

RON DESANTIS GOVERNOR 605 Suwannee Street Tallahassee, FL 32399-0450 JARED W. PERDUE, P.E. SECRETARY

October 24, 2022

Khoa Nguyen Director, Office of Technical Services Federal Highway Administration 3500 Financial Plaza, Suite 400 Tallahassee, Florida 32312

Re: State Specifications Office

Section: 676

Proposed Specification: **REVISED** 6760000 Traffic Cabinets.

Dear Mr. Nguyen:

We are submitting, for your approval, two copies of the above referenced Supplemental Specification.

The changes are proposed by Matt DeWitt from the Traffic Engineering and Operations Office to move all material requirements from Division II to Division III. This change is associated with the proposed changes to Section 995.

Please review and transmit your comments, if any, within two weeks. Comments should be sent via email to daniel.strickland@dot.state.fl.us.

If you have any questions relating to this specification change, please call me at (850) 414-4130.

Sincerely,

Signature on file

Daniel Strickland, P.E. State Specifications Engineer

TRAFFIC CABINETS

(REV <u>10</u>7-<u>24</u>21-22)

SECTION 676 is deleted and the following substituted:

676-1 Description.

Furnish and install traffic cabinets as shown in the Plans. Meet the requirements of Section 603.

676-2 Materials.

676-2.1 General: Use traffic signal controller cabinets, ITS cabinets, and small equipment enclosures and accessories that meet the requirements of Section 995-11 and are listed on the Department's Approved Product List (APL). Cabinets must be permanently marked with a label including the manufacturer's name or trademark, model/part number, and the year and month of manufacture. Place the label on the inside of the main door using a water resistant method. The label must be visible after installation. Provide the cabinet with an automatic transfer switch if shown in the Plans. If shown in the Plans, nNew signal installations must include controller cabinets that will interface with the dimming circuit of LED street lighting with an auxiliary relay if shown in the Plans. Provide cabinets with No. 2 locks unless otherwise shown in the Plans.

Painted and unpainted cabinets must meet the applicable requirements in Aluminum Cabinets, NEMA TS-2-2016, 7.7.2.

676-2.2 NEMA Traffic Signal Controller Cabinets: Provide NEMA traffic signal controller cabinets with all terminals and facilities necessary for traffic signal control meeting the following requirements:

NEMA TS1 Controller Cabinet NEMA TS-1-1989
NEMA TS2 Controller Cabinet NEMA TS 2 2016

676-2.2.1 Documentation: Provide four paper copies of the cabinet wiring diagram with each cabinet. The nomenclature of signal heads, vehicular movements and pedestrian movements on the wiring diagram must be in accordance with the signal operating plan.

Documentation must include a list identifying the termination points of cables used for vehicular and pedestrian signal heads, detector loop lead-ins, and pedestrian pushbutton wires.

A heavy duty, resealable plastic opaque bag must be mounted on the backside of main cabinet door for storing cabinet documentation.

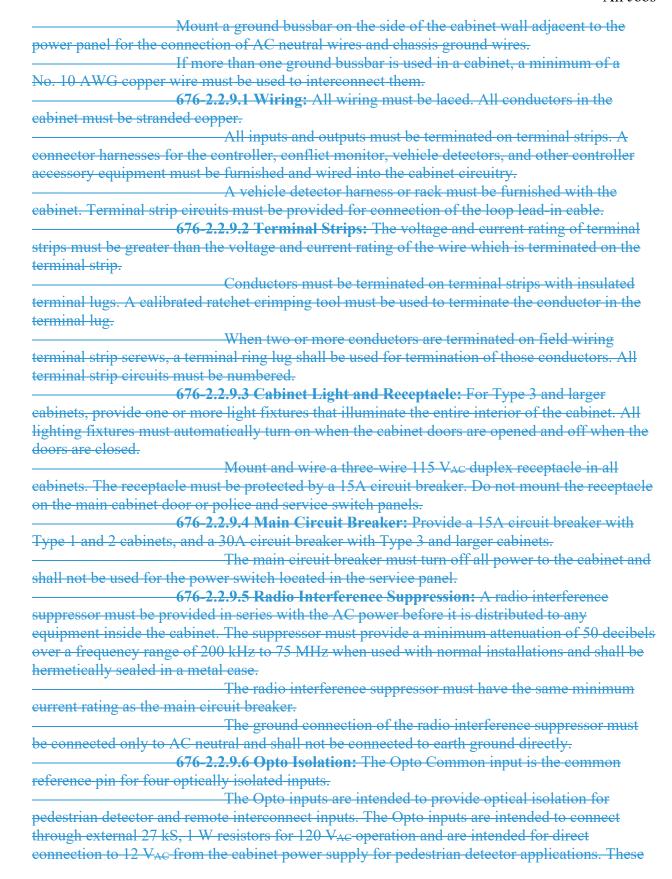

676-2.2.2 Police Switches: Provide the following police switches with Type 3and larger controller cabinets. The switches must be mounted on the police panel and identified as to their function.

1. AUTO-FLASH: When this switch is in the FLASH position, all signal indications must immediately transfer to the flashing mode. AC power shall be removed from the load switches and stop timing applied to the controller unit. When this switch is placed in the AUTO position the controller unit must operate in accordance with the appropriate specification.

2. MANUAL ON-OFF: When this switch is in the on position, a logic ground must be applied to the manual control enable input of the controller unit.

3. MANUAL JACK: Install a manual jack on the police panel. The
jack must mate with a three circuit, 1/4 inch diameter phone plug. Connect the tip and ring
(middle) circuits of the jack to the logic ground and the interval advance inputs of controller unit.
When the manual hand cord is plugged into the jack and the pushbutton is pressed, logic ground
must be connected to the interval advance input of the controller unit.
Provide a manual pushbutton with Type 3 and larger cabinets. The pushbutton
cord must have a minimum length of six feet with a 1/4 inch diameter three circuit plug
connected to one end and a hand held manual pushbutton at the other end. With the exception of
the vehicular yellow and all red clearance intervals, a complete cycle (push release) of the
manual pushbutton shall terminate the controller unit interval that is active. Cycling the push-
button during the vehicular yellow or all red clearance intervals must not terminate the timing of
those intervals.
676-2.2.3 Service Switches: Service switches must be mounted on the service
panel or other locations approved by the Department and identified as to their functions. Provide
the following service switches with Type 3 and larger cabinets.
1. SIGNALS ON-OFF: When this switch is in the off position, AC power
shall be removed from all signal heads. The SIGNALS ON-OFF switch must be connected to the
control input of a contactor (displacement relay). Current supplied to the switch must not exceed
five amperes (amps) total. Do not directly route the main signal head power buss and cabinet
power through the service or police switches.
2. AUTO-FLASH: When this switch is in the FLASH position, all signal
indications must transfer to the flashing mode in accordance with the Uniform Code Flash (UCF)
requirements. AC power shall be removed from the load switches when the signal indications
transfer to the flashing mode. The controller unit must operate in accordance with appropriate
specifications during the flashing mode. When the switch is placed in the AUTO position,
transfer from the flash mode to normal operation shall be made in accordance with UCF
requirements.
3. CONTROLLER ON-OFF: When this switch is in the off position, AC
power shall be removed from the controller.
4. AUX POWER ON-OFF: When this switch is in the off position, AC
power shall be removed from all circuits of the cabinet except for the duplex receptacle, cabinet
light and ventilation fan.
5. VEHICLE DETECTORS: A detector test switch must be provided for
each phase of the controller unit. Detector test switches must include a position for normal
operation (phase receives calls from detectors), a position that provides a constant call, and a
position that provides a momentary call.
676-2.2.4 Doors and Locks: Provide Type 3 and larger cabinets with a hinged,
rain tight and dust tight police door which allows access to the police switches and manual jack.
Locate the police door in the bottom half of the main door for Type 3 and
4 pole mount cabinets. Locate the police door in the upper half of the main door for Type 4 and
larger base mount cabinets.
Hinges and hinge pins must be constructed of stainless steel and prevent
the door (main or police) from sagging. Hinges for the main and police doors must be 14 gauge
and be located on the right side (viewed from the front).
Type 3 and larger cabinets must be furnished with a three point draw roller
latching system consisting of the following latching points:

