as the two Build alternatives.

| Alternative | Opening Year (2030) | | Design Year (2050) | | |
|--|---------------------|---------|--------------------|---------|--|
| | MD Peak | PM Peak | MD Peak | PM Peak | |
| Average Delay (sec) | | | | | |
| No-Build | 269.0 | 367.1 | 346.1 | 426.9 | |
| Alternative A – Enhanced Traffic Signal | 130.3 | 188.8 | 170.1 | 258.0 | |
| Alternative B – PDLT | 118.1 | 170.9 | 136.6 | 199.0 | |
| Total Delay (hr) | | | | | |
| No-Build | 1,017.8 | 1,419.3 | 1,309.0 | 1,628.6 | |
| Alternative A – Enhanced Traffic Signal | 531.4 | 674.3 | 878.4 | 1,174.3 | |
| Alternative B – PDLT | 489.8 | 546.4 | 786.5 | 930.8 | |
| Vehicles Served (number of vehicles) | | | | | |
| No-Build | 13,629 | 13,927 | 13,613 | 13,736 | |
| Alternative A – Enhanced Traffic Signal | 14,686 | 16,750 | 14,274 | 16,400 | |
| Alternative B – PDLT | 14,933 | 17,013 | 14,397 | 16,836 | |

Table 24: Network Operations Summary

5.4.3.2 <u>Travel Times</u>

Travel times for the two major turning movements at the US 41 and Bonita Beach Road intersection, the eastbound left-turn and southbound left-turn, were compared. The travel times were measured from the extents of the study network. A travel time summary for the eastbound left-turn and southbound left-turn movements is shown in **Table 25**. For the eastbound left-turn movement, Alternative B provides improvement in both the mid-day and PM peak period, while Alternative A only provides an improvement in travel times in the PM peak period. For the southbound left-turn movement, both Build alternatives provide an improvement in travel times, with Alternative A providing a greater improvement in the mid-day peak period and Alternative B providing a greater improvement in the PM peak period.

| Alternative | Opening Year (2030) | | Design Year (2050) | |
|---|---------------------|---------|--------------------|---------|
| | MD Peak | PM Peak | MD Peak | PM Peak |
| Eastbound Bonita Beach Road to Northbound US 41 (sec) | | | | |
| No-Build | 327.6 | 675.3 | 415.0 | 788.3 |
| Alternative A – Enhanced Traffic Signal | 357.4 | 533.6 | 474.5 | 596.0 |
| Alternative B – PDLT | 274.4 | 525.6 | 281.2 | 519.4 |
| Southbound US 41 to Eastbound Bonita Beach Road (sec) | | | | |
| No-Build | 406.4 | 472.1 | 409.9 | 460.4 |
| Alternative A – Enhanced Traffic Signal | 257.0 | 337.4 | 303.5 | 400.5 |
| Alternative B – PDLT | 308.1 | 298.6 | 338.8 | 393.8 |

Table 25: Travel Time Summary

5.4.3.3 US 41 and Bonita Beach Road

When isolating the operations at the US 41 and Bonita Beach Road intersection, Alternative B results in the lowest overall delay in both the mid-day peak and PM peak periods when compared to the No-Build Alternative and Alternative A, as shown in **Table 26**. Alternative A provides an improvement in the delay over the No-Build condition, but only reduces the average delay by up to 51 percent while Alternative B reduces the average delay by up to 66 percent.

The 2050 design year traffic analysis shows both build alternatives meet the transportation demand/capacity purpose and need. Alternative B – PDLT shows the best network delay values resulting in the best network travel times and the US 41 and Bonita Beach Road intersection is anticipated to have LOS D in the critical design year PM peak hour. This improved operations and intersection throughput will also aid in emergency response times and emergency evacuations.

Further, the Alternative B – PDLT intersection will enhance intersection safety. Research from PDLT built intersections in Utah have shown a Crash Modification Factor of 0.88 as compared to

signalized intersections. This factor demonstrates both Alternative A and the No-Build alternatives will have more crashes than Alternative B – PDLT. The 12-ft shared use paths on all intersection approaches with more intersection island area will enhance pedestrians and bicyclist ability to move through the intersection and project area.

| | Opening Year (2030) | | Design Year (2050) | |
|---|---------------------|-----------|--------------------|-----------|
| Alternative | MD Peak | PM Peak | MD Peak | PM Peak |
| | Delay (s) | Delay (s) | Delay (s) | Delay (s) |
| | & LOS | & LOS | & LOS | & LOS |
| No-Build | 93.7 | 89.3 | 93.7 | 88.2 |
| | F | F | F | F |
| Alternative A – Enhanced Traffic Signal | 46.3 | 67.0 | 51.9 | 79.0 |
| | D | E | D | E |
| Alternative B – PDLT | 31.6 | 39.0 | 33.3 | 44.5 |
| | C | D | C | D |

Table 26: US 41 and Bonita Beach Road Overall Intersection Delay

5.4.4 Pond Siting Alternatives Analysis

There are four proposed drainage basins within the project limits. The onsite roadway basin areas draining to the ponds were determined to be the areas within the proposed right-of-way limits. The outfall's location in the proposed condition is the same as the existing condition. Attenuation in the proposed ponds is provided in all basins. Please refer to the concept plans in **Appendix G** for the pond locations. **Table 27** and **Figure 64** provide a summary of the proposed basin limits.

| Basin Name | Basin Area | Remarks |
|-----------------------------------|-------------|--|
| Windsor Road/NW Quadrant Basin | 8.19 acres | Includes NW Quadrant Roadway |
| Basin West | 2.90 acres | |
| Basin East | 8.88 acres | |
| Basin North | 57.95 acres | Includes NE Quadrant Roadway and portion of intersections at US 41 and NW Quadrant Roadway |

Table 27: Summary of Proposed Drainage Basins

The locations of potential pond sites were selected by considering existing stormwater features, proximity to the outfall location, estimated average wet seasonal water elevations, soil types, land use, and aesthetic features. There are several existing ponds within the project limits permitted to treat the existing project roadway. Where viable, these ponds will be utilized and expanded to

continue to provide treatment for the project. Additionally, the Northwest Quadrant Roadway will be designed by the City of Bonita Springs and treatment and attenuation will be provided as part of that project. Additional information can be found in the *US 41 and Bonita Beach Road Pond Siting Report*.

5.4.4.1 <u>Windsor Road/Northwest Quadrant Basin</u>

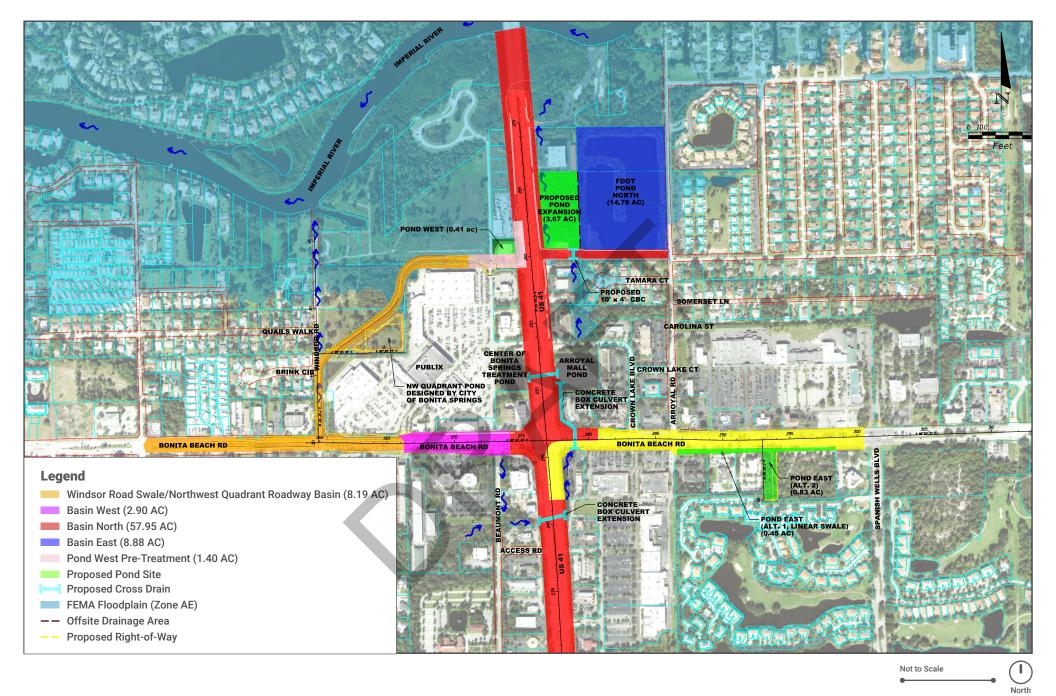

A portion of Bonita Beach Road west of US 41 and the Northwest Quadrant Roadway are being designed under a separate project led by the City of Bonita Springs. Runoff from Bonita Beach Road will be collected in curb and gutter inlets on Bonita Beach Road and in shallow swales along the Northwest Quadrant Roadway. Stormwater runoff will be conveyed to a proposed stormwater pond southeast of the quadrant roadway, ultimately outfalling to the Imperial River. Coordination with the City determined the pond would not be able to accommodate the additional improvements at the US 41 and Bonita Beach Road intersection or improvements at the US 41 and Northwest Quadrant Roadway intersection. Therefore, the limits of Basin West that are not being treated within the City's proposed pond will be accounted for within Pond West and by expansion of the existing FDOT North Pond for Basin North (discussed in **Section 5.4.4.4**).

Pond West

Pond West will serve as pre-treatment for the Basin North improvements. Portions of the improvements to the Northwest Quadrant Roadway proposed by this study and to Basin North will be routed to Pond West to assist in meeting nutrient loading requirements. Pond West is located west of US 41 at approximately Sta. 261+00 (LT.). The pond will encompass a total of 0.37 acres of the impacted parcel's remnant area.

5.4.4.2 Basin West

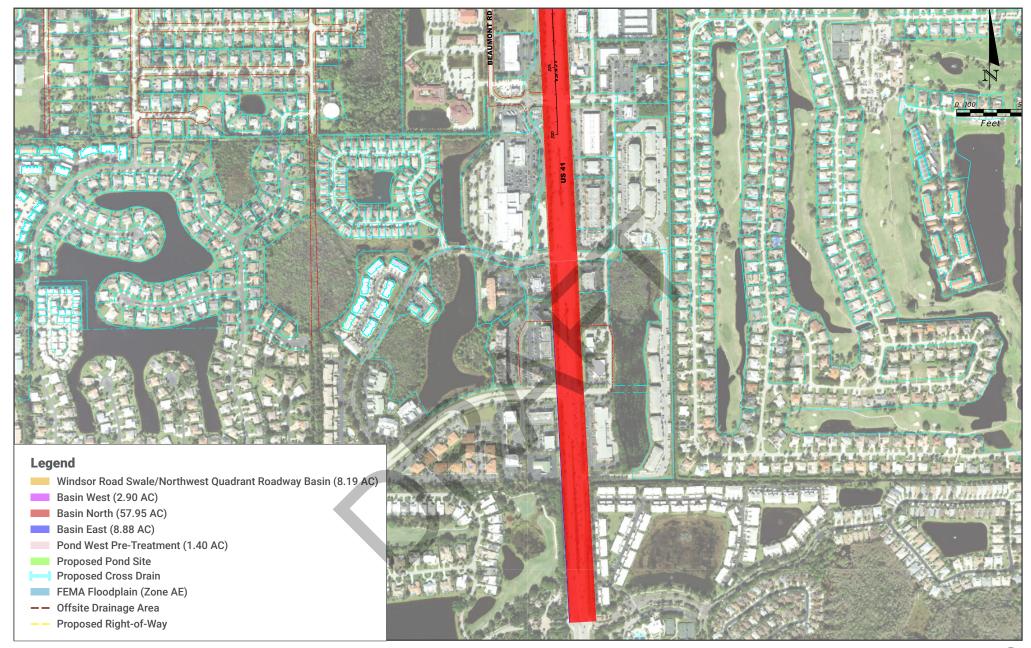

Basin West's eastern limit at the US 41 and Bonita Beach Road intersection will shift slightly west to reduce the basin's proposed limits to maintain the same basin area as the existing condition. Stormwater runoff from Basin West will maintain the existing outfall to Beaumont Drive's ditch to the south. Additional proposed areas will be collected within the storm sewer system along US 41 and conveyed and accounted for within the proposed Pond North expansion as part of Basin North.

Not to Scale

U North

US 41 at Bonita Beach Road PD&E Study

FPID 444321-1-22-01

Figure 64B | Proposed Basin Map

5.4.4.3 Basin East

Basin East maintains the existing basin limits, beginning at the US 41 and Bonita Beach Road intersection and continuing east to Spanish Wells Boulevard. Stormwater runoff from Bonita Beach Road and a portion of the intersection will be collected within curb and gutter inlets and conveyed to a stormwater treatment facility prior to being discharged to the concrete box culvert underneath Bonita Beach Road, flowing to the Arroyal Mall Pond. There are two (2) alternatives being considered for this basin: 1. A dry retention swale; and 2. An offsite dry retention pond.

Pond East Alternative 1 – Dry Retention Swale

Pond East Alternative 1 would serve as the treatment and attenuation for Basin East. Alternative 1 is located south of Bonita Beach Road from approximately Sta. 286+50 (RT.) to Sta. 293+10. This swale is located within the existing roadway right-of-way. Preliminary sizing calculations indicate that the pond size will need to be approximately 30' wide by approximately 660' long (0.45 acres minimum). The proposed location of the swale has an area of approximately 0.74 acres due to the area not being a 30' typical width and accounting for driveways crosscutting the swale, thus the 0.45 acres needed for Pond East Alternative 1 will be accommodated. The swale will outfall to the concrete box culvert underneath Bonita Beach Road at the same location as the basin's existing condition outfall. This is the basin's preferred alternative.

Pond East Alternative 2 – Offsite Dry Retention Pond

Pond East Alternative 2 would serve as the treatment and attenuation pond for Basin East. Pond East Alternative 2 is located south of Bonita Beach Road at approximately Sta, 293+40 (RT.). This pond site is located within one parcel (00001.0120), as shown **Figure 65**. Preliminary pond sizing calculations indicate that this pond requires 0.83 acres of area. This pond will outfall to the concrete box culvert underneath Bonita Beach Road at the same location as the basin's existing condition outfall.

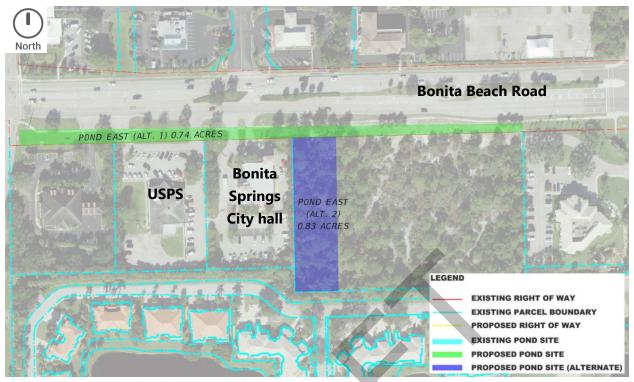

Figure 65: Pond East Alternative 2

5.4.4.4 Basin North

Basin North is currently permitted under SFWMD Permit No. 36-02988-P. This permit is for the surface water management system serving US 41 from CR 887 (Old US 41 Road) to north of Bonita Beach Road. In the proposed condition, the basin limits would be expanded at the intersections of Bonita Beach Road and the Northwest Quadrant Roadway to treat and attenuate for the additional areas not accounted within the northwest quadrant pond. This pond is currently being designed by the City of Bonita Springs. The basin's treatment and attenuation is provided in an existing FDOT pond, Pond North. The pond has been analyzed to be expanded to provide additional treatment and attenuation volume needed for the proposed intersection improvements.

Pond North

Pond North will serve as Basin North's primary treatment and attenuation pond. Pond North is located approximately 105 feet east of the US 41 alignment. The pond's southern end will be impacted by the proposed Northeast Quadrant Roadway. The pond will be expanded to the west into Parcel 00260.002A, which is also impacted by the proposed Northeast Quadrant Roadway, and into Parcels 00260.0010, 00257.0010 and 00257.0030, as shown in **Figure 66**. Preliminary pond sizing calculations indicate this pond will need to be expanded approximately 3.66 acres. This pond will maintain the existing outfall to the Imperial River.

Figure 66: Pond North

5.4.4.5 Arroyal Mall Pond Impacts

The proposed improvements to the US 41 and Bonita Beach Road intersection will have impacts to the existing Arroyal Mall Pond, permitted under SFWMD Permit No. 36-00863-S. The canal running adjacent to US 41 from the concrete box culvert crossing at Bonita Beach Road north to the Arroyal Mall Pond would need to be enclosed to accommodate Alternative B if this alternative is the preferred alternative. Volumetric impacts to the Arroyal Mall Pond from the addition of the Alternative B are anticipated to be approximately 0.25 ac-ft. These impacts can be offset by regrading the southern and western pond berms, which will provide approximately 0.33 ac-ft of added volume.

5.5 Comparative Alternatives Evaluation

The US 41 and Bonita Beach Road comparative evaluation matrix presented at the Alternatives Public Workshop is shown in **Table 28**. The comparative evaluation matrix reviews the following metrics for the no-build, Alternative A, and Alternative B:

- Ability to Meet Purpose and Need
 - o Improves Traffic Operations

- Improve Traffic Mobility and Transportation Network Access
- o Enhances Emergency Evacuation and Response Times
- Enhance Mobility Options and Multi-Modal Access
- Potential Right-of-Way Impacts
 - o Number of Business/Residential/Other Relocations
 - o Number of Business/Residential/Other Parcels Impacted
 - Acres of Right-of-Way to be Acquired
- Potential Environmental Effects
 - o Threatened/Endangered Species and Habitat Impacts
 - Acres of Wetlands Impacted
 - Acres of Floodplains Impacted
 - o Archaeological/Historic Resources Impacts
 - o Number of Public Recreation Resources Impacted
 - o Number of Noise Sensitive Receptors Impacted
 - Number of Contamination Sites Impacted
 - Number of Utilities Impacted
- Traffic Operations
 - o 2050 Average Vehicle Delay
 - Net Present Value of Improvement
- Estimated Project Costs
 - Right-of-Way Acquisition for Roadway
 - Wetland Mitigation
 - Final Design and Construction
 - Construction Engineering and Inspection

As shown in **Table 28**, Alternative B is anticipated to meet each of the four purpose and need elements while Alternative A is only anticipated to meet three. The proposed traffic separators on the intersection approaches as part of Alternative B provides a refuge area for pedestrians crossing the intersection. As Alternative A does not have this refuge area, it is a pedestrian safety issue and does not meet the purpose and need element of enhancing mobility options and multi-modal access. As discussed in **Section 3.0**, the No-Build does not improve traffic operations for the study intersection. Research from PDLT built intersections in Utah have shown a Crash Modification Factor of 0.88 as compared to signalized intersections. This factor demonstrates both Alternative A and the No-Build alternatives will have more crashes than Alternative B – PDLT. Also with no improvements, the No-Build will not enhance emergency evacuation/response times or mobility options/multi-modal access, thus the No-Build does not satisfy any purpose and need elements.

The right-of-way take area for Alternative B is approximately 0.7 acres higher than Alternative A, with an additional two parcels impacted. Each alternative also has the same number of commercial relocations.

The potential environmental impacts are generally the same for both intersection alternatives. Both alternatives have a low impact to threatened/endangered species and are also expected to have the same number of utility impacts due to the overhead electrical relocation.

Both Alternative A and Alternative B are expected to improve LOS and crash safety when compared to the No-Build alternative. The FDOT ICE Tool was used to estimate the operational and safety benefit for the alternatives over a 20-year life cycle to understand the improvement's return on investment. These benefits were calculated as an estimated "Net Present Value" (NPV) to compare the alternatives. While Alternative B is approximately \$7.8 million more expensive than Alternative A, the estimated NPV for Alternative B is approximately \$51 million higher than Alternative A, meaning the PDLT will have a higher return on investment and more benefit for the users of the intersection. This is mostly in operational benefits over the 20-year life cycle. The results of the NPV analysis are provided in **Table 29**.

| EVALUATION FACTORS Alternative | Alternative A: Enhanced Traffic Signal | Alternative B: Partial Displaced Left Turn | No Build |
|---|---|---|------------------|
| ABILITY TO MEET PURPOSE AND NEED | | | |
| Improves Traffic Operations | ✓ | ✓ | X |
| Improve Traffic Mobility and Transportation Network Access | ✓ | ✓ | X |
| Enhances Emergency Evacuation and Response Times | ✓ | \checkmark | X |
| Enhance Mobility Options and Multi-Modal Access | X | ✓ | X |
| POTENTIAL RIGHT OF WAY IMPACTS | | | |
| Relocations (#Business/#Residential/#Other) | 2/0/0 | 2/0/0 | 0 |
| Parcels (#Business/#Residential/#Other) | 12/2/3 | 14/2/3 | 0 |
| Right of Way to be Aqcuired (acres) | 4.05 | 4.73 | 0 |
| POTENTIAL ENVIRONMENTAL EFFECTS | | | |
| Threatened/Endangered Species and Habitat | Low | Low | N/A |
| Wetlands (acres) | 0.55 | 0.79 | 0 |
| Floodplains (acres) | 4.63 | 4.65 | 0 |
| Archaeological/Historic Resources | Low-Mod/0 | Low-Mod/0 | N/A |
| Public Recreation Resources (#) | 1 | 1 | 0 |
| Noise Sensitive Receptors (#) | 16 | 16 | 0 |
| Contamination Sites (#Low/#Medium/#High Risk) | 6/3/0 | 6/3/0 | 0/0/0 |
| Utilities Impacted (#) | 8 | 8 | 0 |
| TRAFFIC OPERATIONS | | | |
| US 41/Bonita Beach Road Intersection 2050 Average Vehicle Delay in Seconds (Midday/PM) | 71/93 | 69/98 | 231/256 |
| Net Present Value ¹ (Compared to No-Build) | \$263,360,000 | \$314,380,000 | N/A |
| ESTIMATED PROJECT COSTS (2023 \$\$) | | | |
| Right of Way for Roadway | \$15,000,000 | \$16,050,000 | \$0 |
| Wetland Mitigation | \$50,000 | \$70,000 | \$0 |
| Final Design and Construction | \$20,610,000 | \$26,630,000 | |
| Construction Engineering and Inspection | \$2,470,000 | | |
| Preliminary Estimate of Total Project Cost ² | \$38,130,000 | \$45,950,000 | \$0 ³ |

¹ Net Present Value - 20 year life cycle costs for operational (reduced delay) and safety (fewer crashes) benefits as compared to the no-build alternative minus construction and right-of-way costs. The higher the number represents better return on investment.

² Source: FDOT Long-Range Estimating System. Preliminary Estimate of Total Project Cost does not include maintenance costs.

³ No-Build would result in higher maintenance costs.

| Cost Cotomorias | Net Present Value of Costs | | | |
|---------------------------------------|----------------------------|-------------------------|---------------|--|
| Cost Categories | No-Build | Alt. A | Alt B | |
| Planning, Construction & R/W Costs | \$0 | \$26,130,000 | \$33,110,000 | |
| Post-Opening Costs | \$98,229 | \$98,229 | \$238,276 | |
| Auto Passenger Delay | \$518,057,346 | \$214,690,192 | \$193,769,624 | |
| Truck Delay | \$24,327,189 | \$10,083,158 | \$9,099,847 | |
| Safety | \$67,707,714 | \$95,826,837 | \$59,592,328 | |
| Total Cost | \$610,190,479 | \$346,828,415 | \$295,810,075 | |
| Benefit Categories | No-Build | Alt. A | Alt. B | |
| Auto Passenger Delay | \$0 | \$303,367,155 | \$324,287,722 | |
| Truck Delay | \$0 | \$14,244,031 | \$15,227,342 | |
| Safety | \$0 | (\$28,119,123) | \$8,115,387 | |
| Net Present Value of Benefits | \$0 | \$289,492,064 | \$347,630,451 | |
| Net Present Value of Costs | \$0 | \$26,130,000 | \$33,250,048 | |
| Net Present Value of Improvements | \$0 | \$263,362,064 | \$314,380,404 | |
| Net Present Value of Alt B over Alt A | <u>N/A</u> | N/A <u>\$51,018,340</u> | | |

Table 29: Net Present Value Analysis for Intersection Alternatives

5.6 Selection of the Preferred Alternative

The project's purpose is to address the deficient operational capacity of the US 41 and Bonita Beach Road intersection to relieve existing congestion and accommodate projected future traffic demand. The project's secondary goals are to 1) Enhance safety conditions; 2) Improve multi-modal access; and 3) Enhance system linkage through regional and local mobility.

Alternatives A (Enhanced Traffic Signal) and B (PDLT) were presented at the Alternatives Public Workshop conducted virtually on Monday, April 3 and in-person on Tuesday, April 4, 2023. Following the workshop, feedback was gathered from members of the public for both alternatives. The majority of public comments received expressed support for Alternative B, PDLT. Alternative B was favored as it does not add through lanes along US 41, was viewed as being more operationally efficient, and provided better pedestrian and bicyclist safety. These alternatives were also presented to the Lee County MPO on June 16, 2023 and the public support for the PDLT alternative was documented with the MPO Board.

Discussions were held with FDOT District 1 after the Alternatives Public Workshop and it was determined Alternative B – PDLT best aligns with the project's purpose and need and was selected as the preferred alternative. The following bullets summarize how the PDLT recommendation meets the primary and secondary purpose and need goals noted above:

- Transportation Demand/Capacity
 - In the 2050 future build condition, the average network delay for vehicles traveling through the PDLT would be approximately 50 percent less than the No-Build Alternative.
 - The estimated number of vehicles served by the PDLT in 2050 would be approximately 20 percent higher than the No-Build Alternative.
 - The PDLT is anticipated to improve average vehicle delay by over 45 seconds in both the 2050 mid-day and PM peak hours when compared to the No-Build Alternative at the main US 41 at Bonita Beach Road intersection only.
- Safety
 - Using the predictive safety analysis methods provided in the FDOT Safety Performance for Intersection Control Evaluation (SPICE) Tool, the PDLT intersection is predicted to decrease total and fatal/injury crashes by over 10 percent vs the No-Build Alternative over the 20-year life cycle from 2030 to 2050.
 - Increase the volume of residents and tourists from coastal communities that can be evacuated during an emergency event by improving operations at the intersection of two major evacuation routes.
 - Enhance access to facilities of the state evacuation route network.
 - Improve response times (due to enhanced access) to emergency events and incidences.
- Modal Interrelationships
 - Sidewalks in the study area are proposed to be widened to 12' shared-use paths along both sides of US 41 and Bonita Beach Road.
 - These shared-use paths will improve pedestrian/bicycle access and circulation by modifying/limiting opportunities for conflicts between automobiles and pedestrians/bicyclists.
 - The 12' shared-use path improvements proposed as part of the PDLT would help further enhance the future vision of the Coastal Loop Trail in the study area.
 - Additional median and concrete traffic separators are included in the PDLT concept to provide pedestrian refuge areas and better facilitate non-motorist crossings.
 - The PDLT will also enhance the performance and reliability of transit service operating along US 41 and Bonita Beach Road by reducing delays at the intersection.
- System Linkage
 - Improve the viability of US 41 as a regional alternative facility to I-75 by reducing travel delay.

