996-7.2.5 – *Should the GFCI receptacle in this spec match the one in 685-2.2.5? 30A versus 20A*

Response: The draft content in 685-2.2.5 that was released for comment should have been deleted since these requirements were moved to, and are sufficiently addressed in, the material requirements of 996-7.2.5. The draft of 685-2.2.5 has been edited accordingly and the requirement for the 20A receptacle remains in 996-7.2.5.

On 996-5.2 Marking- is it worthwhile adding “FDOT ITS” for markings on PB Lids for items such as composite cable that is installed as part of an ITS project (not fiber or power)? Thank you.

Response: We will consider and research adding additional marking language in the future but are making no changes at this time.
