Just a minor comment in blue, second paragraph:

~~For galvanized steel members, meet the general requirements of Section 962. Obtain galvanized steel from a fabrication facility that is listed on the Department's Production Facility Listing. Producers seeking inclusion on the list shall meet the requirements of Section 105. Repair galvanized surfaces in accordance with Section 562. Galvanizing materials used for repair must meet the requirements of Section 975.~~

Response: I agree with the editorial change.

The second sentence "Hot-Dip galvanize structural steel after fabrication and galvanize bolts, nuts, and washers in accordance with Section 962. Hot-Dip galvanize structural steel after fabrication and galvanize bolts, nuts, and washers in accordance with Section 962.:

Should be shortened to "Hot-Dip Galvanize structural steel after fabrication and galvanize bolts, nuts, and washers in accordance with Section 962."

The extra language gives the impression the something extra is required above and beyond Section 962.

Response: I agree with the comment.
