665-2.3.2:
1. Does remote configuration imply the ability to upgrade firmware? "Ensure that the system can display detection zones and detection activations overlaid on live passive detector inputs."

Response: No, this is only for configuration and management of the device.

Is the intent of this sentence that there will be a configuration software that allows for detection zones and live actuations to be overlaid over a virtual, or camera, layout of the intersection?

Response: Yes; however, ***overlaid on live passive detector inputs*** allows for each option mentioned without specifically identifying which is used to achieve this requirement.
