

RON DESANTIS GOVERNOR 605 Suwannee Street Tallahassee, FL 32399-0450 KEVIN J. THIBAULT, P.E. SECRETARY

August 23, 2019

Khoa Nguyen Director, Office of Technical Services Federal Highway Administration 3500 Financial Plaza, Suite 400 Tallahassee, Florida 32312

Re: State Specifications Office

Section: 932

Proposed Specification: 9320300 Nonmetallic Accessory Materials for Concrete

**Pavement and Concrete Structures.** 

Dear Mr. Nguyen:

We are submitting, for your approval, two copies of the above referenced Supplemental Specification.

The changes are proposed by Steve Nolan of the State Structures Design Office to add basalt (BFRP) rebar as an equivalent option to GFRP rebar.

Please review and transmit your comments, if any, within two weeks. Comments should be sent via email to stefanie.maxwell@dot.state.fl.us.

If you have any questions relating to this specification change, please call me at 414-4130.

Sincerely,

Signature on file

Daniel Strickland, P.E. State Specifications Engineer

State Construction Engineer

## NONMETALLIC ACCESSORY MATERIALS FOR CONCRETE PAVEMENT AND CONCRETE STRUCTURES.

(REV <del>6-26-197-8-198-23-19</del>)

SUBARTICLE 932-3 is deleted and the following substituted:

## 932-3 Fiber Reinforced Polymer (FRP) Reinforcing Bars.

**932-3.1 General:** Obtain FRP reinforcing bars from producers currently on the Department's Production Facility Listing. Producers seeking inclusion on the list shall meet the requirements of Section 105.

Use only solid, round, thermoset <u>basalt fiber reinforced polymer (BFRP)</u>, glass fiber reinforced polymer (GFRP) or carbon fiber reinforced polymer (CFRP) reinforcing bars. Bars shall be manufactured using pultrusion, variations of pultrusion, or other suitable processes noted in the producer's Quality Control Plan, subject to the approval of the State Materials Office (SMO). For BFRP and CFRP bars only vinyl ester or epoxy resin systems are permitted. For GFRP, use only bars manufactured using vinyl ester resin systems and glass fibers classified as E-CR that meet the requirements of ASTM D578.

**932-3.2 Bar Sizes and Loads:** The sizes and loads of FRP reinforcing bars shall meet the requirements in Table 3-1. The measured cross-sectional area, including any bond enhancing surface treatments, shall be determined according to Table 3-2.

| Table 3-1 Sizes and Tensile Loads of FRP Reinforcing Bars |       |                               |  |         |                                 |           |
|---|-------|-------------------------------|--|---------|---------------------------------|-----------|
| Nominal<br>Bar Size Bar                                   |       | Nominal<br>Cross<br>Sectional | Measured Cross-Sectional Area (in <sup>2</sup> ) |         | Minimum G<br>Tensile I<br>(kips | Load      |
|   |       | Area (in²)                    | Minimum  | Maximum | BFRP and<br>GFRP Bars           | CFRP Bars |

| 9   | 1.128 | 1.00                          | 0.934  | 1.137   | 82.0                            | -         |
| 10  | 1.270 | 1.27                          | 1.154  | 1.385   | 98.2                            | -         |

932-3.3 Material Requirements: Producers shall submit to the State Materials Office (SMO), a test report of the physical and mechanical property requirements in Table 3-2 and Table 3-3 as applicable for the types and sizes of FRP reinforcing produced. Qualification testing shall be conducted by an independent laboratory approved by the Department for performing the FRP test methods.

Three production LOTS shall be randomly sampled at the production facility by a designee of the State Materials Office. The minimum number of specimens per production LOT shall be as indicated in Table 3-2 and Table 3-3. The coefficient of variation (COV) for each test result shall be less than 6%. Outliers shall be subject to further investigation per ASTM E178. If the COV exceeds 6%, the number of test specimens per production LOT may be doubled, a maximum of two times, to meet the COV requirement. Otherwise, the results shall be rejected. A production LOT is defined as a LOT of FRP reinforcing produced from start to finish with the same constituent materials used in the same proportions without changing any production parameter, such as cure temperature or line speed.

| Bond Strength to<br>Concrete, Block<br>Pull-Out   | ACI 440.3R, Method B.3<br>or ASTM D7913 | >1.1 ksi | 5 <sup>m</sup> |  |

a – Guaranteed tensile load shall be equal to the average test result from all three lots minus three standard deviations.

**932-3.3.1 Additional Requirements for Bent FRP Bars:** For all bars produced by bending straight solid FRP bars before the resin is fully cured, the minimum inside bend radius shall be at least three times the nominal diameters for bar sizes 2 through 8; and four times the nominal diameters for sizes 9 and 10.

The straight portion of a bent FRP reinforcing bar shall be extracted with sufficient length for tensile testing according to Table 3-3. When the bent shape does not allow for the tensile testing of one of its straight portions, test specimens produced at the same time during the same production LOT shall be used.

| Table 3-3  |  |                                       |                   |  |

| Horizontal Shear Strength <sup>p</sup>                  | <u>ASTM D4475</u>   | >5.5 ksi   | <u>5</u> <sup>m</sup> |  |  |

a – Guaranteed tensile load shall be equal to the average test result from all three lots minus three standard deviations.

**932-3.4 Material Acceptance:** Submit to the Engineer, a certification for each production LOT from the producer of the FRP reinforcing bars, confirming that the requirements of this Section are met. The certifications shall conform to the requirements of Section 6.