1. Center of the cabinet (lock)
2. Top of the cabinet—controlled by the door handle
3. Bottom of the cabinet-controlled by the door handle
The latching points on the top and bottom of the cabinet must remain in
the locked position until the main cabinet door lock is unlocked. The locking mechanism must b
equipped with nylon rollers to secure the top and bottom of the door.
Type 3 and larger cabinets must be furnished with a door stop which
retains the main door open in a 90 degree and 120 degree position.
676-2.2.5 Police and Service Panels: Provide a police service panel with Type 3
and larger cabinets. The panels may be constructed of either sheet aluminum or cast aluminum.
Locate the police panel behind the police door attached to the main door. The service panel mus
be mounted on the back side of the police panel. The police panel must have the following
minimum dimensions:
1. Height 4 inches
2. Width 8 inches
3. Depth 2-1/2 inches
676-2.2.6 Ventilation: Type 1 and 2 cabinets must be vented to allow dissipation
of the heat generated by the equipment housed inside the cabinet.
Type 3 and larger cabinets must have dual, UL listed, thermostatically
controlled fans, rated for continuous duty with a service life of at least three years. Mount
thermostats on the inside top of the cabinet. Thermostats must be user adjustable to allow
temperature settings ranging from a minimum of 70°F to a maximum of 140°F and capable of
activating the fans within plus or minus 5 degrees of the set temperature. The intake vent must b
rain tight, located on the bottom half of the cabinet, and covered with a removable filter.
676-2.2.7 Shelves: Type 2 cabinets must be furnished with one shelf. Type 3 and
larger cabinets must be furnished with two adjustable shelves. Shelves must be adjustable in a
maximum of 2 inch increments from the top of the load panel to 12 inches from the top of the
controller cabinet.
676-2.2.8 Mounting Hardware: Type 1, 2, and 3 cabinets must be supplied with
hardware for attaching the top and bottom half of the cabinet onto a flat or round surface.
Optional wall or pole mount hardware must be provided for mounting Type 4 cabinets in specific
installations.
Type 4 cabinets must have rigid tabs attached to the bottom of the cabinet
Type 5 cabinets must have rigid brackets attached to the bottom of the cabinet. Rigid brackets
and tabs must be constructed of the same material used for the cabinet.
Type 4 and larger cabinets must be provided with one of the following
alternatives for fastening to a concrete base:
1. Galvanized anchor bolts, nuts, lock washers, and flat washers in
accordance with ASTM A153. The anchor bolts must be at least 1/2 inch in diameter, seven
inches in vertical length with at least three inch horizontal, or
2. Heavy duty machine bolt anchors, flat washers, lock washers
and machine screws with at least 1/2 inch thread diameter.
676-2.2.9 Electrical: Fabricate ground bussbars of copper or aluminum alloy
material compatible with copper wire and provide at least two positions where No. 2 AWG
stranded copper wire can be attached.