- Enhance east-west access between two primary north-south transportation corridors (US 41 and I-75) as well as between the mainland of Lee County and coastal communities/tourist destinations to the west.
- Enhance freight mobility and access within the area as US 41 is designated as regional freight mobility corridor (Tier 1 Regional Freight Corridor) in the Lee County 2045 Long Range Transportation Plan.
- The proposed PDLT improvements will support local system linkage planning efforts by providing a Northeast Quadrant Roadway connecting US 41 to Arroyal Road. It will also widen the US 41 and Northeast Quadrant Roadway intersection's west approach to meet the intersection's future traffic demands.

6.0 AGENCY COORDINATION & PUBLIC INVOLVEMENT

6.1 Agency Coordination

6.1.1 ETDM

Initial evaluations of the proposed US 41 and Bonita Beach Road project occurred during the Efficient Transportation Decision Making (ETDM) process. The ETDM process helps to identify project stakeholders and affected communities, obtain preliminary agency and public comments, and determine environmentally sensitive areas and project impact levels. The ETDM Summary Report (#6291) for US 41 and Bonita Beach Road was published on January 18, 2020. The ETDM Summary Report shows 1 resource to be enhanced, 16 resources to have minimal impact, and 2 resources to have moderate impact. No resources had a degree of effect of substantial or requiring issue resolution. The report can be accessed on the ETDM public website (https://etdmpub.fla-etat.org/est/) and is found in **Appendix E**.

6.1.2 Project Kick-Off Letter

To announce the project's start, and in place of a project kick-off meeting, letters were emailed to elected and appointed officials, and newsletters were mailed to those whose property lies, in whole or part, within at least 300 feet on either side of each project alternative, as well as other local citizens who may be impacted by the construction of this project. The project kick-off letter described the PD&E study process, the project purpose and need, and the project schedule. Elected and Appointed Officials contact information is listed in the Public Involvement Plan (PIP). Names and mailing addresses were obtained from the Lee County property appraiser website. The project's *Comments and Coordination Report* includes a package of the kick-off letters, Newsletters #1 and #2, contact information, mailing addresses, and a map identifying properties receiving mailed notifications.

6.1.3 Project Update Meetings

Various agency meetings were conducted to give a project update and collect comments. Project update meetings were performed with the following agencies on the following days:

- 1. City of Bonita Springs and FDOT District 1 In-Person Meeting in Bartow, FL on January 29, 2020.
 - Project coordination meeting with City Council member and Assistant City Manager
- 2. City of Bonita Springs and FDOT District 1 Virtual via Microsoft Teams on 2/24/2021
 - \circ $\:$ Discuss Purpose & Need, traffic analysis, and initial intersection alternatives
- 3. Lee County and FDOT District 1 Virtual via GoToMeeting on 3/5/2021
 - o Discuss Purpose & Need, traffic analysis, and initial intersection alternatives

- 4. City of Bonita Springs City Council Members and FDOT District 1 Virtual via Microsoft Teams on 4/12/2021 and 4/13/2021
 - Project update meeting
- 5. City of Bonita Springs and FDOT District 1 Virtual via Microsoft Teams on 8/30/2021
 o Project update meeting
- 6. City of Bonita Springs and FDOT District 1 Virtual via Microsoft Teams on 1/24/2022
 o Project update meeting
- 7. City of Bonita Springs and FDOT District 1 In-Person Meeting on 01/05/2023 at City Office.
 - Project update meeting
- Lee County Department of Transportation and FDOT District 1 In-Person Meeting on 01/05/2023 at County Office.
 - Project update meeting
- Lee County MPO staff and FDOT District 1 In-Person Meeting on 01/05/2023 at MPO Office.
 - Project update meeting
- 10. Lee MPO Technical Advisory Committee (TAC) and Citizen Advisory Committee (CAC) Meetings – In-Person Presentation on 6/1/2023.
 - Presented update on study, overview of intersection alternatives, and summary of the Alternatives Public Workshop
- 11. Lee MPO Governing Board In-Person Presentation on 6/16/2023 at Board Meeting.
 - Presented update on study, overview of intersection alternatives, and summary of the Alternatives Public Workshop
- 12. Lee MPO Bicycle Pedestrian Coordinating Committee Meeting In-Person Presentation on 6/27/2023.
 - Presented update on study, overview of intersection alternatives, and summary of the Alternatives Public Workshop
- 13. City of Bonita Springs, Lee County MPO, and FDOT District 1 Virtual via Microsoft Teams on 7/14/2023
 - Project update meeting
- 14. City of Bonita Springs Consultant and FDOT District 1 In-Person Meeting on 8/3/2023
 - Discuss Northwest Quadrant Roadway design status
- 15. LeeTran and FDOT District 1 Virtual via Microsoft Teams on 9/21/2023
 - Discuss transit stop improvements to be included in the preferred alternative
- 16. City of Bonita Springs and FDOT District 1 Virtual via Microsoft Teams on 12/8/2023
 - Discuss Northwest Quadrant Roadway design status

Meeting agendas, along with questions and comments obtained from these project update presentations, are contained in the project's *Comments and Coordination Report*.

6.1.4 Business Working Group

FDOT created a Business Working Group (BWG) of businesses in the immediate US 41 and Bonita Beach Road. The BWG's purpose was to meet virtually to obtain input about the transportation needs of the area, answer questions and keep business owners informed regarding the study. Letters were sent to eight business owners in May 2021. These were followed up with emails to each business owner on June 21, 2021, and one response was received. On June 29, 2021, a second email was sent to the business who had not responded. These emails included a Doodle poll to select a potential date for a virtual meeting. There were two responses showing interest in a virtual meeting. A different approach was taken. On July 21, 2021, FDOT District 1 and consultant team representatives traveled to Bonita Springs and conducted impromptu meetings with six of the eight businesses with a series of prepared questions we asked the person in-charge at the business at that time. The businesses were generally very cooperative, provided answers to our questions and supported improving the intersection. Following these meetings, no further BWG activities have occurred.

6.1.5 Transit Coordination

The PDLT concept will impact transit stops within the intersection study area thus coordination efforts were performed with the FDOT District 1 and LeeTran as part of refinements to the Preferred Alternative. FDOT District 1 Transit staff reviewed the Preferred Alternative PDLT concept and provided comments on transit stop impacts. A follow up meeting was held with these FDOT District 1 Transit staff on September 21, 2023 to discuss potential transit stop relocations prior to coordinating with LeeTran.

LeeTran was then contacted via email on September 22, 2023 to verify existing transit stops within the study area and provide input regarding relocation of potential transit stops as part of the PDLT concept. Dawn Huff, the Planning and Scheduling Manager with LeeTran, responded via email on October 11, 2023 with a review of the PDLT concept and input regarding each transit stop. A copy of this email and Ms. Huff's response to comments can be found in the project's *Comments and Coordination Report* and **Appendix F**. The proposed transit stop locations are discussed in **Section 7.7**.

6.2 Public Involvement

6.2.1 Public Workshop Announcements

To announce the virtual (April 3, 2023) and in-person (April 4, 2023) Alternatives Public Meeting and solicit participation, the following notifications were sent to potential attendees or published on the following dates:

- 1. Invitation letters emailed to 84 elected and appointed officials emailed 03/06/2023;
- 2. Newsletters mailed to 754 property owners and interested persons 03/06/2023;

- 3. Display advertisement published in the News-Press 03/24/2023;
- 4. Notification posted in the Florida Administrative Register (FAR) 03/24/2023;
- 5. Notification posted to the project website and FDOT public notices webpage 03/27/2023; and
- 6. Press release sent by FDOT District 1 03/27/2023.

A package of the announcements is contained in the project's Comments and Coordination Report.

6.2.2 Alternatives Public Workshop

The Alternatives Public Workshop was performed in a hybrid format consisting of both a virtual component hosted online via GoToWebinar at 6:00 PM on Monday, April 3, 2023, as well as an inperson component located at the Bonita Springs Recreation Center (26740 Pine Ave., Bonita Springs, FL 34135) from 5:00 PM to 7:00 PM on Tuesday, April 4, 2023. This process followed and was consistent with the most current FDOT guidelines for Hybrid Public Meetings.

The online component consisted of a live introduction by the FDOT Project Manager followed by a narrated presentation and a live question and answer period with the project team. The inperson meeting consisted of an open house format to provide an opportunity for the public to review the proposed project, speak one-on-one with project team members, and voice their comments or concerns. Project documents, including comment forms, were available for public review on the project website: https://www.swflroads.com/project/444321-1 beginning on March 27, 2023. Additionally, there was a link on the project website that allowed citizens to submit comments without the use of the comment form. Phone and email were also available for providing input. A total of 12 guests attended the public workshop virtually using GoToWebinar and a total of 30 guests attended the public workshop in person. Of the 30 public citizens that attended the in-person workshop, eight were public officials or representatives.

A total of 18 responses (emailed comments, in-person, virtual, and website) were received during the comment period between April 3 and April 14, 2023. Of these, 11 in-person submissions, 5 virtual submissions, 2 emailed comments, and 1 website comment were received. The following list provides a high-level overview of the concerns:

- 6 traffic concerns expressed concern for congestion surrounding the intersection, and traffic displacement to surrounding areas.
- 5 signal location concerns requests to clarify locations of new/moving traffic signals, suggesting proposed signal locations.
- 3 plaza access concerns expressed concerns regarding the location of access to Springs Plaza and Center of Bonita Springs.
- 9 Partial DLT Alternative supporters expressed support for the Partial Displaced Left Turn.
- 3 pedestrian and bicycle concerns expressed concern for time crossing the intersection and availability of pedestrian and bicycle accommodations.

- 3 speed concerns expressed concerns regarding the current and proposed speed limits.
- 10 specific concerns these comments were lengthy and requested specific items that cannot be grouped into any of the previous categories, such as noise, stormwater runoff, impact to nature, flyover alternative, public transportation, using AI for changing signals, Angler's Paradise access and specific property concerns.

Generally the comments were in support of the project and alternatives to alleviate congestion and improve safety. Details of the specific public comments and responses to those are available in the *Comments and Coordination Report*.

6.3 Public Hearing

6.3.1 Public Hearing Announcements

To announce the March 26, 2024 virtual and in-person Public Hearing and solicit participation, the following notifications were sent to potential attendees or published on the following dates:

- 1. Email to Elected Officials Distributed on February 28, 2024
- 2. Email to Appointed Officials Distributed on February 28, 2024
- 3. Email to Interested Parties Distributed on February 28, 2024
- 4. Email to ETAT Members Distributed on February 28, 2024
- 5. Newsletter to Property Owners Mailed on February 28, 2024
- 6. Florida Administrative Register Published on March 15, 2024
- 7. FDOT Public Notice Website Published on March 5, 2024
- 8. Press Release Distributed on March 18, 2024
- 9. Legal Advertisements Published in The News-Press on March 8, 2024, and March 19, 2024

A package of the announcements is contained in the project's Comments and Coordination Report.

6.3.2 Public Hearing

FDOT conducted a hybrid public hearing to provide interested persons with information on the preferred alternative selected by FDOT, and to allow the public the opportunity to comment. The hearing was held on Tuesday, March 26, 2024, at the Bonita Springs Recreation Center, and the formal hearing portion was live-streamed online through GoToWebinar. The in-person venue was chosen because of its proximity to the project limits, the availability of a larger space, the location of the previous public meeting, and its familiarity with the locals. Meeting materials were posted to the project webpage (https://www.swflroads.com/project/444321-1) on March 19, 2024.

As attendees entered the hearing, they were provided with a handout and the project team explained the comment process. At the in-person event, an open house was held from 5 - 6 PM. Members of the study team were available to answer questions and discuss the project during

this time. A separate table for noise, right-of-way, draft project documents, and transportation development process information was available to the public.

A total of 67 people attended the in-person meeting which included 9 FDOT and consultant staff plus 3 elected officials. The online meeting was attended by 52 people.

The following project-related information was on display:

- Project Location Map
- Typical Sections of US 41
- Typical Sections of Bonita Beach Road
- Preferred Alternative Map
- Welcome and Thank You Boards
- Schedule and Funding
- Evaluation Matrix
- Comment Board
- Title VI
- Federal & State Requirements
- Floodplain Map

At 6 PM the formal portion of the hearing began for both the in-person and online attendees. A project presentation was played, and the public had the opportunity to provide verbal comments. Two attendees provided verbal testimony at the in-person event, one attendee provided verbal comment through the online event, and one attendee provided a comment that was read aloud by the moderator through the online event.

A total of 16 comments were received during the comment period between March 26 and April 5, 2024. The 16 comments came in the form of three speakers during the Hearing, one comment via the virtual Hearing "chat" feature, eight emails (two before the Hearing and six after the Hearing), three written comment forms obtained at the Hearing, and one comment submitted via the project website.

The following list provides a high-level overview of the concerns:

- 4 traffic concerns expressed concern for congestion surrounding the intersection in relation to new development, and traffic displacement to surrounding areas.
- 5 signal location and operation concerns request to understand signal operations during a hurricane, installation of intersection safety cameras, concerns about the surrounding traffic signal's coordination with the US 41 and Bonita Beach Road intersection, concerns about signal timing to accommodate traffic higher volumes, and median modification to allow for an additional turning lane going US 41 northbound.
- 1 Gas station access concern expressed concerns regarding the exit location on US 41 closest to the US 41 and Bonita Beach Road intersection.

- 1 Pedestrian and bicycle concern expressed interest to understand how the future Bonita Estero Rail Trail (BERT) will connect to the area's pedestrian and bicycle infrastructure.
- 1 Speed concern expressed concerns regarding the current speed limits in relation to safety.
- 1 Property acquisition concern surrounding business concerned about the impact the roadway project will have on their property.
- 4 specific concerns these comments requested specific items that cannot be grouped into any of the previous categories, such as compensation for negative impacts related to the proposed roadway project, noise, stormwater runoff, flooding, diminution of property values, and flyover alternative.

During the Open House portion of the Public Hearing, public conversations with the Study Team were generally supportive of the project and the Preferred Alternative to alleviate congestion and improve safety in the Study Area. However, the written/on-the-record spoken comments were related to concerns about increased congestion in the surrounding areas and how the Preferred Alternative signalized intersection would operate.

In response to the area-wide traffic concerns, the Study Team noted the extensive traffic analysis that was performed and how adjacent roadways/intersections are being improved as part of the Preferred Alternative to help alleviate congestion in the surrounding roadway network. In response to the signal location/operation concerns, the Study Team explained how the signal could operate under different circumstances (e.g. lost power due to a hurricane) and how the signal coordination will operate to facilitate the higher traffic volumes in the area.

Details of the specific public comments and responses, the public hearing notifications (including emails, advertisements, newsletter invite, and mailing list), the sign-in sheets, all hearing materials, and comment sheets from the meeting (as well as those received in the 10 days following), can be found in the *Comments and Coordination Report* located in the project files. The Public Hearing Transcript is in the project file.

7.0 PREFERRED ALTERNATIVE

This section includes a description of design features of the PDLT preferred alternative. The concept plans for the preferred alternative are located in **Appendix G**.

7.1 Roadway Characteristics of Preferred Alternative

The preferred alternative at the US 41 and Bonita Beach Road intersection is the PDLT. The following describes the PDLT's roadway characteristics:

- Northbound and southbound left turn movements are relocated to the outside of the opposing traffic flow, allowing the northbound and southbound left turning movements to operate in the same signal phase as the northbound and southbound through movements.
- Two new signalized "crossover" intersections are proposed along US 41 approximately 675' south and 460' north of Bonita Beach Road to allow left turning vehicles to cross to the other side of the opposing flow.
- The southbound and eastbound left turn movements are proposed to have three lanes each.
- The eastbound and westbound right turn movements are proposed to have two lanes each.
- US 41 is proposed to remain at six total through lanes, three in each direction.

The preferred alternative's limits spanned from Sta. 221+19 to Sta. 271+81 along US 41 and from Sta. 254+57 to Sta. 300+33 along Bonita Beach Road, where they then tie into the existing roadway. The following describes additional improvements along US 41 outside of the main PDLT intersection:

- Signalization and turn lane additions at the US 41 and Foley Road intersection.
- At the north crossover intersection, the US 41 northbound lanes will become four lanes and the fourth lane is dropped prior to the Imperial River bridge.
- Converting the US 41 at the Center of Bonita Springs intersection from a traditional signalized intersection to a thru-cut intersection, restricting eastbound/westbound through movements. This intersection would be the tie-in points for the Northwest and Northeast Quadrant Roadways.
- Access management refinements along US 41.

A new Northwest Quadrant Roadway from Bonita Beach Road (east-west Sta. 259+91) to US 41 (north-south Sta. 260+00) will be constructed by the City of Bonita Springs and is included in the preferred alternative. Also included is a new Northeast Quadrant Roadway from US 41 to Arroyal Road that ties-in at the new thru-cut signal noted above.

As previously discussed in **Section 5.4.2**, Bonita Beach Road is planned to be widened from a four-lane basic roadway to a six-lane basic roadway from Sta. 267+00 to Sta. 286+00 (three lanes will extend eastbound to Sta. 300+33). Turn lane improvements are also proposed at the existing signalized intersections of the Center of Bonita Springs driveway and Arroyal Road with Bonita Beach Road.

The following sections discuss the specific roadway characteristics of the preferred alternative along US 41, Bonita Beach Road, and the quadrant roadway system.

7.1.1 US 41 Roadway Characteristics

The southern end of US 41 between Foley Road (Sta. 222+75) and the Springs Plaza/Access Road (Sta. 232+50) (**Figure 67**) serves to transition between the existing conditions to the south and the PDLT improvements to the north. The following describes the specific roadway characteristics in this segment:

- 25' wide median, including Type E curb and gutter;
- Three 11' travel lanes in each direction;
- 7' wide on-street buffered bicycle lanes;
- Type F curb and gutter outside of the bicycle lanes;
- Varies 4' to 7' grass strip between the back of curb and sidewalk;
- 6' wide sidewalks on both sides of US 41; and
- Varies 29' to 39' landscape area between the back of sidewalk and right-of-way line.

Moving north along US 41, the pedestrian/bicycle facilities transition from sidewalk and on-street bicycle lanes to 12-foot wide shared-use paths on both sides of US 41. The following roadway characteristics are present from Springs Plaza/Access Road (Sta. 232+50) to the Southern "Crossover" Intersection (Sta. 239+00) (**Figure 68**):

- 28' wide median, including Type E curb and gutter;
- Three 11' travel lanes in each direction;
- Type F curb and gutter outside of the travel lanes;
- Varies 15' to 28' grass strip between the back of curb and shared-use paths;
- 12' wide shared-use paths on both sides of US 41;
 - Northbound shared-use path begins at Springs Plaza (Sta. 232+50); and
 - \circ Southbound shared-use path ends just south of Access Road (Sta. 237+00).
- Varies 15' to 20' landscape area between the back of shared-use paths and right-of-way line.

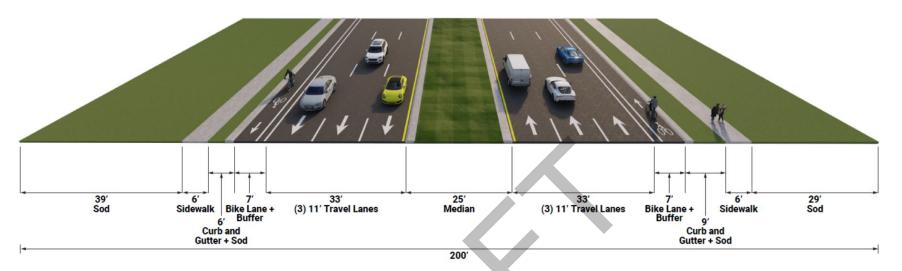

Figure 67: US 41 – Foley Road to Springs Plaza/Access Road

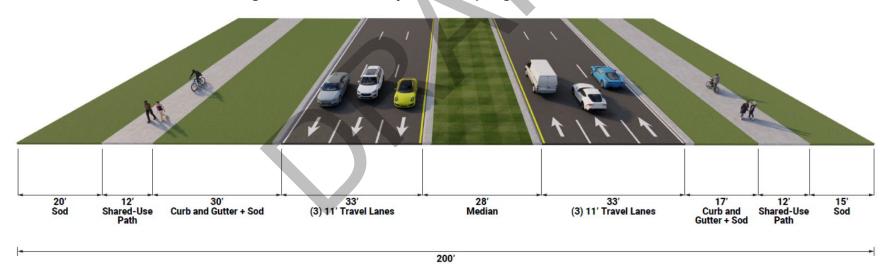

Figure 68: US 41 – Springs Plaza/Access Road to Southern "Crossover" Intersection

Between the Southern "Crossover" Intersection (Sta. 239+00) and the US 41 and Bonita Beach Road intersection (Sta. 246+00) (**Figure 69**), the shared-use paths on both roadway sides are maintained and travel lanes associated with the PDLT are added:

- 15.5' wide median, including Type E curb and gutter;
- Three 11' travel lanes in each direction;
- Exclusive 11' northbound right turn lane;
- Dual 11' northbound exclusive left turn lanes positioned to the west of the southbound through lanes, with a 6' traffic separator in between;
- Dual 11' eastbound to southbound exclusive right turn lanes positioned to the west of the northbound left turn lanes, with a 6' traffic separator in between;
- Type F curb and gutter outside of the travel lanes;
- 4' grass buffer on both sides between back of curb and the shared-use paths;
- 12' wide shared-use paths on both sides of US 41;
- A 17.5' landscape area between the back of the east side shared-use path and right-ofway line;
- A 6' tie-back area between the back of the west side shared-use path and proposed rightof-way line; and
- An additional 8' of right-of-way will be needed on the west side of US 41 to accommodate this cross section.

The north leg of the US 41 and Bonita Beach Road intersection (Sta. 246+00), up to the Northern "Crossover" Intersection (Sta. 251+00) (**Figure 70**), maintains roadway characteristics similar to the south leg of the intersection:

- 26.5' wide median, including Type E curb and gutter;
- Three 11' travel lanes in each direction;
- Exclusive 11' southbound right turn lane;
- Triple 11' southbound exclusive left turn lanes positioned to the east of the northbound through lanes, with a 6' traffic separator in between;
- Dual 11' westbound to northbound exclusive right turn lanes positioned to the east of the southbound left turn lanes, with a 6' traffic separator in between;
- Type F curb and gutter outside of the travel lanes;
- 4' grass buffer on both sides between back of curb and the shared-use paths;
- 12' wide shared-use paths on both sides of US 41;
- A 32.5' landscape area between the back of the west side shared-use path and right-ofway line;
- A 6' tie-back area between the back of the east side shared-use path and proposed rightof-way line; and

• Due to the alignment of the northbound and southbound lanes through the intersection, the southbound approach is shifted to the east. With this shift, an additional 45 feet of right-of-way will be needed on the east side of US 41 and the existing drainage canal in the northeast corner of the intersection will be boxed in a 500' long 10'x7' CBC.

The northern portion of US 41 between the Northern "Crossover" Intersection (Sta. 251+00) and the Imperial River Boat Ramp (Sta. 270+00) includes the following roadway characteristics (**Figure 71**):

- 28' wide median, including Type E curb and gutter;
- Four 11' northbound through lanes (outside lane drops at the Imperial River Boat Ramp);
- Four 11' southbound through lanes;
 - The inside lane is an "auxiliary" lane beginning at Sta. 265+00 which then drops into the triple southbound left turn lanes.
- Continuous southbound right turn lane from Bonita Beach Road (Sta. 247+00) to south of Northwest Quadrant Roadway signalized intersection (Sta 259+00).
- Type F curb and gutter outside of the travel lanes;
- Varies 4' to 10' grass buffer on both sides between back of curb and shared-use paths;
- 12' wide shared-use paths on both sides of US 41 beginning and ending just north of the Imperial River Boat Ramp (Sta. 271+00); and
- Varies 25' to 30' landscape area between the back of shared-use paths and right-of-way line.

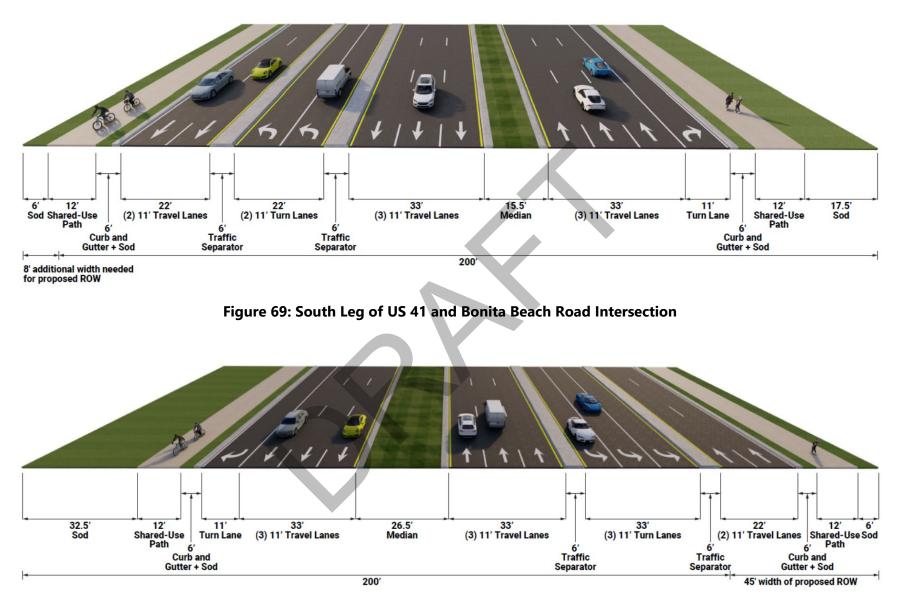

Figure 70: North Leg of US 41 and Bonita Beach Road Intersection

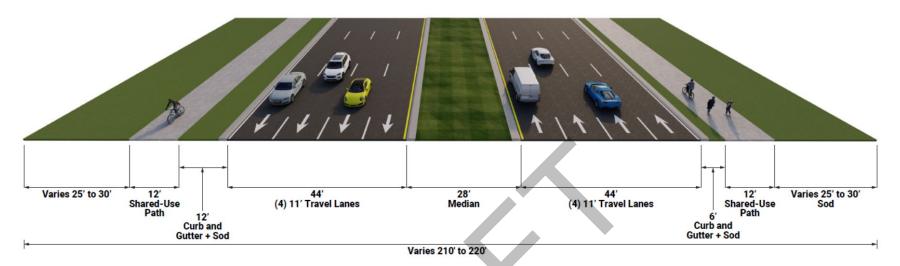

Figure 71: US 41 between Center of Bonita Springs and Imperial River Boat Ramp

7.1.2 Bonita Beach Road Roadway Characteristics

Bonita Beach Road has three unique cross sections through the study area: west of US 41, from US 41 to Arroyal Road, and from Arroyal Road to Spanish Wells Boulevard. The preferred alternative cross sections include the following roadway characteristics:

- West of US 41 (Figure 72) -
 - 6' wide traffic separator;
 - Three 11' travel lanes in each direction;
 - Three 11' eastbound left turn lanes;
 - Two 11' eastbound right turn lanes;
 - Type F curb and gutter outside of the travel lanes;
 - 4' grass strip between the back of curb and shared-use paths;
 - 12' wide shared-use paths on both sides of Bonita Beach Road;
 - Shared-use paths begin and end just east of the Center of Bonita Springs driveway (Sta. 267+00) and continue eastward to US 41.
 - 6' landscape area between the back of the shared-use path and right-of-way line; and
 - An additional 30' of right-of-way will be needed on Bonita Beach Road's south side to accommodate this cross section.
- East of US 41 (Figure 73) -
 - 7' wide traffic separator;
 - Three 11' travel lanes in each direction;
 - Two 11' westbound left turn lanes;
 - Two 11' westbound right turn lanes;
 - Type F curb and gutter outside of the travel lanes;
 - 4' grass strip between the back of curb and shared-use paths; and
 - 12' wide shared-use paths on both sides of Bonita Beach Road;
 - Shared-use paths are between US 41 and begin/end at Arroyal Road (Sta. 286+10);
 - Varies 4' to 6' landscape area between the back of sidewalk and right-of-way line; and
 - An additional 11' of right-of-way will be needed on the north side and an additional 12' of right-of-way will be needed on Bonita Beach Road's south side to accommodate this cross section.
- From Arroyal Road (Sta. 286+40) to Spanish Wells Boulevard (Sta. 301+00) (Figure 74) -
 - Varies 30' to 40' wide median with Type E curb and gutter;
 - Two 12' travel lanes in the westbound direction;
 - Three 12' travel lanes in the eastbound direction;

- Type F curb and gutter outside of the travel lanes;
- Varies 2' to 30' grass strip between the back of curb and sidewalk;
- \circ 5' wide sidewalk on both sides of Bonita Beach Road; and
- Varies 0' to 20' landscape area between the back of sidewalk and right-of-way line.

