SECTION 943 CORRUGATED STEEL PIPE AND PIPE ARCH (INCLUDING UNDERDRAIN)

943-1 General Requirements.

Corrugated steel pipe, including round culvert pipe, pipe arch and underdrain and coupling bands for each type shall conform to AASHTO M36. Except for underdrain, corrugated steel pipe including pipe arch shall be fabricated with helical corrugations with a minimum of two annular corrugations formed on each end of each pipe to accommodate a coupling band. Annular fabrication is not permitted unless specifically called for in the Plans or Specifications. Provide, notarized certification of as part of the shipping ticket, the actual mean inside diameter and total measured lengths of each lot of pipe shipped to the project. Include in the certification the minimum and maximum inside diameters used to certify calculate the actual mean inside diameter.

Test the pipe joints hydrostatically at the specified pressure using test methods in ASTM D3212 with the exceptions of Sections 7.3 and 7.4. In lieu of Section 7.4, deflect one side of the pipe to a 5% reduction in internal diameter using the parallel plate testing methodology of ASTM D2412. Load the deflected pipe to within 1/2 the actual pipe diameter from the centerline of the gasket or just beyond the end of the hugger band, whichever is greater. Ensure that the loading mechanism does not contact the hugger band or associated hardware. Testing of pipe joints shall be done at the manufacturing plant and witnessed by the Engineer or designated representative.

943-2 Round Culvert Pipe.

For round culvert pipe used as sidedrain, unless shown otherwise in the Plans, the minimum thickness of the metal (including galvanizing - AASHTO M218, or aluminum coating - AASHTO M274), shall be as specified below. <u>Alternatively, if no future maintenance concerns</u> exist, the Contractor may propose the pipe gage based on the Department's Drainage Manual and Culvert Service Life Estimator for approval by the Engineer.

TABLE I				
THICKNESS OF METAL FOR SIDEDRAIN PIPE				
Nominal Diameter	Metal Sheet	Mean Thickness Metal		
(Inches)	Gauge No.	(Inches)		
6	18	0.0516		
8	16	0.0635		
10	16	0.0635		
12	16	0.0635		
15	16	0.0635		
18	16	0.0635		
21	16	0.0635		
24	16	0.0635		
30	14	0.0785		
36	14	0.0785		
42	12	0.1084		

TABLE I THICKNESS OF METAL FOR SIDEDRAIN PIPE				
Nominal Diameter	Metal Sheet	Mean Thickness Metal		
(Inches)	Gauge No.	(Inches)		
48	12	0.1084		
54	12	0.1084		
60	10	0.1382		
66	10	0.1382		
72	10	0.1382		
78	8	0.1681		
84	8	0.1681		
90	8	0.1681		
96 and over	8	0.1681		

TABLE II				
PERMISSIBLE VARIATION IN THICKNESS				
OF METAL FOR PIPE AND CONNECTING BANDS				
Metal Sheet Gauge No	Mean Thickness of Metal (Inches)	Permissible Variation (Inches)		
18	0.0516	0.007		
16	0.0635	0.007		
14	0.0785	0.008		
12	0.1084	0.009		
10	0.1382	0.009		
8	0.1681	0.009		

943-3 Pipe Arch.

For corrugated metal pipe arch, in addition to the requirements shown in AASHTO M36, thickness of the metal shall be as shown for the equivalent size round pipe in Tables I and II, above, and the fabrication of the pipe arch sections shall be such as to insure a substantially flat invert.

943-4 Alternate Connecting Bands.

In addition to the connecting bands as specified in AASHTO M36, alternate types of connecting bands are specified in 430-8.1.3, for use with the types of installations as shown.

943-5 Bituminous Coating and Paved Invert.

When bituminous coating is specified, the pipe, or pipe arch, shall be coated in accordance with the requirements of AASHTO M190, for Type A (Fully Bituminous Coated).

When bituminous coated and paved invert are specified the pipe or pipe arch shall be coated and paved in accordance with AASHTO M190, for Type C (Fully Bituminous Coated and Paved). The temperature of the asphalt at the time of coating and the duration of the pipe submerged time shall be optimized such that excess coating does not adhere to the pipe.

943-6 Paved Interior.

When bituminous coated and paved interior are called for, the coating and paving shall meet the requirements specified above for bituminous and paved invert (Type C), with the following additions and exceptions:

(a)<u>1</u>. The smooth pavement formed by the asphalt cement shall extend over the entire interior of the pipe.

(b)2. The exterior coating and the interior paving shall be applied.

(c)<u>3.</u> No markings will be required on the outside of the pipe to designate the center line of the top of the pipe.

(d)<u>4.</u> Lifting lugs shall be attached to the pipe, and shall be suitably placed to facilitate moving the pipe without damage to the exterior or interior bituminous material.

943-7 Basis of Acceptance of Bituminous Coating and Paving.

The acceptance of the bituminous coating, paved invert, and paved interior will be based on the manufacturer's certified mill tests.

943-8 Underdrain Pipe.

Corrugated metal pipe for underdrain shall conform to the requirements of AASHTO M36 except that Class IV pipe, as specified in Section 18.1.1.4 therein, shall not be used.