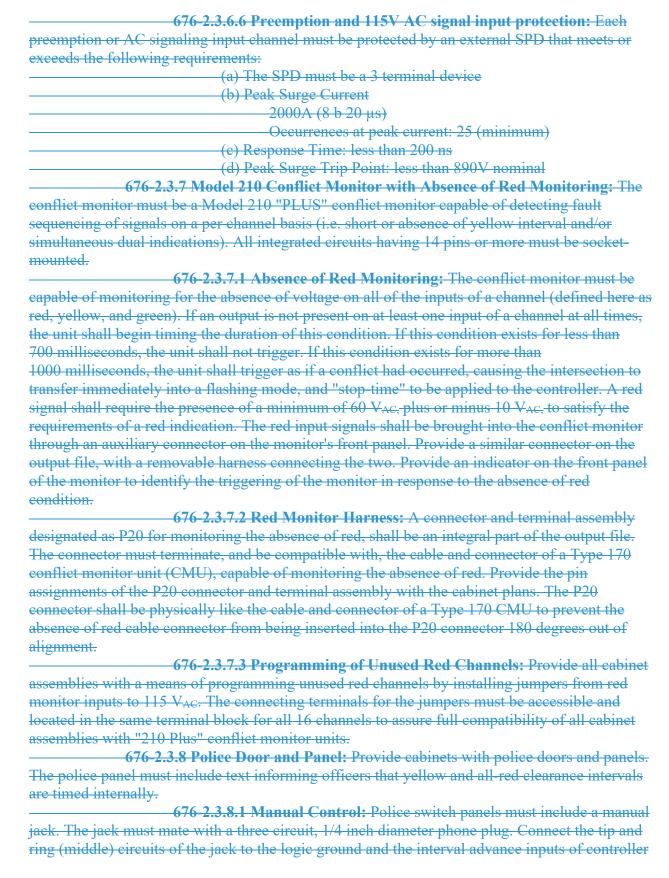

inputs may alternatively be used for low-true DC applications when the Opto Common pin is connected to the 24 V supply. The Opto inputs shall provide electrical isolation of 10 MS minimum resistance and 1000 VAC RMS minimum breakdown to all connector pins except the Opto Common pin. These inputs shall exhibit nominal impedance to the Opto Common pin of 5 kS', plus or minus 10 percent, and shall require 2.4 mA, plus or minus 10 percent, from a nominal 12 VAC supply. The Opto inputs shall not recognize 3 VAC RMS or less relative to the common input and recognize 6 VAC RMS or more relative to the common input. Any steady state voltage applied between an Opto input and the Opto Common shall not exceed 35 VAC RMS. Opto inputs shall not be acknowledged when active for 25 ms or less, and shall be acknowledged when active for 50 ms or more. 676-2.2.9.7 Load Resistors: A load resistor or capacitor must be installed between the AC (common) and each signal field wiring terminal for the yellow, green and walk indication. All load resistors and capacitors must be on the front side of any panel used in the cabinet. 676-2.2.9.8 Surge Protection: Furnish surge protective devices (SPDs) for the main AC power input, all signal head field wiring terminals, interconnect cable terminals and loop lead-in cable terminals which are located in the cabinet. SPDs must be unobstructed and accessible from the front side of any panel used in the cabinet. Cabinets utilizing Din rail mounted SPDs must be grounded with a conductor to the cabinet bussbar. The SPD for the main AC power input of the cabinet must be connected on the load side of the cabinet circuit breaker. SPDs for signal and interconnect cable field wiring terminals must meet the following: 1. Clamp the surge voltage to a level no greater than twice the peak operating voltage of the circuit being protected. 2. Withstand a surge current of 1000A with an 8 by 20 µs waveform six times (at 1 second intervals between surges) without damage to the suppressor. SPDs for loop lead-in cables must be designed in accordance with the following requirements: 1. Protect the detector unit loop inputs against differential (between the loop lead) surges, and against common mode (between loop leads and ground) surges. 2. Clamp the surge voltage to 25 V or less when subjected to repetitive 300A surges. 3. Withstand repetitive 400A surges with an 8 by 20 µs waveform without damage. SPDs must be installed according to the SPD manufacturer's instructions and not affect the operation of detectors. SPD leads must be kept as short as possible. 676-2.3 Type 170 Traffic Signal Controller Cabinets: Provide Type 170 traffic signal controller cabinets with all terminals and facilities necessary for traffic signal control and meeting the following requirements: Model 332, 334 and 336S Cabinets **CALTRANS TEES 2009**

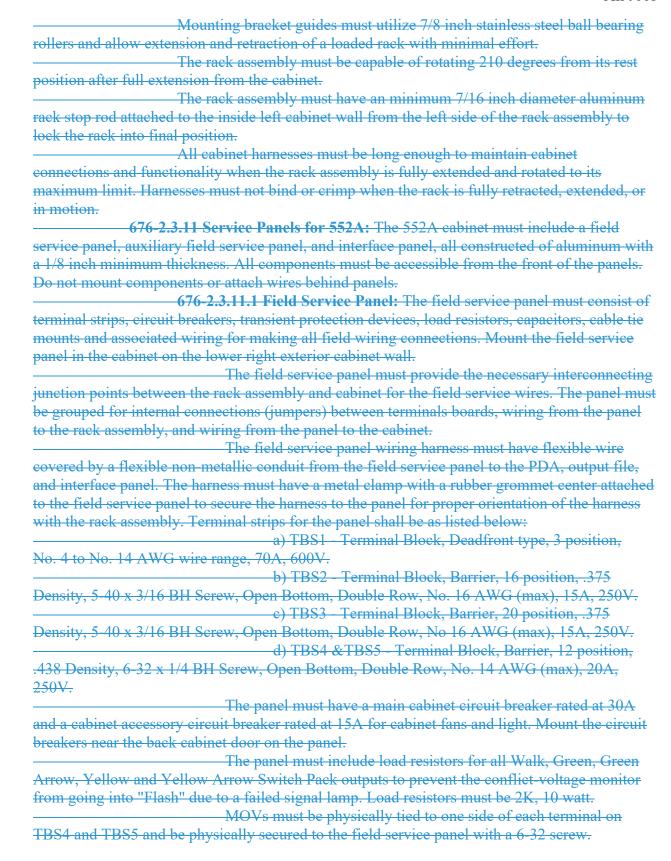

Model 336S cabinet must incorporate input surge protection mounted on a fold-
down termination panel at the input file.
Model 332 cabinets must incorporate a lower input termination panel. Model 332
and 334 cabinets must be base mounted. The Model 332 cabinet must have an auxiliary
MODEL 420 output file, and be configured for 8 vehicle, 4 pedestrian, and 4 overlaps.
Model 552A designation is given to Model 332 cabinet assemblies that include a
swing-out EIA 19 inch rack cage.
Model 662 designation is given to Model 552A cabinets with a 66 inch height.
Cabinets must comply with figures for traffic control signals and devices
available on the Department's State Traffic Engineering and Operations Office website at the
following URL:
Error! Hyperlink reference not valid
All terminals and facilities on panels must be clearly identified using permanent
silk-screened text.
676-2.3.1 Base Plate and Mounting Brackets: Provide cabinets with a standard
base mounting bolt pattern and a minimum of two aluminum plates welded inside for anchoring
to a concrete or composite base.
676-2.3.2 Output File: Fabricate the output file using a "hard wired" harness.
Printed board circuit boards are not acceptable.
676-2.3.3 Shelf: Provide an aluminum shelf with storage compartment in the racl
below the controller (for remote secondary monitor/lap top computer use). The storage
compartment must have telescoping drawer guides for full extension. The compartment top mus
have a non-slip plastic laminate attached. Provide an RS-232 connector for communications to
the C2S port.
676-2.3.4 Loads: Provide dummy loads consisting of 4.7k resistors rated at
five watts minimum for Greens, Peds, and Yellows. The dummy loads must be mounted on a
terminal block in the rear of the output file or other approved location. Wire one side of each
dummy load to AC return in a manner that allows a technician to easily attach the load to output
from selected load switches.
676-2.3.5 Cabinet Light: Provide one or more light fixtures that illuminate the
entire interior of the cabinet. All lighting fixtures must automatically turn on when the cabinet
doors are opened and off when the doors are closed.
676-2.3.6 Surge Protection: Provide each cabinet with devices to protect
equipment from surges. Surge protector termination panels must be attached to the cabinet rack
assembly and allow sufficient space for connections, access, and surge protector replacement.
AC isolation terminals must be on the same side of the cabinet as the AC service inputs. DC
terminals and loop detector terminals must be installed on the opposite side of the cabinet from
the AC power lines.
Surge protection for 332A cabinets must be mounted on the lower input
termination panel.
Surge protection for 336S cabinets must be mounted on a custom fold
down termination panel at the input file.
Under no circumstance (normal operation or short-circuit condition) shall
the amperage capacity of the internal wiring and printed circuit board traces be less than the
protecting threshold of circuit breakers and surge protectors provided.
brossessing an enterior or enterior or enterior mile perior brossessing brossessing

