ENGINEER'S CERTIFICATION

I, Keffler Castro, PE, with Florida PE No. 66437, certify that I currently hold an active Professional Engineer's License in the State of Florida, and I am competent through education or experience to provide engineering services in the civil and traffic engineering disciplines contained in this report. I further certify that this report was prepared by me or under my responsible charge as defined in Chapter 61G15-18.001 F.A.C. and that all statements, conclusions, and recommendations made herein are true and correct to the best of my knowledge and ability.

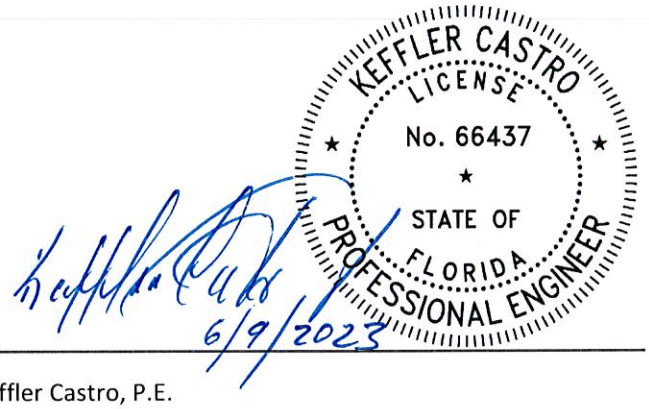
Project Description:

CRASH UPDATE FOR 3R SAFETY REVIEW

SR 886/PORT BOULEVARD

FROM BISCAYNE BOULEVARD TO PORT MIAMI

SECTION 87061000 (MP 0.000 TO MP 0.776)



Keffler Castro, P.E.

Doral, Florida 33178
CA No.25976

1. INTRODUCTION

The segment of SR 886/Port Boulevard from Biscayne Boulevard to Port Miami was identified by the Department as a candidate for a Resurfacing, Restoration, and Rehabilitation (3R) project with FM No. 443913-1. A 3R Safety Review was completed in April 2020 in response to the Department's request. The 3R Safety Review included a crash analysis for the segment based on the crash data for the period starting on January 1, 2014, and ending on December 31, 2016. This Technical Memorandum has been prepared in response to the Department's request for an update on the 3R Safety Review crash analysis based on crash data starting on January 1, 2017, and ending on December 31, 2019, and performing field review during AM, MIDDAY, and PM conditions. This Technical Memorandum aims to confirm previous crash patterns and safety countermeasures or identify new crash patterns, suggest a further review, and/or recommend new safety countermeasures to enhance safety and operations and that could be implemented through the subject 3R Project. **Figure 1.1** depicts the study area.

[THIS AREA WAS INTENTIONALLY LEFT BLANK]