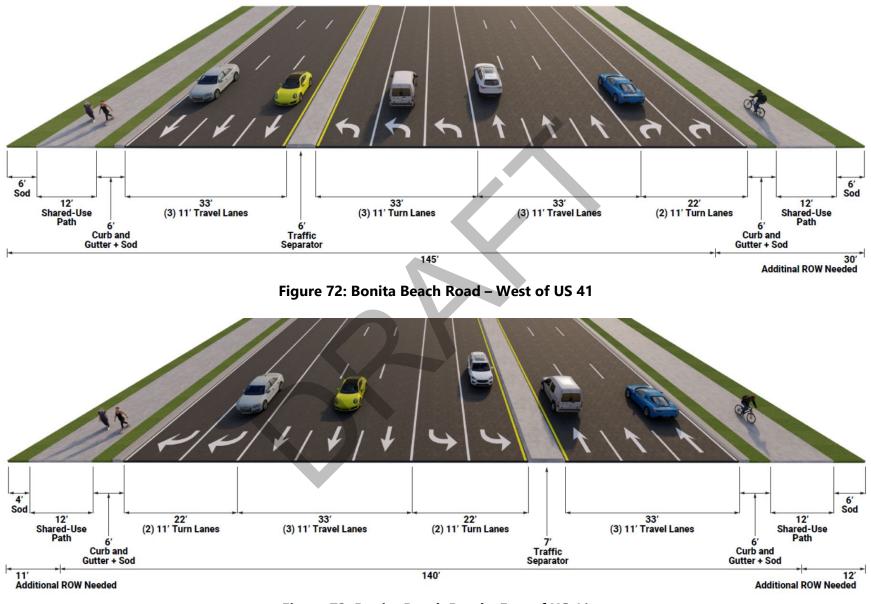

Figure 73: Bonita Beach Road – East of US 41

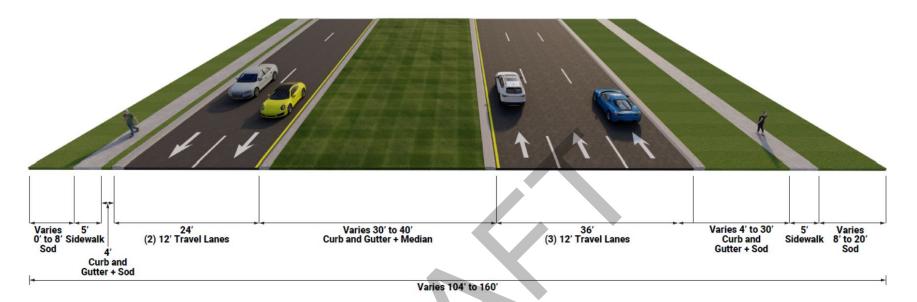

Figure 74: Bonita Beach Road from Arroyal Road to Spanish Wells Boulevard

7.1.3 Quadrant Roadway System

A new Northwest Quadrant Roadway from Bonita Beach Road at Windsor Road (Bonita Beach Road Sta. 260+00) to US 41 at the Center of Bonita Springs (US 41 Sta. 260+00) will be constructed by the City of Bonita Springs before the preferred alternative is planned to be constructed. The City's Northwest Quadrant Roadway design concept ties in at the existing US 41/Center of Bonita Springs intersection (US 41 Sta. 260+00) and is not making any improvements to this intersection. In the future condition, this intersection will not have enough capacity to accommodate the forecasted traffic demand, necessitating additional turn lane improvements on the intersection's west leg. As part of the preferred alternative, the Northwest Quadrant Roadway is being modified from the northwest corner of the Center of Bonita Springs Shopping Plaza to US 41. The roadway characteristics for this change is discussed below:

- Northwest Corner of the Center of Bonita Springs Shopping Plaza to US 41 (Figure 75):
 - Roadway is widened to develop a center median with varying width;
 - One 11' travel lane in each direction;
 - o 6' sidewalk on the north side of the roadway;
 - 12' shared-use path on the south side of the roadway; and
 - New 11' westbound left turn lane into Center of Bonita Springs behind the Old Time Pottery building.
- West Leg at US 41 Intersection (Figure 76):
 - 4' concrete traffic separator;
 - One 11' eastbound right turn lane;
 - Three 11' eastbound left turn lanes;
 - One 11' westbound receiving lane;
 - Type F curb and gutter outside of the travel lanes;
 - Varies 0' to 4' grass strip between the back of curb and sidewalk/shared-use path;
 - 12' wide shared-use path on the south side;
 - 6' wide sidewalk on the north side; and
 - Varies 4' to 6' tie-back area between the back of sidewalk/shared-use path and proposed right-of-way line.

Tying into the east leg of this intersection is a new Northeast Quadrant Roadway proposed between US 41 and Arroyal Road, intersecting at Arroyal Road and Carolina Street. This will be a new three-lane roadway with two lanes eastbound and one lane westbound, as shown in **Figure 77**. The lane configuration at the US 41 intersection is discussed below:

- 4' concrete traffic separator (approximately 300' in length);
- One 11' westbound left turn lane;
- One 11' westbound right turn lane;
- Two 11' eastbound receiving lanes;

- 7' buffered bicycle lanes in each direction;
- Type F curb and gutter outside of the buffered bicycle lanes;
- 3' grass strip between the back of curb and sidewalk;
- 6' wide sidewalks on both sides; and
- 2' tie-back area between the back of sidewalk and proposed right-of-way line.

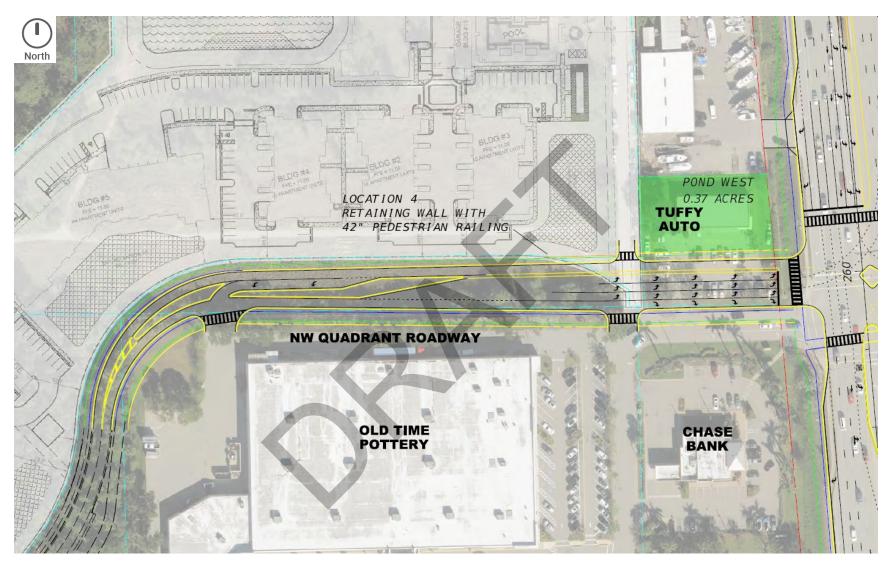

Figure 75: Northwest Quadrant Roadway Changes

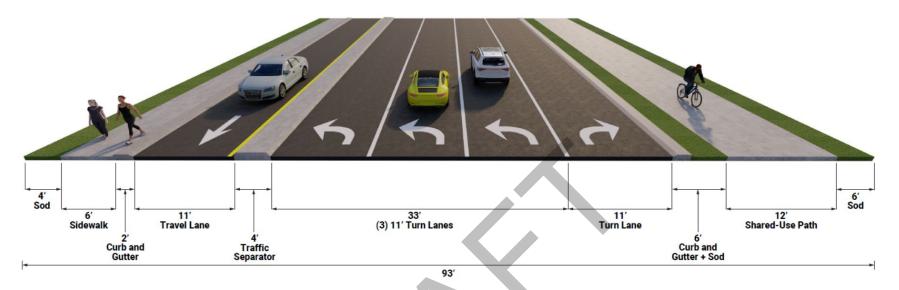

Figure 76: Northwest Quadrant Roadway – West Leg at US 41

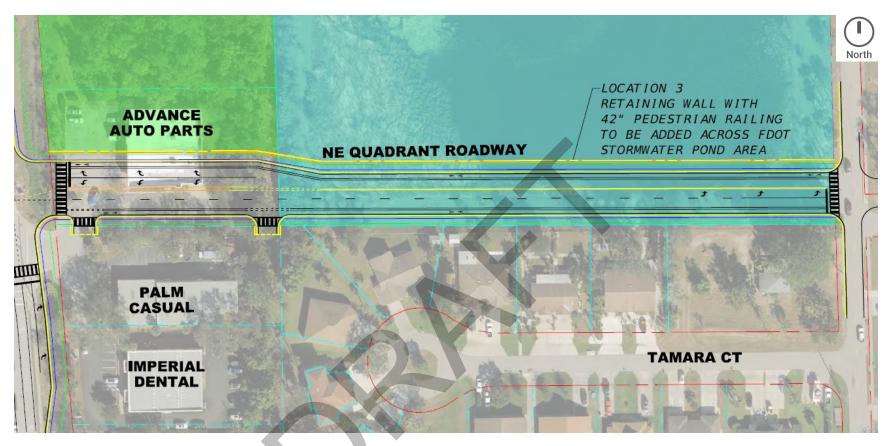

Figure 77: New Northeast Quadrant Roadway

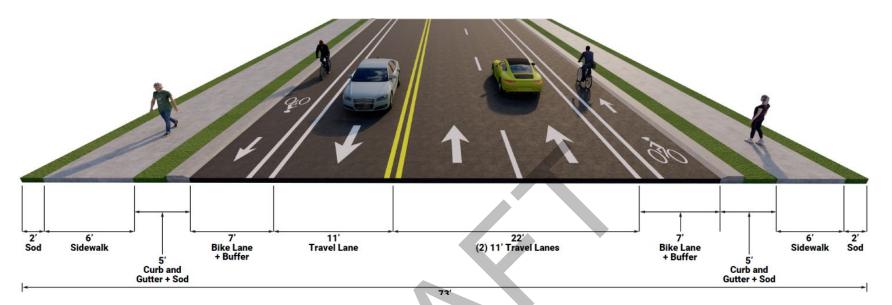

Figure 78: Northeast Quadrant Roadway Typical Section

7.2 Access Management

As noted in **Section 2.2.3**, the existing access management classification for US 41 is an Access Class 5 (Restrictive) facility (per Table 201.4.2 of the FDM) with an existing 50-mph posted speed limit. In the preferred alternative, US 41 is proposed to remain an Access Class 5 facility but the posted speed limit is proposed to be lowered to 45 mph, as discussed in **Section 0**. The following discusses the modifications to access along US 41 as part of the preferred alternative improvements:

- Foley Road (Sta. 222+75) being converted from a full median opening to a signalized intersection when signal warrants are met (discussed further in **Section 7.8**).
- Existing directional median opening at Sportsman's Wholesale Bonita Springs/Springs Plaza driveway (Sta. 233+00):
 - Northbound left turn access to Sportsman's Wholesale Bonita Springs will remain open but southbound left turn access to Springs Plaza will be removed, thus only right-in/right-out access will be provided.
- New signalized intersection at Southern "Crossover" Intersection (Sta. 239+00) (discussed further in **Section 7.8**).
- Existing driveway for the Aspen Dental (Sta. 241+00) will remain but be shifted to the west and connect to the relocated eastbound to southbound right turn lanes.
- New signalized intersection at Northern "Crossover" Intersection (Sta. 251+00) (discussed further in **Section 7.8**).
- Access for the Palm Casual/Imperial Dental properties will be moved from the original signalized intersection at the Center of Bonita Springs (Sta. 260+00) to a driveway connection along the Northeast Quadrant Roadway approximately 350' east of the US 41 signalized intersection.
- Existing driveway at The Lockup Self Storage (Sta. 266+50):
 - Proposed northbound directional median opening to provide left turn access to the planned Angler's Paradise driveway.

While Bonita Beach Road is a local roadway, the existing access management classification also most closely resembles an Access Class 5 (Restrictive) facility. No proposed changes to access or driveways are proposed along Bonita Beach Road as part of the preferred alternative.

7.3 Right-of-Way

The preferred alternative is anticipated to impact 18 parcels and requires approximately 3.5 acres of right-of-way for the roadway impacts. Stormwater impacts associated with the preferred alternative is anticipated to impact an additional six parcels for approximately 4.9 acres, as shown in **Table 30**. Of the 24 total parcel impacts, two are anticipated to require business relocations: The Tuffy Auto in the northwest corner and the AutoZone in the northeast corner of the US 41

intersection with the new proposed Northwest/Northeast Quadrant Roadway. The total right-ofway cost for the project (roadway and stormwater ponds) is estimated at \$22,100,000.

| Limits | Parcels Impacted | ROW Acreage | Pond + FPCA Acreage | Total ROW Acreage | Total ROW Cost Estimate |
|--|---------------------|----------------|---------------------------|----------------------|----------------------------|
| Displaced Left Turn Lane (Roadway Only) | 18 | 3.5 | 0.0 | 3.5 | \$13,600,000 |
| Displaced Left Turn Lane (Pond Sites) | 6 | 0.0 | 4.9 | 4.9 | \$8,500,000 |
| Totals | 24 | 3.5 | 4.9 | 8.4 | \$22,100,000 |

 Table 30: ROW Needs and Cost Estimates

The Conceptual Stage Relocation Plan (CSRP), located on the project file, provided a search for available commercial property within a 5 mile radius of the two business relocations. This search found a low supply of commercial property when focused on automotive repair shop and automotive parts store within the project area. The CSRP concluded finding comparable relocation sites may require increased assistance and coordination with business owners throughout the relocation process to provide profitable business operations after the relocation.

7.4 Design and Posted Speeds

As noted in **Section 4.2**, the preferred alternative concept was developed following the design criteria for a 45 mph roadway. While the existing design/posted speed along US 41 in the study area is 50 mph, the design/posted speed limit is proposed to be reduced to 45 mph to facilitate travel through the new PDLT intersection. The 45 mph posted speed is proposed for the following limits:

- Northbound from just south of Foley Road (Sta. 222+75) to just north of Riverview Center Boulevard, approximately 1/4 mile north of the Imperial River Bridge.
- Southbound from just north of Riverview Center Boulevard to just south of Foley Road (Sta. 222+75).

7.5 Horizontal and Vertical Geometry

7.5.1 Horizontal Alignment

Ten horizontal curves are present along US 41 for the preferred alternative. The existing horizontal alignments and curves along Bonita Beach Road are recommended to be maintained. The horizontal curves along US 41 are associated with right turn movements at the intersection with Bonita Beach Road and the Southern/Northern "Crossover" Intersections. Data for the preferred

alternative curves can be seen in **Table 31** and are noted in the preferred alternative plan sheets provided in **Appendix G**.

| Location | Length (FT) | Radius (FT) |
|--|-------------|-------------|
| Southern "Crossover" Intersection (NB Approach) | 65' | 160′ |
| Southern "Crossover" Intersection (NB Receiving) | 46′ | 140′ |
| Southern "Crossover" Intersection (SB Approach) | 80' | 167′ |
| US 41 and Bonita Beach Road Eastbound Right-Turn | 90' | 135′ |
| US 41 and Bonita Beach Road Westbound Right-Turn | 108′ | 143′ |
| US 41 and Bonita Beach Road Northbound Right-Turn | 164' | 100′ |
| US 41 and Bonita Beach Road Southbound Right-Turn | 168′ | 100′ |
| Northern "Crossover" Intersection (SB Approach) | 50' | 150′ |
| Northern "Crossover" Intersection (SB Receiving) | 66' | 200′ |
| Northern "Crossover" Intersection (NB Approach) | 48' | 164′ |

Table 31: US 41 PDLT Horizontal Curves

7.5.2 Vertical Alignment

As discussed in **Section 2.2.9**, as-built plans for both US 41 and Bonita Beach Road were reviewed and there is one 328 foot (100 meter) vertical curve present along US 41 as it approaches the Imperial River bridge. This vertical curve begins with an elevation of approximately 11.7 feet (3.6 meters) at Sta. 267+37 and ends with an elevation of approximately 14.7 feet (4.5 meters) at Sta. 270+65, for a total elevation change of 3 feet (0.9 meters). It is recommended the proposed vertical alignment matches the existing vertical alignment where possible. However, profile adjustments may be needed to maintain positive drainage where existing grades fall below 0.30 percent, which is the minimum allowed grade on 45 mph curbed roadways according to FDM Section 210.10.1.1. In areas where profile adjustments may be necessary, it is recommended to "rock" the grade as needed to facilitate the drainage patterns.

7.6 Design Variations and Design Exceptions

No design variations or exceptions are proposed for this project.

7.7 Multi-Modal Accommodations

7.7.1 Bicycle and Pedestrian Accommodations

As discussed in **Section 7.1**, the following pedestrian/bicycle facilities are proposed as part of the Preferred Alternative:

- 6' sidewalks are proposed on the south end of the corridor:
 - In the northbound direction from Foley Road (Sta. 222+75) to Springs Plaza (Sta. 232+50); and
 - In the southbound direction from just south of Access Road (Sta. 237+00) to Foley Road (Sta. 222+75).
- 7' on-street buffered bicycle lanes are proposed on the south end of the corridor:
 - In the northbound direction from Foley Road (Sta. 222+75) to just north of Springs Plaza (Sta. 234+50).
 - In the southbound direction from just south of Access Road (Sta. 237+00) to Foley Road (Sta. 222+75).
- 12' shared-use paths are proposed on both sides of US 41:
 - In the northbound direction from Springs Plaza (Sta. 232+50) to just north of the Imperial River Boat Ramp (Sta. 271+00).
 - In the southbound direction from just north of the Imperial River Boat Ramp (Sta. 271+00) to just south of Access Road (Sta. 237+00).
- 12' shared-use paths are proposed on both sides of Bonita Beach Road between the east side of the Center of Bonita Springs signalized intersection (Sta. 267+00) and the west side of the Arroyal Road signalized intersection (Sta. 286+00).

7.7.2 Trail Accommodations

The OGT and the Lee County MPO have identified trail opportunities in the vicinity of the US 41 and Bonita Beach Road study intersection. The Coastal Loop Trail is a spur loop from the Southwest Coastal Regional Trail, which is part of the larger Shared-Use Nonmotorized (SUN) Trail Program. This is a planned loop trail that begins at the Southwest Coastal Regional Trail in Bonita Springs, travels along Bonita Beach Road to the barrier islands, then travels through Fort Myers Beach and southern Fort Myers before connecting back to the Southwest Coastal Regional Trail east of US 41 in Fort Myers. Through discussions with Lee County MPO, no future funding has been dedicated for Coastal Loop Trail improvements in the vicinity of the US 41 and Bonita Beach Road intersection as per the date of this report.

7.7.3 Transit Accommodations

As discussed in **Section 6.1.5** and shown in **Appendix F**, LeeTran reviewed the bus stops within the study area in relation to the preferred alternative PDLT concept. Based on this review, the following transit accommodations are proposed and shown on the PDLT concept in **Appendix G**:

- US 41 shown in **Figure 79**:
 - Relocate the southbound bus stop in front of the Wendy's approximately 550' south to be in front of the Kentucky Fried Chicken (KFC) so it is outside of the Southern "Crossover" Intersection influence area.
 - Add a new northbound bus stop in front of the McDonald's creating a complimentary bus stop to the southbound bus stop.
 - Install a mid-block crossing with a Pedestrian Hybrid Beacon (PHB) to connect the relocated southbound bus stop and new northbound bus stop.
 - No bus stops are located north of Bonita Beach Road in the study area.
- Bonita Beach Road:
 - The two eastbound bus stops east of US 41 are being shifted approximately 20' south to accommodate the third eastbound through lane.
 - The one westbound bus stop east of US 41 will remain in the same location.
 - No bus stops are located west of US 41 within the study area.

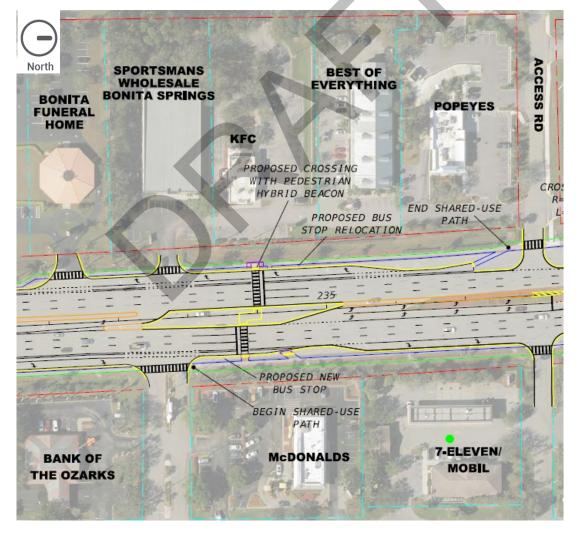

Figure 79: US 41 New Transit Stop Locations and Crossing with PHB

7.8 Intersection Concepts and Signal Analysis

Outside of the main US 41/Bonita Beach Road intersection and "Crossover" intersections (discussed in detail in **Section 7.1**), additional intersection improvements throughout the study area are proposed as part of the preferred alternative:

- US 41 and Foley Road (Sta. 222+75) Sheet 2 in Appendix G
 - Signalization (when signal warrants are met);
 - Change eastbound approach from a shared through-left turn lane and exclusive right turn lane to an exclusive left-turn lane and shared through-right turn lane; and
 - Formalize westbound approach to include an exclusive left-turn lane and shared through-right turn lane.
- US 41 and Center of Bonita Springs (Sta. 260+00) Sheet 5 in Appendix G
 - Converting the signalized intersection to a "thru-cut" signal. A thru-cut intersection restricts through movements from the minor street typically due to operational conditions (e.g., low number of through movements) and/or geometric constraints. In this case, the west leg is being widened from two lanes to five lanes (four eastbound approach lanes and one westbound receiving lane) and the east leg is being widened from two lanes to four lanes and two eastbound receiving lanes);
 - A fourth lane is being added in the northbound/southbound directions along US
 41 through the intersection; and
 - Additional southbound left turn lane.
- Bonita Beach Road and Center of Bonita Springs (Sta. 266+40) Sheet 7 in Appendix G
 - Additional eastbound receiving lane (three receiving lanes total).
- Bonita Beach Road and Arroyal Road (Sta. 286+40) Sheet 9 in Appendix G
 - Additional exclusive westbound right turn lane;
 - o Additional eastbound through lane (three lanes total); and
 - Change southbound approach from an exclusive left/through/right turn lane configuration to dual left turn lanes and a shared through-right turn lane.

Using the existing and relocated fiber optic cable along both US 41 and Bonita Beach Road, the aforementioned signals should be interconnected with the signals associated with the US 41 and Bonita Beach Road intersection.

7.9 Tolled Projects

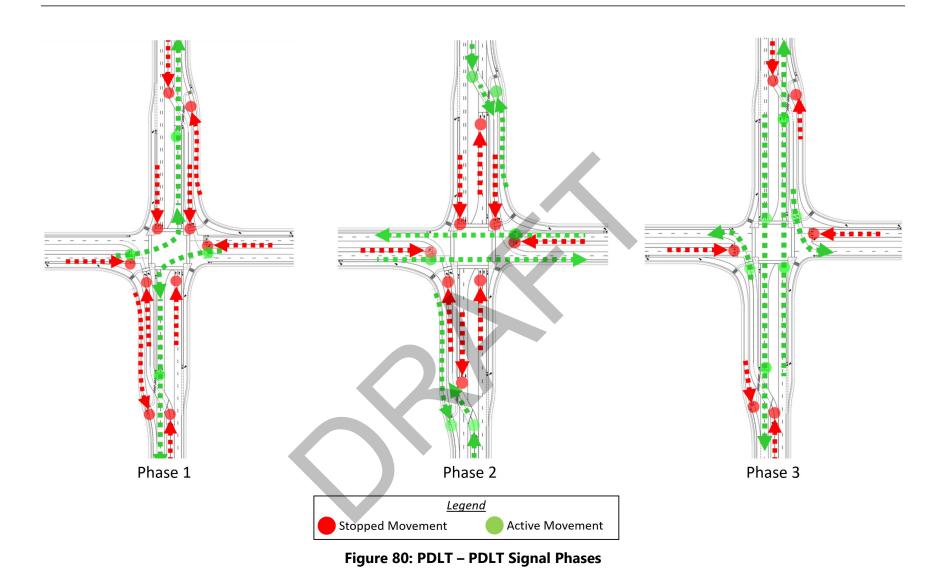

No tolling facilities are proposed as part of this project.

7.10 Intelligent Transportation System and TSM&O Strategies

The PDLT preferred alternative is a type of TSM&O strategy requiring complex intersection coordination/signal operations to move vehicles efficiently and effectively. The primary feature of a PDLT intersection is displacing left turn movements on an approach to the other side of the opposing traffic flow, also known as a "crossover" movement. With this "crossover" intersection comes a different type of signal coordination that is needed for the three signals associated with these intersections. The various signal phases of the PDLT are discussed in this section and shown in **Figure 80**.

In the initial PDLT phase, the Bonita Beach Road left turn movements receive the green light while also getting the green light as a through movement at the adjacent "crossover" intersections. During the second phase, the "crossover" intersections left and right turn movements are green to allow queueing for the northbound and southbound left turn lanes at the main intersection. This phase also accommodates the Bonita Beach Road through movements. The third and final phase, US 41's through and left turn movements are given the green light and are able to operate simultaneously. The northbound/southbound through movements for the "crossover" intersections are also green during this phase.

7.11 Landscape

No specific landscape features are proposed as part of this project. The project is anticipated to impact the existing landscaping within FDOT's right of way. Currently there is landscaping including royal palms and shrubbery beds within all four quadrants of the intersection, as well as trees within the existing medians along US 41. The project is anticipated to remove a portion of this landscaping to accommodate the preferred alternative.

7.12 Lighting

As noted in **Section 2.2.19**, decorative roadway lighting is present along US 41 and intersection lighting is provided along Bonita Beach Road. As part of the preferred alternative, the decorative lighting should be enhanced to provide intersection level lighting at all signalized intersections and the new pedestrian crossing location on US 41 south of the southern PDLT "Crossover" intersection. This is to improve night-time safety within the study area by following the guidance in FDM Section 231.3.2.1 and Table 231.2.1.