676-2.3.6.1 Power Distribution Assembly Protection: The power
distribution assembly (PDA) SPD must be a two stage series/parallel device that meets or
exceeds the following:
1. Maximum AC line voltage: 140 V _{AC}
2. 20 pulses of peak current, each of which will rise in
8 microseconds and fall in 20 microseconds to one-half the peak: 20kA.
3. The protector must include the following terminals:
a. Main line (AC Line first stage terminal)
b. Main Neutral (AC Neutral input terminals)
c. Equipment Line Out (AC Line second stage
output terminal, 10A)
d. Equipment Neutral Out (Neutral terminal to
protected equipment)
e. Ground (Earth connection)
4. The main AC line in and the equipment line outer
terminals must be separated by a 200 microhenry (minimum) inductor rated to handle 10A AC
service
5. The first stage clamp shall be between Main Line and
ground terminals
6. The second stage clamp shall be between Equipment
Line Out and Equipment Neutral
7. The protector for the first and second stage clamp must
have a metal oxide varistor (MOV) or similar solid state device, rated 20 kA.
The main neutral and equipment neutral output shall be connected
together internally, and shall have an MOV (or similar solid state device, or gas discharge tubes)
rated at 20 kA between main neutral and ground terminals.
The PDA SPD must have a peak clamp voltage of 250V at 20 kA
(voltage measured between equipment line out and equipment neutral out terminals, current
applied between main line and ground terminals with ground and main neutral terminals
externally tied together).
The PDA SPD must have a maximum let through voltage not
exceeding 500 Vpk using an 8 by 20 μ s/1.2 by 50 μ s; 6 kV, 3 kA surge. The SPD must either be
epoxy-encapsulated in a flame retardant material or utilize thermally protected varistors and be
designed for continuous service current of 10A at 120 V _{AC} RMS. Power to the Type 170E
controller and to the 24V power supply must be provided from the equipment line out terminal or
the PDA SPD.
676-2.3.6.2 Inductive Loop Detector Protection: Protect each inductive
loop detector input channel with an external SPD that meets or exceeds the following:
1. The SPD must be a three terminal device, two of which shall be
connected across the signal inputs of the detector. The third terminal shall be connected to
chassis ground to protect against common mode damage.
2. The SPD must instantly clamp differential mode surges (induced
voltage across the loop detector input terminals) via a semiconductor array. The array shall be
designed to appear as a very low capacitance to the detector.
3. The SPD must clamp common mode surges (induced voltage
between the loop leads and ground) via solid state clamping devices.

4. Peak Surge Current					
a. Differential Mode: 400Λ (8 by 20 μs)					
b. Common Mode: 1000Λ (8 by 20 μs)					
c. Estimated Occurrences: 500 @ 200A					
5. Response Time: 40 ns					
6. Input Capacitance 35 pF typical					
7. Clamp Voltage					
a. 30V max @ 400A (Differential Mode)					
b. 30V max @1000A (Common Mode)					
676-2.3.6.3 Signal Load Switch Protection: The outputs of each load					
switch in the output file shall be provided with a MOV connected from the AC positive field					
terminal to the chassis ground. The MOV must be rated 150 V _{AC} and shall be a V150LA20A (or					
· · · · · · · · · · · · · · · · · · ·					
approved equal). 676.2.3.6.4 Communication Input Protections Feed law voltage					
676-2.3.6.4 Communication Input Protection: Each low voltage					
communication input must be protected as it enters the cabinet with a hybrid two-stage SPD that					
meets or exceeds the following:					
1. The SPD must be a dual pair (four-wire) module with a					
double-sided, gold-plated printed circuit board connector.					
2. The SPD must be installed in a ten-circuit card edge					
terminal block (PCB1B10A).					
3. The SPD must be utilized as two independent signal					
pairs. The data circuits must pass through the SPD in a serial fashion.					
4. Peak Surge Current					
b. Occurrences at 2000A: greater than 100					
5. Response Time: less than 1 ns					
6. Clamp Voltage: 30V maximum					
7. Series Resistance: greater than 15 ohms per line					
8. Primary Protector: 3 element gas tube					
9. Secondary Protector: Solid state clamp (1.5 kW					
minimum)					
The line side of the SPD must be connected to the communication					
field wires, the load side connected to the communication connector of the controller, and the					
ground terminal connected to chassis ground.					
676-2.3.6.5 Low Voltage DC input protection: Each DC input must be					
protected by an SPD that meets or exceeds the following:					
(a) The SPD must be a 5 terminal device. Two terminals must be					
connected to the line side of the low voltage pair, two terminals must be connected to the input					
file side, and the fifth terminal connected to chassis ground.					
(b)Peak Surge Current					
2 kA (8 by 20 µs)					
Occurrences at peak current: 100 (typical)					
(c) Response Time: 5-30 ns					
(d) Shock: Must withstand 10 foot drop on concrete					
(e) Clamp Voltage: 30V					
(f) Series Resistance: greater than 15 ohms each conductor					

unit. When the manual hand cord is plugged into the jack and the pushbutton is pressed, logic
ground must be connected to the interval advance input of the controller unit.
The pushbutton cord must have a minimum length of six feet with
a 1/4 inch diameter three circuit plug connected to one end and a hand held manual pushbutton a
the other end. With the exception of the vehicular yellow and all red clearance intervals, a
complete cycle (push-release) of the manual pushbutton shall terminate the controller unit
interval that is active. Cycling the push-button during the vehicular yellow or all red clearance
intervals must not terminate the timing of those intervals.
676-2.3.9 Technician Service Panel: Provide cabinets with a technician service
panel which is mounted on the back side of the police panel (inside the main cabinet front door).
676-2.3.9.1 Service Panel Switches: There must be two switches located
on the technician service panel, clearly labeled according to the following functions:
(a) UCF—This toggle switch shall:
Place the intersection into Flashing Operation.
After meeting requirements for Flashing
Operations, all power shall be removed immediately from signal load switches.
(b) Signal On/Off—This toggle switch shall disconnect all
power to the signal lights through the use of a 60A contact switch placed in series with the load
switch packs.
Labels must be silk screened directly on the panel.
676-2.3.10 Swing-out Rack Assembly: Provide 552-A cabinets with a pullout
and rotatable rack assembly as well as an interface panel mounted on the top of the rack
assembly and attached to the top shelf. The rack assembly must be constructed to house
components designed to be installed in a standard EIA 19 inch rack and shall house the
Controller, Input File, Output File No. 1, PDA No. 2, and a storage compartment.
Construct the rack and slide/hinged mounting brackets so that when the
rack assembly (fully loaded) can be pulled out with one hand with complete ease of operation
including rotation of the assembly.
The rack assembly must have a spring-loaded latch mechanism to secure
the rack assembly inside the cabinet while in the "rest" position. When pulled out of the cabinet
at any point from its resting position (inside cabinet) to its full extension and rotation, the fully
loaded rack assembly shall not cause any member of the assembly to bend, warp or bind. The
rack must be made of one inch square aluminum tubing with welded joints and extend and retract
smoothly without noticeable friction or stress on roller guides, extension brackets, or other
mechanical components. Maximum deflection of the entire rack assembly (with all equipment
installed) shall not exceed 1/8 inch.
The rack assembly must have 12 technician test switches mounted to the
interface frame assembly. Technician test switches must be of the momentary type and shall
have eight vehicle and four pedestrian inputs.
The front of the rack assembly must be tapped with 10-30 threads with
EIA universal spacing for 19 inch electrical equipment racks.
The rack assembly must be attached to the left cabinet wall through
combination slide/hinged mounting brackets.
The slide/hinged mounting brackets must be fabricated from aluminum
and/or stainless steel only.