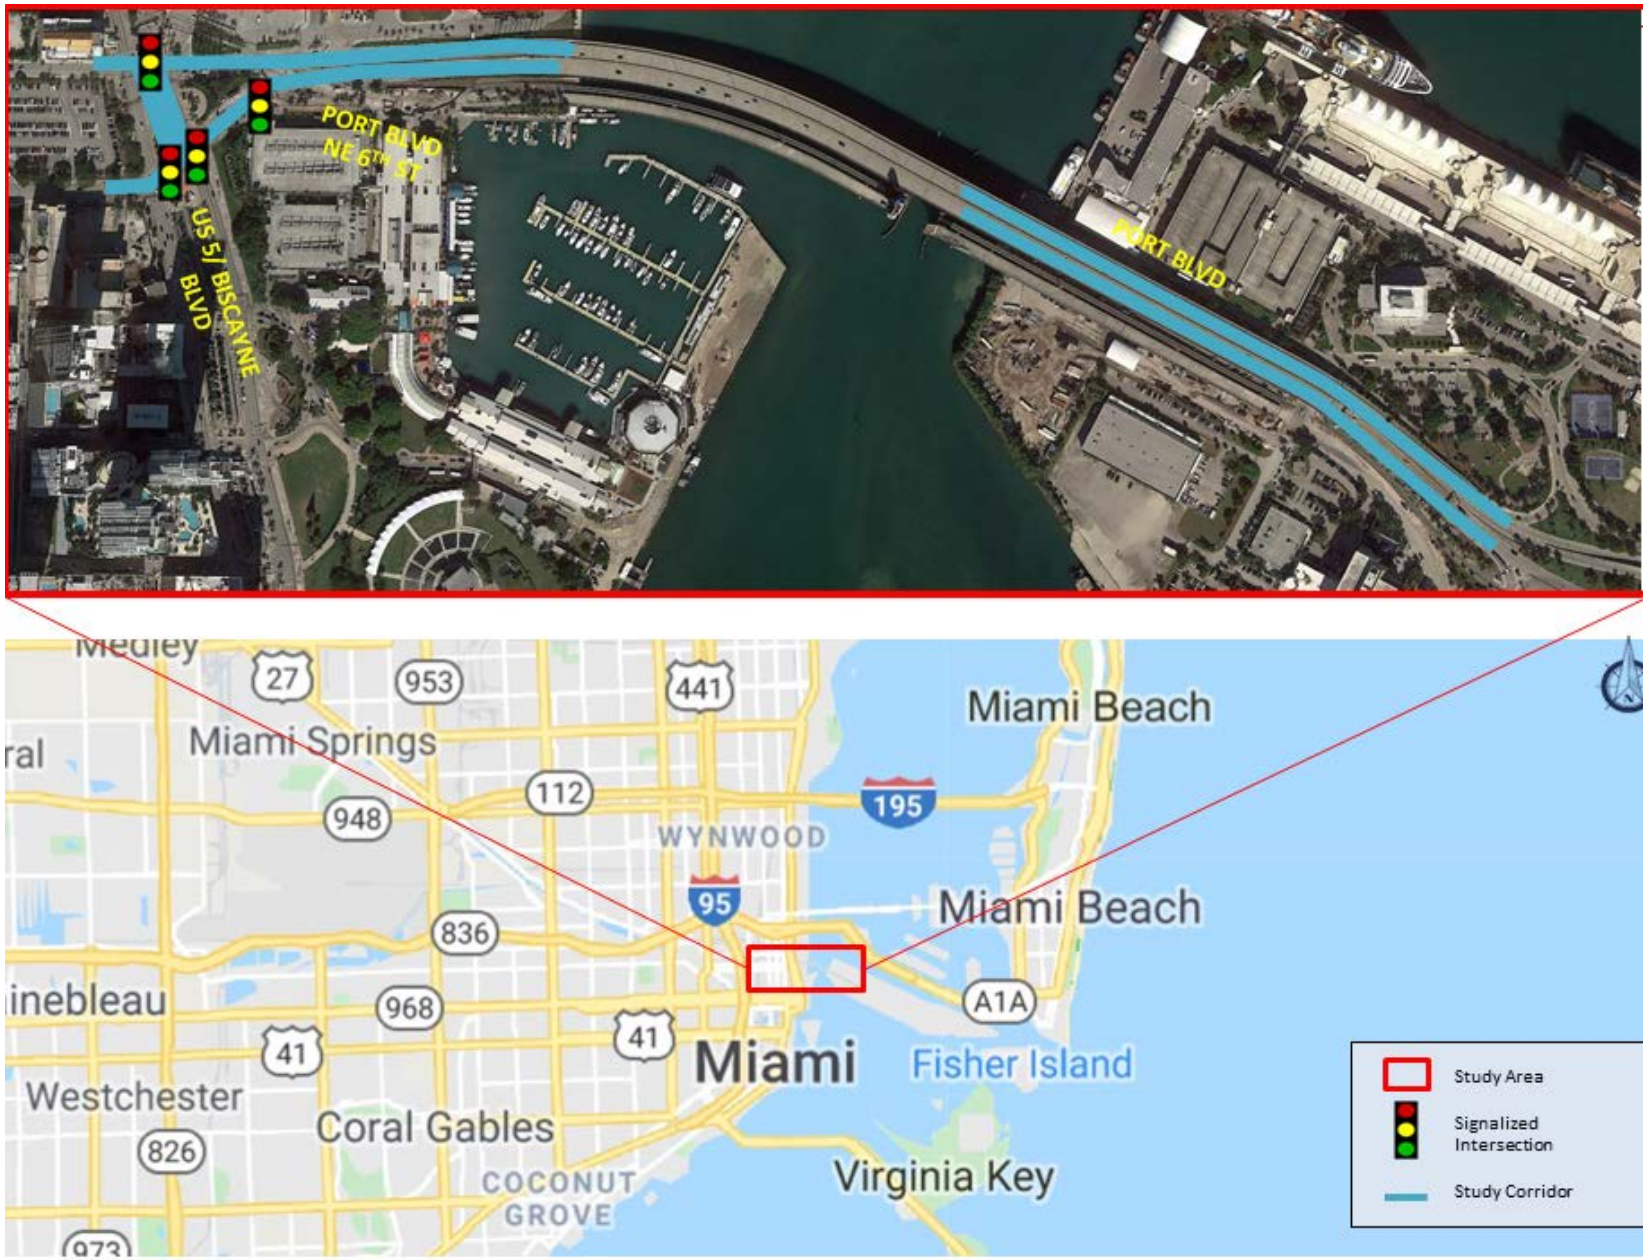

Figure 1.1: Project Location Map

2. CRASH ANALYSIS

The crash data for the five years (January 1, 2018 to December 31, 2022) for 87061000/SR 886/Port Boulevard from MP 0.000 to 0.776 and 87030000/SR 5/US 1/Biscayne Boulevard from MP 11.309 to MP 11.350 was downloaded from the FDOT's Crash Analysis Reporting (CAR) Online Database, Signal Four Analytics database, and the State Safety Office GIS Query Tool (SSOGis), and summarized for the study area. A review was conducted by individually reviewing the police reports for all crashes and updating the database for crash information such as crash type, contributing cause, vehicle travel direction, number of injuries, etc. The following is a summary of the Analysis:

- The segment experienced 152 crashes in the five years, with a yearly breakdown of 39, 31, 13, 33, and 36 (2018, 2019, 2020, 2021, and 2022, respectively). The Covid 19 pandemic could cause a drop in crashes in 2020.
- The percentage of nighttime crashes (night/dusk/dawn) was 33.6% (51 crashes), above the district-wide average of 28.5%.
- The percentage of crashes during wet/slippery pavement conditions was 11.2% (17 crashes), slightly below the district-wide average of 11.8%.
- Based on crash severity, 9.2% (14 crashes) were injury-type crashes, and 90.8% (138 crashes) were property damage-only crashes. *There were no fatal crashes during the five-year study period.*
- The leading types of crashes were sideswipe, with 79 crashes and rear-end, with 42 crashes. These are the same leading crashes identified in the 3R safety review completed in August 2020.
- There were four (4) pedestrian and three (3) bicycle crashes during the five years study period. *Since pedestrian and bicycle features such as high-emphasis crosswalks and countdown pedestrian signal heads were upgraded recently, these crash types were not further investigated.*

Table 2.1 presents a summary by crash type for the segment, and **Table 2.2** presents a crash summary by different categories, such as lighting conditions, surface conditions, and weather conditions. The same information is depicted graphically in **Figure 2.1** for visual comparison.

Table 2-1: Crash Summary by Type – Segment

SR 886/Port Boulevard From SR 5/US 1/Biscayne Boulevard to Port Miami		Number of Crashes Year 2018	2019	2020	2021	2022	5 Year Total Crashes	Mean Crashes Per Year	%

Table 2.3 and **Figure 2.2** present an overall perspective of the clustering and staggering of crashes along the study segment. From **Table 2.4**, **Figure 2.2**, and a review of the crash summaries and/EVA analysis (raw data) for all intersections along the entire segment, the following locations are further investigated:

- SR 886/Port Boulevard/NE 5th Street and SR 5/US 1/Biscayne Boulevard
- SR 5/US 1/Biscayne Boulevard and NE 6th Street

Collision Diagrams were prepared for the above locations for the analysis period of January 1, 2018, through December 31, 2022, and are presented in **Appendix A**. The raw crash data for the segment is also presented in **Appendix B**.

Figure 2.1: Histograms of Crash Summaries

Table 2-3: Crash Distribution by Intersection

Location	2018	2019	2020	2021	2022	PDO	Injury	Fatal	Totals
SR 886/Port Boulevard/NE 5 Street	17	18	7	17	25	74	10	0	84
SR 886/Port Boulevard/NE 6 Street	19	11	5	15	11	57	4	0	61