A lighting study based on the preferred alternative should be performed where existing roadway lighting is present to assess whether existing lighting placement is acceptable or if lighting needs to be relocated. Potentially relocating lighting along US 41 to focus on the PDLT will help drivers and pedestrians navigate the intersection's unfamiliar maneuvers during nighttime conditions.

7.13 Wildlife Crossings

No wildlife crossings are proposed as part of this project.

7.14 Permits

Permit applications are reviewed by regulatory agencies for their consistency with regulatory criteria and/or the project's effect on resources (e.g., wetland function, protected species, and their habitats). During the permit application process, the lead regulatory agencies may request input from other agencies to review that the project will not adversely impact a regulated or protected resource under their purview. For protected species, a species-specific permit may be required prior to issuance of the environmental permit. The following is a list of anticipated permits needed from state and federal agencies for the proposed project:

- General State 404 Permit (62-331.248);
- National Pollutant Discharge Elimination System Permit;
- Individual Environmental Resource Permit; and
- Gopher Tortoise Relocation Permit.

7.15 Drainage and Stormwater Management Facilities

7.15.1 Preferred Pond Alternatives

The stormwater runoff from the project limits will be collected and conveyed via curb and gutter to the recommended pond alternative for each basin. The various pond alternatives consist of dry retention ponds, wet detention ponds, and dry linear swales. The ponds will discharge at or near the same locations carrying the existing condition roadway runoff, or directly into canals where appropriate. The proposed ponds have been sized to achieve the required water quality treatment and water quantity attenuation and serve as a budget tool for the project's right-of-way estimation. The following offsite pond sites are preferred and are shown on the preferred alternative concept plans in **Appendix G**:

- Windsor Road/Northwest Quadrant Basin:
 - Pond West Pond West will serve as pre-treatment for the Basin North improvements. Portions of the improvements to the Northwest Quadrant Roadway proposed by this study and to Basin North will be routed to Pond West to assist in meeting nutrient loading requirements. Pond West is located west of US 41 at approximately Sta. 261+00 (LT.). The pond will encompass a total of 0.37 acres of the impacted parcel's remnant area.
- Basin West:
 - Stormwater runoff from Basin West will maintain the existing outfall to Beaumont Drive's ditch to the south. Additional proposed areas will be collected within the storm sewer system along US 41 and conveyed and accounted for within the proposed Pond North expansion as part of Basin North.
- Basin East:
 - Pond East Alternative 1 (Dry Retention Swale) Pond East Alternative 1 would serve as the treatment and attenuation for Basin East. Alternative 1 is located south of Bonita Beach Road from approximately Sta. 286+50 (RT.) to Sta. 293+10. This swale is located within the existing roadway right-of-way. Preliminary sizing calculations indicate that the right-of-way can accommodate a 30-foot-wide swale and requires a length of approximately 660'. The swale will outfall to the concrete box culvert underneath Bonita Beach Road at the same location as the basin's existing condition outfall.
- Basin North:
 - Pond North Pond North will serve as Basin North's primary treatment and attenuation pond. The pond's southern end will be impacted by the proposed Northeast Quadrant Roadway, thus it will be expanded west. Preliminary pond sizing calculations indicate this pond will need to be expanded approximately 3.66 acres. This pond will maintain the existing outfall to the Imperial River.

For more information on the preferred stormwater ponds, please refer to the SR 45 (US 41) at Bonita Beach Road PD&E Study Pond Siting Report.

7.15.2 Arroyal Mall Pond

The proposed improvements to the US 41 and Bonita Beach Road intersection will have impacts to the existing Arroyal Mall Pond, permitted under SFWMD Permit No. 36-00863-S. The canal running adjacent to US 41 from the concrete box culvert crossing at Bonita Beach Road north to the Arroyal Mall Pond would need to be enclosed to accommodate the PDLT. Volumetric impacts to the Arroyal Mall Pond from the addition of the PDLT are anticipated to be approximately 0.25 ac-ft. These impacts can be offset by re-grading the southern and western pond berms, which will provide approximately 0.33 ac-ft of added volume.

7.15.3 Box Culvert Analysis

Preliminary box culverts' analysis was performed in HY-8 using available permit information. The proposed extensions, including the enclosure of the canal north of Bonita Beach Road, found minimal impacts to the canal's upstream stages. The canal's flows, stage data, and culvert information were obtained from the existing Arroyal Mall permit. The maximum stage increases determined from the proposed culvert extensions and enclosure were 0.01 ft (50-year storm), 0.02 ft (100-year storm), and 0.04 ft (500-year storm). The hydraulic analysis compares the double 8'x4' CBC going from 165' in the existing condition to 220' in the preferred alternative and the single 10'x7' CBC going from 130' in the existing condition to 500' in the preferred alternative.

7.16 Floodplain Analysis

According to the FEMA FIRMs, northern portions of the proposed quadrant roadway lie within Zone AE of the 100-year floodplain. The Base Flood Elevation (BFE) of the site has been determined to be at the elevation of 9.0 feet NAVD upstream of the bridge over the Imperial River and 10.0 feet NAVD downstream of the bridge.

It was concluded that the project will impact approximately 8.20 ac-ft of floodplain based on the proposed intersection and quadrant roadway improvements. According to the Lee County Flood Insurance Study (FIS), the floodplain within the limits of this study are under tidal influence. Per coordination with SFWMD, floodplain compensation is not required for impacts to floodplains within tidal limits. Although not required to provide floodplain compensation in the stormwater pond, the expansion of the existing FDOT stormwater pond (Pond North) to meet treatment and attenuation requirements for the project, has the added benefit to also provide floodplain compensation, but to meet the stormwater requirements for the project.

It was determined that the floodplain encroachment is classified as "minimal." Minimal encroachments on a floodplain occur when there is a floodplain involvement but impacts on

human life, transportation facilities, and natural and beneficial floodplain values are not significant and can be resolved with minimal efforts.

In conclusion, the following floodplain statement is a slightly modified version of statement Number 4 in the FDOT PD&E Manual (Part 2, Chapter 13 "Floodplains") tailored for this project:

"The proposed structures and stormwater management systems will perform hydraulically in a manner equal to or greater than the existing condition, and backwater surface elevations are not expected to significantly increase. As a result, there will be no significant change in flood risk, and there will not be a significant change in the potential for interruption or termination of emergency service or in emergency evacuation routes. Therefore, it has been determined that this encroachment is not significant."

Refer to the SR 45 (US 41) at Bonita Beach Road PD&E Study Location Hydraulics Report for more information.

7.17 Bridge and Structure Analysis

7.17.1 Box Culvert Extensions

There are two existing concrete box culverts within the project limits, one underneath US 41 and another underneath Bonita Beach Road, both serving the same canal system. The 8'x4' double barrel culvert located underneath US 41 approximately 570' south of Bonita Beach Road is proposed to be extended by approximately 45' for a total length of 220'. The 10'x7' single barrel culvert located underneath Bonita Beach Road approximately 120' east of US 41 is proposed to be extended by approximately 370' for a total length of 500'. Each of these box culvert extensions are identified in the preferred alternative concept plans in **Appendix G**.

7.17.2 Proposed Retaining Walls

Retaining walls will be required at multiple locations where the proposed roadway improvements impact existing stormwater ponds and canals. These locations include:

- Location 1 Along existing drainage canal along east side of US 41 just south of Bonita Beach Road.
- Location 2 Along existing Arroyal Mall Treatment Pond east of US 41 just south of the US 41 and Crown Lake Boulevard intersection.
- Location 3 Along the proposed Northeast Quadrant Roadway between Arroyal Road and US 41 adjacent to existing FDOT stormwater pond and proposed pond extension.
- Location 4 Along the Northwest Quadrant Roadway adjacent to stormwater pond on Angler's Paradise development approximately 400' west of US 41.

Each of the retaining walls would be directly adjacent to pedestrian/bicycle facilities thus 42" pedestrian bullet railing is proposed on top of each retaining wall. The locations of the proposed new retaining walls are shown in the preferred alternative concept plans in **Appendix G**.

7.17.2.1 Location 1

At the first location, the proposed shared-use path outside of the US 41 northbound right-turn lane at Bonita Beach Road encroaches into the existing canal right-of-way. The encroachment places the edge of the proposed shared-use path within the western canal bank limiting access for canal maintenance and could impact the embankment's stability. To limit the impacts to the existing canal and required right-of-way, a 525' long wall is proposed along the east side of US 41 adjacent to the dual right-turn lanes. Based on the proximity of the canal to the proposed work, an anchored sheet pile retaining wall is assumed for the purposes of this report. The exact type of wall (e.g., cantilevered, anchored, soldier-pile) and material (e.g., steel or concrete) will be determined during the design phase since it is dependent on multiple factors including soil properties, exposed wall height, and existing/proposed subsurface utilities and drainage.

7.17.2.2 Location 2

At the second location, the proposed dual right-turn lanes from westbound Bonita Beach Road to northbound US 41 not only require the existing drainage canal to be enclosed in a proposed box culvert, but the turn lanes encroach into the existing Arroyal Mall Treatment Pond located southeast of the US 41 and Crown Lake Boulevard intersection. To limit the impacts to the existing pond and required right-of-way, a 300' long wall is proposed along the east side of US 41 adjacent to the dual right-turn lanes north of the extended 10'x7' box culvert. Since the wall will be partially submerged, a bulkhead or sheet pile wall is proposed to limit in-water work and potential dewatering activities. Similar to Location 1, an anchored steel sheet pile wall is assumed for the purposes of this report.

7.17.2.3 Location 3

At the third location, the proposed Northeast Quadrant Roadway encroaches into the existing FDOT stormwater pond. To limit the impacts to the existing pond and required right-of-way, a 1,000' long wall is proposed along the north side of the roadway. Since the wall will be partially submerged, a bulkhead or sheet pile wall is proposed to limit in-water work and potential dewatering activities. Similar to the other locations, an anchored steel sheet pile wall is assumed for the purposes of this report.

7.17.2.4 Location 4

The fourth location is a proposed 25' long toe berm gravity wall adjacent to a dry retention pond on the Angler's Paradise development, approximately 400' west of US 41 along the Northwest Quadrant Roadway. It is anticipated half of the wall will be buried and the other half will retain the side slope between the back of sidewalk and the dry retention pond.

7.17.3 Noise Barrier

Of the 57 analyzed sites, the noise level at one special land use (SLU) site is predicted to approach or exceed the noise abatement criteria (NAC) for the design year 2050 Build Alternative. All other sites were predicted to not meet or exceed applicable NAC because of the project. Noise barriers were analyzed and considered to abate project-related impacts to the playground affiliated with the Noah's Ark Academy located in the northeast corner of the US 41 and Bonita Beach Road intersection. The special use barrier analysis results indicate that a barrier could potentially provide reasonable and feasible noise abatement for the impacted receptor. The proposed noise barrier would be 8' in height and approximately 290' in length. This noise barrier is identified in the preferred alternative concept plans in **Appendix G**.

7.18 Transportation Management Plan

The US 41 and Bonita Beach Road proposed PDLT is going to be a complex construction project. This is due to the need to shift bicycle lane traffic off the roadway prior to constructing the right turn lanes and to shift the right turn lanes prior to building the PDLTs, especially near the northeast and southeast corners of the intersection. Also, existing medians need to be removed and paved, so traffic can be shifted as part of maintenance of traffic (MOT) activities. The existing number of traffic lanes will always be provided during construction (except for possible overnight lane closures) so no detours will be necessary. Access to driveways and businesses, as well as sidewalk access on at least one side of each roadway, will always be maintained during all phases. Pedestrian Longitudinal Channelizing Devices (PLCD) will be used for pedestrian rerouting and Plastic Drums will be used to delineate opposing traffic until permanent islands are installed in later phases.

7.19 Constructability

The general sequence of construction for the proposed alignment changes and widening is detailed below and illustrated in **Appendix H**:

Phase I: Install MOT devices. Remove medians and install pavement during overnight lane closures. Proposed medians and traffic separator to be constructed in later phases unless otherwise noted. Add temporary striping during overnight hours to all legs of traffic to allow shifting of traffic away from the southwest and northeast corners of the intersection. Prepare the northeast corner of the intersection for the construction of permanent elements by relocation existing utilities and building the box culvert in this quadrant. Construct proposed paths in southwest and northeast corners, one corner at a time to allow for rerouting of pedestrian travel. When existing sidewalks need to be closed, re-route pedestrians using FDOT standard plans index 102-660.

- Phase II: Shift pedestrians and bicyclists to newly constructed paths. Adjust plastic drums and PLCDs. Construct ponds. Construct proposed right turn lanes and widening in southwest and northeast corners. Construct the new Northwest and Northeast Quadrant Roadways. Construct temporary traffic signals for the Southern and Northern "Crossover" locations.
- Phase III: Adjust plastic drum devices, add temporary striping during overnight hours. Shift right turn traffic to newly constructed right turn lanes. Construct widening for DLT, concrete islands in the southwest and northeast corners and construct traffic separator (between DLT and northbound traffic lanes, section north of proposed crosswalk in the northeast corner).
- Phase IV: Add temporary striping for new DLT lanes. Open DLTs to traffic. Construct proposed shared use path and curb and gutter in southeast corner of intersection, reroute pedestrians using FDOT standard plans index 102-660 as needed. Remove temporary traffic signals.
- Phase V: Relocate plastic drum devices during overnight lane closures. Construct right turn lane in southeast corner and sidewalk/curb and gutter in the northwest corner.
- Phase VI: During overnight lane closure, complete construction of remaining proposed curb and gutter/traffic separators. Mill and resurface remaining pavement and temporary restripe for final lane configurations.
- Phase VII: Remove MOT devices. Place final striping.

7.20 Construction Impacts

Impacts resulting from the construction of the proposed project are discussed below:

- Based on the existing land use within the limits of this project, construction of the proposed roadway improvements may have temporary noise and vibration impacts. It is anticipated that the application of the *FDOT Standard Specifications for Road and Bridge Construction* will minimize or eliminate most of the potential construction noise and vibration impacts. However, should unanticipated noise or vibration issues arise during the construction process, the Project Manager, in concert with FDOT's Noise Specialist and the Contractor, will investigate additional methods of controlling these impacts.
- Construction activities may cause short-term air quality impacts in the form of dust from earthwork and unpaved roads. These impacts will be minimized by adherence to applicable state regulations and to applicable *FDOT Standard Specifications for Road and Bridge Construction*.

- Specific Best Management Practices (BMPs) during construction will follow the standard Stormwater Pollution Prevention Plan (SWPPP) and Erosion Control Plans to be developed by the contractor. BMPs will also follow guidelines established in the State of Florida Erosion and Sediment Control Designer and Reviewer Manual (June 2007, updated July 2013).
 - BMPs will consist of both stabilization and structural practices to manage and control stormwater runoff during construction. Stabilization practices will include artificial covering such as turf or sod (temporary condition) and asphalt or concrete surface, and sod (permanent condition). Structural practices for temporary construction site BMPs include sediment barriers (such as perimeter silt fence and turbidity barriers), inlet protection systems and sediment containment systems. These BMPs are further discussed in Section V "Temporary Construction Site BMPs" in the Erosion and Sediment Control Manual.
- Construction activities near canals will require temporary erosion control measures such as staked and floating turbidity barriers (as appropriate). Temporary drainage shall be maintained during all aspects and phases of construction.
- Species and habitat protections are discussed in Section 1.3.
- Maintenance of traffic and access impacts are discussed in Section 7.19.
- Access to businesses along US 41 and Bonita Beach Road shall be maintained during normal business hours.
- Roadway lighting levels need to be maintained or enhanced at temporary and permanent pedestrian crosswalks.

7.21 Special Features

As discussed in **Section 7.17**, retaining walls are needed along multiple canals due to impacts from the PDLT. Detail on these retaining walls is provided in that section. The nearly 500' long box culvert is also a special feature that will need to be accounted for during construction. A noise wall is also proposed along Bonita Beach Road in the northeast corner of the US 41 intersection.

7.22 Utilities

Based on information provided by the UAOs, the existing utilities identified on the project were evaluated and potential utility impacts due to the preferred alternative were quantified.

Table 32 outlines the preferred alternative potential utility impacts. To minimize existing utility's impacts to the fullest extent possible, mitigation measures would be taken during the project's design phase. If impacts are unavoidable, design alternatives would be reviewed to allow for impacted facilities relocation in a manner minimizing cost to the UAO and minimizing customer disruption.

No utility companies have indicated that they have easements within the project limits at the time of the *Utility Assessment Package*. Accordingly, the utility relocations presented within the *Utility Assessment Package* would be at the expenses of the utility. Utility coordination should be performed during the design phase of the project to confirm there are no unknown utility easements or potential reimbursable relocations present on the project.

| Utility Company | Utility Contact | Description |
|-----------------------------------|---|---|
| Bonita Springs Utilities, Inc. | Peter Rim; prim@bsu.us; 239-390-4973 | Existing 12" water line along the north side of Bonita Beach Road Existing 12" sewer force main crossing Bonita Beach Road at Beaumont Road and Meadowlark Lane Existing 12" water Line going north along the east side of US 41 Two out-of-service mains on the south side of Bonita Beach Road |

7.23 Cost Estimates

Table 33 displays the construction cost estimates for the preferred alternative PDLT. The maintenance of traffic (MOT) was calculated as 15 percent of the base construction cost and mobilization (MOB) was calculated as 10 percent of the base construction cost + MOT cost. The project unknowns were calculated as 5 percent of the base construction cost + MOT cost + MOB cost. A contingency of \$150,000.00 was also included in the project unknowns. As displayed in the table, the project's total construction cost is approximately \$35.3 million.

Table 33: US 41 at Bonita Beach Road Construction Cost Estimates

| Base Const. Cost | мот | МОВ | Project Unknowns | Total Const. Cost |
|---------------------|-------------|-------------|---------------------|----------------------|
| \$26,470,000 | \$3,970,000 | \$3,040,000 | \$1,820,000 | \$35,310,000 |

The total estimated project cost, as shown in **Table 34**, displays the total construction cost, the wetland mitigation cost, the anticipated right-of-way cost, the design cost (funding set aside in the FDOT Work Program), and the CEI cost (calculated as 10 percent of the total construction cost) for the PDLT. The Long Range Estimates (LREs) for the preferred alternative are included in **Appendix I**.

| Cost Element | Cost |
|-------------------------|---------------------|
| Total Construction Cost | \$35,310,000 |
| Wetland Mitigation Cost | \$300,000 |
| ROW Cost | \$22,100,000 |
| Design Cost | \$3,500,000 |
| CEI Cost | \$3,530,000 |
| Total Project Cost | <u>\$64,740,000</u> |

Appendix A – Transit Information

EVOLVE Rethink. Revitalize. Reinvent.

LeeTran – Lee County Transit COMPREHENSIVE OPERATIONS ANALYSIS

November 2020

PREPARED BY Tindale

Route 600 – Coconut Point / Immokalee Road

Route 600 is LeeTran's regional connection to Collier County. This route operates on weekdays, Saturday, and Sunday from the Creekside Transfer Center to Coconut Point Mall.

Segment Time Points

| 1 | 2 | 3 | 4 | 5 | 6 |
|-----------------------|----------|----------|---------|---------|-----------|
| Coconut | US-41 & | Old 41 & | US-41 & | US-41 & | Creekside |
| Coconut Point Mall | Bernwood | | Bonita | Wiggins | Transfer |
| POINT IVIAII | Bernwood | Reynolds | Beach | Pass | Center |

Route 600 – Coconut Point / Immokalee Road

| | Weekday | Saturday | Sunday |
|---------|-------------------|-------------------|-------------------|
| Span | 6:00 AM – 7:19 PM | 6:00 AM – 7:19 PM | 7:35 AM – 4:25 PM |
| Headway | 90 Minutes | 90 Minutes | 120 Minutes |

Pros/Cons

- Route 600 is the only fixed route that provides service to Collier County, as well as the Creekside Transfer Center.
- Route 600 operates slightly below the LeeTran on-time performance system average on weekdays, Saturday, and Sunday.
- On-time performance is likely impacted by the length of the route and congestion near the Creekside Transfer Center.

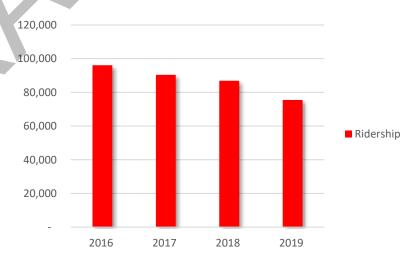

Activity Centers/Uses

 Coconut Point Mall, Creekside Transfer Center, Bonita Springs City Hall, Publix

| FY 2019 | Ridership | VOMS | Revenue Miles | Operating Expense |
|---------|-----------|------|---------------|----------------------|
| | 75,473 | 1 | 79,065 | \$567,510 |

Ridership Trend

The following figure shows Route 600 ridership by year from 2016 to 2019.

With LeeTran's ULTRA On-Demand Transit service, a deluxe multi-person vehicle will take you anywhere within the service area. Available seven days a week from 7:00 am to 6:00 pm, LeeTran's new curb-to-curb ULTRA On-Demand service allows riders to request a ride as needed!

Con el servicio ULTRA On-Demand Transit de LeeTran, un vehículo de lujo para varias personas lo llevará a cualquier lugar dentro del área de servicio. Disponible los siete días de la semana a partir de las 7:00 a.m. a las 6:00 p.m., el nuevo servicio a pedido ULTRA de puerta a puerta de LeeTran permite a los pasajeros solicitar un viaje según sea necesario!

We have exciting news for Lee County transit users in the Bonita area!

On Demand Transit

With LeeTran's ULTRA On-Demand Transit service, a deluxe mini-bus will take you anywhere within the service area. Available seven days a week from 7:00 am to 6:00 pm, LeeTran's new curb to curb ULTRA on-demand service allows riders to request a ride as needed! No more planning rides days or weeks in advance and no more waiting at busy bus stops in the Bonita service area. This new service is available to anyone and on a first-come, first-served basis. This service will utilize UBER's scheduling and tracking platform so you can see where your vehicle is in real-time!

Frequently Asked Questions:

What are the Ultra Hours of operation? 7:00 a.m. to 6:00 p.m. Monday through Sunday.

What is the latest I can make a trip request? The latest trip request is 5:30pm. Service for ULTRA ends at 6:00 pm.

Where can I ride with ULTRA service?

Our ULTRA service zone map clarifies the area of available service where you can schedule curb-to-curb service at your convenience through the Ultra service.

How is Ultra service different from the standard LeeTran fixed-route

service? Ultra is an on-demand transit service that allows riders to arrange pickups within the designated service zone. This service differs from traditional fixed-route service as riders no longer need to travel to a specific bus stop along a defined bus route at a particular time in order to catch a ride with public transit. Ultra service allows riders to request a ride at their convenience and track vehicles in their area.

How do I know when a driver will be picking me up? You will be able to track the vehicle using the Uber app. If you allow notifications through the Uber app,

you will also receive updates as the driver nears your location.

Can I change my pick-up location after I have made my request?

You cannot change your existing ride. However, you can cancel your ride and book a new ride that suits your pick-up location or destination. If the driver has already confirmed your pick up, you could incur a \$2.00 cancellation fee.

How much does it cost to ride? Ultra fares are \$1.50 each way.

How do I pay? There are a variety of ways to pay for your ULTRA ride! You can pay via the Uber app using the app's checkout features. You may also pay by phone while making a request through our customer service center at 239-533-8726 Option 7. You may also pay with cash after making your trip request by phone.

How many carryon possessions can I bring with me on my ULTRA ride? Each rider can carry up to two bags on

to the bus.

Is the Ultra service intended to replace LeeTran fixed route or Passport service? Ultra will not replace Passport services as those services will still be available to those who qualify. Ultra is designed to support LeeTran's fixed route services by connecting Lehigh Acres area riders to the 515 route as well as the route 110.

How will I recognize my Ultra ride?

The Ultra vehicles are recognizable with distinctive graphics and branding. The Uber app also allows you to track the location of the vehicle assigned to pick you up.

Is there a discount trip cost for students and seniors? All ULTRA rides are a standard \$1.50. There are no discounts for this service at this time.

How do I request a ride?

The quickest and easiest way to request a ride is through the Uber app. You can also contact customer support at 239-533-8726 option 7 if you are unable to access the app.

Do children need to be in a car seat

when riding? Children under the age of 5 are required to ride in a child seat provided by an accompanying adult. Parents are responsible for the safety of accompanying children and are asked to ensure seat belts are securely fastened while riding on an ULTRA bus.

Do children need to pay to ride?

Children 6 and under ride free on Ultra with the accompanying purchase of an adult fare. Each additional child must have an accompanying adult fare to receive a free fare. You must request children rides through customer service in order to receive free fares for them. The Uber app will not wave children's fares at this time. Per the Uber guidelines, to have an Uber account and be able to request rides, a rider has to be at least 18 years of age. Anyone under that age must be accompanied by an adult 18 years of age or older on all rides.

What if I don't have a smartphone?

You can request a pickup through our call center at 239-533-8726 Option 7

What if my scheduled pickup is in a gated community? All pickups will be made outside of gated communities, where public and private roads intersect, or at the clubhouse if it is within a rea-

or at the clubhouse if it is within a reasonable distance to the entrance of the community. ULTRA will not be granted gate access.

L = Not applicable

DEV – Daily Entering Vehicles

MEV – Million Entering Vehicles = (DEV * 365) / 1,000,000

ACTUAL – Actual Crash Rate = No. of crashes in a year / MEV

AVERAGE – District-wide Average Crash Rate for similar intersections

CRITICAL – Critical Crash Rate = AVERAGE + K * SQRT(AVERAGE/MEV) + 1/(2 * MEV)

Area type is Urban; therefore, K = 3.291

Safety Ratio = ACTUAL/CRITICAL

Calculated K = (ACTUAL - AVERAGE + 1/(2 * MEV))/SQRT(AVERAGE/MEV)

CONLV - Confidence Level: Percent probability that the crash rate is abnormally high for the study intersection using the District-wide average as a basis

Introduction to Programming Screen Summary Report

The Programming Screen Summary Report shown below is a read-only version of information contained in the Programming Screen Summary Report generated by the ETDM Coordinator for the selected project after completion of the ETAT Programming Screen review. The purpose of the Programming Screen Summary Report is to summarize the results of the ETAT Programming Screen review of the project; provide details concerning agency comments about potential effects to natural, cultural, and community resources; and provide additional documentation of activities related to the Programming Phase for the project. Available information for a Programming Screen Summary Report includes:

- Screening Summary Report chart
- Project Description information (including a summary description of the project, a summary of public comments on the project, and community-desired features identified during public involvement activities)
- Purpose and Need information (including the Purpose and Need Statement and the results of agency reviews of the project Purpose and Need)
- Specific information regarding the potential transportation improvement such as alternatives or road segments that were reviewed; an overview of ETAT Programming Screen reviews; and agency comments concerning potential effects and degree of effect, by issue, to natural, cultural, and community resources
- Project Scope information, consisting of general project recommendations resulting from the ETAT Programming Screen review, permits, and technical studies required (if any)
- Class of Action determined for the project
- Dispute Resolution Activity Log (if any)

The legend for the Degree of Effect chart is provided in an appendix to the report.

For complete documentation of the project record, also see the GIS Analysis Results Report published on the same date as the Programming Screen Summary Report.