676-2.3.11.2 Auxiliary Field Service Panel: The auxiliary field service
panel must be mounted on the lower left interior cabinet wall and consist of a minimum of four
terminal strips, 18 detector surge protectors and one pedestrian button isolation board assembly.
The 18 surge protectors must be a three terminal device, two of which are connected across the
signal inputs of the detector for differential mode protection and the third terminal is grounded to
protect against common mode damage. Mount the pedestrian button isolation board on the
auxiliary field service panel. Terminal strips for the panel shall be Terminal Block, Barrier,
12 position, .438 Density, 6-32 x 1/4 BH Screw, Open Bottom, Double Row, No. 14 AWG
(max), 20A, 250V.
Install a four-button pedestrian isolation board on the auxiliary
field service panel to provide for the connection of the pedestrian buttons on phases 2, 4, 6 and 8.
The board must provide electrical isolation of the field wiring to the internal cabinet wiring. The
inputs to this isolation board shall be wired to terminal block TBA5 for connection to field
wiring. The outputs of this board shall be carried through the harness to the input file to the
proper wires that go to the interface extension panel of the controller.
The pedestrian button isolation board must include a PC board
mounted on an aluminum panel with the following minimum dimensions:
Height: 2 inches
Thickness: 1/8 to 3/16 inches
676-2.3.11.3 Interface Panel: The interface panel must consist of eight
terminal strips, one telephone line suppressor and mounting fixture, two 24 V _{DC} relays and
mounting fixtures, and all associated wiring for connecting the required interface equipment
modules.
The front of the panel must be covered by a 1/4 inch clear
plexiglass sheet, supported from the panel by four 1-1/2 inch standoffs. Secure the panels and
cover using wing nuts that are removable without the use of tools. The plexiglass cover shall
have 1/2 inch slot, centered over each of the terminal strips. All covers and panels must be
interchangeable.
The panel wiring must provide the necessary interconnecting
junction points between interface equipment cable harnesses and controller cabinet input and
output signal. The panel wiring provides the functional wiring information for connecting the
interface equipment in the cabinet.
The panel wiring must be grouped for internal connections
(jumpers between terminal boards) as well as wiring from the controller and related cabinet
functions to the terminal boards on the interface panel.
Ground wires must be No. 14 AWG wire, minimum. The internal
harnesses must be located between TB1, TB2 and TB3. The external and internal wiring must be
located outside of TB1 and TB4, between TB2 and TB3.
Terminal strips shall be Barrier type, .375 Density, 5-40 x 3/16 BH
Screw, Open Bottom, Double Row, No. 16 AWG (max), 15A, 250V. Terminals must use
nickel/cadmium plated brass screws. All terminals and facilities on panels must be clearly
identified using permanent silk-screened
The K1P and K2F relays shall be 15A miniature relays with
polycarbonate cover, 2 form C (CO) contact arrangement, DC coil input, socket mount, .187 inch
quick connect/solder terminals, AgCdO (15A) contacts, and 24 VAC coil voltage with matching
quick connectsolder terminals, Age do (13A) contacts, and 24 vac con voltage with matering

socket and hold down spring. All screws on the relay socket must be brass with nickel/cadmium
plating.
676-2.3.12 Storage Compartment: Mount an aluminum storage compartment in
the rack assembly. The storage compartment must have telescoping drawer guides for full
extension of drawer from rack assembly and have a continuous front lip for opening the
compartment top for storage. The top of the compartment must be non-slip plastic laminate.
Install a communication port on the right hand side of the drawer at the
front for connecting to the communications port of the controller unit via the cabinet harness.
676-2.3.13 Cabinet Rails: Provide the cabinet with four cabinet rails for
mounting wiring panels and various brackets. Rails must be keyhole design with slots 2 inches
on center with a top opening diameter of 5/8 inches to allow the insertion of a 5/8 inch by 1 inch
carriage bolt. The rails must be approximately 1-1/2 inch to 2 inches wide by 1/2 inches deep.
Do not use unistruts or other rails.
676-2.3.14 Electrical: Do not use printed circuit boards in any controller cabinet
subsystem file or panel, including but not limited to the output file (except for the red monitor
program board), service panel, interface panel, and input file.
676-2.3.14.1 Wiring: Cut all wires to the proper length and neatly laced
into cables with nylon lacing. No wire shall be doubled back to take up slack. Cables in the
cabinet must not interfere with the routing and connection of field wiring. Cables must be
secured with nylon cable clamps, unless specified otherwise. The position of cables between the
components must be such that when the door is closed, it does not press against the cables or
force the cables against the various components inside the controller cabinet.
Fabricate ground buss bars of a copper or aluminum alloy materia
compatible with copper wire and provide at least two positions where a No. 2 AWG stranded
copper wire can be attached. Mount a 6 inch ground buss bar with screw terminals on the bottom
flange on each side of the cabinet for connection of AC neutral wires and chassis ground. Attack
a flexible ground strap between the left side ground buss bar and the left side bottom rear of the
rack assembly. Wiring harnesses must be covered by a flexible non-metallic conduit. Panel wire
size must be a minimum of No. 18 AWG unless otherwise specified.
676-2.3.14.2 Terminals: Terminal connections must be soldered or
constructed using a calibrated ratchet type crimping tool. Wiring must be traceable and without
entanglement.
676-2.4 Controller Cabinet Flashing Operation: When a non-emergency flashing
operation is required, the selected operation shall be performed by the UCF format. The
following shall utilize UCF format:
a) Flash Switch located on the cabinet service panel
b) Time Base Coordination Flash
When flashing operation is initiated, the controller assembly shall transfer from
normal operation to flashing operation only at the end of the common major street red interval,
the common minor street yellow interval, or the all red interval.
UCF shall be an internal function of the controller unit and must not be inhibited
by the hold command. External logic will not be allowed to provide this function.
In the event of an emergency when flashing operation is required, the controller
assembly shall immediately place the intersection on flash. Emergency flash may be initiated by
the following:

a) Auto/Flash Switch - A switch located on the cabinet police panel
 b) Conflict-Voltage Monitor senses a conflicting indication or system

error

The transfer of the controller assembly from flashing operation to normal operation shall cause the controller unit to revert to its start-up sequence unless the conflict-voltage monitor has transferred the controller assembly to flashing operation. If transferred to flashing operation by the conflict-voltage monitor, the controller assembly shall remain in flashing operation until the monitor unit is reset and automatic operation can be implemented through the normal start-up sequence.

