The only item I wanted to clarify is the below statement.

“If the assembly includes a cabinet, the cabinet must be currently listed on the APL or meet the applicable cabinet material requirements listed in Section 676”.

Is it the Department’s intent to allow non-APL cabinets to be used? To my knowledge, all other applications (i.e. signal cabinets, ITS cabinets, ramp metering cabinets, etc.) are required to be on the APL. Not sure why this application would be any different.

SubSection 995-2.7.2: Communications: Bullet No. 6, second sentence "For WWVDS installed.....vehicle detection" must be removed as this requirement is repeated in bullet no. 7.