The Florida Department of Transportation may adopt this planning product into the environmental review process, pursuant to Title 23 Sec. USC 168(4)(d) or the state project development process.

Purpose and Need

Purpose and Need

The purpose of this project is to address the deficient operational capacity of the US 41 and CR 865 (Bonita Beach Road) intersection to relieve existing congestion and accommodate projected area travel demand. Other goals of the project are to 1) enhance regional and local mobility, 2) enhance safety conditions, and 3) improve multi-modal access. The need for the project is based on the following criteria:

CAPACITY/TRANSPORTATION DEMAND: Improve Operational Conditions

According to Appendix G: Congestion Management Process of the Lee County Metropolitan Planning Organization's (MPO) 2040 Long Range Transportation Plan (LRTP) [Lee County 2040 Transportation Plan], the intersection of US 41 at CR 865 (Bonita Beach Road) experiences chronic congestion. As population and employment growth are expected to continue within this area of Lee County, congestion at the intersection is anticipated to increase.

Based on the Florida Department of Transportation (FDOT) District One Regional Planning Model, the population within the traffic analysis zones (TAZs) encompassing the intersection is expected to increase by 77% between 2010 and 2040; employment is expected to grow by 40% during the same time period. Per the Lee County 2040 Transportation Plan, comparable growth is expected countywide with a 69% increase in residents and a 72% increase in jobs. In addition, the intersection of US 41 and CR 865 (Bonita Beach Road) is identified within the Lee County 2040 Transportation Plan as a "Redevelopment Corridor Intensification Area".

As depicted through Figure 34: 2030 Volume to Capacity Ratio of the Lee County 2040 Transportation Plan, both US 41 and CR 865 (Bonita Beach Road) are expected to be severely congested as each will have a volume to capacity (V/C) ratio of over 1.20. Specific 2040 V/C ratios for each roadway, as reported in the Lee County 2040 Transportation Plan, are as follows: US 41 south of Bonita Beach Road = 1.50, US 41 north of Bonita Beach Road = 1.70, CR 865 (Bonita Beach Road) west of US 41 = 1.29, and CR 865 (Bonita Beach Road) east of US 41 = 1.52. Based on Federal Highway Administration guidance, a V/C ratio less than 0.85 generally indicates that adequate roadway capacity is available and vehicles are not expected to experience significant queues and delays. As the V/C ratio approaches 1.0, traffic flow may become unstable, and delay and queuing conditions may occur. Once the demand exceeds the capacity [a V/C ratio greater than 1.0], traffic flow is unstable and excessive delay and queuing is expected; the roadway is deemed deficient as it has surpassed its designated service volume and Level of Service (LOS) standard.

The existing and future traffic conditions for the roadways composing the intersection are as follows:

-Existing Conditions-

Roadway Segment / 2018 AADT (1) / 2018 AADTT Percentage (1) / 2018 LOS (2)

US 41 south of Bonita Beach Road [6 Lanes] / 33,153 / 4.1% / C US 41 north of Bonita Beach Road [6 Lanes] / 51,000 / 4.1% / C CR 865 (Bonita Beach Road) west of US 41 [4 Lanes] / 25,080 / 2.6% / C CR 865 (Bonita Beach Road) east of US 41 [4 Lanes] / 38,000 / 4.1% / E

-Future Conditions (No-Build)-

Roadway Segment / 2040 AADT (3) / 2040 LOS (2)

US 41 south of Bonita Beach Road [6 Lanes] / 66,800 / E US 41 north of Bonita Beach Road [6 Lanes] / 70,400 / E CR 865 (Bonita Beach Road) west of US 41 [4 Lanes] / 43,000 / E Sources:

(1) 2018 Annual Average Daily Traffic (AADT) and 2018 Annual Average Daily Truck Traffic (AADTT) volumes derived from FDOT Florida Traffic Online, 2018; 2018 AADTT Percentage is derived from 2018 AADTT volume divided by 2018 AADT volume.

(2) LOS based on FDOT Generalized Annual Average Daily Volumes, 2012.

For CR 865 (Bonita Beach Road), LOS Generalized Volumes were adjusted -10% (e.g. non-State signalized roadway). (3) 2040 AADT without improvement (No-Build) derived from 2040 FDOT District One Regional Planning Model.

The existing intersection is operationally deficient and is not able to accommodate the multiple transportation modes [vehicles (including trucks), bicyclists, and pedestrians] that presently use the two corridors composing the intersection. The segment of CR 865 (Bonita Beach Road) east of US 41 currently operates at LOS E. Conditions along both roadways are anticipated to be exacerbated if no improvements occur as the intersection lacks the operational capacity to accommodate future travel demand; both roadways are projected to operate at LOS E by year 2040. An analysis conducted specifically for the intersection further indicated that under the 2040 No-Build condition, the intersection will operate at LOS F as vehicles will experience a 169.8-second delay [a delay of over 80 seconds is considered LOS F].

This project is intended to improve traffic operations at the intersection of US 41 and CR 865 (Bonita Beach Road) by increasing the operational capacity to address existing congestion and projected travel demand.

AREA WIDE NETWORK/SYSTEM LINKAGE: Improve Traffic Mobility and Transportation Network Access

US 41 serves as a critical arterial in facilitating the north-south movement of regional and local traffic [including truck traffic] as it runs parallel to I-75 along the west coast of the State of Florida. Similarly, CR 865 (Bonita Beach Road) serves as a major east-west local roadway within Lee County, linking US 41 and I-75 and providing access [as one of two connections] between the mainland of Lee County and coastal communities/tourist destinations to the west [i.e., barrier islands and beaches]. The intersection enhancement is anticipated to:

-Improve the viability of US 41 as a regional alternative facility to I-75 by reducing travel delay,

-Enhance east-west access between two primary north-south transportation corridors [US 41 and I-75] as well as between the mainland of Lee County and coastal communities/tourist destinations to the west, and

-Enhance freight mobility and access within the area as both US 41 and CR 865 (Bonita Beach Road) are designated as regional freight facilities [Tier 1 Regional Freight Corridor and Tier 2 Regional Freight Connector, respectively] in the Lee County 2040 Transportation Plan.

SAFETY CONDITIONS: Enhance Emergency Evacuation and Response Times

US 41 and CR 865 (Bonita Beach Road) are designated emergency evacuation routes of both the Florida Division of Emergency Management and Lee County. Providing parallel service to I-75, US 41 plays an important role in facilitating north-south traffic during incidences and emergency evacuation periods [particularly within southwest Florida]. CR 865 (Bonita Beach Road) also serves a critical role during emergency evacuation periods as it connects US 41 and I-75 [facilities of the state evacuation route network] and provides one of two connections for residents and tourists between the barrier islands/tourist destinations to the west and mainland of Lee County. The intersection improvement is anticipated to:

-Increase the volume of residents and tourists from coastal communities that can be evacuated during an emergency event by eliminating a point of delay at the intersection of two major evacuation routes;

-Enhance access to facilities of the state evacuation route network, and

-Improve response times [due to enhanced access] to emergency events and incidences.

MODAL INTERRELATIONSHIPS: Enhance Mobility Options and Multi-Modal Access

While sidewalks are present on both sides of US 41 and CR 865 (Bonita Beach Road), marked bicycle lanes only exist on US 41 [both sides]. Two LeeTran bus routes [Routes 150 and 600] additionally operate along US 41 and CR 865 (Bonita Beach Road). Due to the presence of these facilities/services and the surrounding urban environment, heavy pedestrian and bicycle traffic exists in the area [as observed during three separate field reviews conducted for the project]. Multi-modal facilities are to be considered as part of the project as the need for and performance of these facilities/travel options at the intersection are critical with growth in the area creating a latent demand for continued, increased bicycle and pedestrian activity. The intersection enhancement is anticipated to:

-Improve pedestrian/bicycle access and circulation by modifying/limiting opportunities for conflicts between automobiles and pedestrians/bicyclists and

-Enhance the performance and reliability of transit service operating along US 41 and CR 865 (Bonita Beach Road) by reducing delays at the intersection.

PROJECT STATUS

The project is identified in FDOT's FY 2020 - FY 2024 Five-Year Work Program and Lee County MPO's FY 2019/2020 - FY 2023/2024 Transportation Improvement Program with \$1,183,060 and \$1,110,000 programmed for the PD&E Study, respectively. Additionally, the Lee County Comprehensive Plan's Appendix illustrates the project on Map 3A: 2030 Financially Feasible Highway Plan; Map 3A also notes that there is partial funding for an interchange at the intersection. The intersection improvement is not identified in the State transportation Improvement Plan (STIP) or the Lee County 2040 Transportation Plan.

Project Description

This project entails improving the operations of the at-grade intersection of US 41 and CR 865 (Bonita Beach Road) in the City of Bonita Springs, Lee County to address existing congestion and projected travel demand. US 41 extends the length of Lee County and is classified as a six-lane 'Urban Principal Arterial'. CR 865 (Bonita Beach Road) operates as an east-west, four-lane 'Urban Minor Arterial' in the southern section of Lee County, near the Collier County Line, connecting coastal communities/tourist attractions [i.e., barrier islands and beaches] to the mainland of Lee County. Sidewalks are present on both sides of US 41 and CR 865 (Bonita Beach Road); however, marked bicycle lanes only exist on US 41 [both sides]. Two LeeTran bus routes [Routes 150 and 600] additionally operate along US 41 and CR 865 (Bonita Beach Road).

A range of alternatives [including "No-Build", at-grade enhancements, a roundabout, and new overpass] will be evaluated for the intersection improvement as part of the Project Development and Environment (PD&E) Study. Bicycle and pedestrian facilities/facility enhancements will also be considered. As such, specific right-of-way requirements will be determined during the PD&E Study; additional right-of-way may be required depending on the selected alternative.

Summary of Public Comments

Project No: #6291 Project Name: US 41 Interchange at CR 865 (Bonita Beach Road) Project Description: Intersection Improvements ETDM Phase: Programming

Synopsis of Public Comments

The Lee County and Collier Metropolitan Planning Organizations invited the FDOT District One ETDM Coordinator to present the above-referenced project at the meetings described below. Input received through public outreach indicated mixed support for this project in the community. While congestion, bicycle/pedestrian circulation and overall safety at the intersection were identified as primary reasons to implement the improvement, potential adverse impacts to local businesses and pedestrian/transit access from a possible above-grade road crossing were noted concerns. Public commentary also suggested that the project should address transit, population and employment growth, regional/statewide connectivity and emergency evacuation. A brief overview of public outreach conducted for the project is provided below.

Public Outreach Activities

Forum: Joint Technical Advisory Committee Meeting of the Lee County and Collier Metropolitan Planning Organizations

Location: Estero Community Park & Recreation Center9200 Corkscrew Palms Boulevard, Room 103AEstero, Florida 33928

Date/Time: Thursday, March 7, 2013, 9:30 a.m.

FDOT District One representatives provided a summary of the project including the project description, purpose and need, summary of initial project issues and scheduled project activities to follow. Comment cards were provided to members of the Technical Advisory Committees and meeting attendees to complete and return for inclusion in the Environmental Screening Tool (EST) Project Diary. Completed comment cards may be found as an attachment (6291 Public Comment Cards) in the EST under Reports > Project Diary > Supplemental Project Documents.

The meeting attendees expressed support for the project but also concern about the potential for adverse impacts to local businesses and pedestrian/transit access. Future evaluation of project solutions should include at-grade alternatives in addition to above-grade and no build.

Forum: Joint Citizen Advisory Committee Meeting of the Lee County and Collier Metropolitan Planning Organizations

Location: Estero Community Park & Recreation Center9200 Corkscrew Palms Boulevard, Room 103AEstero, Florida 33928

Date/Time: Thursday, March 7, 2013, 1:30 p.m.

While the meeting attendees generally agreed with the project purpose and need, some questioned how the project would benefit transit (e.g., reduced pedestrian access). One committee member suggested examining a six-lane US 41 overpass. Another indicated that since highway overpasses are not visually pleasing, an additional 8-10 feet of right-of-way on either side would be required to mitigate for aesthetic impacts. Others noted that some communities have decided to remove flyovers due to the adverse economic impacts on local businesses.

ETAT Reviews and Coordinator Summary: Social and Economic Relocation Potential

Project Effects

Coordinator Summary Degree of Effect: 3 Moderate assigned 01/18/2020 by FDOT District 1

Comments:

FDOT District One reported that the project area primarily consists of commercial/retail/office and residential uses and noted that the residential uses sit behind the commercial/retail/office activities along the two roadways. FDOT stated that vegetated swales and surface parking lots buffer most of the businesses on each corridor; however, some structures on CR 865 (Bonita Beach Road) are located closer to the roadway. FDOT noted that depending on the type of improvement proposed [i.e., whether an elevated structure is recommended], additional right-of-way may be required. **Coordination Document:** PD&E Support Document as per PD&E Manual.

Access to proximate businesses and residences may temporarily be affected and/or modified as a result of the project. Encroachment into surrounding parcels, if necessary, will be coordinated with the appropriate property owners. The proposed project improvements will be designed to minimize right-of-way acquisition. Specific right-of-way requirements will be determined during the Project Development and Environment Study. Due to the fact that additional right-of-way may be required as a result of the project, a Summary Degree of Effect of Moderate has been assigned to the Relocation Potential issue.

Next Steps: During the Project Development phase, FDOT will conduct public outreach in coordination with the Lee County Metropolitan Planning Organization, Lee County, and the City of Bonita Springs to solicit input on potential project effects to adjacent properties and identify alternatives that may minimize impacts. Further assessment of relocation effects will be conducted during the Project Development phase as more detailed and finalized project information regarding right-of-way needs becomes available. A Conceptual Stage Relocation Plan [conducted and prepared in accordance with Part 2, Chapter 4 of the FDOT PD&E Manual] will be included in the Project Development and Environment Study scoping recommendations for this project.

Technical Study: Conceptual Stage Relocation Plan.

Degree of Effect: 3 Moderate assigned 11/11/2019 by Lauren Brooks, FDOT District 1

Coordination Document:

Office of Greenways and Trails (OGT): Multi-Use Trail Opportunities (1)

Estero - Bonita Corridor

Shared-Use Nonmotorized (SUN) Trail Network (1)

Estero - Bonita Corridor

Comments on Effects to Resources:

The project area primarily consists of commercial/retail/office and residential uses. The noted commercial/retail/office uses line both US 41 and CR 865 (Bonita Beach Road); the residential uses sit behind the commercial/retail/office activities along the two roadways. Vegetated swales and surface parking lots buffer most of the businesses on each corridor; however, some structures on CR 865 (Bonita Beach Road) are located closer to the roadway. Existing right-of-way surrounding the intersection ranges from 135 feet to 150 feet along CR 865 (Bonita Beach Road) and is 215 feet along US 41. Depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended], additional right-of-way may be required.

Access to proximate businesses and residences may also temporarily be affected and/or modified as a result of the project. Encroachment into surrounding parcels, if necessary, will be coordinated with the appropriate property owners. Further, the proposed project improvements will be designed to minimize right-of-way acquisition. Specific right-of-way requirements will be determined during the Project Development and Environment Study. Based on the foregoing, moderate involvement regarding relocation potential is anticipated.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Additional Comments (optional):

CLC Recommendations:

During the Project Development phase, FDOT District One will conduct public outreach in coordination with the Lee County Metropolitan Planning Organization, Lee County, and the City of Bonita Springs to solicit input on potential project effects to adjacent properties and identify alternatives that may minimize impacts. Further assessment of relocation effects will be conducted during the Project Development phase as more detailed and finalized project information regarding right-of-way needs becomes available.

Indirect Effects

Identified Resources and Level of Importance:

Comments on Effects to Resources:

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Aesthetic Effects

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

FDOT District One noted features associated with aesthetics that occur within the project vicinity. FDOT indicated that proximate land uses along the corridor are consistent with existing land uses as well as the future land use vision and aesthetic character of the corridor. FDOT further stated that while the project will consider bicycle and pedestrian facilities/facility enhancements in order to improve safety conditions and multi-modal access/mobility, views from/of the surrounding area could be affected depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended].

A Summary Degree of Effect of Minimal has been assigned to the Aesthetic Effects issue given the heavy commercial character of each corridor and the fact that the project appears to be consistent with the future land use vision and aesthetic character of the intersection. **Coordination Document:** PD&E Support Document as per PD&E Manual.

Next Steps: During the Project Development phase, FDOT will engage residents and business owners in coordination with the Lee County Metropolitan Planning Organization, Lee County, and the City of Bonita Springs to solicit input on potential project effects as well as opinions and preferences regarding general design concepts related to corridor aesthetics.

Technical Study: None.

- Multiple Dwelling Units, Low Rise \ 4.22 \ 3.36%

Comments on Effects to Resources:

The project is located within the City of Bonita Springs, a U.S. Census Designated Place of Lee County. Commercial/retail/office uses line both US 41 and CR 865 (Bonita Beach Road); residential uses sit behind the commercial/retail/office activities along the two roadways.

According to the City of Bonita Springs Future Land Use Map, the area surrounding the intersection will continue to support these identified uses. It is important to note that while the project will consider bicycle and pedestrian facilities/facility enhancements in order to improve safety conditions and multi-modal access/mobility, views from/of the surrounding area could be affected depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended]. However, given the heavy commercial character of each corridor and the fact that the project appears to be consistent with the future land use vision and aesthetic character of the intersection, minimal involvement regarding aesthetic effects is anticipated.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Additional Comments (optional):

CLC Recommendations:

During the Project Development phase, the FDOT District One will engage residents and business owners in coordination with the Lee County Metropolitan Planning Organization, Lee County, and the City of Bonita Springs to solicit input on potential project effects as well as opinions and preferences regarding general design concepts related to aesthetics.

Comments on Effects to Resources:

Recommended Avoidance, Minimization, and Mitigation Opportunities

Farmlands

Project Effects

0 None assigned 01/18/2020 by FDOT District 1 **Coordinator Summary Degree of Effect:**

Comments:

No ETAT members provided comments for this issue.

The 500-foot project buffer consists of 15.81 acres [87.69%] of soils classified as Farmland of Unique Importance. Based on recent aerial imagery and field observations, land containing these soils has been developed. Also, no agricultural land is present within the 500-foot project buffer. According to the City of Bonita Springs Future Land Use Map, the area is expected to continue to support commercial/retail/office and residential uses. In addition, the intersection is located entirely within the Bonita Springs Urbanized Area. For these reasons, no impacts to farmlands are anticipated as a result of the project. No further coordination with NRCS is needed as land within the project buffer does not meet the definition of farmland as defined in 7 CFR 658 and the provisions of the Farmland Protection Policy Act of 1981. Based on the foregoing, a Summary Degree of Effect of None has been assigned to the Farmlands issue.

Next Steps: None.

Technical Study: None.

None found

Land Use Changes

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

FDEO stated that the project is compatible with the City of Bonita Springs Comprehensive Plan and local community development goals as it is anticipated to support population and economic growth and development through enhanced mobility/access and enhance emergency evacuations and response times. FDEO additionally identified future land uses surrounding the project and

noted that the project is not in an Area of Critical State Concern, a Coastal High Hazard Area, within proximity to any parks, or near any military bases. Furthermore, FDEO recommended that the City of Bonita Spring update its Future Transportation Map series to include the project. **Coordination Document:** No Involvement.

FDOT District One commented that the area primarily consists of commercial/retail/office and residential uses; most of the commercial/retail/office uses are concentrated in strip shopping centers located in the northwest and southeast quadrants of the intersection; residential uses are located behind the commercial/retail/office activities along the two roadways. FDOT stated that according to the City of Bonita Springs Future Land Use Map, the area surrounding the intersection will continue to support the aforementioned uses. FDOT commented that while the project is identified in the FDOT FY 2020 - FY 2024 Five-Year Work Program, the FDOT's State Transportation Improvement Program (STIP), and the Lee County Metropolitan Planning Organization's (MPO) FY 2019/2020 - FY 2023/2024 Transportation Improvement Program, it is not identified in the Lee County MPO's Long Range Transportation Plan (LRTP) [Lee County 2040 Transportation Plan]. FDOT added that the Lee County Comprehensive Plan's Appendix illustrates the project on Map 3A: 2030 Financially Feasible Highway Plan. **Coordination Document:** PD&E Support Document as per PD&E Manual.

Overall, the project is consistent with the land use vision for the project area. Therefore, a Summary Degree of Effect of Minimal has been assigned to the Land Use Changes issue.

Next Steps: During the Project Development phase, FDOT will conduct public outreach with the Lee County MPO, Lee County, and the City of Bonita Springs to obtain feedback from residents and business owners that may be affected by the project. FDOT will also coordinate with the noted agencies to ensure that required project funding is identified in the LRTP, TIP, Work Program, and STIP, and that the project is consistent with the local comprehensive plans.

Technical Study: None.

Comments on Effects to Resources:

The project is located within the City of Bonita Springs, a U.S. Census Designated Place of Lee County. The project area primarily consists of commercial/retail/office and residential uses. The identified commercial/retail/office uses line both US 41 and CR 865 (Bonita Beach Road); most of the uses are concentrated in strip shopping centers respectively located in the northwest and southeast quadrants of the intersection. Large tenants of these strip-centers include Publix, Winn-Dixie, and Crunch Fitness. The identified residential uses sit behind the commercial/retail/office activities along the two roadways.

One Planned Unit Development [Crown Lake Shoppes CPD] is present within the 500-foot project buffer; seven additional Planned Unit Developments are present within the 1,320-foot project buffer. A golf course [Spanish Wells Golf and Country Club] also exists within the southeast quadrant of the intersection, east of the present strip center. According to the City of Bonita Springs Future Land Use Map, the area surrounding the intersection will continue to support the noted uses. Therefore, the project is anticipated to accommodate existing and proposed development within the area. For these reasons, minimal impacts or changes to proximate land uses are anticipated as a result of the project.

Transportation Plan Consistency

The project is identified in the FDOT's FY 2020 - FY 2024 Five-Year Work Program with \$1,183,060 programmed for the PD&E Study. Additionally, the project is identified in the FDOT's State Transportation Improvement Program (STIP) and the Lee County Metropolitan Planning Organization's (MPO) FY 2019/2020 - FY 2023/2024 Transportation Improvement Program with \$1,110,000 allocated for the PD&E Study. The Lee County Comprehensive Plan's Appendix illustrates the project on Map 3A: 2030 Financially Feasible Highway Plan; Map 3A also notes that there is partial funding for an interchange at the intersection. The intersection improvement is not identified in the Lee County MPO's Long Range Transportation Plan (LRTP) [Lee County 2040 Transportation Plan].

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Additional Comments (optional):

CLC Recommendations:

During the Project Development phase, the FDOT District One will conduct public outreach in coordination with the Lee County MPO, Lee County, and the City of Bonita Springs to obtain feedback from residents and business owners that may be affected by the project. FDOT will also coordinate with the listed agencies to ensure that required project funding is identified in the LRTP, TIP, Work Program, and STIP and that the project is consistent with the local government comprehensive plans.

adopted on June 20, 2018).

Comments on Effects to Resources:

Compatibility with Community Development Goals and Comprehensive Plan:

The project is compatible with local community development goals to the extent that the project intends to support local population and economic growth and development through enhancing multi-modal mobility/access.

The project is compatible with the *City of Bonita Springs Comprehensive Plan* with regard to the following: (1) the project intends to enhance local and regional mobility; (2) the project intends to support population and economic growth and development; and (3) the project is anticipated to enhance emergency evacuation and response times to emergency events and incidences.

Future Transportation Map:

The City of Bonita Springs Comprehensive Plan Future Transportation Map series does not identify the project. DEO staff recommends that the City update its map(s) to include the project.

Land Uses:

The future land use designation surrounding the proposed project is General Commercial.

Parks:

The project is not located in close proximity to any City parks.

Area of Critical State Concern (ACSC), Coastal High Hazard Area (CHHA), and Military Bases:

The project is not located within an Area of Critical State Concern or the CHHA, nor does it encroach on any military installation. Other Planning-Related Items:

N/A.

Economic

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

FDEO indicated that the project is not located within a Rural Area of Opportunity. FDEO stated that the project has the potential to attract new development, business activity, and jobs due to improved access/mobility. **Coordination Document:** No Involvement.

FDOT District One commented that both US 41 and CR 865 (Bonita Beach Road) are important in facilitating regional and local traffic [including truck traffic] in the area, particularly in providing access to other major transportation corridors and coastal communities/tourist destinations to the west of the Lee County mainland. FDOT identified specific economic features and businesses within the project area and noted that the area surrounding the project will experience a large increase in residential units and population and employment growth between 2010 and 2040. FDOT stated that the purpose of this project is to address the deficient operational capacity of the US 41 and CR 865 (Bonita Beach Road) intersection to relieve existing congestion and accommodate projected area travel demand. **Coordination Document:** PD&E Support Document as per PD&E Manual.

In the long term, the proposed project is expected to enhance economic conditions of the area by: 1) addressing the deficient capacity of the intersection in the existing and future condition in order to serve the mobility demands of the area, thereby

E - 17

Page 16 of 80 Summary Report - Project #6291 - US 41 at CR 865 (Bonita Beach Road) Intersection Improvemented on: 1/18/2020

supporting increased growth; 2) better facilitating the movement of local and regional freight; and 3) accommodating multimodal activity through bicycle and pedestrian facilities/facility enhancements and reliable transit. However, a Summary Degree of Effect of Minimal has been assigned to the Economic issue due to the fact that access to the noted businesses may be modified depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended] or temporarily affected during project construction as a result of the project.

Next Steps: During the Project Development phase, FDOT will engage residents and business owners in coordination with the Lee County Metropolitan Planning Organization, Lee County, and the City of Bonita Springs to solicit input on potential economic enhancements/impacts as a result of the project as well as potential solutions.

Technical Study: None.

Degree of Effect: 2 Minimal assigned 11/11/2019 by Lauren Brooks, FDOT District 1

Coordination Document: PD&E Support Document As Per PD&E Manual

- Vacant Nonresidential \ 8.53 \ 6.79%
- Vacant Residential \ 0.56 \ 0.45%

Comments on Effects to Resources:

Both US 41 and CR 865 (Bonita Beach Road) are important in facilitating regional and local traffic [including truck traffic] in the area, particularly with their access to other major transportation corridors and coastal communities/tourist destinations [i.e., Fort Meyers Beach and Little Hickory Island] to the west of the Lee County mainland.

The purpose of this project is to address the deficient operational capacity of the US 41 and CR 865 (Bonita Beach Road) intersection to relieve existing congestion and accommodate projected area travel demand. As population and employment are expected to continue to grow within this area of Lee County, congestion at the intersection is anticipated to increase. According to the Lee County Metropolitan Planning Organization's (MPO) 2040 Long Range Transportation Plan (LRTP), the county is expected to grow from 618,800 residents in 2010 to 1,044,000 residents in 2040 [69% increase] and employment is expected to increase by 72% from 285,000 jobs in 2010 to 490,200 jobs in 2040. To accommodate the rise in population, 305,200 new homes are expected to be built within the county by 2040 [the difference between 354,600 homes in 2010 and 659,800 homes projected in 2040]. Based on the Florida Department of Transportation (FDOT) District One Regional Planning Model, the population specifically within the traffic analysis zones (TAZs) encompassing the intersection is expected to increase by 77% between 2010 and 2040, and employment is expected to grow by 40% during the same time period.

