Comments: (11-1-18)

1. This revision deals with the LCD; the ATSSA guideline, as well as our APL, must remove the reflective sheeting attached to the LCD photos/pictures. This part of the LCD is not necessary but has in the past caused concern since the inspector uses both as a guide to their review of that traffic control device.

Response:

2. Regarding the removal of the height requirement, this is long overdue.

Response:

3. Regarding the maximum messages of two phases: the use of the word "must" will be cause for concern on jobs with multiple VMS units. Messages on VMS' is a common sensical process that might be better served by not dictating specifics.

Response:

4. 102-9.12 Portable Changeable Message Sign (PCMS), I think this language is a little awkward. My suggestion is to change the first line to "Messages shall have no more than two phases."

Response:

→ Messages must have a maximum of two phases. The display time for each phase must be at least two seconds but no more than three seconds. The sum of the display time must be a maximum of six seconds.

Response:
