Recommend removing the line below from installation requirements.

By removing the pole and mast arm mounting language from method of measurement (as in proposed), an MSP will likely need to be developed for optional-mounting usage. It may be confusing to leave language about it under installation, as it could then be construed that only plan details would be necessary, and they are still standard/valid options.

654-3 Installation Requirements.

~~*Optional mast arm and pole installation may be used if shown in the Plans.*~~