Commercial/retail/office uses line both US 41 and CR 865 (Bonita Beach Road); residential uses sit behind the commercial/retail/office activities along the two roadways. Two strip shopping centers are respectively located in the northwest and E - 18

Page 17 of 80 Summary Report - Project #6291 - US 41 at CR 865 (Bonita Beach Road) Intersection Improverriebed on: 1/18/2020

southeast quadrants of the intersection; large tenants of these strip-centers include Publix, Winn-Dixie, and Crunch Fitness. Numerous banking, clothing, and retail establishments surround the intersection such as Bank of America, Wells Fargo, Goodwill, and Walgreens.

In the long term, the proposed project is expected to enhance economic conditions of the area by 1) addressing the deficient capacity of the intersection in the existing and future condition in order to serve the mobility demands of the area, thereby supporting increased growth; 2) better facilitating the movement of local and regional freight; and 3) accommodating multimodal activity through bicycle and pedestrian facilities/facility enhancements and reliable transit. However, depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended], minimal economic impacts are anticipated due to the fact that access to the noted businesses may be modified or temporarily affected during project construction as a result of the project.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Additional Comments (optional):

CLC Recommendations:

During the Project Development phase, FDOT District One will conduct public outreach in coordination with the Lee County MPO, Lee County, and the City of Bonita Springs to solicit input from proximate residents and business owners regarding potential economic enhancements/impacts as a result of the project as well as potential solutions.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Social **Project Effects**

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

FDOT District One stated that the project is located within the City of Bonita Springs, a U.S. Census Designated Place of Lee County. FDOT commented that the project area primarily consists of commercial/retail/office and residential uses; the residential uses sit behind the commercial/retail/office activities along the two roadways. FDOT indicated that several community features are present within the area given its urban nature. FDOT added that compared to the demographic characteristics of Lee County, the 500-foot project buffer contains significantly higher percentages of individuals who identify themselves as White and who are age 65 and older, a comparable Other Race population percentage, significantly lower population percentages of African Americans and Hispanics, drastically lower percentages of individuals age 18 and under and housing units with no vehicle available, a slightly higher median family income [\$889 more], and a comparable percentage of individuals who speak English less than very well indicating that Limited English Proficiency (LEP) accommodations will likely be required as the project advances. FDOT commented that no census blocks within the 500-foot project buffer contain a minority population greater than 40%. FDOT reported that the purpose of this project is to address the deficient operational capacity of the US 41 and CR 865 (Bonita Beach Road) intersection to relieve existing congestion and accommodate projected area travel demand [including truck, visitor, and evacuation traffic]; other goals of the project are to 1) enhance regional and local mobility, 2) enhance safety conditions, and 3) improve multi-modal access. Coordination Document: PD&E Support Document as per PD&E Manual.

USEPA stated that no environmental justice communities were identified within the 500-foot project buffer. USEPA noted that should communities be identified as the project continues, impacts of the project on minority and low-income populations will need to be identified. USEPA recommended implementation of meaningful public involvement to develop systems, services, and solutions that meet the needs of the community and vulnerable populations. Coordination Document: To Be Determined: Further Coordination Required.

In the long term, the proposed project is anticipated to have positive effects on the social environment and cohesion of surrounding communities by enhancing multi-modal access to residences, job opportunities, essential services, and tourist destinations; improving transit reliability; and enhancing safety conditions. Depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended], the project could affect community cohesion and the area's visual character/aesthetic quality. However, a Summary Degree of Effect of Minimal has been assigned to the Social issue due to the heavy commercial character of each corridor composing the intersection and the fact that the intersection improvement is anticipated to enhance pedestrian/bicycle access and circulation [by reducing opportunities for conflicts between automobiles and pedestrians/bicyclists] and the performance and reliability of transit service operating in the area [by reducing delays at the intersection].

Next Steps: During the Project Development phase, FDOT will conduct public outreach in coordination with the Lee County Metropolitan Planning Organization, Lee County, and the City of Bonita Springs to solicit input from the general public [targeting special population groups] to ensure that the social and transportation needs of the affected community are not negatively impacted by the project. Public outreach activities will consider/potentially include LEP accommodations. A Public Involvement Plan [prepared in accordance with Part 1, Chapter 11 of the FDOT PD&E Manual] will be included in the Project Development and Environment Study scoping recommendations for this project.

Technical Study: Public Involvement Plan.

Degree of Effect: 2 Minimal assigned 11/11/2019 by Roshanna White, US Environmental Protection Agency

Coordination Document:

To Be Determined: Further Coordination Required

Direct Effects

Identified Resources and Level of Importance:

Social GIS analysis and the Sociocultural Data Report for the Current Project Alternatives did not identify potential EJ communities within a 500-ft buffer of the project. Therefore, the EPA assigns a Minimal Degree of Effect for Social.

Comments on Effects to Resources:

E - 20

If potential EJ communities are identified as the project continue identify the impacts of the project that appear to fall disproportionately on minority and low-income populations in accordance with EO 12898.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Consider meaningful public involvement that enables transportation professionals to develop systems, services, and solutions that meet the needs of the community and the vulnerable populations that potentially will be temporarily or permanently impacted by the project.

Comments on Effects to Resources:

The US 41 at Bonita Beach Road intersection is located within the City of Bonita Springs, a U.S. Census Designated Place of Lee County. The project area primarily consists of commercial/retail/office and residential uses; two strip shopping centers are respectively located in the northwest and southeast quadrants of the intersection. The noted commercial/retail/office uses line both US 41 and CR 865 (Bonita Beach Road). The residential uses sit behind the commercial/retail/office activities along the two roadways. Vegetated swales and surface parking lots buffer most of the businesses on each corridor; however, some structures on CR 865 (Bonita Beach Road) are located closer to the roadway.

Community features reported within the 1,320-foot project buffer include: eight Planned Unit Developments, four homeowner and condominium associations [Waterford I, II, and III and Wedgewood I], six healthcare facilities, one community center/religious center, one laser facility, one law enforcement facility, a private golf course, and one Office of Greenways and Trails (OGT) multi-use trail opportunity/hiking trail priority [Estero - Bonita Corridor] - also part of the Shared-Use Nonmotorized (SUN) Trail Network.

Compared to the demographic characteristics for Lee County, the 500-foot project buffer contains significantly higher percentages of individuals who identify themselves as White and who are age 65 and older, a comparable Other Race population percentage, significantly lower population percentages of African Americans and Hispanics, drastically lower percentages of individuals age 18 and under and housing units with no vehicle available, and a slightly higher median family income [\$889 more].

The table below presents the demographic data for both the 500-foot project buffer and Lee County.

Demographic / 500-Foot Buffer / Lee County White (Race)* / 92.3 % / 83.0% African-American (Race)* / 0.7% / 8.3% "Other" *** (Race)* / 7.0% / 8.8% Hispanic (Ethnic Group)* / 12.7% / 18.3% Age 65+** / 33.0% / 23.5% Under Age 18** / 11.5% / 19.5% HH w/o car** / 1.8% / 4.7% Med. Family Income** \$59,950 / \$58,950 * Source: US Census Bureau (2010 US Census) ** Source: US Census Bureau (2010 American Community Survey) *** "Other" includes Asian, Native American, Native Hawaiian & Other Pacific Islander Alone, & Other Race.

Minority Population Greater than 40%:

Out of the 13 census blocks within the 500-foot project buffer, none contain a minority population greater than 40%.

Limited English Proficiency (LEP) Accommodations:

Limited English Proficiency (LEP) accommodations will likely be required during public involvement efforts of the Project Development phase as 11.37% or 623 persons within the census block groups containing the project corridor "speak English less than very well" compared to 10.35% of Lee County's population.

It should be noted that US 41 and CR 865 (Bonita Beach Road) are designated emergency evacuation routes of both the Florida Division of Emergency Management and Lee County as well as designated regional freight facilities according to the Lee County Metropolitan Planning Organization's (MPO's) 2040 Long Range Transportation Plan (LRTP). As such, US 41 facilitates critical northsouth regional and local traffic [including truck traffic and evacuation traffic] and connects employment and population centers throughout the west coast of Florida. In addition, CR 865 (Bonita Beach Road) provides east-west access between major north-south transportation corridors of the area [US 41 and I-75] as well as serves as one of two connections between the coastal communities/tourist destinations to the west and the mainland of Lee County. Further, LeeTran bus routes [Routes 150 and 600] operate along CR 865 (Bonita Beach Road) and US 41, respectively.

The purpose of this project is to address the deficient operational capacity of the US 41 and CR 865 (Bonita Beach Road) intersection to relieve existing congestion and accommodate projected area travel demand. Other goals of the project are to 1) enhance regional and local mobility, 2) enhance safety conditions, and 3) improve multi-modal access.

In the long term, the proposed project is anticipated to have positive effects on the social environment and cohesion of surrounding communities by enhancing multi-modal access to residences, job opportunities, essential services, and tourist destinations; improving transit reliability; and enhancing safety conditions. Depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended], the project could affect community cohesion and the area's visual character/aesthetic quality. However, due to the heavy commercial character of each corridor composing the intersection and the fact that the intersection improvement is anticipated to enhance pedestrian/bicycle access and circulation [by reducing opportunities for conflicts between automobiles and pedestrians/bicyclists] and the performance and reliability of transit service operating in the area [by reducing delays at the intersection], impacts on the social environment and community cohesion as a result of the project are anticipated to be minimal.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Additional Comments (optional):

CLC Recommendations:

During the Project Development phase, the FDOT District One will conduct public outreach in coordination with the Lee County MPO, Lee County, and the City of Bonita Springs to solicit input from the general public (targeting special population groups) on potential project effects related to community cohesion and social interaction as well as potential solutions to ensure that both the social and transportation needs of the surrounding communities are addressed through the project. Public outreach activities will consider/include LEP accommodations.

Mobility

Project Effects

Coordinator Summary Degree of Effect:

1 Enhanced assigned 01/18/2020 by FDOT District 1

Comments:

FDOT District One stated that the US 41 and CR 865 (Bonita Beach Road) intersection is at-grade. FDOT reported that US 41 facilitates the north-south movement of regional and local traffic [including truck traffic] as it runs parallel to I-75 along the west coast of the State of Florida; it additionally connects employment and population centers throughout the west coast of Florida. FDOT noted that CR 865 (Bonita Beach Road) provides east-west access between major north-south transportation corridors of the area [US 41 and I-75] as well as serves as one of two connections between the coastal communities/tourist destinations to the west and the mainland of Lee County. FDOT added that US 41 and CR 865 (Bonita Beach Road) are designated state and county emergency/evacuation routes as well as designated regional freight facilities. FDOT commented that sidewalks are present on both sides of the roadways; however, marked bicycle lanes only occur along US 41. FDOT listed mobility features within the project area. FDOT commented that the project is intended to address the deficient operational capacity of the US 41 and CR 865 (Bonita Beach Road) intersection to relieve existing congestion and accommodate projected area travel demand. FDOT stated that the improvement will reduce delays at the intersection, enhancing overall mobility by: 1) improving the viability of US 41 as a regional alternative facility to I-75; 2) enhancing east-west access between two primary north-south transportation corridors [US 41 and I-75] as well as between the mainland of Lee County and coastal communities/tourist destinations to the west; 3) improving freight mobility and access within the area; 4) increasing the volume of residents and tourists from coastal communities that can be evacuated, enhancing access to facilities of the state evacuation route network, and improving response times to emergency events and incidences; 5) perfecting the performance and reliability of transit service in the area; and 6) improving pedestrian/bicycle access and circulation by modifying/limiting opportunities for conflicts between automobiles and pedestrians/bicyclists. Coordination Document: PD&E Support Document as per PD&E Manual.

Based on the foregoing a Summary Degree of Effect of Enhanced has been assigned to the Mobility issue.

Next Steps: During the Project Development phase, FDOT will conduct public outreach in coordination with the Lee County Metropolitan Planning Organization, Lee County, and the City of Bonita Springs to solicit community opinions and preferences on potential project-related effects and enhancements regarding area mobility and measures to avoid or minimize possible adverse effects.

Technical Study: None.

Degree of Effect: 1 Enhanced assigned 11/11/2019 by Lauren Brooks, FDOT District 1

Coordination Document:

PD&E Support Document As Per PD&E Manual

Direct Effects Identified Resources and Level of Importance: 500-Foot Buffer: Bus Transit Routes (2) - Route 150 - Route 600 Office of Greenways and Trails (OGT): Hiking Trail Priorities (1) - Estero - Bonita Corridor Office of Greenways and Trails (OGT): Multi-Use Trail Opportunities (1) - Estero - Bonita Corridor Shared-Use Nonmotorized (SUN) Trail Network (1) - Estero - Bonita Corridor Transportation Disadvantaged Service Provider Areas (TDSP) in Florida (1) - Good Wheels, Inc. Housing Units with No Vehicle Available (Total / Percentage) - 51 / 1.8%

Comments on Effects to Resources:

The US 41 and CR 865 (Bonita Beach Road) intersection is at-grade with double left turn lanes at all approaches to the intersection.

E - 24

US 41 is classified as a six-lane 'Urban Principal Arterial' with a raised median and right turn lanes that run the length of the project limits. CR 865 (Bonita Beach Road) is classified as a four-lane 'Urban Minor Arterial' with a raised median and turn and merge lanes at various points.

US 41 facilitates the north-south movement of regional and local traffic [including truck traffic] as it runs parallel to I-75 along the west coast of the State of Florida; it additionally connects employment and population centers throughout the west coast of Florida. CR 865 (Bonita Beach Road) provides east-west access between major north-south transportation corridors of the area [US 41 and I -75] as well as serves as one of two connections between the coastal communities/tourist destinations to the west and the mainland of Lee County.

US 41 and CR 865 (Bonita Beach Road) are designated emergency/evacuation routes of both the Florida Division of Emergency Management and Lee County as well as designated regional freight facilities [US 41 - Tier 1 Regional Freight Corridor and CR 865 (Bonita Beach Road) - Tier 2 Regional Freight Connector] according to the Lee County Metropolitan Planning Organization's (MPO's) 2040 Long Range Transportation Plan (LRTP). It should be noted that sidewalks are present on both sides of US 41 and CR 865 (Bonita Beach Road); however, marked bicycle lanes only occur along US 41. Two LeeTran bus routes [Routes 150 and 600], one transportation disadvantaged service provider area [Good Wheels Inc.], and a future trail exist within the 500-foot project buffer.

This project is intended to address the deficient operational capacity of the US 41 and CR 865 (Bonita Beach Road) intersection to relieve existing congestion and accommodate projected area travel demand. In turn, through reduced delays at the intersection, the improvement is anticipated to enhance overall mobility in the area by 1) improving the viability of US 41 as a regional alternative facility to I-75; 2) enhancing east-west access between two primary north-south transportation corridors [US 41 and I-75] as well as between the mainland of Lee County and coastal communities/tourist destinations to the west; 3) enhancing freight mobility and access within the area; 4) increasing the volume of residents and tourists from coastal communities that can be evacuated, enhancing access to facilities of the state evacuation route network, and improving response times to emergency events and incidences; 5) enhancing the performance and reliability of transit service in the area; and 6) improving pedestrian/bicycle access and circulation by modifying/limiting opportunities for conflicts between automobiles and pedestrians/bicyclists.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Additional Comments (optional):

CLC Recommendations:

During the Project Development phase, the FDOT District One will conduct public outreach in coordination with the Lee County Metropolitan Planning Organization, Lee County, and the City of Bonita Springs to solicit community opinions and preferences on potential project-related effects and enhancements regarding mobility within the area and measures to avoid or minimize possible adverse effects.

Section 4(f) Potential

Project Effects

Coordinator Summary Degree of Effect:

2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

No ETAT members provided comments for this issue.

One potential Section 4(f) resource, an Office of Greenways and Trails (OGT) multi-use trail opportunity/hiking trail priority [Estero-Bonita Corridor], exists within the 500-foot project buffer. While no comprehensive Cultural Resource Assessment Survey has been conducted for either US 41 or CR 865 (Bonita Beach Road), no previously recorded resources exist within 500 feet of the intersection; in addition, there is low potential for unrecorded historic resources to exist given the developed nature of the project area. For these reasons, a Summary Degree of Effect of Minimal has been assigned to the Section 4(f) Potential issue.

Next Steps: A Section 4(f) Determination of Applicability Form [Form No. 650-050-45], prepared in accordance with Part 2, Chapter 7 of the FDOT PD&E Manual, will be included in the Project Development and Environment Study scoping recommendations for this project.

Technical Study: Section 4(f) Determination of Applicability Form [Form No. 650-050-45].

Historic and Archaeological Sites

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

FDOS reported that the project area has not been comprehensively surveyed and that a survey should be conducted for this project. FDOS stated that all cultural resources, including potential historic districts, within the area of potential effect should be documented and assessed for National Register of Historic Places (NRHP) eligibility. FDOS added that consultation with the project sponsor will take place to avoid, minimize, or mitigate any adverse effects to significant cultural resources. FDOS requested review of the completed survey. **Coordination Document:** PD&E Support Document as per PD&E Manual.

STOF did not identify any issues or potential project effects related to historic and archaeological sites. **Coordination Document:** No Involvement.

A review of the data indicates that the portion of the project along US 41 is within the boundaries of a previous Cultural Resource Assessment Survey (CRAS) conducted in 1997: The Cultural Resource Assessment Survey of US 41 from North of CR 887 to San Carlos Boulevard [Collier and Lee Counties, Florida]. No comprehensive survey has been conducted along CR 865 (Bonita Beach Road). No previously recorded cultural resources are located within 500 feet of the project corridors. Property appraiser data also identified no parcels with potential unrecorded historic resources. Although considered historic in other parts of the state, US 41

Page 26 of 80 Summary Report - Project #6291 - US 41 at CR 865 (Bonita Beach Road) Intersection Improvemented on: 1/18/2020

within the project area no longer retains any historic fabric or integrity. Based on the previous survey of US 41, the lack of previously recorded resources within 500 feet of the intersection, the absence of any potential unrecorded historic resources, and the developed nature of the project area, a Summary Degree of Effect of Minimal has been assigned to the Historic and Archaeological Sites issue.

Next Steps: A Cultural Resource Assessment Survey [conducted in accordance with applicable federal or state historic preservation laws and Part 2, Chapter 8 of the FDOT PD&E Manual] will be included in the Project Development and Environment Study scoping recommendations for this project.

Technical Study: Cultural Resource Assessment Survey.

Coordination Document:

PD&E Support Document As Per PD&E Manual

Coordination Document Comments:

Since the entire project area has not been comprehensively surveyed, a survey should be conducted for this project. All cultural resources, including potential historic districts, within the area of potential effect should be documented and assessed for NRHP eligibility. The resultant survey report shall conform to the specifications set forth in Chapter 1A-46 Florida Administrative Code, FDOT PD&E Manual Part 2, Chapter 8 and will need to be forwarded to this agency (or the appropriate Federal Agency) for review and comment.

Direct Effects

Identified Resources and Level of Importance:

As reported.

Comments on Effects to Resources:

The project has minimal potential to impact cultural resources within and adjacent to the proposed project.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

This office will consult with the project sponsors to avoid, minimize, or mitigate any adverse effects to significant cultural resources.

Additional Comments (optional):

Since the entire project area has not been comprehensively surveyed, a survey should be conducted for this project. All cultural resources, including potential historic districts, within the area of potential effect should be documented and assessed for NRHP

This office will consult with the project sponsors to avoid, minimize, or mitigate any adverse effects to significant cultural resources.

ETAT Reviews and Coordinator Summary: Natural

Wetlands and Surface Waters

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

FDEP noted that an Environmental Resource Permit (ERP) may be required for the minor impacts to adjacent wetlands and stormwater areas. Coordination Document: PD&E Support Document as Per PD&E Manual.

FWS commented that wetlands, which provide important habitat for fish and wildlife, may occur within the project area. FWS stated that the project should be designed to avoid impacts to wetlands and mitigation should be provided to fully compensate for unavoidable impacts. Coordination Document: To Be Determined: Further Coordination Required.

NMFS stated that it does not appear that the project will directly impact NMFS trust resources; however, the Imperial River [located within 2,000 feet of the project] drains into Little Hickory Bay and Fish Trap Bay, which contain estuarine habitats that are used by federally-managed fish species and their pray. NMFS noted that indirect impacts to the Imperial River and nearby estuarine habitats are anticipated to be minimal due to upgrades to the stormwater management systems and use of best management practices. Coordination Document: To Be Determined: Further Coordination Required.

SFWMD reported that the project may affect 1.36 acres of wetlands that are potentially associated with the existing stormwater ponds and a canal that flows along the east side of US 41; however, it is unclear if jurisdictional wetlands are present within the project area. SFWMD stated that a wetland determination and an offsite mitigation plan should be included in the ERP application if wetland impacts are proposed. Coordination Document: Permit or Technical Study Required.

USACE indicated that a Standard Individual Permit will likely be required; however, a Regional General Permit or a Nationwide Permit [3 or 14] may be appropriate depending upon how the project develops. USACE restated resources that were listed in the PED and noted that runoff into adjacent wetlands and surface waters is a concern for this project. USACE recommended that a wetland survey be conducted; avoidance and minimization should be incorporated into the design, and compensatory mitigation will be required for unavoidable wetland and surface water impacts. Coordination Document: To Be Determined: Further Coordination Required.

USEPA stated that while no major impacts to wetlands or surface waters are anticipated as a result of the project, the project will result in an increase in impervious surfaces thereby generating more stormwater runoff. USEPA recommended that stormwater runoff be treated before diverting it to waterbodies. **Coordination Document:** To Be Determined: Further Coordination Required.

While no wetlands are reported within the 500-foot project buffer based on the SFWMD Wetlands 2008-2015 database, the National Wetlands Inventory database identifies 1.36 acres [7.55%] of palustrine wetlands within the same designated buffer. These wetlands are primarily associated with two existing stormwater ponds located approximately 300 feet north of CR 865 (Bonita Beach Road) and a canal that flows parallel to the east side of US 41 connecting to one of the stormwater ponds. It should be noted that estuarine wetlands associated with the Imperial River are located approximately 2,000 feet north of the project. Avoidance and minimization measures will be incorporated into the project's design, best management practices will be utilized during project activities, and compensatory mitigation will be provided for any adverse wetland impacts resulting from the proposed project improvements. Further, the proposed stormwater management system for the project will be developed to meet the design and performance criteria established in the SFWMD ERP Applicant's Handbook Volumes I and II for the treatment and attenuation of discharges to nearby waterbodies. As such, stormwater runoff from the proposed project will be treated to prevent water quality impacts to nearby wetlands. Due to the presence of the noted features, and the potential need for right of way acquisition to accommodate stormwater improvements, a Summary Degree of Effect of Minimal has been assigned to the Wetlands and Surface Waters issue.

Next Steps: A Natural Resources Evaluation [conducted in accordance with Part 2, Chapter 9 of the FDOT PD&E Manual] will be included in the Project Development and Environment Study scoping recommendations for this project.

Technical Study: Natural Resources Evaluation.

Degree of Effect: 2 Minimal assigned 11/19/2019 by Mark M Tamblyn, US Army Corps of Engineers

Coordination Document:

To Be Determined: Further Coordination Required

Coordination Document Comments:

The proposed project will more than likely have lo be permitted using a Standard Indlvldual Permit, but depending on the project development and planning process a different permit might be more applicable. There is a possibility that a Regional General Permit or a Nationwide 3 or 14 (maintenance-linear transportation project) could be used as the project develops and planning moves forward.

Direct Effects

Identified Resources and Level of Importance:

It appears that no wetlands *I* surface waters were reported within the 500-foot project buffer based on the SFWMD Wetlands 2008-2015 database, the National Wetlands Inventory database Identified 1.36 acres of palustrine wetlands within the 500 foot buffer. These wetlands / surface waters are primarily associated with the storm water ponds within and adjacent to the intersection and the Wide canal that flows along the east side of US 41 and crosses underneath CR 865 (Bonita Beach Road),

The !eve! of importance would be minimal for new road construction or improvements with the associated adjacent wetlands / surface waters within the 500 foot buffer. The wetlands *I* surface waters are isolated along this alternative. Avoidance and minimization measures should be rather easy to accomplish as long as the design and location stay the same. One area to be concerned about Is the potential from run-off which may become a problem within this new improvement *I* expansion and water quality. The best management practices should be utilized during project planning design activities so this project can proceed along the line of the review.

Comments on Effects to Resources:

Any wetlands or surface waters in the project area deemed to be jurisdictional along the existing roadway should be avoided and impacts minimized. This projects has wetlands(1.36 acres) within a 500 foot buffer, they appear to be avoidable with the present location and design of this review. Given the jurisdictional wetland resources along the proposed project, impacts to these resources should be easily avoided. A true concern is the potential for run-off into these adjacent wetlands / surface waters. This potential water quality problem should be reviewed and studied within the new improvement / expansion of this intersection. Additional studies should look at these types of impacts and attempt to avoid and minimize any and all. These types of impacts will need to be permitted and mitigated for as well.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

The Corps recommends a continued emphasis on wetland avoidance and minimization throughout the planning and design process . A wetland survey should be conducted within the study area to identify the wetlands and a jurisdictional determinallon should be completed. If needed mitigation options should be discussed for unavoidable impacts during the project development and planning phases. The proposed project will more than likely have to be permitted using a Standard Individual Permit. There !s a possibl!ity that a Regional General Permit might be applicable, or a Nationwide 3 or 14 (Maintenance-linear transportation) could be used as the project development and planning moves forward.

Page 29 of 80 Summary Report - Project #6291 - US 41 at CR 865 (Bonita Beach Road) Intersection Improverniebed on: 1/18/2020

Additional Comments (optional):

The proposed project will more than likely have lo be permitted using a Standard Indlvldual Permit, but depending on the project development and planning process a different permit might be more applicable. There is a poss!bility that a Regional General Permit or a Nationwide 3 or 14 (maintenance-linear transportation project) could be used as the project develops and planning moves forward.

CLC Recommendations:

Degree of Effect: 2 Minimal assigned 11/11/2019 by Roshanna White, US Environmental Protection Agency

Coordination Document:

To Be Determined: Further Coordination Required

Direct Effects

Identified Resources and Level of Importance:

Storm water runoff from urban sources, including roadways, carries pollutants such as volatile organics, petroleum hydrocarbons, heavy metals, and pesticides/herbicides. The EPA does not anticipate major impacts to wetlands and surface waters. Therefore, the EPA assigns a Minimal Degree of Effect for Wetlands and Surface Waters.

Comments on Effects to Resources:

With an increase in the impervious surface area, the project area is expected to experience an increase in storm water runoff.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Treat storm water runoff before diverting it to water bodies

Additional Comments (optional):

Comments on Effects to Resources:

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Degree of Effect: 2 Minimal assigned 11/01/2019 by Trisha Stone, South Florida Water Management District

Coordination Document:

Permit or Technical Study Required

Direct Effects

Identified Resources and Level of Importance:

Potentially 1.36 acres of wetlands that may be associated with the existing stormwater ponds (OSW) within proximity to the intersection and the wide canal that flows along the east side of US 41 and crosses underneath Bonita Beach Road.

Comments on Effects to Resources:

It is unclear if jurisdictional wetlands are located within the project area.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

A wetland determination should be included in the environmental resource permit review or could be done separately as either a formal or informal wetland jurisdictional determination. Due to the linear nature of this project, off site mitigation at a mitigation bank would be recommended if there are wetlands impacts within the project area.

Degree of Effect: 2 Minimal assigned 10/02/2019 by David A. Rydene, National Marine Fisheries Service

Coordination Document:

To Be Determined: Further Coordination Required

Direct Effects

Identified Resources and Level of Importance:

The resources of concern are located at the mouth of the Imperial River, and in Little Hickory Bay and Fish Trap Bay. These areas contain estuarine habitats used by federally-managed fish species and their prey.