Total	**39**	**31**	**13**	**33**	**36**	**138**	**14**	**0**	**152**

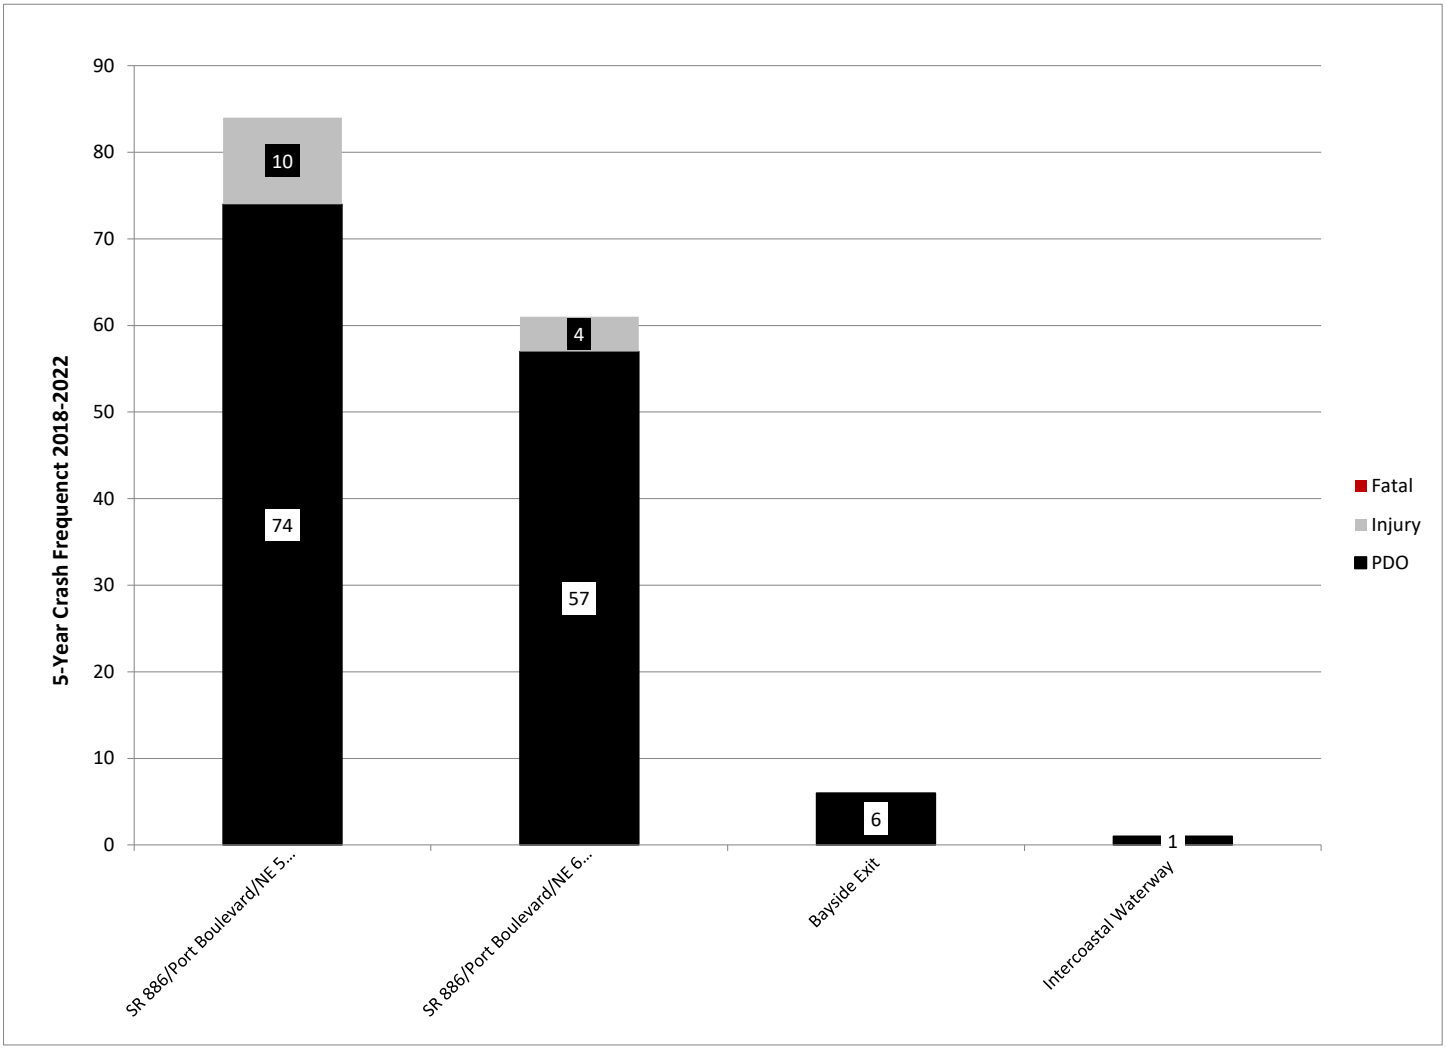

Figure 2.2: Crash Distribution by Intersection

SR 886/Port Boulevard/NE 5th Street and SR 5/US 1/Biscayne Boulevard

- Given this intersection's geometric layout, an expected value analysis (EVA) was not performed; instead, a frequency analysis was conducted.
- There were 84 crashes in the five-year study period, with a yearly breakdown of 17, 18, 7, 17, and 25 (2018, 2019, 2020, 2021, and 2022). The Covid 19 pandemic could cause a drop in crashes in 2020.
- The percentage of crashes during nighttime (night/dusk/dawn) was 36.9% (31 crashes), above the district-wide average of 28.5%.
- The percentage of crashes during wet/slippery pavement conditions was 13.1% (11 crashes), above the district-wide average of 11.8%.
- Based on crash severity, 11.9% (10 crashes) were injury-type crashes, and 88.1% (74 crashes) were property damage-only crashes. *There were no fatal crashes during the five-year study period.*
- There were no specific peak periods for all crashes.
- The leading crash types were sideswipe at 54.8% (46 crashes) and rear-end at 26.2% (22 crashes). However, since rear-end crashes were spread out and low in frequency, a crash pattern was not identified and will no longer be investigated.
- Of the 46 sideswipe crashes, 18 crashes involved eastbound left-turn vehicles at the east signal, with a yearly breakdown of four (4), four (4), one (1), five (5), and four (4). There was no specific peak period for sideswipe crashes. Improper turn from the inside through lane was the leading cause of the sideswipe crashes.
- There were three (3) pedestrian and two (2) bicycle crashes. *Since pedestrian and bicycle features such as high-emphasis crosswalks and countdown pedestrian signal heads were upgraded recently, these crash types are not further investigated.*

Table 2.5 summarizes the crash statistics of the intersection.