676-2.5 Intelligent Transportation System Cabinets: The cabinet shell must conform to NEMA 3R requirements, be constructed of unpainted sheet aluminum alloy 5052-H32 with a minimum thickness of 0.125 inches and have a smooth, uniform natural aluminum finish without rivet holes, visible scratches or gouges on the outer surface. Other finishes are acceptable if approved.

The dimensions for cabinets are listed below.

Table 676-1							
Cabinet Dimensions in Inches							
Cabinet Type	Height	Width	Depth				
340	66" - 68"	44" - 46"	26" - 28"				
336	36" - 39"	2 4" - 26"	20' - 22"				
336S	46" - 48"	24" - 26"	22" - 24"				
334	66"-68"	24" - 26"	30" - 32"				
332D	66" - 68"	48" - 50"	30" - 32"				
P44	55" - 59"	44" - 46"	26" - 29"				

The cabinet must be weather resistant and constructed with a crowned top to prevent standing water. All exterior cabinet welds must be gas tungsten arc (TIG) welds and all interior cabinet welds must be gas metal arc (MIG) or TIG welds. All exterior cabinet and door seams must be continuously welded and smooth and all inside and outside edges of the cabinet must be free of burrs, rounded and smoothed for safety. All welds must be neatly formed and free of cracks, blow holes and other irregularities. Use ER5356 aluminum alloy bare welding electrodes conforming to AWS A5.10 requirements for welding on aluminum. Procedures, welders and welding operators must conform to AWS requirements as contained in AWS B3.0 and C5.6 for aluminum.

The cabinet must have a lifting eye plate on both sides of the top of the cabinet for lifting and positioning it. Each lifting eye must be secured with a minimum of two bolts to the cabinet body and have a lift point opening diameter of 0.75 inches and capable of supporting a weight load of 1,000 pounds. All external bolt heads must be tamperproof.

Ground-mount cabinets must include a removable base plate and two aluminum plates, welded inside, for anchoring the cabinet to a concrete or composite type base as shown in the Plans. Fabricate the plates from aluminum alloy 5052-H32 a minimum of 4 inches wide by 0.125 inches thick. Provide the cabinet with four 1 inch diameter holes for anchoring.

676-2.5.1 Doors: Provide cabinets with front and rear doors, each equipped with a lock and handle. Doors must be full size, matching the height and width dimensions of the

cabinet enclosure, with no fewer than three Type 4 or larger stainless steel hinges or; alternately, one full-length "piano" hinge. Hinges must be constructed of 14 gauge stainless steel with stainless steel hinge pins that are spot-welded at the top. Mount the hinges so that they cannot be removed from the door or cabinet without first opening the door. Brace the door and hinges to withstand 100 pounds per vertical foot of door height load applied to the outer edge of the door when standing open. Ensure there is no permanent deformation or impairment of any part of the door or cabinet body when the load is removed.

Door opening must provide a flange that allows the door gasket to mate with a flat surface. Include a gasket made of closed-cell material resistant to UV, weathering, elevated temperatures, and permanent deformation that is permanently bonded to the inside of each door forming a weather-tight seal when the door is closed.

676-2.5.2 Latches: Provide all cabinets with a three-point draw roller latching system for the doors. The latching system must have the following latching points.

- 1. Center of the cabinet (lock).
- 2. Top of the cabinet—controlled by the door handle.
- 3. Bottom of the cabinet—controlled by the door handle.

The latching points on the top and bottom of the cabinet must remain in the locked position until the main cabinet door lock is unlocked. The locking mechanism must be equipped with nylon rollers to secure the top and bottom of the door.

Provide the cabinet with a door stop that retains the main door open in a 90 degree and 120 degree position.

Outfit the doors with an industrial standard pin tumbler lock with No. 2 key, or an approved alternate, and hardware that allows the door to be secured using a padlock. Provide two keys for each cabinet lock.

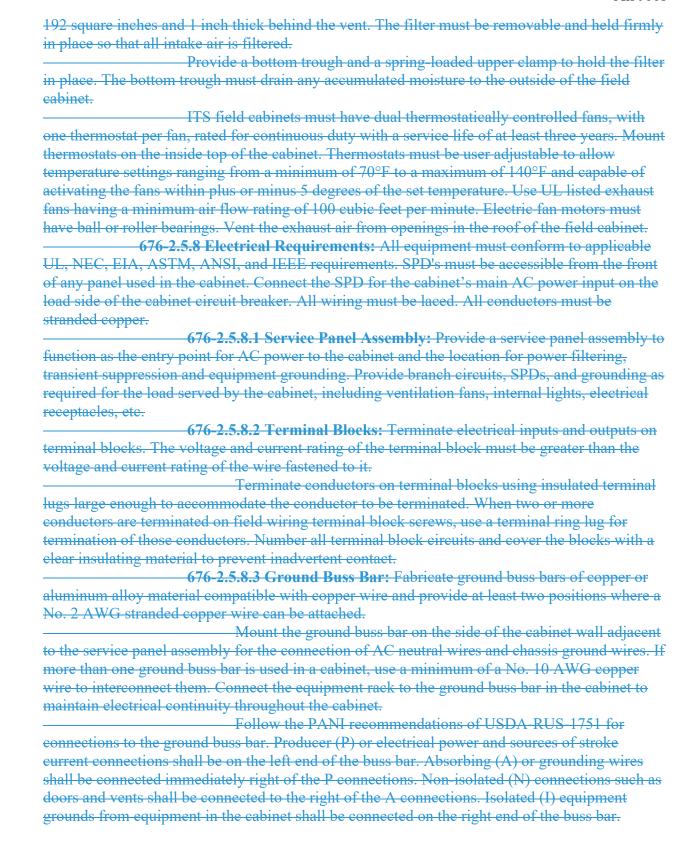

676-2.5.3 Rails: Provide the cabinet with four cabinet rails that form a cage for mounting miscellaneous wiring panels and various mounting brackets. Use rails constructed of either 0.1345 inch thick plated steel or 0.105 inch thick stainless steel that extend the length of the cabinet's sides, starting from the bottom of the enclosure. Rails must be keyhole designed with slots 2 inches on center with a top opening of 5/8 inch in diameter to allow the insertion of a 5/8 inch by 1 inch carriage bolt. Rails must be 1-1/2 to 2 inches wide by 1/2 inches deep, drilled and tapped for 10-32 screws or rack screws with EIA universal spacing. Do not use unistruts or other rail types.