E - 32

Comments on Effects to Resources:

NOAA's National Marine Fisheries Service (NMFS) has reviewed the information contained in the Environmental Screening Tool (EST) for ETDM Project # 6291. The Florida Department of Transportation District 1 proposes intersection improvements at the existing US 41-CR 865 (Bonita Beach Road) at-grade interchange in Lee County, Florida. A range of alternatives will be considered during the PD&E phase, including "no build", at-grade enhancement, roundabout, and overpass options.

NMFS staff conducted a site inspection of the project area on May 1, 2013, to assess potential concerns related to living marine resources within the Imperial River, Little Hickory Bay, and Fish Trap Bay. The lands adjacent to the proposed project are principally commercial properties. It does not appear that the project will directly impact NMFS trust resources. However, the project's northern terminus (as shown in the EST maps) lies within 2000 feet of the Imperial River. The Imperial River drains to Little Hickory Bay and Fish Trap Bay. The mouth of the Imperial River, Little Hickory Bay, and Fish Trap Bay contain estuarine habitats (e.g. seagrass and mangrove) used by federally-managed fish species and their prey. However, with upgrades to stormwater management systems and use of Best Management Practices (as described in the project's Preliminary Environmental Discussion) any indirect impacts to nearby estuarine habitats should be minimal.

Wildlife and Habitat

Project Effects

Coordinator Summary Degree of Effect:

2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

FWC noted that minimal impacts to wildlife resources are anticipated as a result of the project. **Coordination Document:** No Involvement.

FWS reported that the project is located within the geographic range of the endangered Florida bonneted bat. FWS recommended that surveys be conducted based on FWS guidance if suitable habitat is present within the project area. FWS also reported that the project occurs within the Core Foraging Area of an active nesting wood stork colony; therefore, any lost foraging habitat resulting from the project must be mitigated within the same Core Foraging Area as the affected nesting colony. FWS added that other federally listed species have the potential to occur in or near the project site, including Eastern indigo snake and federally-listed plants. FWS recommended that FDOT prepare a Biological Assessment during the Project Development and Environment phase of the project. **Coordination Document:** To Be Determined: Further Coordination Required.

SFWMD stated that the project is located within the ranges of several endangered and listed species and noted that least terns and wood storks have been observed within the project area. SFWMD indicated that the likelihood of listed or endangered species nesting or denning in the area is minimal and recommended avoidance and minimization measures for species protection. **Coordination Document:** Permit or Technical Study Required.

The 500-foot project buffer occurs within the Southwest Coast Ecosystem Management Area; FWS Consultation Areas for the American crocodile, Florida bonneted bat, Florida scrub jay, and Southwest plants; Abundant Range for the Florida black bear; and Core Foraging Area of an active nesting wood stork colony. Least terns and wood storks have also been observed within the project area, and the canal located along the east side of US 41 serves as suitable foraging habitat for the wood stork. Based on the Florida Natural Areas Inventory (FNAI) database, the Eastern indigo snake and scrub stylisma have the potential to occur within the 500-foot project buffer; however, no suitable habitat is present for either species. Avoidance and minimization measures will be implemented to the greatest extent practicable, and agency coordination will take place to address potential project impacts to the noted listed species. For these reasons and due to the urban location of the project, a Summary Degree of Effect of Minimal has been assigned to the Wildlife and Habitat issue.

Next Steps: A Natural Resources Evaluation [conducted in accordance with Part 2, Chapter 16 of the FDOT PD&E Manual] will be included in the Project Development and Environment Study scoping recommendations for this project.

Technical Study: Natural Resources Evaluation.

Degree of Effect: 2 Minimal assigned 11/01/2019 by Jennifer Goff, FL Fish and Wildlife Conservation Commission

For the official list of fish and wildlife designated by the state of Florida as Endangered, Threatened or Species of Special Concern, please refer to sections 68A-27.003, .0031 and 005 in *Rules Relating to Endangered or Threatened Species*, Chapter 68A-27, Florida Administrative Code, https://www.flrules.org/gateway/ChapterHome.asp?Chapter=68A-27.

Coordination Document:

To Be Determined: Further Coordination Required

Direct Effects

Identified Resources and Level of Importance:

Federally listed species and fish and wildlife resources

Comments on Effects to Resources:

Federally Listed Species -

The Service has reviewed our Geographic Information Systems (GIS) database for recorded locations of federally listed threatened and endangered species on or adjacent to the project study area. The GIS database is a compilation of data received from several sources.

Florida bonneted bat

The project corridor is located in the geographic range of the endangered Florida bonneted bat (*Eumops floridanus*). If suitable E - 35

Page 34 of 80 Summary Report - Project #6291 - US 41 at CR 865 (Bonita Beach Road) Intersection Improverriebed on: 1/18/2020

habitat occurs within the project footprint, then we recommend that surveys based on the Service's guidance be conducted to determine the status of this species.

Wood Stork

The project corridor is located in the Core Foraging Area (CFA; all lands within 18.6 miles) of an active nesting colony of the endangered wood stork (*Mycteria americana*). The Service believes that the loss of wetlands within a CFA due to an action could result in the loss of foraging habitat for the wood stork. To minimize adverse effects to the wood stork, we recommend that any lost foraging habitat resulting from the project be replaced within the CFA of the affected nesting colony. Moreover, wetlands provided as mitigation should adequately replace the wetland functions lost as a result of the action. The Service does not consider the preservation of wetlands, by itself, as adequate compensation for impacts to wood stork foraging habitat, because the habitat lost is not replaced. Accordingly, any wetland mitigation plan proposed should include a restoration, enhancement, or creation component. In some cases, the Service accepts wetlands compensation located outside the CFA of the affected wood stork nesting colony. Specifically, wetland credits purchased from a "Service Approved" mitigation bank located outside of the CFA would be acceptable to the Service, provided that the impacted wetlands occur within the permitted service area of the bank.

For projects that impact 5 or more acres of wood stork foraging habitat, the Service requires a functional assessment be conducted using our "Wood Stork Foraging Analysis Methodology" (Methodology) on the foraging habitat to be impacted and the foraging habitat provided as mitigation. The Methodology can be found at: https://www.fws.gov/verobeach/BirdsPDFs/20120712_WOST Forage Assessment Methodology_Appendix.pdf.

The Service believes that the following federally listed species have the potential to occur in or near the project site: Florida bonneted bat, wood stork, Eastern indigo snake (*Drymarchon corais couperi*) and Federally listed plants in Charlotte County at http://ecos.fws.gov/ ipac/. Accordingly, the Service recommends that the Florida Department of Transportation (FDOT) prepare a Biological Assessment for the project (as required by 50 CFR 402.12) during the FDOT's Project Development and Environment process.

Fish and Wildlife Resources -

Wetlands provide important habitat for fish and wildlife. Data in the environmental screening tool indicate that wetlands may occur within the project area. We recommend that the project be designed to avoid and minimize impacts to wetland resources to the greatest extent practicable. If impacts to wetlands are unavoidable, we recommend that the FDOT provides mitigation that fully compensates for the loss of wetland resources.

Water Quality and Quantity

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

FDEP commented that every effort should be made to maximize the treatment of stormwater runoff to prevent ground and surface water contamination. FDEP recommended that stormwater treatment be designed to maintain the natural predevelopment hydroperiod and water quality, as well as to protect the natural functions of adjacent wetlands. FDEP further recommended that the Project Development and Environment Study include existing stormwater treatment adequacy and details on future stormwater treatment facilities. FDEP noted that the retro-fitting of stormwater conveyance systems will help reduce water quality impacts. Coordination Document: PD&E Support Document as Per PD&E Manual.

SFWMD stated that the project will discharge into the Imperial River - Marine Segment [WBID 3258EB], which is impaired for fecal coliform, iron, dissolved oxygen, and mercury. SFWMD noted that project discharge will need to meet local basin rates determined by the appropriate agency and that the proposed project design should follow criteria stated in the SFWMD Environmental Resource Permit (ERP) Applicant's Handbook Volumes I and II. SFWMD further stated that the stormwater management system of the project must provide an additional 50% of water quality treatment volume prior to offsite discharge. Coordination Document: Permit or Technical Study Required.

USEPA noted that roadway pollutants increase turbidity and degrade waterbodies through stormwater runoff and suggested avoidance, minimization, and mitigation opportunities to maintain or improve water quality. USEPA stated that it does not anticipate major impacts to water quality and quantity as a result of the project. Coordination Document: To Be Determined: Further Coordination Required.

Stormwater runoff within the project area is currently collected via curb and gutter and a network of vegetated roadside swales. Stormwater ponds are currently located along both sides of US 41, approximately 300 feet north of CR 865 (Bonita Beach Road). An outfall canal also extends south along US 41 for approximately 900 feet, from the east stormwater pond to an existing culvert, where it flows west beneath CR 865 (Bonita Beach Road). The 500-foot project buffer occurs within the watershed of one impaired waterbody [Imperial River - Marine Segment (WBID 3258EB)]. Other features located within the 500-foot project buffer include the Surficial Aquifer System [a principal aquifer of the State of Florida], a recharge area of the Floridian Aquifer, and one NPDES stormwater permit. The Imperial River, a designated Outstanding Florida Water (OFW), is located approximately 2,000 feet north of the project. The proposed stormwater management system will be developed to meet the design and performance criteria established in the SFWMD ERP Applicant's Handbook Volumes I and II for the treatment and attenuation of discharges to impaired waters and OFWs; the design will make every effort to maximize the treatment of stormwater runoff from the proposed intersection improvements. A Storm Water Pollution Prevention Program (SWPPP) will also be implemented [as required by the NPDES permit] to control the effects of stormwater runoff during construction. For these reasons, a Summary Degree of Effect of Minimal has been assigned to the Water Quality and Quantity issue.

Next Steps: A Water Quality Impact Evaluation and potentially a Pond Siting Report [conducted and prepared in accordance with Part 2, Chapter 11 of the FDOT PD&E Manual] will be included in the Project Development and Environment Study scoping recommendations for this project.

Technical Studies: Water Quality Impact Evaluation. / Pond Siting Report (potentially).

Degree of Effect: 2 Minimal assigned 11/11/2019 by Roshanna White, US Environmental Protection Agency

Coordination Document:

To Be Determined: Further Coordination Required

Direct Effects

Identified Resources and Level of Importance:

Common roadway pollutants such as heavy metals, volatile organic chemicals, petroleum hydrocarbons, and suspended solids degrade near-by water bodies through storm water runoff. The EPA does not anticipate major impacts to water quality and quantity. Therefore, the EPA assigns a Minimal Degree of Effect for Water Quality and Quantity

Comments on Effects to Resources:

Roadway contaminants can increase the turbidity of a water body and degradation of water.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Maximize the collection and treatment of storm water, reduce the impact of pollution runoff from construction activities and stabilize soils to reduce the effects of erosion, sedimentation, and runoff to maintain or improve water quality.

Additional Comments (optional):

CLC Recommendations:

Indirect Effects Identified Resources and Level of Importance:

Comments on Effects to Resources:

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Degree of Effect: 2 Minimal assigned 11/08/2019 by Chris Stahl, FL Department of Environmental Protection

Coordination Document:

PD&E Support Document As Per PD&E Manual

Direct Effects

Identified Resources and Level of Importance:

Local surface waters

Comments on Effects to Resources:

Every effort should be made to maximize the treatment of stormwater runoff from the proposed pathway/road widening project to prevent ground and surface water contamination. If an ERP permit is required to construct the project, stormwater treatment should be designed to maintain the natural predevelopment hydroperiod and water quality, as well as to protect the natural functions of adjacent wetlands. We recommend that the PD&E study include details on possible future stormwater treatment facilities. We recommend that the PD&E study include an evaluation of existing stormwater treatment adequacy and details on the future stormwater treatment facilities. Retro-fitting of stormwater conveyance systems would help reduce impacts to water quality.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Additional Comments (optional):

CLC Recommendations:

Identified Resources and Level of Importance:

Comments on Effects to Resources:

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Degree of Effect: 2 Minimal assigned 11/01/2019 by Trisha Stone, South Florida Water Management District

Coordination Document:

Permit or Technical Study Required **Permits**

Environmental Resource Permit Technical Studies

Wetlands Evaluation Report

Direct Effects

Identified Resources and Level of Importance:

The project will discharge to WBID 3258EB Imperial River (Marine Segment) which is impaired for fecal coliform, iron, dissolved oxygen, and mercury. The project will also need to meet local basin rates determined by the appropriate agency.

Comments on Effects to Resources:

To avoid degradation of water quality during construction and operation of the project, the design will need to meet the criteria in ERP Applicant's Handbook Volume I and II. The stormwater management facilities will also need to be designed to attenuate the discharge in accordance with the Applicant's Handbooks and local basin discharge rates.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

The proposed stormwater management system must provide an additional 50% of water quality treatment volume prior to discharging offsite.

ETAT Reviews and Coordinator Summary: Physical

Noise

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

No ETAT members provided comments for this issue.

While commercial uses abut the project intersection, residential subdivisions are present behind the commercial activities. Specific community features within the 500-foot project buffer that may be sensitive to noise and vibration effects include four homeowner and condominium associations [Waterford I, II, and III and Wedgewood I], a dentist office, and one Office of Greenways and Trails (OGT) multi-use trail opportunity/hiking trail priority [Estero-Bonita Corridor]. An additional dentist office, one religious center, healthcare facilities, one laser facility, and additional recreational facilities are reported within the 1,320-foot project buffer. Increased noise levels during construction and presumable noise level increases from higher traffic volumes as a result of improved operational conditions at the US 41 and CR 865 (Bonita Beach Road) intersection could have impacts on nearby residences and other identified sensitive receptors. However, given that the proposed improvements are anticipated to be constructed primarily within the existing right-of-way and abatement criteria will be considered to offset any potential unavoidable adverse effects, a Summary Degree of Effect of Minimal has been assigned to the Noise issue.

Next Steps: A Noise Study Report [conducted in accordance with Part 2, Chapter 18 of the FDOT PD&E Manual] will be included in the Project Development and Environment Study scoping recommendations for this project. **Technical Study:** Noise Study Report.

Navigation

Project Effects

Coordinator Summary Degree of Effect: N/A / No Involvement assigned 01/18/2020 by FDOT District 1

Comments:

USACE noted that the project has no impacts to navigation; however, USACE indicated that further review would be necessary for changes to the project's current design or location to determine potential involvement and permitting needs. **Coordination Document:** To Be Determined: Further Coordination Required.

USCG indicated no further involvement with the project unless the project scope changes or design changes are proposed that include additional, unassessed bridges. **Coordination Document:** No Involvement.

The project does not cross any navigable waterways and will not affect navigation; therefore, a Summary Degree of Effect of N/A / No Involvement has been assigned to the Navigation issue.

Next Steps: None.

Technical Study: None.

Degree of Effect: N/A / No Involvement assigned 11/18/2019 by Mark M Tamblyn, US Army Corps of Engineers

Coordination Document:

To Be Determined: Further Coordination Required

Coordination Document Comments:

The present alternative reviewed has no impacts to navigation at all within a Mile. If anything was to change with design or location further review would be needed to determine involvement and potential permitting.

Direct Effects

Identified Resources and Level of Importance:

This project alternative has no proposed impacts to any navigation at all.

Comments on Effects to Resources:

There will be no effects to any resources related to navigation.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

See comments for direct effects.

Additional Comments (optional):

The present alternative reviewed has no impacts to navigation at all within a Mile. If anything was to change with design or location further review would be needed to determine involvement and potential permitting.

CLC Recommendations:

Indirect Effects

Identified Resources and Level of Importance:

See comments for direct effects.

Comments on Effects to Resources:

Contamination

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

FDEP did not identify any issues or potential project effects related to contamination. **Coordination Document:** PD&E Support Document as Per PD&E Manual.

SFWMD commented that construction methodologies, such as dewatering, must be designed to minimize movement of contaminant plumes. SFWMD stated that projects that do not qualify for a SFWMD General Permit will require a SFWMD Water Use Permit if dewatering is necessary. **Coordination Document:** To Be Determined: Further Coordination Required.

USEPA noted that contamination of groundwater can result in poor drinking water quality and loss of water supply. USEPA added that the potential sources of sub-surface contamination reported in the PED have not been investigated to determine their potential risk. USEPA recommended that corrective action be completed before commencement of project activities, if applicable. **Coordination Document:** To Be Determined: Further Coordination Required.

Potential sources of sub-surface contamination reported within the 500-foot project buffer include two hazardous waste facilities/USEPA Resource Conservation and Recovery Act (RCRA) regulated facilities [one of which is also a closed waste cleanup

E - 43

Page 42 of 80 Summary Report - Project #6291 - US 41 at CR 865 (Bonita Beach Road) Intersection Improvernieted on: 1/18/2020

responsible party site], one additional USEPA RCRA regulated facility, two petroleum contamination monitoring sites/storage tank contamination monitoring sites, one additional storage tank contamination monitoring site, and two Super Act risk sources. The noted sites will be investigated to determine their potential contamination risk during the Project Development and Environment Study. Proper mitigation will take place if medium to high risk sites are identified. For these reasons and given the relatively low presence of such sites within proximity to the project, a Summary Degree of Effect of Minimal has been assigned to the Contamination issue.

Next Steps: Preparation of a Contamination Screening Evaluation Report [in accordance with Part 2, Chapter 20 of the FDOT PD&E Manual] will be included in the Project Development and Environment Study scoping recommendations for this project. **Technical Study:** Contamination Screening Evaluation Report.

Degree of Effect: 2 Minimal assigned 11/11/2019 by Roshanna White, US Environmental Protection Agency

Coordination Document:

To Be Determined: Further Coordination Required

Direct Effects

Identified Resources and Level of Importance:

Potential sources of sub-surface contamination that can adversely effect water quality and quantity. The EPA does not anticipate major impacts from potential pollutants. Therefore, the EPA assigns a Minimal Degree of Effect for Contamination.

Comments on Effects to Resources:

Contamination of ground water can result in poor drinking water quality and loss of water supply. The potential sources of contamination reported in the PED have not been investigated to determine their potential risk.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

The EPA recommends corrective action is completed before commencement of project activities, if applicable.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Air Quality

Project Effects

Coordinator Summary Degree of Effect: 2

Minimal assigned 01/18/2020 by FDOT District 1

Comments:

USEPA stated that the project is within an Air Quality Attainment Area so criteria pollutants under National Ambient Air Quality Standards are considered to be at acceptable levels. USEPA indicated that air quality can possibly be affected by airborne dust and other ambient air pollutants from project construction. USEPA listed several strategies that should be employed during project activities to reduce emissions, such as the use of diesel controls, cleaner fuel, and cleaner construction practices for equipment. **Coordination Document:** To Be Determined: Further Coordination Required.

The project is not located within a USEPA-designated Air Quality Maintenance Area or Non-Attainment Area for any of the six pollutants [ozone, carbon monoxide, sulfur dioxide, nitrogen dioxide, lead, and small particulate matter] specified by the USEPA in National Ambient Air Quality Standards; therefore, the Clean Air Act conformity requirements do not currently apply to this project. Minimal, localized impacts to air quality could occur as a result of fugitive dust and exhaust emissions generated from equipment during project construction; no permanent effects to air quality are anticipated. Therefore, a Summary Degree of Effect of Minimal has been assigned to the Air Quality issue.

Next Steps: None.

Technical Study: None.

Degree of Effect: 2 Minimal assigned 11/11/2019 by Roshanna White, US Environmental Protection Agency

Coordination Document:

Direct Effects

Identified Resources and Level of Importance:

A wide variety of air pollutants can be emitted from stationary and mobile sources. The EPA establishes the National Ambient Air Quality Standards (NAAQS) to protect public health and public welfare and regulates emissions of hazardous air pollutants. The proposed project is in an attainment area, so criteria pollutants under NAAQS are considered to be an acceptable level. Therefore, EPA expects the project to have Minimal impact on air quality.

Comments on Effects to Resources:

The project area air quality can possibly be affected by airborne dust, and other ambient air pollutants from project construction.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

To maintain healthy air quality consider the use of diesel controls, cleaner fuel and cleaner construction practices for on-road and off -road equipment used for transportation, soil movement, or other project activities

Additional Comments (optional):

CLC Recommendations:

Indirect Effects Identified Resources and Level of Importance:

Comments on Effects to Resources:

Infrastructure

Project Effects

3 Moderate assigned 01/18/2020 by FDOT District 1 **Coordinator Summary Degree of Effect:**

Comments:

No ETAT members provided comments for this issue.

Extensive utilities exist around the project intersection, including traffic lights, pedestrian signals, cable markers, and utility cabinet boxes. Power lines run along the north side of CR 865 (Bonita Beach Road) and on the west side of US 41 south of CR 865 (Bonita Beach Road). In addition, street lights line both sides of US 41 and are present along CR 865 (Bonita Beach Road) as mounted on the power lines. Parking lot lights also exist on abutting private properties. A Summary Degree of Effect of Moderate has been assigned to the Infrastructure issue given the potential conflicts with extensive utilities present and the likelihood of relocations taking place as a result of additional right-of-way being required.

Next Steps: A Utility Assessment Package [conducted in accordance with Part 2, Chapter 21 of the FDOT PD&E Manual] will be included in the Project Development and Environment Study scoping recommendations for this project.

Technical Study: Utility Assessment Package.

None found

ETAT Reviews and Coordinator Summary: Special Designations

Special Designations

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 01/18/2020 by FDOT District 1

Comments:

SFWMD restated comments provided for the Coastal and Marine issue. **Coordination Document:** Permit or Technical Study Required.

USEPA noted that the project could increase degradation of water quality in the Imperial River through subsurface contamination and stormwater runoff. USEPA recommended avoidance and minimization activities. **Coordination Document:** To Be Determined: Further Coordination Required.

The Imperial River, a tributary of Estero Bay [a designated Aquatic Preserve], is located approximately 2,000 feet north of the project; the Estero Bay tributaries are designated Outstanding Florida Waters (OFWs). The project, including the proposed stormwater management system, will be developed to meet the design and performance criteria established in the SFWMD Environmental Resource Permit Applicant's Handbook Volumes I and II for the treatment and attenuation of discharges to OFWs. Best management practices will also be utilized during project activities to prevent impacts [primarily siltation] to nearby estuarine habitats. For these reasons, a Summary Degree of Effect of Minimal has been assigned to the Special Designations issue.

Next Steps: None.

Technical Study: None.

Degree of Effect: 2 Minimal assigned 11/11/2019 by Roshanna White, US Environmental Protection Agency

Coordination Document:

To Be Determined: Further Coordination Required

Direct Effects

Identified Resources and Level of Importance:

Further degradation of Imperial River from storm water and potential sub-surface contamination. The EPA does not anticipate major impacts from potential pollutants. Therefore, the EPA assigns a Minimal Degree of Effect for Special Designations.

Comments on Effects to Resources:

The loss of quality water.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Maximize the collection and treatment of storm water, reduce the impact of pollution runoff from construction activities, and corrective action of potentially contaminated sites.

Dispute Resolution Activity Log

There are no dispute actions identified for this project in the EST.

Appendices

Preliminary Environmental Discussion Comments

Social and Economic

Land Use Changes

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal The project is located in the City of F

The project is located in the City of Bonita Springs, a U.S. Census Designated Place within Lee County. The project area primarily consists of commercial/retail/office and residential uses. Specifically, two extensive strip shopping centers are respectively located in the northwest and southeast quadrants of the intersection. One Planned Unit Development [Crown Lake Shoppes CPD] is present within the 500-foot project buffer; eight additional Planned Unit Developments are present within the 1,320-foot project buffer. According to the City of Bonita Springs Future Land Use Map, the area surrounding the intersection will continue to support the noted uses. Therefore, the project is anticipated to accommodate existing and proposed development within the area. For these reasons, minimal impacts or changes to proximate land uses are anticipated as a result of the project. Positive and negative impacts to sociocultural resources will be assessed further as part of the Project Development phase; however, a standalone Sociocultural Effects Evaluation Technical Memorandum will not be prepared as part of the Project Development and Environment Study.

Social

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal

The project is located in the City of Bonita Springs, a U.S. Census Designated Place within Lee County. The project area primarily consists of commercial/retail/office and residential uses; two strip shopping centers are respectively located in the northwest and southeast quadrants of the intersection. Community features reported within the 500-foot project buffer include: four homeowner and condominium associations [Waterford I, II, and III and Wedgewood I] and one Office of Greenways and Trails (OGT) multi-use trail opportunity/hiking trail priority [Estero - Bonita Corridor]. Community features within the 1,320-foot project buffer include: one community center/religious center, healthcare facilities, and one laser facility; additional community facilities [such as city hall, a post office, a fire station, and recreational features] are within the 5,280-foot project buffer. Compared to the demographic characteristics for Lee County, the 500-foot project buffer contains significantly higher percentages of individuals who identify themselves as White and who are age 65 and older, a comparable Other Race population percentage, a lower percentage of housing units with no vehicle available, and a slightly higher median family income [\$889 more]. Limited English Proficiency (LEP) accommodations will likely be required during public involvement efforts of the Project Development phase as 11.37% or 623 persons within the census block groups containing the intersection "speak English less than very well". In the long term, the proposed project is anticipated to have positive effects on the social environment and cohesion of surrounding communities by enhancing multi-modal access to residences, job opportunities, essential services and tourist destinations; improving transit reliability; and enhancing safety conditions. Depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended], the project could affect community cohesion and the area's visual character/aesthetic quality. However, due to the heavy commercial character of each corridor composing the intersection and the fact that the intersection improvement is anticipated to enhance pedestrian/bicycle access and circulation [by reducing opportunities for conflicts between automobiles and pedestrians/bicyclists] and the performance and reliability of transit service operating in the area [by reducing delays at the intersection], impacts on the social environment are anticipated to be minimal. Positive and negative impacts to sociocultural resources will be assessed further as part of the Project Development phase; however, a standalone Sociocultural Effects Evaluation Technical Memorandum will not be prepared as part of the Project Development and Environment Study. A Public Involvement Plan will be included in the Project Development and Environment Study scoping recommendations.

Relocation Potential

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Moderate

The project area primarily consists of commercial/retail/office and residential uses. The noted commercial/retail/office uses line both US 41 and CR 865 (Bonita Beach Road); the residential uses sit behind the commercial/retail/office activities along the two roadways. Vegetated swales and surface parking lots buffer the majority of businesses on each corridor; however, some structures on CR 865 (Bonita Beach Road) are located closer to the roadway. Right-of-way surrounding the intersection ranges from 120 feet to 145 feet along CR 865 (Bonita Beach Road) and 190 feet to 215 feet along US 41. Depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended], additional right of way may be required. Access to proximate businesses and residences may also temporarily be affected and/or modified as a result of the project. Encroachment into surrounding parcels (if necessary) will be coordinated with the appropriate property owners. Further, the proposed project improvements will be designed to minimize right-of-way acquisition. Specific right-of-way requirements will be determined during the Project Development and Environment Study. Based on the foregoing, moderate involvement regarding relocation potential is anticipated. Positive and negative impacts to sociocultural resources will be assessed further as part of the Project Development phase; however, a standalone Sociocultural Effects Evaluation Technical Memorandum will not be prepared as part of the Project Development and Environment Study. A Conceptual Stage Relocation Plan will be included in the Project Development and Environment Study. A Conceptual Stage Relocation Plan will be included in the Project Development and Environment Study.