Table 2-4: Crash Statistics - SR 886/Port Blvd/NE 5th St and SR 5/US 1/Biscayne Blvd

	Wet	1	4	1	4	1	11	2	13.1%

SR 886/Port Boulevard/NE 6th Street and SR 5/US 1/Biscayne Boulevard

- Given this intersection's geometric layout, an expected value analysis (EVA) was not performed; instead, a frequency analysis was conducted.
- There were 61 crashes in the five-year study period, with a yearly breakdown of 19, 11, 5, 15, and 11 (2018, 2019, 2020, 2021, and 2022).
- The percentage of crashes during nighttime (night/dusk/dawn) was 29.5% (18 crashes), slightly above the district-wide average of 28.5%.
- The percentage of crashes during wet/slippery pavement conditions was 8.2% (5 crashes), below the district-wide average of 11.8%.
- Based on crash severity, 8.9% (4 crashes) were injury-type crashes, and 91.1% (41 crashes) were property damage-only crashes. *There were no fatal crashes during the five-year study period.*
- The peak periods for all crashes were 9 PM to Midnight, with 13 crashes (19.7%).
- The leading crash types were sideswipe at 50.8% (31 crashes) and rear-end at 27.9% (17 crashes). However, since rear-end crashes were spread out and low in frequency, a crash pattern was not identified and will no longer be investigated.
- Of the 31 sideswipe crashes, (13) involved northbound vehicles, (14) westbound vehicles, and four (4) southbound vehicles. There was no specific peak period for sideswipe crashes. Improper Passing was the leading cause of the sideswipe crashes.
- There were one (1) pedestrian and one (1) bicycle crashes. *Since pedestrian and bicycle features such as high-emphasis crosswalks and countdown pedestrian signal heads were upgraded recently, these crash types are not further investigated.*

Table 2.6 summarizes the crash statistics of the intersection.

3. FIELD REVIEW

Field reviews were conducted on Wednesday, September 21, 2022, from 3:30 PM to 5:00 PM and Wednesday, October 5, 2022, from 7:30 AM to 9:30 AM during the typical peak periods. In addition, a field review was conducted on October 18, from 6:00 PM to 7:30 PM, before an event in the FTX Arena. The following observations were made:

AM and PM Field Reviews (Typical Peak Hours)

- Low to moderate volumes were observed on the morning and afternoon field reviews. Queues from all approaches at NE 5th Street and NE 6th Street were short and cleared with their respective phases.
- Moderate pedestrian and bicycle activity was observed during the morning and afternoon field reviews. Most pedestrians/bicyclists followed the traffic signal and signs indications and regulations. A few pedestrians crossing away from the crosswalk on the south leg were observed. In addition, several pedestrians going from/to the FTX Arena and the Bayside plaza were observed crossing near the railroad tracks on the east leg. Note that a path for pedestrians connects FTX Arena and Bayside Plaza. The path runs below the Port Boulevard bridge.
- Most eastbound vehicles traveling in the shared left-turn/through and inside-through lanes performed left-turn instead of through movements during all field reviews. However, several conflicts occurred between eastbound through vehicles traveling in the shared left-turn lanes and eastbound vehicles performing illegal left-turn movements from the inside-through lane.

PM Field Review (Before FTX Event)

- High pedestrian activity before the FTX Arena event was observed. No conflicts between vehicles and pedestrians were observed. Police officers assisted pedestrians crossings NE 5th Street and NE 6th Street. A few pedestrians from the Bayside plaza to the FTX Arena were crossing near the railroad tracks on the east leg.
- During typical peak hours, most eastbound vehicles traveling in the shared left-turn/through and inside-through lanes performed left-turn instead of through movements during all field reviews.
- A few northbound vehicles were observed performing illegal left turn movements from the inside through lane.

4. PROPOSED IMPROVEMENTS

SR 886/Port Boulevard/NE 5th Street and SR 5/US 1/Biscayne Boulevard

- The crash analysis confirmed the sideswipe crash patterns identified under the RRR safety review. Although overhead guide signs were installed facing the NE 5th Street eastbound approach, the Signal Four Analytics review revealed a continuation of sideswipe crashes involving eastbound left-turn vehicles at NE 6th Street. During all field reviews, most eastbound vehicles traveling in the shared left-turn/through and inside-through lanes performed left-turn instead of through movements. However, several conflicts occurred between eastbound through vehicles traveling in the shared left-turn lanes and eastbound vehicles performing illegal left-turn movements from the inside-through lane.
- The RRR Safety review did not recommend any improvement at NE 5th Street because signing and pavement markings improvements were implemented during the study. However, since the sideswipe crash pattern continues, the Safety Office requested CHP to conduct an operational analysis to evaluate changing the lane configuration at the eastbound approach. Based on the crash pattern and field review observations, the following two (2) Alternatives were considered:
  - Alternative 1: An exclusive left-turn lane and three through lanes facing the eastbound approach.
  - Alternative 2: An exclusive left-turn lane, a shared left-turn/through lane, and two through lanes facing the eastbound approach.

The conceptual improvements for Alternatives 1 and 2 are presented in Figure The operational analysis is presented in **Section 4.1**.

Photo 24 – Eastbound Approach at NE 5th Street East Signal

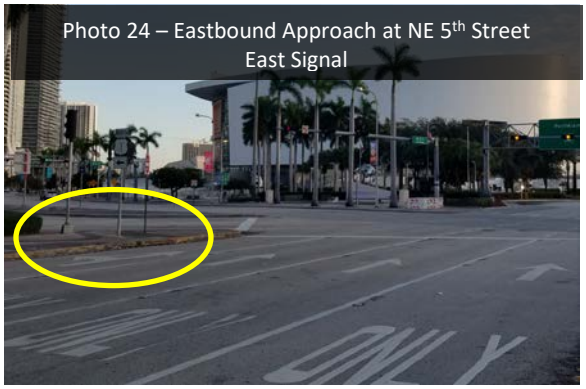

Photo 25 – Eastbound Approach at NE 5th Street West Signal

- The following improvements are also recommended for NE 5th Street:
  - Provide a high-emphasis crosswalk at the west leg of the intersection.
  - Install Flexible Retroreflective Backplates facing all approaches

SR 886/Port Boulevard/NE 6 Street and SR 5/US 1/Biscayne Boulevard

- The RRR Safety review recommended considering a lighting study at NE 6th Street to determine and/or confirm if the level of existing lighting complies with the current Department criteria given in FDM 231. However, the frequency and percentage of nighttime crashes have reduced significantly (from 32 (53.3%) to 4 crashes (26.7%)) and are now below the districtwide average; therefore, the improvement is no longer recommended.
- The following improvements are recommended for NE 6th Street:
  - Install Flexible Retroreflective Backplates facing all approaches.
  - Trim landscaping blocking the pedestrian signal heads on the north leg raised median.