932-3.4.1 Sampling: The Engineer will select a minimum of six straight bars with minimum lengths of 7 feet each and a minimum of five bent bars from each shipment, representing a random production LOT, per bar size of FRP reinforcing for testing in accordance with Table 3-4. Testing shall be conducted, at the Contractor's expense, by a Department approved independent laboratory. Each test shall be replicated a minimum of three times per sample. Submit the test results to the Engineer for review and approval prior to installation.

Sampling and Testing will not be required for bars to be used solely as reinforcement for sheet pile bulkheads, but LOT samples will still be selected and retained by the Engineer until final acceptance of the work.

| Testing                              | Table 3-4 Testing Requirements for Project Material Acceptance of FRP Reinforcing Bars |             |                                      |                                 |  |  |

**932-3.3 Material Requirements:** Producers shall submit to the State Materials Office (SMO), a test report of the physical and mechanical property requirements in Table 3-2 and Table 3-3 as applicable for the types and sizes of FRP reinforcing produced. Qualification testing shall be conducted by an independent laboratory approved by the Department for performing the FRP test methods.

Three production LOTS shall be randomly sampled at the production facility by a designee of the SMO. The minimum number of specimens per production LOT shall be as indicated in Table 3-2 and Table 3-3. The coefficient of variation (COV) for each test result shall be less than 6%. Outliers shall be subject to further investigation per ASTM E178. If the COV exceeds 6%, the number of test specimens per production LOT may be doubled, a maximum of two times, to meet the COV requirement. Otherwise, the results shall be rejected. A production LOT is defined as a LOT of FRP reinforcing produced from start to finish with the same constituent materials used in the same proportions without changing any production parameter, such as cure temperature or line speed.

| Physical and M  | Table 3-2 Mechanical Property Requirements for  | Straight FRP Reinforcing   | Rars              |
|---|---|--|-------------------|
| Property  | Test Method   | Requirement  | Specimens per LOT |
| Fiber Mass Fraction   | ASTM D2584<br>or<br>ASTM D3171  | ≥70%   | 5 <sup>n</sup>    |
| Short-Term Moisture<br>Absorption   | ASTM D570, Procedure 7.1;<br>24 hours immersion at 122°F                              | ≤0.25%   | 5 <sup>m</sup>    |
| Long-Term Moisture Absorption   | ASTM D570, Procedure 7.4; immersion to full saturation at 122°F                       | ≤1.0%  | 5 <sup>m</sup>    |
| Glass Transition  | ASTM D7028 (DMA)<br>or  | ≥230°F   | 3 <sup>m</sup>    |
| Temperature (Tg)  | ASTM E1356 (DSC; $T_{\rm m}$ )/ASTM D3418 (DSC; $T_{\rm mg}$ )                        | ≥212°F   | 3                 |
| Total Enthalpy of<br>Polymerization<br>(Neat Resin)   | ASTM E2160  | Identify the resin system used for each bar size and report the average value of three replicates for each system                    |                   |
| Degree of Cure  | ASTM E2160  | ≥95% of Total polymerization enthalpy  | 3 <sup>n</sup>    |
| Measured Cross-<br>Sectional Area<br>Guaranteed Tensile<br>Load <sup>a</sup><br>Tensile Modulus | ASTM D7205  | Within the range listed<br>in Table 3-1<br>≥ Value listed in<br>Table 3-1<br>≥6,500 ksi for BFRP and<br>GFRP<br>≥18,000 ksi for CRFP | 10 <sup>n</sup>   |
| Alkali Resistance<br>with Load  | ASTM D7705; 3 months test<br>duration, followed by tensile strength<br>per ASTM D7205 | ≥ 70% Tensile strength retention   | 5 <sup>m</sup>    |

| Bond Strength to<br>Concrete, Block<br>Pull-Out   | ACI 440.3R, Method B.3<br>or ASTM D7913       | >1.1 ksi | 5 <sup>m</sup> |  |

a - Guaranteed tensile load shall be equal to the average test result from all three lots minus three standard deviations.

**932-3.3.1 Additional Requirements for Bent FRP Bars:** For all bars produced by bending straight solid FRP bars before the resin is fully cured, the minimum inside bend radius shall be at least three times the nominal diameters for bar sizes 2 through 8; and four times the nominal diameters for sizes 9 and 10.

The straight portion of a bent FRP reinforcing bar shall be extracted with sufficient length for tensile testing according to Table 3-3. When the bent shape does not allow for the tensile testing of one of its straight portions, test specimens produced at the same time during the same production LOT shall be used.

n – Tests shall be conducted for all bar sizes produced.

m – Tests shall be conducted for the smallest, median, and largest bar size produced.

p – Only required for BFRP bars.

a – Guaranteed tensile load shall be equal to the average test result from all three lots minus three standard deviations.

**932-3.4 Material Acceptance:** Submit to the Engineer, a certification for each production LOT from the producer of the FRP reinforcing bars, confirming that the requirements of this Section are met. The certifications shall conform to the requirements of Section 6.

932-3.4.1 Sampling: The Engineer will select a minimum of six straight bars with minimum lengths of 7 feet each and a minimum of five bent bars from each shipment, representing a random production LOT, per bar size of FRP reinforcing for testing in accordance with Table 3-4. Testing shall be conducted, at the Contractor's expense, by a Department approved independent laboratory. Each test shall be replicated a minimum of three times per sample. Submit the test results to the Engineer for review and approval prior to installation. Testing will not be required for bars to be used solely as reinforcement for sheet pile bulkheads, but LOT samples will still be selected and retained by the Engineer until final acceptance of the work.

| Table 3-4 Testing Requirements for Project Material Acceptance of FRP Reinforcing Bars |   |        |     |                                 |  |  |
|--|---|--------|-----|---------------------------------|--|--|
| Property   | Test Method   |        |     | Test Required for Bent Bar      |  |  |