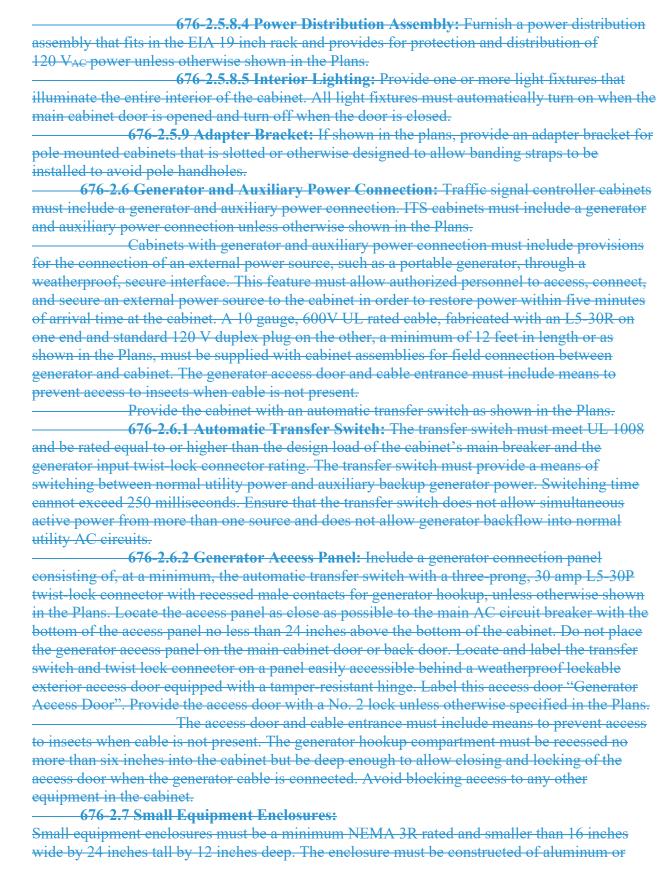

676-2.5.4 Racks: The cabinet must include a standard 19 inch EIA/TIA equipment rack centered in the cabinet for mounting devices to be installed inside. Clearance in the rack between the rails must be 17-3/4 inches.

676-2.5.5 Shelf: Provide a level, rollout internal shelf with a minimum work area measuring 10 inches by 10 inches. The shelf must be capable of sustaining a constant 20 pound load and the shelf position must be adjustable.

676-2.5.6 Sunshield: Sunshields must be mounted with tamper resistant hardware to standoffs that provide an air gap of at least of one inch between the exterior cabinet walls and the sunshields. Sunshield standoffs located on the roof of the cabinet must be welded to the cabinet body. Construct sunshields of 0.125 inch thick 5052-H32 aluminum sheet with corners that are rounded and smoothed for safety.

676-2.5.7 Ventilation: Provide ventilation through the use of a louvered vent at the bottom of the door. Vent depth must not exceed 0.25 inch. Provide an air filter a minimum of

non-metallic materials. Enclosures must include a safe means of removing power from the installed equipment for servicing and replacement, such as a switch, fuse, or breaker. Discrete markings, such as manufacturer name and model, are permitted on the outside of small enclosures.

All fasteners less than 5/8 inch exposed to the elements must be Type 304 or 316 stainless steel.

Construct aluminum enclosures of 5052 sheet aluminum alloy with a minimum thickness of 0.090 inches. Aluminum enclosures must have a uniform natural finish or be powder coat painted in accordance with AAMA-2603-02 specifications. All welds, bends, and seams must be neatly formed and free of cracks, blow holes and other irregularities. All inside and outside edges of the enclosure must be free of burrs, rivet holes, visible scratches, and gouges and have a smooth, uniform finish.

Non-metallic enclosures must be UL 508A listed, be rated for outdoor use, and resist chemicals, corrosion, and ultraviolet rays.

Enclosure doors must include a vandal resistant hinge and be secured with a locking latch or a minimum of two quick-release Type 304 or 316 stainless steel latches with padlock hasps. Removal of the hinge or hinge pin must not be possible while the enclosure is closed. Provide two sets of keys with each lock.

Enclosures may be vented. Holes larger than 1/8 inches must be covered by heavy duty screen.

Post mounted enclosures must be supplied with mounting hardware for attaching the enclosure to a 4-1/2 inch (OD) aluminum post.

676-3 Installation Requirements.

676-3.1 General: Ground all cabinets in accordance with the requirements of Section 620. Keep the ground wire from the cabinet ground bussbarbusbar to the ground rod assembly or array as short as possible. Ensure the ground wire is not in contact with any other part of the cabinet. Controller cabinets shall be wired in accordance with the signal operating plan specified in the Contract Documents. If phases are omitted for future use, the cabinet must be wired for these future phases. However, the load switches for the future phases do not have to be furnished. All field drilled conduit entrance holes or other holes must be reamed and free of burrs. All conduit connections to the cabinets and small equipment enclosures must be weatherproof.

676-3.2 Traffic Signal Controller Cabinet Installation: Install traffic signal controller cabinets in accordance with Standard Plans, Index 676-010.

676-3.2.1 Pole Mounted Cabinets:

- (a) Fasten the pole mounted hardware furnished with the cabinet to the cabinet using bolts no less than 1/2 inch threaded diameter. Ensure all connections are watertight.
 - (b) Use stainless steel bands for mounting cabinets onto steel strain poles.
- (c) Use stainless steel bands or lead anchors (or equivalent) for mounting cabinets onto concrete strain poles.
- (d) Use stainless steel bands or lag bolts for mounting cabinets onto wood poles.

676-3.2.2 Base Mounted Cabinets:

- (a) Use anchor bolts to fasten base mounted cabinets to the concrete base.
- (b) Seal the joint between the bottom of the cabinet and the concrete base (inside and outside of cabinet) with a clear silicone rubber sealant.

Improve Safety, Enhance Mobility, Inspire Innovation www.fdot.gov

(c) Construct the base for the cabinets with concrete in accordance with Section 347. Make the concrete base for the cabinet level, free of honeycombs and as smooth as possible. Temporarily seal the end of conduit risers located in the base before placing the concrete. Position the end of the conduit risers a minimum of 2 inches above the finished surface of the concrete base.

676-3.2.3 Field Wiring:

- (a) Terminate signal cable, interconnect cable, and loop lead-in wires on the appropriate terminal strips in the controller cabinet with insulated terminal lugs. Use a calibrated ratchet type crimping tool to install the insulated terminal lugs onto the field wires.
- (b) Label spare circuits of the signal and interconnect cables and connect them to the cabinet ground bussbar.
- (c) Neatly bundle and identify all field wiring cables in the controller cabinet.

676-3.3 Intelligent Transportation System Cabinet Installation: Mount the cabinet as shown in the Plans; and provide the cabinet with the necessary base or pole mount hardware. Ensure that pole and structure-mounted field cabinets have mounting brackets on the side so that both cabinet doors are fully functional. Provide an adapter bracket for pole mounted cabinets that is designed to allow banding straps to be installed without Mounting straps must not obstructing pole handholes.

Make provisions for all telephone, data, control, and confirmation connections between the ITS device and field cabinet and for any required wiring harnesses and connectors.