SR 886/Port Boulevard at Arena Entrance

- The RRR Safety review recommended (non-safety improvement) considering removing the existing STOP sign on the north-westbound approach; however, the sign has already been removed.
- It is recommended to develop an educational campaign to reduce crossings between the FTX Arena and the Bayside plaza near the railroad crossing. Pedestrians/bicyclists can use the pedestrian path (under Port Boulevard bridge) or SR 5 sign

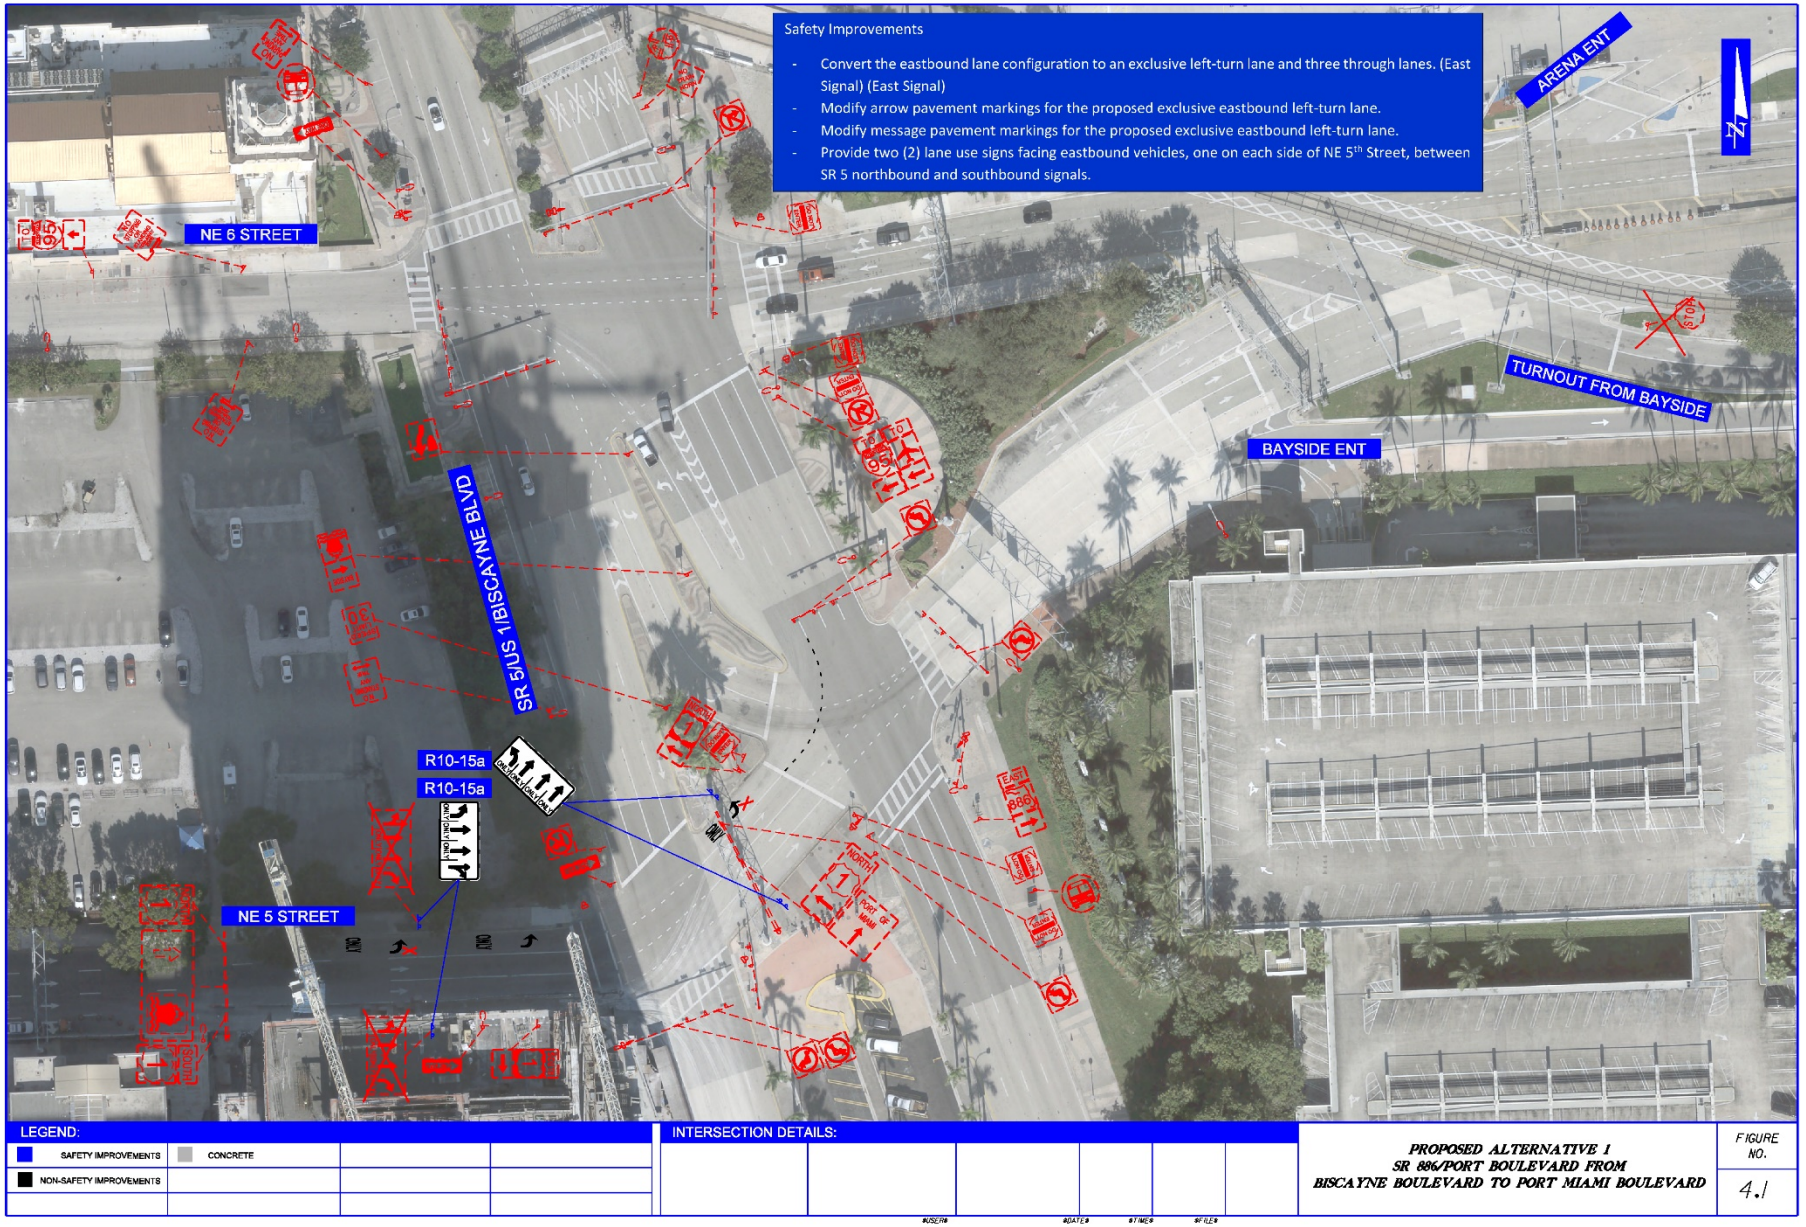

Figure 4.1: Conceptual Improvements for Alternative 1

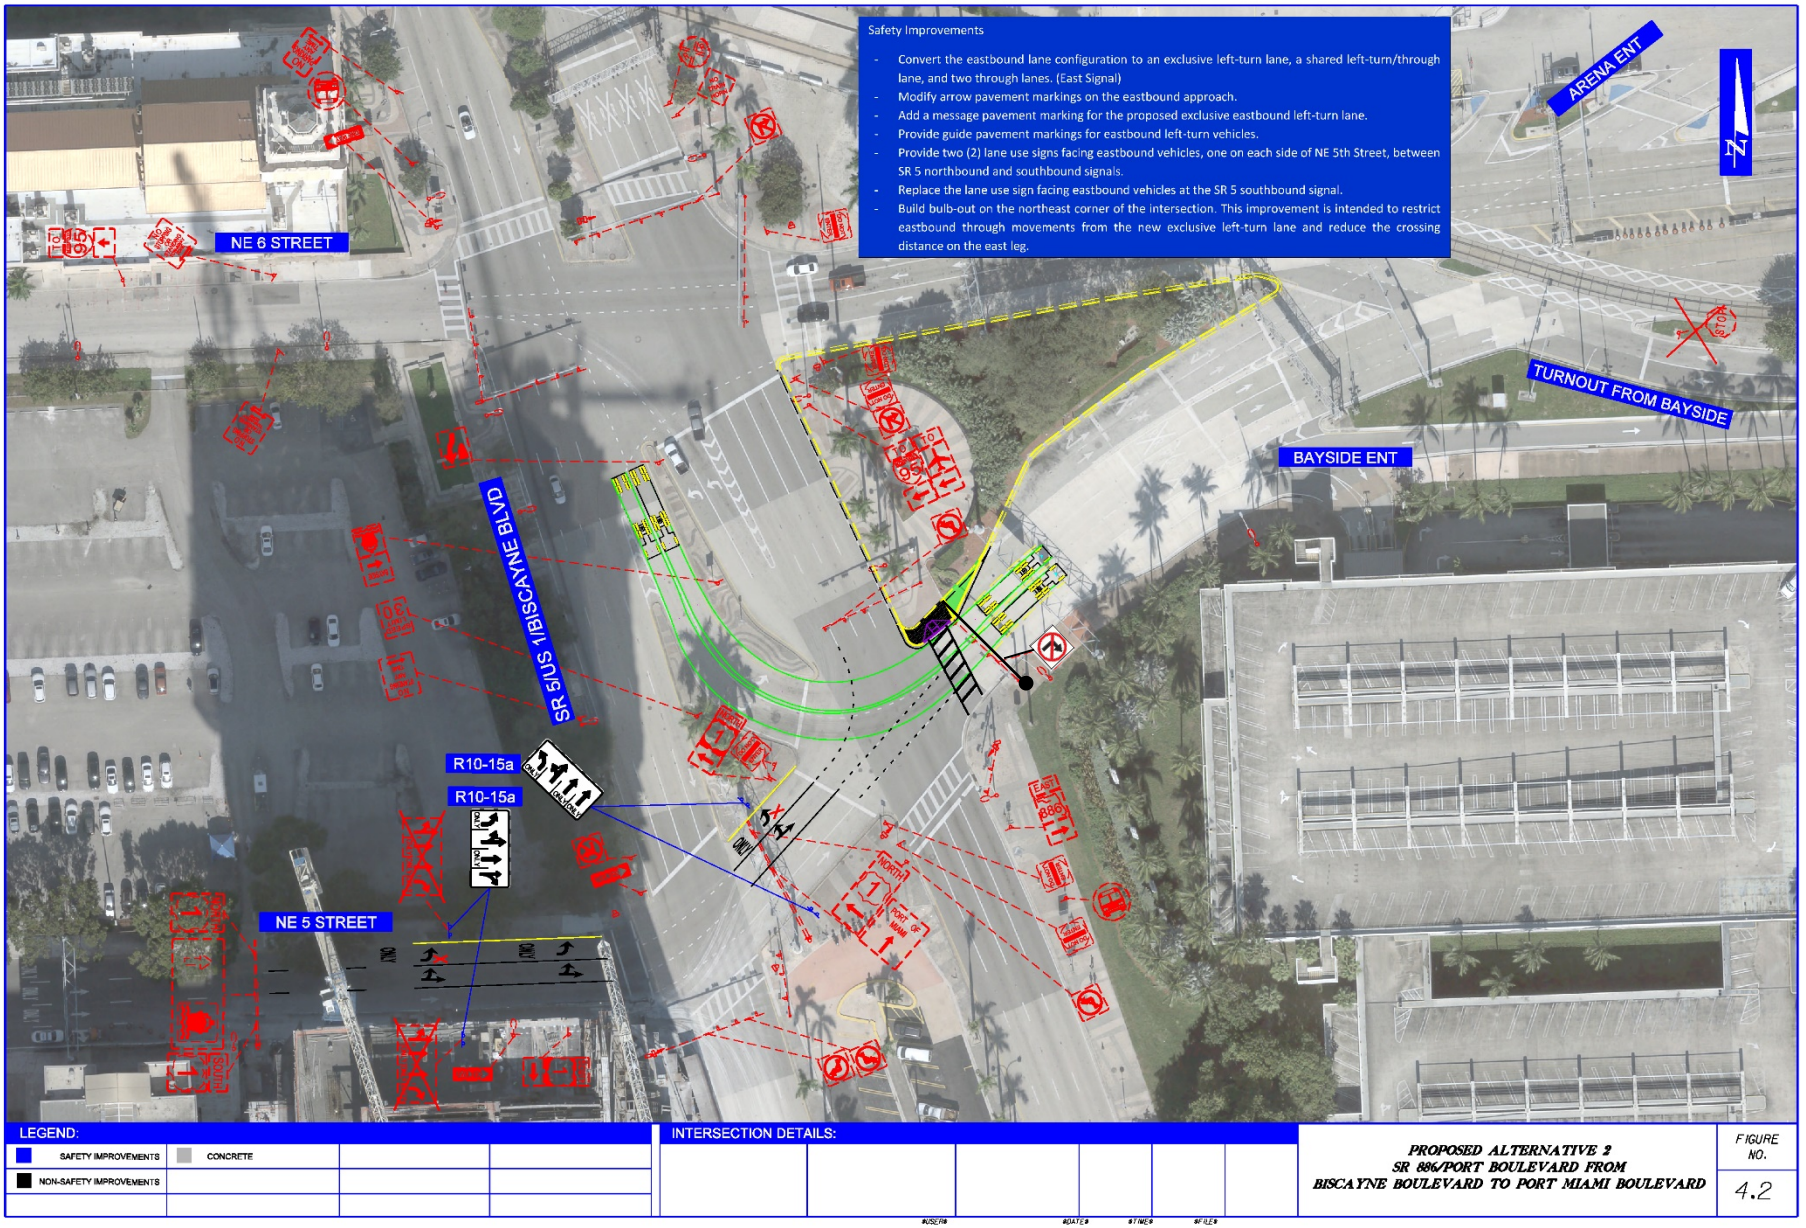

Figure 4.2: Conceptual Improvements for Alternative 2

5. OPERATIONAL ANALYSIS – SR 886/NE 5 STREET AND SR 5/US 1/BISCAYNE BOULEVARD (NB Signal)

The operational Analysis using Synchro was prepared for the AM, Miday, and PM peak hours of a typical weekday considering the following lane configuration alternatives:

