Schedule the submission of shop drawings to allow for a 45 day review period for category 2 bridge components, tolling components, including the associated signing, identified in the current FDOT General Tolling Requirements (GTR) Part 3, ~~the associated signing~~, DMS and ITS infrastructure. Schedule the submission of shop drawings to allow for a 25 day review period for all other items. The review period commences upon the Engineer of Record's receipt of the valid submittal or valid re-submittal and terminates upon the transmittal of the submittal back to the Contractor. A valid submittal includes all the minimum requirements outlined in 5-1.4.4.

In the 3rd paragraph of 5-1.4.6, it is stated that the review period is 45 days for Category 2 bridge components. Would the MSE walls that wrap around the end bent of a Category 2 bridge be considered a component of that bridge, and therefore be allotted a 45 day review period? The same would apply to shoring for a footing excavation. These are examples of components that are used on both Category 1 and Category 2 bridges, but could have different review periods depending on the bridge they are associated with. Does this language need to be clarified?