Place a heavy-duty resealable plastic bag on the backside of the main cabinet door for storing a list of terminal block connections and other cabinet documentation.

Place all equipment in the cabinet according to the recommendations of the manufacturer. Maintain a minimum clearance of 6 inches between the top of the cabinet and the top of any equipment placed on the top shelf of the cabinet and a minimum clearance of 2 inches between each side of the cabinet and any equipment placed on the cabinet shelves.

Construct a maintenance service slab as shown in Standard Plan 676-010 or as shown in the Plans. Construct the maintenance service slab with concrete in accordance with Section 347.

676-3.4 Small Enclosure Installation: Mount the enclosure on a pole or support structure as shown in the Plans, and provide any hardware necessary for a complete and accepted installation.

676-4 Warranty.

Ensure traffic cabinets and enclosures have a manufacturer's warranty covering defects for a minimum of two years from the date of final acceptance in accordance with 5-11 and Section 608. The warranty must include providing replacements, within 10 calendar days of notification, for defective parts and equipment during the warranty period at no cost to the Department or maintaining agency.

676-5 Method of Measurement.

The Contract unit price each for traffic cabinet or enclosure, furnished and installed, will include all materials specified in the Contract Documents, and all labor, equipment, and miscellaneous materials necessary for a complete and acceptable installation.

No separate payment will be made for a traffic <u>signal controller</u> cabinet when included with the controller assembly as per Section 670.

676-6 Basis of Payment.

Price and payment will be full compensation for all work specified in this Section. Payment will be made under:

Item No. 676- 1- Traffic Signal Controller Cabinet - each.

Item No. 676- 2- ITS Cabinet - each.

Item No. 676- 3- Small Equipment Enclosure - each.

TRAFFIC CABINETS (REV 10-24-22)

SECTION 676 is deleted and the following substituted:

676-1 Description.

Furnish and install traffic cabinets as shown in the Plans. Meet the requirements of Section 603.

676-2 Materials.

676-2.1 General: Use traffic signal controller cabinets, ITS cabinets, and small equipment enclosures that meet the requirements of Section 995-11 and are listed on the Department's Approved Product List (APL). Provide the cabinet with an automatic transfer switch if shown in the Plans. New signal installations must include controller cabinets that will interface with the dimming circuit of LED street lighting with an auxiliary relay if shown in the Plans. Provide cabinets with No. 2 locks unless otherwise shown in the Plans.

676-3 Installation Requirements.

676-3.1 General: Ground all cabinets in accordance with the requirements of Section 620. Keep the ground wire from the cabinet ground busbar to the ground rod assembly or array as short as possible. Ensure the ground wire is not in contact with any other part of the cabinet. Controller cabinets shall be wired in accordance with the signal operating plan specified in the Contract Documents. If phases are omitted for future use, the cabinet must be wired for these future phases. However, the load switches for the future phases do not have to be furnished. All field drilled conduit entrance holes or other holes must be reamed and free of burrs. All conduit connections to cabinets and small equipment enclosures must be weatherproof.

676-3.2 Traffic Signal Controller Cabinet Installation: Install traffic signal controller cabinets in accordance with Standard Plans, Index 676-010.

676-3.2.1 Pole Mounted Cabinets:

- (a) Fasten the pole mounted hardware furnished with the cabinet to the cabinet using bolts no less than 1/2 inch threaded diameter. Ensure all connections are watertight.
 - (b) Use stainless steel bands for mounting cabinets onto steel strain poles.
- (c) Use stainless steel bands or lead anchors (or equivalent) for mounting cabinets onto concrete strain poles.
- (d) Use stainless steel bands or lag bolts for mounting cabinets onto wood poles.

676-3.2.2 Base Mounted Cabinets:

- (a) Use anchor bolts to fasten base mounted cabinets to the concrete base.
- (b) Seal the joint between the bottom of the cabinet and the concrete base (inside and outside of cabinet) with a clear silicone rubber sealant.
- (c) Construct the base for the cabinets with concrete in accordance with Section 347. Make the concrete base for the cabinet level, free of honeycombs and as smooth as possible. Temporarily seal the end of conduit risers located in the base before placing the concrete. Position the end of the conduit risers a minimum of 2 inches above the finished surface of the concrete base.

676-3.2.3 Field Wiring:

- (a) Terminate signal cable, interconnect cable, and loop lead-in wires on the appropriate terminal strips in the controller cabinet with insulated terminal lugs. Use a calibrated ratchet type crimping tool to install the insulated terminal lugs onto the field wires.
- (b) Label spare circuits of the signal and interconnect cables and connect them to the cabinet ground bussbar.
- (c) Neatly bundle and identify all field wiring cables in the controller cabinet.

676-3.3 Intelligent Transportation System Cabinet Installation: Mount the cabinet as shown in the Plans and provide the cabinet with the necessary base or pole mount hardware. Ensure that pole and structure-mounted field cabinets have mounting brackets on the side so that both cabinet doors are fully functional. Provide an adapter bracket for pole mounted cabinets that is designed to allow banding straps to be installed without obstructing pole handholes.

Make provisions for all data, control, and confirmation connections between the ITS device and field cabinet and for any required wiring harnesses and connectors.

Place a heavy-duty resealable plastic bag on the backside of the main cabinet door for storing a list of terminal block connections and other cabinet documentation.

Place all equipment in the cabinet according to the recommendations of the manufacturer. Maintain a minimum clearance of 6 inches between the top of the cabinet and the top of any equipment placed on the top shelf of the cabinet and a minimum clearance of 2 inches between each side of the cabinet and any equipment placed on the cabinet shelves.

Construct a maintenance service slab as shown in Standard Plan 676-010 or as shown in the Plans. Construct the maintenance service slab with concrete in accordance with Section 347.

676-3.4 Small Enclosure Installation: Mount the enclosure on a pole or support structure as shown in the Plans and provide any hardware necessary for a complete and accepted installation.

676-4 Warranty.

Ensure cabinets and enclosures have a manufacturer's warranty covering defects for a minimum of two years from the date of final acceptance in accordance with 5-11 and Section 608. The warranty must include providing replacements, within 10 calendar days of notification, for defective parts and equipment during the warranty period at no cost to the Department or maintaining agency.

676-5 Method of Measurement.

The Contract unit price each for cabinet or enclosure, furnished and installed, will include all materials specified in the Contract Documents, and all labor, equipment, and miscellaneous materials necessary for a complete and acceptable installation.

No separate payment will be made for a traffic signal controller cabinet when included with the controller assembly as per Section 670.

676-6 Basis of Payment.

Price and payment will be full compensation for all work specified in this Section. Payment will be made under:

Item No. 676- 1- Traffic Signal Controller Cabinet - each.

Item No. 676- 2- ITS Cabinet - each.

Item No. 676- 3- Small Equipment Enclosure - each.