- Existing: A shared left-turn lane and three through lanes.
- Alternative 1: An exclusive left-turn lane and three through lanes facing the eastbound approach.
- Alternative 2: An exclusive left-turn lane, a shared left-turn/through lane, and two through lanes facing the eastbound approach.

Signal timing and phasing information (TOD and SOP) have been included in **Appendix D**.

As shown in **Table 5-1**, the operational analysis revealed that **Alternative 2** improves the Level of Service (LOS) for the eastbound left-turn movements during the AM peak period without impacting the LOS, delay, or V/C of the rest of the movements, approaches, or overall intersection. Although the slight operational improvements, the lane configuration change is anticipated to reduce conflicts and sideswipe crashes between eastbound left-turn and through vehicles. The implementation of this improvement requires the following:

- Modify arrow pavement markings on the eastbound approach.
- Add a message pavement marking for the proposed exclusive eastbound left-turn lane.
- Provide guide pavement markings for eastbound left-turn vehicles.
- Provide two (2) lane use signs facing eastbound vehicles, one on each side of NE 5th Street, between SR 5 northbound and southbound signals.
- Replace the lane use sign facing eastbound vehicles at the SR 5 southbound signal.
- ***Build bulb-out on the northeast corner of the intersection. This improvement is intended to restrict eastbound through movements from the new exclusive left-turn lane and reduce the crossing distance on the east leg.***
- ***Replace the mast arm facing eastbound.***

Note that the new overhead guide signs facing eastbound need not be modified.

6. BENEFIT/COST ANALYSIS – SR 886/NE 5 STREET AND SR 5/US 1/BISCAYNE BOULEVARD (NB Signal)

Given the high demand for eastbound left-turn vehicles during the PM peak period and the anticipated low impact of Alternative 1 improvements to reduce crashes, a Benefit/Cost analysis (B/C) was performed only for Alternative 2 (Preferred alternative). The analysis includes evaluating the potential reduction of sideswipe crashes at NE 5th Street upon implementing the improvements under Alternative 2 and the associated estimated improvement costs.

Preliminary Cost Estimates: **Tables 6.1** and **6.2** show the preliminary construction cost estimates for Alternative 2, with and without replacing the mast arm facing eastbound. The recommended improvements were prepared using FDOT's standard pay items and historical unit costs from previous construction projects recently completed in Miami-Dade County. The cost estimates include pay items for roadway, signalization, signing and pavement marking, traffic control maintenance, preliminary engineering, mobilization, and a contingency amount to account for unforeseen cost elements. Detailed cost estimates for Alternative 2 are included in **Appendix E**.

Table 6.1: Cost Estimates for Alternative 2 – SR 886 at SR 5 (NB Signal) – With MA Replacement

SAFETY IMPROVEMENTS		COST
Roadway	$	99,521.39
Signing & Pavement Marking	$	12,086.34
Signalization	$	129,686.86
SUBTOTAL	**$**	**241,294.59**
20% Maintenance of Traffic	$	48,258.92
10% Mobilization	$	24,129.46
32% Preliminary Engineering	$	77,214.27
18% Construction Engineering & Inspection	$	43,433.03
Project Contigency	$	25,000.00
GRAND TOTAL	**$**	**459,330.26**

Table 6.2: Cost Estimates for Alternative 2 – SR 886 at SR 5 (NB Signal) - Without MA Replacement

SAFETY IMPROVEMENTS		COST
Roadway	$	92,793.09
Signing & Pavement Marking	$	5,394.90
SUBTOTAL	**$**	**98,187.99**
20% Maintenance of Traffic	$	19,637.60
10% Mobilization	$	9,818.80
32% Preliminary Engineering	$	31,420.16
18% Construction Engineering & Inspection	$	17,673.84
Project Contigency	$	20,000.00
GRAND TOTAL	**$**	**196,738.38**

The cost estimates assume that a portion of the proposed bulb-out will be built with brick pavers to match the existing features.

Crash Reduction Factors (CRF)

An estimation of the potential crash reduction for Alternative 2 was calculated. The calculations were performed using the following sources: the Department's "CRASH" 9, the FHWA report titled "Desktop Reference for Crash Reduction Factors" (Sept 2008), and the Crash Modification Factors (CMF) Clearinghouse. **Table 6.3** details the crash reduction computations for the safety-related improvements for Alternative 2. Applying the above CRF sources, the safety improvements identified are estimated to be nearly **1.4** crash reductions annually.

Table 6.3: Crash Reduction Computation for Alternative 2 – SR 886/Port Blvd/NE 5th Street at SR 5 (NB Signal)

PROPOSED IMPROVEMENTS		CRF	SOURCE	TARGETED CRASH TYPE	NUMBER OF CRASHES TARGETED	NUMBER OF REDUCED CRASHES
NE 5 Street	Modify Lane Configuration	24%	FDOT Crash Reduction Factors (#11)	Sideswipe	28	6.72
		24%		Rear End	2	0.48
	TOTAL CRASHES REDUCED IN 5-YEARS					**7.20**
	CRASHES REDUCED PER YEAR					**1.4**

B/C Calculation

The safety B/C ratio values were calculated for Alternative 2, for the two scenarios, with and without replacing the mast arm facing eastbound, as shown in **Tables 6.4** and **6.5**. The B/C ratios for Alternative 2 were calculated to be **4.7** if the mast arm facing eastbound is replaced and **11.6** if the mast arm is not replaced.

Table 6.4: Summary of B/C Analysis for Alternative 2 – With MA Replacement

DESCRIPTION	ALTERNATIVE 1
Safety Benefits	$ 180,099.94
Annualized Cost of Project	$ 38,354.63
SAFETY B/C	**4.7**
NVP	**$ 1,443,087.54**

Table 6.5: Summary of B/C Analysis for Alternative 2 – Without MA Replacement

DESCRIPTION	ALTERNATIVE 1
Safety Benefits	$ 180,099.94
Annualized Cost of Project	$ 15,549.23
SAFETY B/C	**11.6**
NVP	**$ 1,705,679.42**

Detailed B/C ratio computations are included in **Appendix F**.

