Is there a study or information on the most value added deficiencies and the volume/cost of them?

Response:

I'm not aware of any study regarding deficiencies and volume/cost of them.

In determining an IRI Warranty threshold, we reviewed past IRI data which showed only 0.3% of limited access roadway Lot's and 1.5% of non-limited access roadway Lot's would have exceeded the 110 in/mile warranty threshold within the 3 year warranty period. For laser testing, a Lot is 0.1 mile (528 feet) section of a lane.
