## SECTION 985 GEOSYNTHETIC MATERIALS

#### 985-1 Description.

Geosynthetic materials are used for nonstructural and structural applications and shall be either geotextiles (woven or non-woven) or geogrids (woven or extruded) that are used for drainage, erosion control, reinforcement, separation or stabilization.

### 985-2 Materials.

**985-2.1 General Requirements:** Unless restricted in the Plans or Specifications, the geosynthetic material shall be a woven, non woven or extruded material consisting of long-chain polymeric filaments or yarns such as polypropylene, polyethylene, polyester, polyamides or polyvinylidene chloride formed into a stable network such that the filaments or yarns retain their relative position to each other. The base plastic shall contain stabilizers and/or inhibitors to make the filaments resistant to deterioration due to ultra-violet light, heat exposure and potential chemically damaging environment. The edges of the material shall be selvaged or otherwise finished to prevent the outer yarn from pulling away from the material and shall be free of any treatment which may significantly alter its physical properties.

**985-2.2 Physical Requirements:** Each geosynthetic material shall be tested by an independent third party in accordance with the following methods as they apply to the specific application type. All testing and reported values, except apparent opening size (AOS), are to be minimum average roll values in the weakest principle direction unless indicated otherwise in this Section. Values for AOS are maximum average roll values.

Geotextile Selection		
In-situ Soil Type or Drainage Application	Class for Type D1, D2, D3 Materials (see Table 1.1)	
< 15% passing a No. 200 Sieve*	а	
15% to 50% passing a No. 200 Sieve*	b	
> 50% passing a No. 200 Sieve*	с	
> 50% passing a No. 200 Sieve* with Plastic Index >7	d	
MSE Joint Cover for Sand Backfill	e	
MSE Joint Cover for Coarse Aggregate or Limerock Backfill	f	
*as per AASHTO T88.		

Table 1.1 Drainage Geotextiles				
Test Methods and Requirements for Types D-1, D-2 and D-3				
Property/Test Method	D-1 D-2 D-3			
Minimum Permittivity (Sec - 1) per ASTM D4491	D-1a = 0.7 D-1b = 0.2 D-1c = 0.1 D-1d = 0.1 D-1e = 0.7 D-1f = 1.5	D-2a = 0.7 D-2b = 0.2 D-2c = 0.1 D-2d = 0.1 D-2e = 0.7 D-2f = 1.5	D-3a = 0.5D-3b = 0.2D-3c = 0.1D-3d = 0.1D-3e = 0.7	
Maximum AOS (US Sieve No.*) per ASTM D4751	D-1a = 40  D-1b = 60  D-1c = 70  D-1d = 50  D-1e = 70  D-1f = 30	D-2a = 40D-2b = 60D-2c = 70D-2d = 50D-2e = 70D-2f = 30	D-3a = 40 D-3b = 60 D-3c = 70 D-3d = 50 D-3e = 70	
Minimum Grab Tensile Strength (lbs) per ASTM D4632	315	Woven Monofilament = 248 Other Woven Geotextiles: Elongation <50% = 315 Elongation >50% = 203	Elongation $<50\% = 248$ Elongation $\ge 50\% = 158$	
Mass per Unit Area (oz/sy) per ASTM D5261	Provide Test Result	Provide Test Result	Provide Test Result

**985-2.3 Overlaps and Seams:** Overlaps shall be in accordance with the manufacturer's recommendations unless specified otherwise in the Contract Documents for a particular application. To reduce overlaps, the geosynthetic material may be sewn together in accordance with the manufacturer's recommendations. Sew the seams with thread meeting the chemical requirements and minimum seam strength requirements in Tables 1.1, 1.2 and 3.

**985-2.4 Packaging and Labeling:** Geosynthetics shall be packaged in a protective covering sufficient to protect the material from temperatures greater than 140 F, sunlight, dirt, and other debris during shipment and storage. The manufacturer's name, product name, style number, roll dimensions and LOT numbers must be clearly labeled on all packaging.

### 985-3 Product Acceptance and Certification.

**985-3.1 Product Acceptance:** All geosynthetic materials shall be one of the products listed on the Department's Approved Product List (APL). Manufacturers seeking evaluation of products must submit an application in accordance with Section 6 and include independently certified test reports that the material meets the physical requirements of this Section. Products will be listed on the APL according to geosynthetic application type. For products with limited APL approvals, installations and design alternatives must not rely on the limitation. Structural geosynthetics are listed with property values.

**985-3.2 Certification:** The Contractor shall submit to the Engineer a certification from the manufacturer confirming that the material meets the requirements of this Section and is appropriate for the intended use. The manufacturer shall also provide two 8 inch by 10 inch samples of the geosynthetic material for product identification. The manufacturer's certification shall be attested to by a person having legal authority to bind the manufacturing company.

The manufacturer shall maintain test records as required by this Specification and these records shall be made available to the Department upon request.

# 985-4 Applications.

#### 985-4.1 Nonstructural:

**985-4.1.1 Drainage:** Select geotextile materials that meet the required permeability and AOS based on test results on the soil or fill adjacent to the geotextile for gradation. Materials for drainage applications must be tested in accordance with and meet the physical requirements in 985-2.2, Table 1.1.

	Drainage Applications	
Geotextile Type	Description	Design Standards Index No.