[THIS AREA WAS INTENTIONALLY LEFT BLANK]

7. CONCLUSIONS AND RECOMMENDATIONS

Based on the crash analysis and field observation, there is a clear pattern of sideswipe crashes involving eastbound left-turn vehicles at NE 5th Street (east signal). The traffic data collected reported a high volume of left-turn vehicles, especially in the afternoon peak period. From the crashes and conditions observed during the field review, the following two (2) Alternatives were evaluated using Synchro:

- Alternative 1: Convert the eastbound lane configuration to an exclusive left-turn lane and three through lanes
- Alternative 2: Convert the eastbound lane configuration to an exclusive left-turn lane, a shared left-turn/through lane, and two through lanes.

The operational analysis revealed that **Alternative 2** improves the Level of Service (LOS) for the eastbound left-turn movements during the AM peak period without impacting the LOS, delay, or V/C of the rest of the movements, approaches, or overall intersection. Although the operational improvements are minimum, modifying the lane configuration reduces conflicts and sideswipe crashes between eastbound left-turn and through vehicles. The implementation of this improvement requires the following:

- Modify arrow pavement markings on the eastbound approach.
- Add a message pavement marking for the proposed exclusive eastbound left-turn lane.
- Provide guide pavement markings for eastbound left-turn vehicles.
- Provide two (2) lane use signs facing eastbound vehicles, one on each side of NE 5th Street, between SR 5 northbound and southbound signals.
- Replace the lane use sign facing eastbound vehicles at the SR 5 southbound signal.
- ***Build bulb-out on the northeast corner of the intersection. This improvement is intended to restrict eastbound through movements from the new exclusive left-turn lane and reduce the crossing distance on the east leg.***
- ***Replace the mast arm facing eastbound.***

Note that the new overhead guide signs facing eastbound need not be modified.

The safety improvements proposed under Alternative 2 are estimated to reduce nearly 1.4 crashes annually, and the B/C ratios for were calculated to be **4.7** if the mast arm facing eastbound is replaced and **11.6** if the mast arm is not replaced.

10 PROPOSED IMPROVEMENTS (LIST AND DISCUSS)

Convert the eastbound lane configuration to an exclusive left-turn lane, a shared left-turn/through lane, and two through lanes.

- Modify arrow pavement markings on the eastbound approach.
- Add a message pavement marking for the proposed exclusive eastbound left-turn lane.
- Provide guide pavement markings for eastbound left-turn vehicles.
- Provide two (2) lane use signs facing eastbound vehicles, one on each side of NE 5th Street, between SR 5 northbound and southbound signals.
- Replace the lane use sign facing eastbound vehicles at the SR 5 southbound signal.
- Build bulb-out on the northeast corner of the intersection.

Branden Young	5/24/2023	1	

The preliminary cultural review identified archaeological and historical resources within the area recommended for improvement. Therefore, if the improvement types and locations remain consistent with those recommended in this scoping report, the Planning and Environmental Management Office (PLEMO) will need to conduct a cultural evaluation. The results of the evaluation would need to be coordinated with the State Historic Preservation Officer (SHPO). The SHPO will have 30 days from receipt of the resultant report for review.

Please be aware that potentially historic buildings are located in the vicinity of the recommended improvements. During design, the Planning and Environmental Management Office (PLEMO) will revisit the proposed improvements in relation to these resources to ensure no historic properties are affected by the recommended improvements.

Created By	Created On	Version	Delegate For
Derek Frantz	6/2/2023	1	

The following comment is based on the review of the Safety Study.
A contamination impact review utilizing the FDOT District VI Contamination Screening Tool was performed for the project corridor. The Contamination Screening Tool contains Geographic Information System layers depicting contaminated sites identified by the Florida Department of Environmental Protection and Miami Dade County Department of Regulatory Economic Resources. Based on said review, two known contaminated sites have been identified within a 500-ft radius of the project corridor for both alternatives 1 & 2 presented within the study. However, there are no drainage features, subsurface excavation, and/or dewatering in proximity of the known contaminated sites, therefore, no contamination impacts are anticipated.

There is a Railroad Crossing No. 272960-A (FEC) east of Biscayne Blvd. (MP 0.091).
Project WILL have Rail Involvement.
Coordination will be required with FEC throughout the project. (Comment created by Leila Franzoi for Hector Hartmann).

Although it is stated that "Given the high demand for eastbound left-turn vehicles during the PM peak period and the anticipated low impact of Alternative 1 improvements to reduce crashes, a Benefit/Cost analysis (B/C) was performed only for Alternative 2 (Preferred alternative).", Alternative 1 should still be shown to be a lesser alternative. It appears that we have a "Preferred", without performing the analysis.

Created By	Created On	Version
Keffler Castro	6/2/2023	1

Agree. Given the high volume of LT vehicles (way more than though traffic) and conditions observed during the field review (left-turns from the inside through lane) we assumed that. However, the Department requested the operational analysis to validate our assumption.

The Planning Office is conducting Project-level Context Classification (PLCC) reviews as projects are conducted. The purpose of these reviews is to re-evaluate at a more granular level the original systemwide Context Classification (CC) assignments. A PLCC review was previously completed for this segment, and it was determined that the PLCC is C6 – Urban Core.

No comments/actions needed.

This safety study has been reviewed by the Environment Section and has been determined that this project will need to be revisited during design once the full scope of work and funding information is available. This information is needed to confirm the appropriate Class of Action and to determine the appropriate scope of coordination with local, state, and/or federal agencies.

The Project Manager must provide the Environment Section with the opportunity to perform an environmental impact review once design plans have been developed. If warranted, an Environmental Certification will be prepared upon the completion of the environmental impact review.

The project corridor is within the Consultation Area for the Florida bonneted bat which is listed as an endangered species. Please be aware that if any tree and/or bridge impacts are proposed as part of this project, a species survey may be warranted to determine if roosting or foraging habitat exists. Coordination with U.S. Fish and Wildlife Service may be required.

1. ADA related issues have been reflected in the comment provided for the Scoping Report prepared for the project with FM 443913-1 along SR 886 / Port Boulevard from east of Biscayne Blvd. to Port Miami. Note that the Scoping Report calls for replacing the deficient curb ramp at the south end of the proposed high emphasis crosswalk shown on Fig. 4.2.
2. It is understood that this is a safety study and only requires ADA deficiencies to be addressed when directly associated to the proposed safety improvements. It is recommended to include a section in the report stating, "During design, the engineer shall perform an inventory identifying ADA deficiencies and provide findings to the ADA Coordinator. This serve as coordination between Traffic Ops and PLEMO, to identify the possibility of the ADA related scope to be included via separate funding."