Farmlands

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: None

The 500-foot project buffer consists of 15.81 acres (87.69%) of soils classified as Farmland of Unique Importance. Based on recent aerial imagery and field observations, land containing these soils has been developed. Also, no agricultural land is present within the 500-foot project buffer. According to the City of Bonita Springs Future Land Use Map, the area is expected to continue to support commercial/retail/office and residential uses. In addition, the intersection is located entirely within the Bonita Springs Urbanized Area. For these reasons, no impacts to farmlands are anticipated as a result of the project. In addition, no further coordination with NRCS is needed as the project does not meet the definition of farmland as defined in 7 CFR 658 and the provisions of the Farmland Protection Policy Act of 1981.

Aesthetic Effects

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal

The project is located in the City of Bonita Springs, a U.S. Census Designated Place within Lee County. Commercial/retail/office uses line both US 41 and CR 865 (Bonita Beach Road); residential uses sit behind the commercial/retail/office activities along the two roadways. According to the City of Bonita Springs Future Land Use Map, the area surrounding the intersection will continue to support these identified uses. It is important to note that while the project will consider bicycle and pedestrian facilities/facility enhancements in order to improve safety conditions and multi-modal access/mobility, views from/of the surrounding area could be affected depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended]. However, given the heavy commercial character of each corridor and the fact that the project appears to be consistent with the future land use vision and aesthetic character of the intersection, minimal involvement regarding aesthetic effects is anticipated. Positive and negative impacts to sociocultural resources will be assessed further as part of the Project Development phase; however, a standalone Sociocultural Effects Evaluation Technical Memorandum will not be prepared as part of the Project Development and Environment Study.

Economic Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1 Degree of Effect: Minimal

Commercial/retail/office uses line both US 41 and CR 865 (Bonita Beach Road); residential uses sit behind the commercial/retail/office activities along the two roadways. Two strip shopping centers are respectively located in the northwest and southeast quadrants of the intersection; large tenants of these strip-centers include Publix, Winn-Dixie, and Crunch Fitness. Numerous banking, clothing, and retail establishments surround the intersection such as Bank of America, Wells Fargo, Goodwill, and Walgreens. It is important to note that the two roadways composing the intersection are important in facilitating regional and local traffic [including truck traffic] in the area, particularly with their access to other major transportation corridors and coastal communities/tourist destinations [i.e., Fort Meyers Beach and Little Hickory Island] to the west of the Lee County mainland. In the long term, the proposed project is expected to enhance economic conditions of the area by 1) addressing the deficient capacity of the intersection in the existing and future condition in order to serve the mobility demands of the area, thereby supporting increased growth, 2) better facilitating the movement of local and regional freight, and 3) accommodating multimodal activity through bicycle and pedestrian facilities/facility enhancements and reliable transit. However, depending on the type of improvement proposed [i.e., whether or not an elevated structure is recommended], minimal economic impacts are anticipated due to the fact that access to the noted businesses may be modified or temporarily affected during project construction as a result of the project. Positive and negative impacts to sociocultural resources will be assessed further as part of the Project Development phase; however, a standalone Sociocultural Effects Evaluation Technical Memorandum will not be prepared as part of the Project Development and Environment Study.

Mobility

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Enhanced

The US 41 and CR 865 (Bonita Beach Road) intersection is at-grade with double left turn lanes at all approaches to the intersection. US 41 is classified as a six-lane 'Urban Principal Arterial' with a raised median and right turn lanes that run the length of the project limits. CR 865 (Bonita Beach Road) is classified as a four-lane 'Urban Minor Arterial' with a raised median and turn and merge lanes at various points. US 41 facilitates the north-south movement of regional and local traffic (including truck traffic) as it runs parallel to I-75 along the east coast of the State of Florida; it additionally connects employment and population centers throughout the west coast of Florida. CR 865 (Bonita Beach Road) provides east-west access between major north-south transportation corridors of the area [US 41 and I-75] as well as serves as one of two connections between the coastal communities/tourist destinations to the west and the mainland of Lee County. US 41 and CR 865 (Bonita Beach Road) are designated emergency evacuation routes of both the Florida Division of Emergency Management and Lee County as well as designated regional freight facilities [US 41 - Tier 1 Regional Freight Corridor and CR 865 (Bonita Beach Road) - Tier 2 Regional Freight Connector] according to the Lee County Metropolitan Planning Organization's (MPO's) 2040 Long Range Transportation Plan (LRTP). It should be noted that sidewalks are present on both sides of US 41 and CR 865 (Bonita Beach Road); however, marked bicycle lanes only occur along US 41. Two LeeTran bus routes [Routes 150 and 600], one transportation disadvantaged service provider area [Good Wheels Inc.], and a future trail exists within the 500-foot project buffer. This project is intended to improve traffic operations at the intersection of US 41 and CR 865 (Bonita Beach Road) by increasing the operational capacity to address existing congestion and projected travel demand. In turn, through reduced delays at the intersection, the improvement is anticipated to enhance overall mobility in the area by 1) improving the viability of US 41 as a regional alternative facility to I-75; 2) enhancing east-west access between two primary north-south transportation corridors [US 41 and I-75] as well as between the mainland of Lee County and coastal communities/tourist destinations to the west; 3) enhancing freight mobility and access within the area; 4) increasing the volume of residents and tourists from coastal communities that can be evacuated, enhancing access to facilities of the state evacuation route network, and improving response times to emergency events and incidences; 5) enhancing the performance and reliability of transit service in the area; and 6) improving pedestrian/bicycle access and circulation by modifying/limiting opportunities for conflicts between automobiles and pedestrians/bicyclists. Positive and negative impacts to sociocultural resources will be assessed further as part of the Project Development phase; however, a standalone Sociocultural Effects Evaluation Technical Memorandum will not be prepared as part of the Project Development and Environment Study.

Cultural Section 4(f) Potential

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal

One potential Section 4(f) resource, an Office of Greenways and Trails (OGT) multi-use trail opportunity/hiking trail priority [Estero-Bonita Corridor], exists within the 500-foot project buffer. While no comprehensive Cultural Resource Assessment Survey has been conducted for either US 41 or CR 865 (Bonita Beach Road), no previously recorded resources exist within 500 feet of the intersection; in addition, there is low potential for unrecorded historic resources to exist given the developed nature of the project area. For these reasons, minimal involvement regarding Section 4(f) potential is anticipated. A Section 4(f) Determination of Applicability Form [Form No. 650-050-45] will be included in the Project Development and Environment Study scoping recommendations.

Historic and Archaeological Sites

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal

A review of the data indicates that the portion of the project along US 41 is within the boundaries of a previous Cultural Resource Assessment Survey (CRAS) conducted in 1997: the Cultural Resource Assessment Survey of US 41 from North of CR 887 to San Carlos Boulevard [Collier and Lee Counties, Florida]. No comprehensive survey has been conducted along CR 865 (Bonita Beach Road). No previously recorded cultural resources are located within 500 feet of the project corridors. Property appraiser data also identified no parcels with potential unrecorded historic resources. Although considered historic in other parts of the state, US 41 within the project area no longer retains any historic fabric or integrity. Based on the previous survey of US 41, the lack of previously recorded resources within 500 feet of the intersection, the absence of any potential unrecorded historic resources, and the developed nature of the project area, minimal involvement regarding cultural resources is anticipated. A Cultural Resource Assessment Survey will be included in the Project Development and Environment Study scoping recommendations.

Recreation Areas

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1 Degree of Effect: Minimal

Recreational features located in the project vicinity include: one Office of Greenways and Trails (OGT) multi-use trail opportunity/hiking trail priority [Estero-Bonita Corridor] within the 500-foot project buffer and one private golf course within the 1,320-foot project buffer. Due to the limited number of recreational features within the project vicinity, minimal involvement regarding recreation areas is anticipated as a result of the project.

Natural

Wetlands and Surface Waters Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal

While no wetlands were reported within the 500-foot project buffer based on the SFWMD Wetlands 2008-2015 database, the National Wetlands Inventory database identified 1.36 acres [7.55%] of palustrine wetlands within the same buffer. These wetlands are primarily associated with the stormwater ponds within proximity to the intersection and the wide canal that flows along the east side of US 41 and crosses underneath CR 865 (Bonita Beach Road). It should be noted that estuarine wetlands associated with the

Imperial River are located approximately 2,000 feet north of the project. Avoidance and minimization measures will be incorporated into the project's design, best management practices will be utilized during project activities, and compensatory mitigation will be provided for any adverse wetland impacts resulting from the proposed project improvements. Further, the proposed stormwater management system for the project will be developed to meet the design and performance criteria established in the SFWMD Environmental Resource Permit Applicant's Handbook Volumes I and II for the treatment and attenuation of discharges to nearby waterbodies. As such, stormwater runoff from the proposed project will be treated to prevent water quality impacts to nearby wetlands. Additional right-of-way acquisition may be necessary to accommodate improved stormwater management facilities. Due to the presence of the noted features, minimal involvement regarding wetland resources is anticipated. A Natural Resources Evaluation will be included in the Project Development and Environment Study scoping recommendations.

Water Quality and Quantity

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal

Stormwater runoff within the project area is currently collected via curb and gutter and a network of vegetated swales adjacent to and on both sides of each roadway. Stormwater ponds are located within proximity to the intersection, and a wide canal flows along the east side of US 41 crossing underneath CR 865 (Bonita Beach Road). The 500-foot project buffer occurs within the watershed of one impaired waterbody [Imperial River - Marine Segment (WBID 3258EB)] - which is impaired for fecal coliform, iron, nutrients, and dissolved oxygen. Other features located within the 500-foot project buffer include: the Surficial Aquifer System [a principal aquifer of the State of Florida], a recharge area of the Floridian Aquifer, and one NPDES stormwater permit. The Imperial River, a tributary of Estero Bay [a designated Aquatic Preserve], is additionally located approximately 2,000 feet north of the project; the Estero Bay tributaries are designated Outstanding Florida Waters (OFWs). The proposed stormwater management system will be developed to meet the design and performance criteria established in the SFWMD Environmental Resource Permit Applicant's Handbook Volumes I and II for the treatment and attenuation of discharges to impaired waters and OFWs; the design will make every effort to maximize the treatment of stormwater runoff from the proposed intersection improvements. A Storm Water Pollution Prevention Program (SWPPP) will also be implemented [as required by the NPDES permit] to control the effects of stormwater runoff during construction. For these reasons, minimal involvement regarding water quality and quantity resources is anticipated. A Water Quality Impact Evaluation, and potentially a Pond Siting Report, will be included in the Project Development and Environment Study scoping recommendations.

Floodplains

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1 Degree of Effect: Minimal

According to the DFIRM (SFHA) 100 Year Flood Zone data, 2.92 acres [16.21%] of the project's 500-foot buffer occurs within the 100-year floodplain [Flood Zone AE]. The 100-year floodplain is concentrated in the southwest quadrant of the intersection. Floodplain compensation associated with project impacts will be addressed through necessary agency coordination. For these reasons, minimal involvement regarding floodplains is anticipated. A Location Hydraulic Report will be included in the Project Development and Environment Study scoping recommendations.

Wildlife and Habitat

For the official list of fish and wildlife designated by the state of Florida as Endangered, Threatened or Species of Special Concern, please refer to sections 68A-27.003, .0031 and 005 in *Rules Relating to Endangered or Threatened Species*, Chapter 68A-27, Florida Administrative Code, https://www.flrules.org/gateway/ChapterHome.asp?Chapter=68A-27.

For general information on Florida imperiled species and species conservation programs, go to https://myfwc.com/wildlife/abitats/wildlife/

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1 Degree of Effect: Minimal

The 500-foot project buffer occurs within the Southwest Coast Ecosystem Management Area; FWS Consultation Areas for the American crocodile, Florida bonneted bat, Florida scrub jay, and Southwest plants; Abundant Range for the Florida black bear; and Core Foraging Area of an active nesting wood stork colony. Least terns and wood storks have been observed within the project area; the canal present on the east side of US 41 serves as suitable habitat for wood storks. Based on the Florida Natural Areas Inventory (FNAI) database, two other endangered or rare species [Eastern indigo snake and scrub stylisma] have the potential to occur within the 500-foot project buffer; additional protected species and habitat are further reported within one mile of the project. Avoidance and minimization measures will be implemented to the greatest extent practicable, and agency coordination will take place to address potential project impacts to the noted listed species. For these reasons and due to the surrounding urban environment, minimal involvement regarding wildlife and habitat resources is anticipated. A Natural Resources Evaluation will be included in the Project Development and Environment Study scoping recommendations.

Coastal and Marine

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal

No coastal or marine resources are reported within the 500-foot project buffer; however, estuarine wetlands associated with the Imperial River are located approximately 2,000 feet north of the project. Avoidance and minimization measures will be incorporated into the project's design, and best management practices will be utilized during project activities to prevent potential water quality impacts to proximate estuarine habitats. For this reason, minimal involvement regarding coastal and marine resources is anticipated.

Physical

Noise Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1 Degree of Effect: Minimal

While commercial uses abut the project intersection, residential subdivisions are present behind the commercial activities. Specific community features within the 500-foot project buffer that may be sensitive to noise and vibration effects include: four homeowner and condominium associations [Waterford I, II, and III and Wedgewood I], a dentist office, and one Office of Greenways and Trails (OGT) multi-use trail opportunity/hiking trail priority [Estero-Bonita Corridor]. An additional dentist office, one religious center, healthcare facilities, one laser facility, and additional recreational facilities are reported within the 1320-foot project buffer. Increased noise levels during construction and presumable noise level increases from higher traffic volumes as a result of improved operational conditions at the US 41 and CR 865 (Bonita Beach Road) intersection could have impacts on nearby residences and other identified sensitive receptors. However, given that the proposed improvements are anticipated to be constructed primarily within the existing right-of-way and abatement criteria will be considered to offset any potential unavoidable adverse effects, overall noise and vibration related impacts as a result of the project are anticipated to be minimal. A Noise Study Report will be included in the Project Development and Environment Study scoping recommendations.

Air Quality Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1 Degree of Effect: Minimal The project is not located within a USEPA-designated Air Quality Maintenance Area or Non-Attainment Area for any of the six pollutants [ozone, carbon monoxide, sulfur dioxide, nitrogen dioxide, lead, and small particulate matter] specified by the USEPA in National Ambient Air Quality Standards; therefore, the Clean Air Act conformity requirements do not currently apply to this project. Minimal, localized impacts to air quality could occur as a result of fugitive dust and exhaust emissions generated from equipment during project construction; no permanent effects to air quality are anticipated. An Air Quality Technical Memorandum will be included in the Project Development and Environmental Study scoping recommendations.

Contamination

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal

Potential sources of contamination reported within the 500-foot project buffer include: two hazardous waste facilities/USEPA Resource Conservation and Recovery Act (RCRA) regulated facilities [one of these facilities is also a closed waste cleanup responsible party site], one additional USEPA RCRA regulated facility, two petroleum contamination monitoring sites/storage tank contamination monitoring sites, one additional storage tank contamination monitoring site, and two Super Act risk sources. The noted sites will be investigated to determine their potential contamination risk during the Project Development and Environment Study. Proper mitigation will take place if medium to high risk sites are identified. For these reasons and given the relatively low presence of sites within proximity to the project intersection, minimal involvement regarding contamination is anticipated. A Contamination Screening Evaluation Report will be included in the Project Development and Environment Study scoping recommendations.

Infrastructure

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Moderate

Extensive utilities exist around the project intersection, including: traffic lights, pedestrian signals, cable markers, and utility cabinet boxes. Power lines run along the north side of CR 865 (Bonita Beach Road) and on the west side of US 41 south of CR 865 (Bonita Beach Road). In addition, street lights line both sides of US 41 and are present along CR 865 (Bonita Beach Road) as mounted on the power lines. Parking lot lights also exist on abutting private properties. Moderate involvement regarding infrastructure-related features is anticipated given potential conflicts with the extensive utilities present and the likelihood of relocations taking place as a result of additional right-of-way being required. A Utility Assessment Package will be included in the Project Development and Environment Study scoping recommendations.

Navigation

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: N/A / No Involvement

The project does not cross any navigable waterways and will not affect navigation; therefore, no involvement regarding navigation is anticipated.

Special Designations

Special Designations: Outstanding Florida Waters Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1 Degree of Effect: Minimal

The Imperial River, a tributary of Estero Bay [a designated Aquatic Preserve], is located approximately 2,000 feet north of the project; the Estero Bay tributaries are designated Outstanding Florida Waters (OFWs). The project, including the proposed stormwater management system, will be developed to meet the design and performance criteria established in the SFWMD Environmental Resource Permit Applicant's Handbook Volumes I and II for the treatment and attenuation of discharges to OFWs. Best management practices will also be utilized during project activities to prevent impacts [primarily siltation] to proximate estuarine habitats. For these reasons, minimal involvement regarding OFWs is anticipated.

Special Designations: Aquatic Preserves

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: Minimal

The Imperial River, a tributary of Estero Bay [a designated Aquatic Preserve], is located approximately 2,000 feet north of the project. As such, the Estero Bay Aquatic Preserve extends into the Imperial River. The project, including the proposed stormwater management system, will be developed to meet the design and performance criteria established in the SFWMD Environmental Resource Permit Applicant's Handbook Volumes I and II for the treatment and attenuation of discharges to these protected waters. Best management practices will also be utilized during project activities to prevent impacts [primarily siltation] to proximate estuarine habitats. For these reasons, minimal involvement regarding Aquatic Preserves is anticipated.

Special Designations: Scenic Highways

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: N/A / No Involvement

There are no Scenic Highways reported within the 500-foot project buffer; therefore, no involvement regarding these speciallydesignated resources is anticipated.

Special Designations: Wild and Scenic Rivers

Project Level

Refer to Analysis Area PED Comments.

Analysis Area

Areas: Alternative #1

Degree of Effect: N/A / No Involvement

No designated Wild and Scenic Rivers are reported within the 500-foot project buffer; therefore, no involvement regarding these specially-designated resources is anticipated.

Advance Notification Comments

There are no Advance Notification (AN) Package comments for this project.

GIS Analyses

Since there are so many GIS Analyses available for Project #6291 - US 41 at CR 865 (Bonita Beach Road) Intersection Improvement, they have not been included in this ETDM Summary Report. GIS Analyses, however, are always available for this project on the Public ETDM Website. Please click on the link below (or copy this link into your Web Browser) in order to view detailed GIS tabular

E - 58

Special Note: Please be sure that when the GIS Analysis Results page loads, the **Programming Screen Summary Report Published on 01/18/2020 by Lauren Brooks Milestone** is selected. GIS Analyses snapshots have been taken for Project #6291 at various points throughout the project's life-cycle, so it is important that you view the correct snapshot.

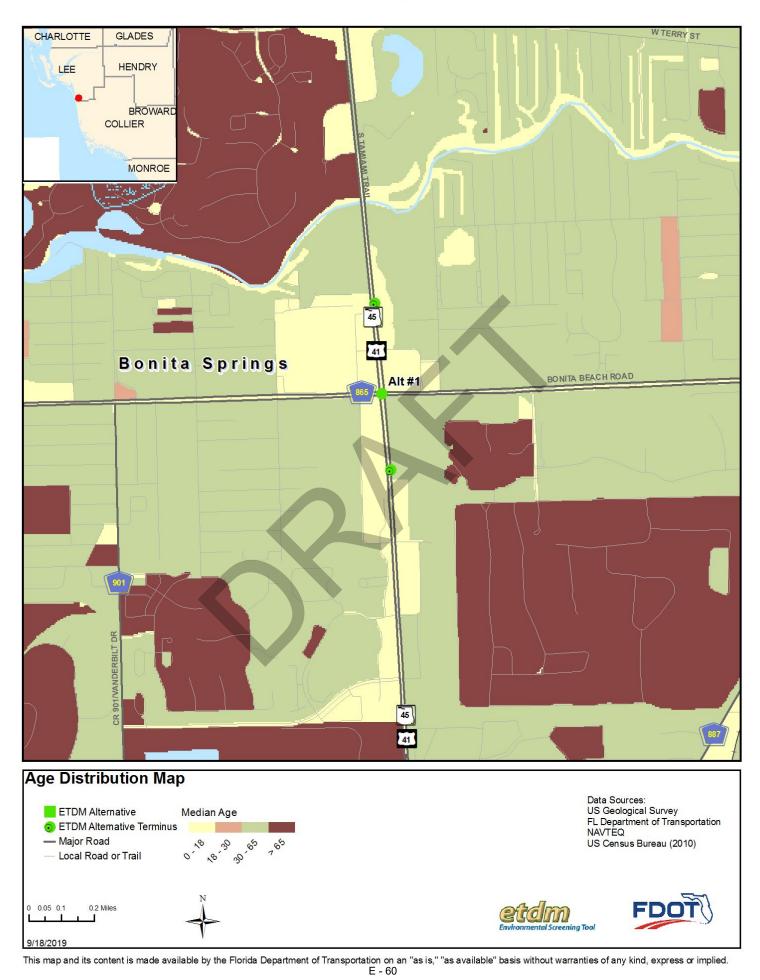

Project Attachments

There are no attachments for this project.

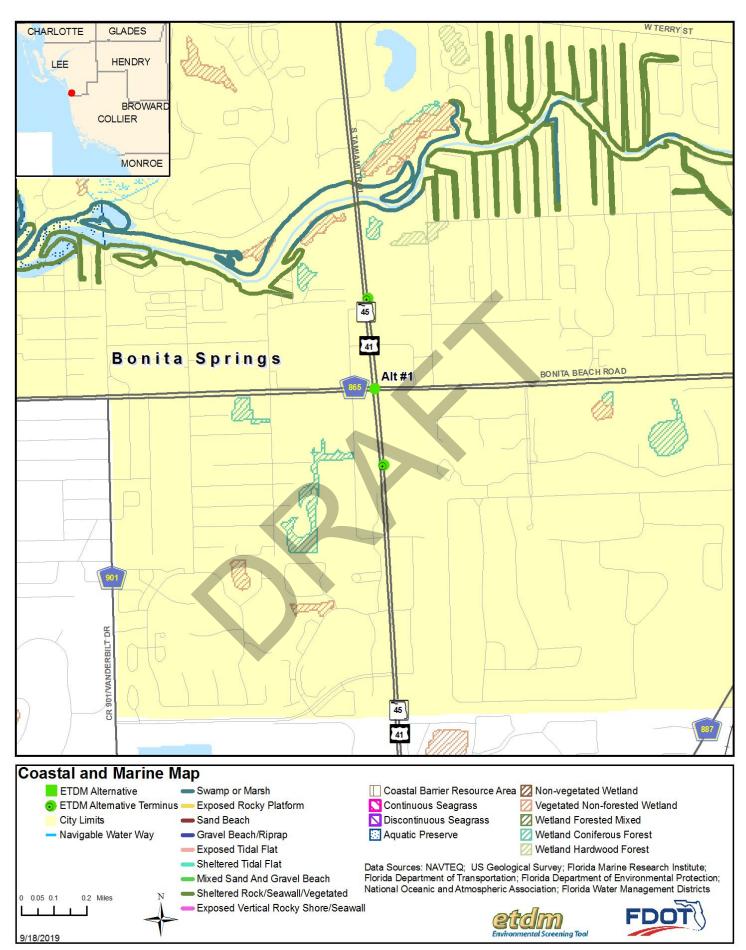

Degree of Effect Legend

| Color Code | Meaning | ETAT | Public Involvement | |
|------------|---|---|--|--|
| N/A | Not Applicable / No Involvement | There is no presence of the issue in relationship to the project, or the issue is irrelevant in relationship to the proposed transportation action. | | |
| 0 | None (after 12/5/2005) | The issue is present, but the project will have no impact on the issue; project has no adverse effect on ETAT resources; permit issuance or consultation involves routine interaction with the agency. The <i>None</i> degree of effect is new as of 12/5/2005. | No community opposition to the planned project. No adverse effect on the community. | |
| 1 | Enhanced | Project has positive effect on the ETAT resource or can reverse a previous adverse effect leading to environmental improvement. | Affected community supports the proposed project. Project has positive effect. | |
| 2 | Minimal | Project has little adverse effect on ETAT resources. Permit issuance or consultation involves routine interaction with the agency. Low cost options are available to address concerns. | Minimum community opposition to the planned project. Minimum adverse effect on the community. | |
| 2 | Minimal to None (assigned prior to 12/5/2005) | Project has little adverse effect on ETAT resources. Permit issuance or consultation involves routine interaction with the agency. Low cost options are available to address concerns. | Minimum community opposition to the planned project. Minimum adverse effect on the community. | |
| 3 | Moderate | Agency resources are affected by the proposed project, but avoidance and minimization options are available and can be addressed during development with a moderated amount of agency involvement and moderate cost impact. | Project has adverse effect on elements of the affected community. Public Involvement is needed to seek alternatives more acceptable to the community. Moderate community interaction will be required during project development. | |
| 4 | Substantial | The project has substantial adverse effects but ETAT understands the project need and will be able to seek avoidance and minimization or mitigation options during project development. Substantial interaction will be required during project development and permitting. | Project has substantial adverse effects on the community and faces substantial community opposition. Intensive community interaction with focused Public Involvement will be required during project development to address community concerns. | |
| 5 | Potential Dispute (Planning Screen) | Project may not conform to agency statutory requirements and may not be permitted. Project modification or evaluation of alternatives is required before advancing to the LRTP Programming Screen. | Community strongly opposes the project. Project is not in conformity with local comprehensive plan and has severe negative impact on the affected community. | |
| 5 | Dispute Resolution (Programming Screen) | Project does not conform to agency statutory requirements and will not be permitted. Dispute resolution is required before the project proceeds to programming. | Community strongly opposes the project. Project is not in conformity with local comprehensive plan and has severe negative impact on the affected community. | |
| | No ETAT Consensus | ETAT members from different agencies assigned a different degree of effect to this project, and the ETDM coordinator has not assigned a summary degree of effect. | | |
| | No ETAT Reviews | No ETAT members have reviewed the corresponding issue for this project, and the ETDM coordinator has not assigned a summary degree of effect. | | |

[External Sender]

Good afternoon Jack,

My apologies for the delayed response. I have reviewed your comments, and the information you sent, and attached is my response. I am available if you still need a meeting after reviewing my comments.

Thank you,

Dawn Huff Planning and Scheduling Manager

3401 Metro Pkwy Fort Myers FL, 33901 O: (239) 533-0233 C: (239) 839-4170 DHuff3@leegov.com

Subject: [EXTERNAL] 444321 - US 41 and Bonita Beach Road PD&E Study - Bus Stop Coordination

Caution: This email originated from an external source. Be cautious of attachments and links, and do not provide login information. Report suspicious activity to the Service Desk: servicedesk@leegov.com or 533-HELP.

Good morning Dawn,

Kittelson is conducting a PD&E Study on behalf of FDOT in southern Lee County to improve the US 41 and Bonita Beach Road intersection. We have a recommended preferred alternative which will impact a LeeTran bus stop on SB US 41 near its intersection with Beaumont Road. We would like to have a Teams meeting with you to discuss:

- 1. Thoughts on potential relocation of this bus stop.
- 2. Impacts to other bus stops in the study area.
- 3. Status of Route 150 which does not appear to be operational.

I have attached a rough sketch and some thoughts in this regard.

We are looking for about 30 minutes of your time to discuss. Would Monday, September 25th sometime between 10:30 am and 12 noon work for you?

Jack

John R. Freeman, Jr., P.E., PTOE, RSP1 Senior Principal
