Comments: (12-20-19, Industry)

Substitution of structural concrete in lieu of non-structural concrete may be used if approved by the Engineer. If structural concrete is used in lieu of non-structural concrete, obtain the concrete from a production facility meeting the requirements of Section 346. Acceptance is based on the requirements of Section 347. Is the above spec really still needed since the reference to the plant needing to be 346 certified was removed in this actual revision?

Response: NOT APPLICABLE. The comment is not related to the proposed change.
Mr. Conover may propose the change at the next FDOT-CTC meeting.

Action: No change is needed.
